The preceding details are given because they mark the beginning of what has developed into the college phases of the National Youth Administration program. (An account of the development of the student-aid program in Minnesota is contained in Biennial Report of the President of the University of Minnesota to the Board of Regents, 1932-34, pp. 305-323.) Within a few weeks the experimental program in Minnesota was obviously a success, and on February 2, 1934, the Federal Emergency Relief Administration announced an extension to include all the non-profit-making collegiate institutions of the country. In August 1935 the National Youth Administration was created to assume authority over the Federal-aid program for youth, including the college-aid program. In its essentials the student-aid program in the colleges has held to the original pattern as formulated by the Minnesota commission for the education of unemployed youth.

With the close of the academic year 1938-39 students at the University of Minnesota have been receiving the Federal aid for 17 academic quarters. (The program began at the outset of the winter quarter, 1933-34. No aid is given during the summer quarters.) From the data that follow, some significant and interesting observations may be made concerning the family and economic backgrounds of the entire group of National Youth Administration students. These data, likewise, are of value in any attempt to appraise the N. Y. A. program.

Sex distribution: From the beginning 4,681 individuals have been recipients of the Federal assistance at the University of Minnesota. (All data cover the period January 1, 1934, through April 30, 1939. These tabulations include collegiate students only, and exclude students at the University of Minnesota schools of agriculture, which are not of collegiate level yet are not strictly high schools.) Of these, 3,336 (71.3 percent) have been men and 1,345 (28.7 percent) have been women. The fact that women are represented in the N. Y. A. group in a smaller proportion than in the student body at large probably reflects a greater unwillingness on the part of girls to attempt a college education on meager resources, and an unwillingness of parents to allow them to do so. (In 1937-38, 43

percent of the total university registration was female.) Whatever the cause, the fact is that women students have profited relatively less by the N. Y. A. program than the men.

Family size: The N. Y. A. assistance is for youth from families whose resources are so limited that without the aid it would be impossible for the sons and daughters to attend college. Table 1 shows the number of dependents in the families from which the students were drawn. This should be read as follows: In 278 cases the student himself was the only dependent, which would mean that the family consisted of a father or a mother and the student; in 1,138 cases there was one dependent besides the student, which in most instances would mean a one-child family, with mother and father both alive, but might mean a widow or widower with two children, one of which is the student.

TABLE 1.—Number of dependents of parent or guardian in the families from which University of Minnesota National Youth Administration students have been drawn, Jan. 1, 1934–Apr. 30, 1939

Dependents	Cases	
	Number	Percent
1.....	278	5.9
2.....	1,138	24.3
3.....	1,030	22.0
4.....	796	17.0
5.....	463	9.9
6.....	193	4.1
7.....	108	2.3
8.....	47	1.0
9.....	22	.5
10.....	11	.2
11.....	12	.3
12.....	4	.1
Orphans.....	64	1.4
No family ties <sup>1</sup> .....	515	11.0
Grand total.....	4,681	100.0

<sup>1</sup> Includes all cases where the student is totally independent of any family for his economic support, that is, where he is entirely "on his own."

The largest single group of students is from families consisting of the parents and himself (24.3 percent) with the three-dependents family (parents and two children) a close second (22 percent). That the N. Y. A. program has assisted students from larger families to attend college is shown from the fact that 47.8 percent of the Minnesota N. Y. A. students are from homes with four or more dependents (typical: father, mother, and three children). When the data of table 1 are coupled with those on family income (table 2) the need for some supplementary assistance if the children are to attend college is evident.

Table 1 also reveals that 11 percent of the students are entirely on their own resources in attending college; for such students, the N. Y. A. assistance is clearly important, even though the earnings from this source must be further supplemented. (See Dorothy G. Johnson and Malcolm M. Willey, the Supplementary Needs of N. Y. A. College Students, School and Society, 48: 565–568 (October 29, 1938).) The group also contains 64 self-supporting orphans.

These data have implications in considering any theory of democratic education. It costs money to attend college, even a public institution. If the costs mount to a point that precludes attendance by students from families whose economic resources are limited by family size or by small earnings of parents or guardians, educational opportunities become associated with class, and the democratic tradition in some degree breaks down. This is why the data on family dependency are important, and become more so in conjunction with the data of table 2 on total annual income.

TABLE 2.—Total annual income of parent or guardian in families from which University of Minnesota National Youth Administration students have been drawn, Jan. 1, 1934–Apr. 30, 1939

Income group	Number	Percent
\$1,000 or less.....	2,085	44.5
\$1,000 to \$1,500.....	1,155	24.7
\$1,500 to \$2,000.....	756	16.2
\$2,000 and up.....	347	7.4
Not given <sup>1</sup> .....	338	7.2
Total.....	4,681	100.0

<sup>1</sup> In the first months of the program these data were not obtained with sufficient exactness to include in the tabulation; certification by relief workers, for example, was accepted instead of a specific income figure. This accounts for the "not given" cases.

Family income: Of the entire group of students, 44.5 percent came from homes in which the major breadwinner had an annual income of \$1,000 or less. (Some attempt has been made to include a cash-equivalent figure for farm families.) Almost 70 percent (69.2 percent) of the students are from homes with an income of less than \$1,500. More than 85 percent have parents earning less than \$2,000.

These data of table 2 are an effective answer, based on 5½ years of experience, to any criticism that numbers of students are receiving N. Y. A. help who do not need it. Families with incomes of less than \$2,000 and of the sizes indicated in table 1

can hardly maintain themselves and also have resources adequate to send their children to college. In normal times the problems of educating the children at the higher levels would be great; in periods of depression these problems are aggravated. Unless children from such families are to be deprived of higher education, aid for them in meeting their college expenses must come from some source, and it is to be remembered that when business conditions are bad, it is increasingly difficult for students to help themselves, by obtaining supplementary employment (see Malcolm M. Willey: Depression, Recovery and Higher Education, ch. 13, on "Student financial problems and the depression." New York: McGraw-Hill Book Co., 1937).

Further substantiation of these points is found in the occupational data on table 3. Almost one-fifth (18.2 percent) of the total of 3,262 cases for which data are available, are from families where the breadwinner is on relief, unemployed, or working for W. P. A. If petty pensioners are added, nearly a quarter of the group is involved (aggregate, 23.3 percent). Here is clear evidence that the N. Y. A. program is touching students who need assistance in obtaining an education. If public assistance is not available for these students, what is the alternative? Again the democratic theory of education intrudes itself.

TABLE 3.—Occupation or source of income of parent or guardian in families from which University of Minnesota National Youth Administration students have been drawn, Jan. 1, 1934–Apr. 30, 1939<sup>1</sup>

Source of income	Number	Percent
Agricultural pursuits.....	605	18.6
Small-business owners.....	379	11.6
Employees of business and industry.....	507	15.5
Professional.....	151	4.6
Public service.....	136	4.2
Education (teachers and administrative).....	17	.5
Skilled trades.....	293	8.9
Laborers.....	168	5.2
Relief.....	187	5.7
Works Progress Administration.....	241	7.4
Pensioners.....	165	5.1
Unemployed.....	166	5.1
Homemakers.....	71	2.2
Domestic service.....	36	1.1
Income from capital <sup>2</sup> .....	128	3.9
Alimony.....	12	.4
Total.....	3,262	100.0

<sup>1</sup> The base in this table is 3,262 cases; adequate data were not obtained in the early months of the program. There is less than 4 percent of overlapping in the categories.

<sup>2</sup> Includes annuities, rent from property, etc.

As might be expected in Minnesota, 18.6 percent of the students are from farm families, a percentage that exceeds that for owners of small business enterprises (groceries, oil stations, etc.) or for employees in business and industry. The categories of table 3 reveal again that the N. Y. A. aid is going into families at the lower end of the economic scale.

As a final check on the economic status of the students, data concerning the annual liabilities of the parent or guardian with respect to interest charges, life-insurance charges, etc., were compiled. (In the first months of the program these data were not requested, which explains the "not given" cases in table 4.) Table 4 shows that 43.4 percent of the parents or guardians had fixed charges of less than \$100, whereas 56.6 percent of them had fixed charges in excess of \$100, running, in 8.9 percent of the cases, to \$500 or more. These data must be read in connection with the income figures of table 2, and when this is done it is further confirmed that the students have been drawn from homes where resources are meager. It is failure to have knowledge of such facts as are shown in table 4 that leads to some criticism regarding eligibility for N. Y. A. appointment in the specific instances that are sometimes questioned by other students or outsiders. Income alone is not a sufficient criterion in making N. Y. A. appointments; as already shown, size of family and family debts and other liabilities must be considered in determining the needs of any single student. The amounts shown in table 4 are absolutely not large in most of the cases, but they are to be considered in relation to the annual incomes of table 2. A fixed charge of \$500 on an income of \$1,500 or \$2,000 does assume relative magnitude in the family budget; a charge of \$100 against an income of \$1,000 is likely to have an important bearing on whether or not children may go to college.

TABLE 4.—Total annual fixed liabilities of parent or guardian of Minnesota National Youth Administration students, Jan. 1, 1934–Apr. 30, 1939

Amount	Number	Percent
\$0 to \$100.....	2,029	43.4
\$100 to \$200.....	740	15.8
\$200 to \$300.....	397	8.5
\$300 to \$400.....	264	5.6
\$400 to \$500.....	196	4.2
\$500 and up.....	417	8.9
Not given.....	638	13.6
Total.....	4,681	100.0

Duration of N. Y. A. appointments: Attention thus far has focused primarily upon the economic background of the 4,681 students who have received Federal work-relief assistance at the University of Minnesota. It now shifts to the question of the duration of the aid. For what periods of time have the students been on the N. Y. A. rolls? Is there any indication that the students become dependent upon N. Y. A. and that a small group is carried along year after year? Or are the benefits spread?

Table 5 shows the duration of the appointments. Three academic quarters is the modal duration of appointment (27.1 percent). The table is somewhat overweighted in the one-, two-, and three-quarter categories because of the appointments made during 1938-39, yet, as the data indicate, the percentage figures drop sharply after the three-quarters group. (Students appointed at the beginning of the spring quarter, 1938-39, and who were still on the rolls when the tabulation was made, April 30, 1939, are included in the one-quarter group. The less-than-one-quarter category contains students who canceled their appointments before completing one academic quarter as N. Y. A. students.) After nine quarters are passed (2 academic years) the numbers are negligible. There is thus no evidence whatsoever that the N. Y. A. students as a group are favored by making them dependent on the program. Only one student has been on the list from the outset—a boy starting as a freshman and now going on with a medical education. Table 5 corroborates what has previously been stated: That N. Y. A. is supplementary aid; no student could depend upon it solely for support during his college course. As it has worked out over the period of nearly 6 years, three academic quarters of N. Y. A. assistance is the optimum supplement, which in money terms would be an average of \$135 per student.

TABLE 5.—Duration of appointments of University of Minnesota National Youth Administration students, Jan. 1, 1934-Apr. 30, 1939

Duration of appointment	Number	Percent
Less than 1 quarter.....	243	5.2
1 quarter.....	886	18.9
2 quarters.....	586	12.5
3 quarters.....	1,269	27.1
4 quarters.....	350	7.5
5 quarters.....	258	5.5
6 quarters.....	438	9.4
7 quarters.....	146	3.1
8 quarters.....	116	2.5
9 quarters.....	187	4.0
10 quarters.....	64	1.4
11 quarters.....	51	1.1
12 quarters.....	66	1.4
13 quarters.....	13	.3
14 quarters.....	5	.1
15 quarters.....	2	.0
16 quarters.....	0	.0
17 quarters.....	1	.0
Total.....	4,681	100.0

Reasons for cancellation: Except during the first months, a record has been kept of all cancellations of N. Y. A. appointments falling within the academic year. Students leaving school at the end of the academic year, for whatever causes—including graduation—are not counted in the tabulation. In table 6 it is seen that the largest single group of cancellations is for the purpose of taking another job. Presumably the new jobs either pay higher rates or permit greater monthly earnings than under N. Y. A. (The maximum earnings of a student under N. Y. A. are \$20 a month from the Federal funds, and the average earnings of the group must be, by N. Y. A. regulation, \$15 per month per student.) That students drop the N. Y. A. appointments to obtain other work is in itself evidence that no general bad habits of "dependency" develop under the program—as is sometimes charged by the critics.

TABLE 6.—Reasons for cancellation of National Youth Administration appointments, University of Minnesota, Jan. 1, 1934-Apr. 30, 1939

Reasons for cancellation	Number	Percent
Dropped.....	38	4.0
Financial.....	104	10.8
Another job.....	263	27.3
Illness.....	111	11.5
Graduation during school year.....	57	5.9
Too much time involved.....	86	8.9
Borrowing.....	32	3.3
Miscellaneous reasons.....	116	12.1
Not given.....	156	16.2
Total.....	963	100.0

Illness accounts for the next largest group of resignations (11.5 percent), and the third largest number are for financial reasons, which means that the students are not able to supplement the N. Y. A. income, and hence must cancel. It should be repeated that no student can maintain himself at the university on \$15 or even \$20 a month; hence whatever is earned through the Federal work relief must be supplemented by other earnings, by borrowing, or by funds from home. About 10 percent of the students are not able to find the supplement and drop out. In a few cases students

are able to borrow for their education and cancel the Federal aid. It should be recalled that under N. Y. A. the students must work for the money they earn; they are paid the prevailing student rates. In some curricula the academic schedules are so heavy that it is only with great difficulty that students can find the time for the academic requirements and the N. Y. A. work requirements as well. It is these students especially that seek borrowed funds as a means of conserving their time for academic work.

The miscellaneous group of cancellations contains widely divergent reasons, from marriage to death; removal from the city also falls here. The "dropped" category contains scholastic failures, unsatisfactory work history, and rare disciplinary cases.

All these data point to the conclusion that while students appreciate the N. Y. A. assistance, the program by no means should be regarded as assuring an easy and comfortable road to higher education. Any idea that N. Y. A. students are a pampered and privileged group, with all worries removed, is obviously false.

Summary observations: This brief survey of facts pertaining to the 4,681 students at the University of Minnesota who have in 17 quarters received assistance through Federal work-relief programs (F. E. R. A., N. Y. A.) leads to these general observations:

1. The N. Y. A. program, as it works out, is more helpful in meeting the needs of men students than of women students, judged by the relative number of appointments.

2. Nearly one-half of the N. Y. A. students are from homes with four or more dependents.

3. The economic need of the N. Y. A. students may be judged from the fact that 70 percent of the students are from homes where the breadwinner earns less than \$1,500 a year; in 44.5 percent of the homes, the annual earnings are less than \$1,000.

4. Study of the occupational groupings of parents substantiates further the fact that the students are from lower economic classes; nearly one-fifth of the students are from families where the breadwinner is unemployed, on W. P. A., or on relief.

5. Analysis of the fixed liabilities of the families (interest, insurance, etc.) further indicates the limited extent of the economic resources of the N. Y. A. students and the families from which they are drawn.

6. The N. Y. A. program is a supplementary program, in that students must have some resources in addition to the N. Y. A. earnings if they are to remain in college. The largest single group of students has the N. Y. A. assistance for a period of three academic quarters. No dependency on N. Y. A. appears to develop.

7. The data for the 4,681 students raise sharply questions relating to the theory of democratic education. With rising educational costs, it becomes progressively difficult as one descends the family earnings scale for youth to find the resources with which to enter and remain in college. All studies of scholastic accomplishment of N. Y. A. students, at Minnesota and elsewhere, show it to be high. There is every reason to believe that without the N. Y. A. assistance, large numbers of these successful students would be unable to complete their education. The alternative to some form of assistance for impoverished students of promise is education on the basis of ability to pay, which strikes at the very heart of democratic principles and tradition. The N. Y. A., while it does not assure a college course to every promising young man and woman, is one factor making it possible for large numbers of students to continue into higher education who would otherwise be unable to do so.

[From School and Society, October 21, 1939, vol. 50, No. 1295]

#### STUDENT ATTITUDES TOWARD GOVERNMENT AID IN EDUCATION

Newspapers throughout the United States during the last week in August carried news articles concerning a report on student attitudes with respect to financing educational costs prepared under the sponsorship of the Graduate School of Journalism of Columbia University. (See also School and Society, 50; 376-377, September 16, 1939.) The general conclusion of the study, which was made under the direction of Prof. Elmo Roper, of Columbia, is that student opinion is opposed to Government aid in the financing of the students' education. A secondary observation based on the report is that the data refute those who charge that some of the leading educational institutions have become centers of socialistic and communistic theories of government and economics. The conclusions, with data, were presented by Dean Carl W. Ackerman in a letter to President Butler.

The widespread circulation of the report and its conclusion, which in turn gave rise to numerous editorial comments in the newspapers, is alone sufficient justification for a more critical examination of the study. To the writer, after a careful study of the report as supplied by Dean Ackerman, there appears to be considerable basis for questioning the data as presented, as well as the conclusions which Dean Ackerman has drawn from them in his letter.

The report gives no indication of the exact methods employed by Professor Roper in conducting the study. It merely says, "By means of a questionnaire and personal interview, based on the technique which Professor Roper originated and has used with conspicuous success in making surveys of public opinion for Fortune magazine, we obtained information which will be of value to the Graduate School of Journalism." Further, "Professor Roper and his staff interviewed a representative cross-section of the economic groups among freshmen, sophomores, juniors, and seniors in the following universities: East—Harvard, Brown, Syracuse, and Columbia; South—Tulane, Alabama, and Vanderbilt; Middle West—Minnesota, Northwestern, Iowa, Oklahoma, Michigan, and Ohio State; West—California and Washington."

Two questions were asked bearing directly on the matter of financing an education: "Which of these do you think is the best way for capable but needy students now in colleges or universities to get financial assistance?" The alternatives, as shown in the tables accompanying the report, are these:

- (1) Private and/or university part-time employment.
- (2) Privately endowed and/or university scholarships.
- (3) Private and/or university loans.
- (4) United States and/or State government aid. (The second question put the first one in reverse form: "Are there any of these from which you think students should not receive financial assistance?" In reply 5.4 percent opposed part-time work, 24.2 percent opposed Government aid, 27.3 percent did not favor loans, 1 percent opposed scholarships. The category "None" contains 18.4 percent and "Don't know" 23.7 percent.)

Immediately an ambiguity intrudes upon the reader which may well have been present to influence the responses of the 1,507 students answering. Is the assistance of the National Youth Administration university part-time employment or is it Government aid? The fact is that under the program of the N. Y. A. the students work at tasks assigned by the institutions, but are paid from Federal funds. The students know that they work for their money; how many of them give thought to, or have precise knowledge of, the source of the funds with which they are paid is an unknown factor. But there is reason to believe that many students, confronted with the alternatives listed above, would not make the clear distinction between items 1 and 4, and there is no indication in the report that distinctions were drawn for them.

Professor Roper's data indicate student opinion to be as follows:

- (1) The largest group, 42.5 percent, prefers part-time employment. [It is not clear that students would not classify N. Y. A. jobs as part-time employment, as suggested above. In fact, in Dean Ackerman's own conclusions there is a basis for this very confusion. He writes: "As capable and needy students prefer part-time work to loans or scholarships, it may be necessary, in order to attract this type of student, for educational institutions to adjust their curricula and assist students to obtain part-time employment." Is N. Y. A. assistance part-time work? Obviously it is, and students so regard it. It would not appear that there is room for argument as to whether students do or do not like part-time work. They do. The issue really centers on whether or not part-time work can be made available, and by whom.]
- (2) The second major group, 32.3 percent, favors scholarships.
- (3) Only 14.5 percent consider university or private loans desirable.
- (4) The smallest group, 7.4 percent, would be receptive to Federal or State aid.

It is the last item that raises specific doubts, especially since approximately 10 percent of all college students, 16 to 24 years of age, inclusive, are now recipients of N. Y. A. assistance, which is, of course, a form of governmental aid. Furthermore, judged by the experience of at least one of the institutions sampled by Professor Roper (Minnesota), if N. Y. A. funds were available a considerably larger percentage of students would be willing to accept the Federal work assistance. It is difficult to account for the 7.4 percent shown by Professor Roper's results as receptive to Federal or State aid in the light of the known desires of students and their parents to obtain the N. Y. A. help. Only two explanations suggest themselves:

- (1) That numbers of students who are not "receptive" to Federal aid, as a matter of fact, are taking it.
- (2) That somewhere there is a flaw in Professor Roper's sampling of students or institutions or in the framing of his questions.

The writer believes the explanation falls under item (2). A possible ambiguity with respect to classification of N. Y. A. assistance has been noted. It is also possible that were the data classified by public and private institutions, further differences might be revealed, though the N. Y. A. assistance has been generally accepted by both private and public institutions.

In view of these difficulties, the writer is unwilling to accept the conclusion drawn by Dean Ackerman:

"The real significance, I think, of present student opinion toward the financing of education is the opposition to Government aid. Students do not favor a spending-lending policy to help them make their way in the world. Only 7.4 percent of the students interviewed considered aid by Federal or State governments as desirable."

Incidentally, insofar as the report itself shows, there is no reference to "spending-lending," and to the writer this jump from the data to an interpretation in terms of "spending-lending" policy is something of a non-sequitur.

Nor is the writer willing to take the additional step and accept this observation drawn from the study by Dean Ackerman:

"Those who have been charging that some of the leading universities in the United States have become centers of socialistic and communistic theories of government and economics should study these statistics. University students today are not applying the prevailing debt theory of political economy in their own lives, nor are they looking forward to the Government to provide them with jobs. . . . All of the international and national political and economic jargon which they have heard outside the classroom, and perhaps in a few classrooms, has not caused them to lose faith in opportunities for careers in existing American enterprises and professions, nor have they been attracted by the bonanza of Govern-

ment debt or private borrowing as an educational aid. Students prefer to work for their education, and what is perhaps more important, they are preparing to work for a living outside of governmental jobs after they are graduated." (Part of these observations relate to other questions in Professor Roper's study on career choices. A report on these is promised later, and comment must be withheld until the data are available for study.)

It is obvious from these generalizations that Professor Roper and Dean Ackerman believe their study provides a basis for concluding that students look with disfavor upon Government student aid; and, although it is not mentioned specifically, the report might easily be taken as an argument against Federal or State aid for students, which would include the aid provided by the National Youth Administration. One may also wonder if the report has implications, not only for Government student aid but also for public education as a whole. How and where does one draw the line between the assistance given individual students through such a program as the N. Y. A. and the assistance given students by the more general subsidy that is involved in State or municipal institutions? Is it implied that the enormous expenditures of the States and some municipalities for support of higher education involve socialistic and communistic tendencies? Obviously not; then why introduce the connotations that adhere to the argument that since only 7.4 percent of the sample favor Government student aid there is no cause for alarm on the part of those who may have thought that universities and colleges are centers of Communist and Socialist theories of government and economics? One cannot but sense that the argument, as drawn, involves both a considerable degree of antagonism to public support of education (or, at least direct aid to students) and a non sequitur with respect to conservative-radical attitudes.

A second ambiguity involves the point of whether the questions asked were interpreted by the students as calling for their opinions with respect to present practice or to an ideal situation. Ideally, private initiative in acquiring an education and full reliance upon private resources may be best. As an ideal, the fact could be accepted that over 40 percent of the individuals in the sample prefer part-time employment as a means of acquiring an education. In a world in which private part-time employment were readily available, it might follow that most students would prefer the private employment to Government aid. But what of students in a world in which part-time employment is not available to meet the needs of all the students who seek and can profit from higher education? It has already been suggested that the data of the study may indicate that appreciable numbers of students have swallowed their ideals and accepted Federal aid. But the conclusions of Dean Ackerman are not framed in terms of the distant future in which ideals will be achieved but in terms of the present. This leads directly to the question of how deserving students are to receive assistance in acquiring a higher education; and, specifically, it raises the question as to whether there is not an obligation upon the part of the Government—State, Federal, or municipal—to provide assistance to those needy students who show scholastic promise but who, through ill fortune, may not have the resources to meet the costs that are involved.

There is ample evidence that not all college students who want private employment can get it; there is ample evidence that these same students do not have private resources with which to finance their higher schooling. Not as an ideal but as a matter of present fact, what is to become of these students? Are they to be denied the opportunities of college? Is education to become a matter of class, available only to the economically successful? If so, what becomes of the democratic theory as it pertains to education? It is beside the point, it appears to the writer, to talk of "the bonanza of Government debt" or the prevailing "debt theory" if the need for helping deserving students exists. That it does exist has been shown by various studies. (See Alvin C. Eurich and James E. Wert, Applicants for Federal Aid at Minnesota Colleges, University of Minnesota, 1937; also Dorothy G. Johnson and Malcolm M. Willey, School and Society, 50: 252-256, Aug. 19, 1939; and Depression, Recovery, and Higher Education, a report of the American Association of University Professors, New York (McGraw-Hill Book Co., 1937), especially chapter XIII, Student Financial Problems and the Depression.)

The exact percentage of students looking with favor or disfavor upon governmental aid is of significance; but in the case of the present study it is not the percentage figures so much as the conclusions drawn from them that are most important. It is because the data are the stepping stone to far-reaching observations relating to the democratic theory of education that the writer is calling Dean Ackerman's report to special attention. The implications, as they pertain to the responsibility of Government in aiding deserving college students, cannot go unchallenged. The implications, as they pertain to present political and economic policy, are of such a nature that they may lead the reader to confuse current political policies associated with the present Government in Washington with the deeper and more fundamental question of where the responsibility ultimately rests for making it possible in a democracy for all young men and women who can profit by higher education to have opportunities for pursuing it.

MALCOLM M. WILLEY,

## Many Industries Moving Into Friendly Connecticut

## EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

ARTICLE FROM THE NEW YORK TIMES OF FEBRUARY 6, 1940

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of February 6, 1940:

[From the New York Times of February 6, 1940]

**MANY INDUSTRIES MOVING INTO FRIENDLY CONNECTICUT—STATE VIRTUALLY BACK TO 1929 LEVELS AS FLIGHT FROM NEW YORK CONTINUES—WAR BOOM A FACTOR IN UPTURN**

(By Russell B. Porter)

HARTFORD, CONN., February 5.—While there has been an exodus of industry from New York in recent years because of high costs, especially taxes and labor, according to the Chamber of Commerce of the State of New York, the adjoining State of Connecticut has been enjoying an influx of new industry, some of which has come from New York.

This movement was accentuated last year. Together with the current war boom, it is continuing in such a way as to be a definite factor in giving the old Nutmeg State a general industrial revival, with increased production, employment, retail sales, and other business activities. Shortages of skilled workers in certain trades, and of factory and housing space in some cities, are reported. W. P. A. rolls have been cut by nearly half since 1938. The State has nearly as many industrial plants operating as in 1929, and actually has more wage earners than it had then.

A definite effort for the industrial rehabilitation of New England by means of old-fashioned Yankee thrift and individual initiative is illustrated by the methods taken to stimulate new industry.

These tactics resulted in the location of 160 new companies in Connecticut during 1939, according to the Connecticut Development Commission, appointed by Gov. Raymond E. Baldwin after his election in 1938. Governor Baldwin, a Republican lawyer from Bridgeport, was elected on a platform pledge to establish a friendly government—friendly to business and industry and also to labor. He adopted the slogan, "There is no substitute for a good job in private industry."

As chairman of his Development Commission he selected a leading businessman, Charles E. Rolfe, of New Haven, general information manager of the Southern New England Telephone Co., and he appointed John J. Egan, secretary of the Connecticut Federation of Labor, as a member.

Smilingly referring to himself as "just a salesman" for prospects in new industry, and giving credit for the results to the State's businessmen, industrialists, and labor leaders, Governor Baldwin told this reporter he had started on the theory that the continuous struggle of the last few years between Government and business and between capital and labor should cease.

"We believe in the definite encouragement of confidence for industry and in the creation of conditions that will stimulate private business to create jobs," he said. "The interests of capital and labor are the same; what helps or hurts one helps or hurts the other."

"We balanced the budget without new taxes, only an increase in the liquor tax, and without sacrificing any essential State services; by eliminating waste, extravagance, and unnecessary expense in the costs of government."

## LABOR NOT MADE TO SUFFER

The Governor, a tall, heavily built man in his late forties, added that nothing had been done at the expense of labor.

"We have progressive labor laws and powerful antisweatshop legislation in this State," he continued. "Our business and industry pay good wages, and have fine relations with their labor. We definitely do not want sweatshops or anybody else running away to duck labor conditions in other States."

Asserting that Connecticut was not trying to steal industry from other States, the Governor said many of the industries that had been attracted by his friendly government were entirely new enterprises, while some others were branches of companies in other States that desired to decentralize production in regional distribution areas like New England.

Of the 160 new industries that came to the State last year, he continued, not more than 10 percent were war babies.

"Part of our upturn in business and employment has been due to the war boom," he added, "and we are prepared for any war business that comes our way, but we feel that a sound State economy is not built on war orders. We all recall how the boom days of the last war were followed by a tailspin for both manufacturers and workmen. War orders are only temporary, and we are looking ahead to the day when they will cease. We are building for a permanent solution of our economic problem and are taking precautions which should prevent another depression after the end of this war."

## ADVANTAGES THAT ARE STRESSED

Members of the development commission, when they invite new industries to settle here, emphasize the Governor's friendly government, the lack of a personal income tax, sales tax, or dividend tax in Connecticut, and the State's comparative freedom from serious labor disputes, as well as other factors.

The commission acts as a clearing house and coordinating agency for local chambers of commerce, manufacturers' associations, and other groups of businessmen and industrialists throughout the State to whom it gives credit for much success in persuading new industry to come to Connecticut even before the commission was appointed.

"Business, industry, and labor have all rallied behind our 'friendly government,'" members of the commission say, "and are cooperating to make it a success."

Robert Crosby, secretary of the chamber of commerce in Bridgeport, the city's principal industrial city, and Mr. Egan, secretary of the State Federation of Labor, both endorsed the work of the commission and agreed with the Governor that sweatshops were definitely discouraged by the administration and by the State's labor code.

According to Mr. Egan, wages paid in Connecticut industry compare favorably with the rest of the country and are not more than 10 percent less than in New York City, a differential, he said, which was offset by the cost of living.

Democratic and independent observers agreed with Mr. Egan that the Governor had not tried to break down the State's labor code or its social services in his economy program.

Mr. Crosby and Oscar Monrad, secretary of the New Haven Chamber of Commerce, said that no inducements, such as free rent or moving expenses, were made to new industries invited here. In New Haven, where 22 companies located during 1939—the high mark for the State—a shortage of first-class factory space has developed, and the chamber of commerce is taking the lead in a drive to raise a fund of \$1,000,000 with which to build modern factories, to be rented at the prevailing rate. The program, he added, was patterned after that of the Special Areas Reconstruction Act in England, Wales, and Scotland, with its outstanding project at Glasgow.

## ACTIVITY IN TEXTILE AREA

In Windham County, center of the eastern Connecticut textile industry which collapsed some years ago, Paul V. Hayden, power engineer for the Connecticut Light & Power Co., organized an unofficial county-development commission in 1938 and went to New York to look for new industry. At that time 5,000 persons were out of work in a county of 50,000 population, and the relief problem was acute. By last July Mr. Hayden had brought 27 new companies into the county, 13 being textile or related manufacturers and 14 being factories in new and diversified lines. They occupied the deserted textile factories and called 4,000 of the unemployed back to work to make such varied articles as radios, electrical appliances, steel pins, bathrobes, metal furniture, and macaroni.

The State Development Commission appointed a committee last year with Carl Gray, vice president of the Whitney Chain Co. of Hartford, as chairman, to make a reemployment survey to find out who was on relief and why, and how they could be got back into industry. The committee found that about one-third of the unemployed were youths between 16 and 25 years who had never been trained for any trade or job, and that another third were men past 40 who had once been skilled workers but had lost or become rusty in their skills during the depression.

This report coincided with a growing demand for skilled labor in various trades, and recently groups of businessmen and industrial leaders, stimulated by the State government and with the cooperation of labor, set up the first of a series of "job-training" schools in Hartford. The State supplies quarters in State trade schools, and business and industry supply instructors and equipment.

The 53 members of the first class to be graduated all got jobs in Hartford factories as their diplomas. The Hartford school is now turning out 20 to 25 graduates a week and six other schools are about to be opened in Bridgeport, New Haven, New London, and elsewhere. Youths and "over forties" are accepted by the schools after being passed on by personnel managers of factories.

## COMPARISON WITH NEW YORK

According to figures assembled by the State Chamber of Commerce in New York, which is much concerned about the exodus of industry from that State, from the official census of manufacturing reports issued biennially by the Federal Department of Commerce, Connecticut by 1937 had recovered 93 percent of her

1929 peak in the number of manufacturing establishments, whereas New York had recovered only 75.7 percent. The 1937 figures are the latest that have been issued. They follow:

	1929	1937
New York.....	39,273	29,746
Connecticut.....	3,122	2,893

Figures from the same source showed that in the same period Connecticut recovered 85.8 percent in the value of her manufactured products, against 73.9 percent for New York:

	1929	1937
New York.....	\$9,892,763,000	\$7,310,674,419
Connecticut.....	1,471,034,000	1,261,798,329

In number of wage earners, Connecticut in 1937 had 104.3 percent of her previous 1929 peak, whereas New York had only 90.2 percent:

	1929	1937
New York.....	1,104,335	995,659
Connecticut.....	251,839	262,621

Business slumped in Connecticut as elsewhere in 1938, but came back in 1939. In December 1939 only 81,230 were registered as unemployed with the State department of labor, compared to 83,286 in December 1937, indicating that more wage earners were employed last year than in 1937. Official employment and production figures for 1939 will not be available, however, until the Department of Commerce releases its 1939 report. The Connecticut State employment service placed 56,897 persons in jobs during 1938, more than in any year since 1933.

According to Vincent Sullivan, State W. P. A. administrator, about 18,000 persons are on W. P. A. in Connecticut now, compared with 30,000 a year ago and 33,000 at the peak in September 1938.

### Proposed Loan to Finland

#### EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 7, 1940

AMERICAN FORUM OF THE AIR

Mr. BROWN. Mr. President, on Sunday, January 28, the Senator from Utah [Mr. KING], the Senator from Iowa [Mr. GILLETTE], the Senator from Wisconsin [Mr. WILEY], and I engaged in a debate over the Forum of the Air on the Finnish loan question, a subject which very likely will be pending in the Senate in the next day or so. The debate has been written out, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Announcer McCORMICK. This is the American Forum of the Air! Listeners from coast to coast once more are invited to hear another Forum broadcast emanating from the broadcasting studios of the New Department of the Interior Building in Washington, D. C., presented by WOL in cooperation with WOR.

The facilities of these studios have been extended by the Secretary of the Interior, Harold L. Ickes, in the interest of promoting educational radio programs which present national problems discussed by leaders of various schools of thought and conducted under nonpartisan and nonpolitical auspices.

Tonight's American Forum of the Air will be presented in two parts.

Under the direction of the chairman, Theodore Granik, pioneer in educational radio discussion and newspaper columnist, you will hear first the viewpoint of each of the speakers. Following the formal presentation of opinion the topic will be treated in extemporaneous discussion. And now your chairman, Theodore Granik:

Chairman GRANIK. Thank you, Mr. McCormick.

One of the most vital issues discussed by our Congress since it has convened on January 3 concerns possible United States aid to Finland. Various Finnish-aid bills have been introduced in both Houses. Some 12 days ago, President Roosevelt sent letters to the Senate and the House in which he said, "There is without doubt in

the United States a great desire for some action to assist Finland to finance the purchase of agricultural surpluses and manufactured products, not including implements of war. There is at the same time undoubted opposition to the creation of precedents which might lead to large credits to nations in Europe, either belligerents or neutrals. No one desires a return to such a status.

"The matter of credits to that Republic," said the President, "is wholly within the jurisdiction of the Congress."

"An extension of credit at this time does not in any way constitute or threaten any so-called involvement in European wars. That much can be taken for granted."

"It seems to me that the most reasonable approach would be action by the Congress authorizing an increase in the revolving credit fund of the Export-Import Bank and authorizing the Reconstruction Finance Corporation to purchase loans and securities from the Export-Import Bank to enable it to finance exportation of agricultural surpluses and manufactured products, not including implements of war.

"It is wholly within the discretion of the Congress to place a ceiling on the amount of such loans."

The President's proposals disappointed some of the friends of Finland because they would not permit the purchase of war materials here—Finland's greatest need. But many opposed them on the grounds that loans to belligerents were forbidden in the neutrality legislation and that such a loan would eventually involve the United States in the European conflict.

Senator PRENTISS M. BROWN, Democrat, of Michigan, had already introduced a bill which would authorize the Reconstruction Finance Corporation to loan \$60,000,000 to Finland without any restrictions as to its use. This week, the Banking and Currency Committee of the Senate, under the chairmanship of Senator WAGNER, of New York, continued hearings of representatives of the State Department and Jesse Jones, Federal Loan Administrator. It favorably reported compromise legislation by a committee vote of 18 to 2.

The bill as reported increased to \$200,000,000 the lending power of the Export-Import Bank.

A provision limits the amount the bank can loan to any one borrower to \$30,000,000, so the maximum loan which can be granted to Finland, in the discretion of the Export-Import Bank, is \$20,000,000 since Finland already has been allotted \$10,000,000 by the bank. Purchase of arms, ammunition, or implements of war is forbidden under the terms of the bill. And no loan may be granted which violates American neutrality under established principles of international law as determined by the State Department. Under an arrangement previously made, the bill in question now goes to the Senate Foreign Relations Committee. If favorably reported, it will go to the Senate floor for debate and vote.

As the Nation awaits further congressional action, we are pleased to present its discussion tonight by four distinguished Members of the United States Senate:

Senator PRENTISS M. BROWN, of Michigan; Senator ALEXANDER WILEY, of Wisconsin; Senator WILLIAM H. KING, of Utah; and Senator GUY M. GILLETTE, of Iowa.

The first half hour will be devoted to short presentations by each of the participants, the second half hour to an informal panel discussion among them. Now we present, as our opening speaker, Senator PRENTISS M. BROWN.

ADDRESS BY SENATOR PRENTISS M. BROWN

The question is often asked: Why should Congress aid Finland? A simple answer is because the American people want to aid Finland. I believe that the people want to give Finland direct financial aid. They want to do it quickly and they want it to be effective. The Senate Banking and Currency Committee approved a compromise bill which will enable our Government to loan Finland \$30,000,000 for general supplies. I favor my original bill for a \$60,000,000 loan. We can't always get all we want. The reasons for this overwhelming sentiment are simple. Our people see a brave little nation fighting against the most extensive nation in the world. We see a people outnumbered 50 to 1, unjustly attacked without a semblance of provocation. We see these brave people fighting for one purpose only and that is defense; defense of their homeland and their homes, of themselves and their loved ones. Finland asked nothing of huge Russia. Russia with more territory than it can possibly occupy and use asks that Finland turn over to her some of Finland's most valuable possessions. The American people are always aroused at a spectacle of this kind. Finland is the one European nation that has paid every installment of principal and interest due to date on her debt to us. The situation suggests a new credit. It is an evidence of integrity, honesty, and industry. Our people admire these qualities. When we compare Finland with that of her brutal assailant, not only our sympathy but our indignation is aroused.

Since the end of the World War, Finland has borrowed close on to one hundred million dollars in the United States and has paid back all but \$8,000,000 of that sum. It is not yet due. Since the beginning of the World War, Russia has borrowed almost two hundred million dollars from us. She now owes us \$395,000,000. She has not paid back 1 cent of that tremendous sum. She has a paltry credit of \$8,000,000 consisting of assets of the Russian Government that they could not get of this country. Little Finland owed our people and our Government combined over one hundred million and has reduced it to approximately eight million. She is absolutely up-to-date on her promises to pay. Russia owes us almost four hundred million and has not volun-

tarily paid us 1 cent. Does it not occur to you that if Finland had taken the Russian attitude and paid nothing, she would have had in excess of \$100,000,000 with which to buy the implements of war from Norway, Sweden, and the other countries of the world as well as from us? Yet today Finland cannot buy from us because she paid us her debt. Russia can buy and is buying from us with the money that she has withheld from the American Government. Should we correct this injustice? I sincerely hope that the Congress of the United States will provide a loan which will enable our Finnish friends to buy the implements and materials necessary to defend their homes and firesides, their women and children, and their Government.

The question is asked, What can America gain from this? What benefit will it be to the people of the United States to loan Finland money? Our people love justice. They appreciate honor and integrity and while we are unwilling to take any steps that will sacrifice our sons on the field of battle, I am confident that a satisfaction much higher than the material gain comes to those who yield a helping hand by the means proposed to an honored friend in his hour of trouble. Uncle Sam may be ridiculed by his own people for trying to be the good samaritan, but no one can say that the Finnish people ever gave any just reason for ridicule. They appreciate what we have done and fulfill their promises to pay.

Some complaint is made that we should retain our resources for our own people. I agree with this sentiment. But this money is to be loaned, not given. Finland's record indicates that it will be repaid and if it were not paid, the loss to the whole people of the United States would be about 25 cents to each of us. I think that the average man would be willing to risk the pay of a part of an hour's labor and would conclude that if it assisted in stopping the possible subjugation of the Baltic nations by communistic Russia, it would not only yield rich returns in satisfaction, but it would remove a possible danger of the spread of the nefarious doctrines of Stalin and his cohorts to the splendid peoples of all Scandinavia, and this is worth something to the United States in a moral and in a material way.

We live in a realistic world. We may stand aside and refuse the paltry aid suggested. That refusal might result in the spread of an unholy doctrine that will plague us, may possibly destroy us in the years to come. If in our judgment a loan now to this brave people will stop the spread, is it wiser in a material way to grant or to withhold? You may view the surge of ungodly Russia toward the fair states of democratic Scandinavia without a troubled heart. I cannot. I know the superb citizenship that Sweden, Norway, and Finland have given us. If I can without risk to my country stop this menace, I want to do so. We are not going to war about a few million. We can do this thing without serious risk. Not to do it may be much more dangerous to our democracy.

Chairman GRANIK. Thank you, Senator BROWN. We now present Senator ALEXANDER WILEY, of Wisconsin, in tonight's American Forum of the Air discussion Shall Congress Aid Finland? Senator WILEY.

#### ADDRESS BY SENATOR ALEXANDER WILEY

Mr. Granik, my colleagues, and ladies and gentlemen: In entering upon this debate we can agree on the following premises:

First. That the American people are practically unanimous in their sympathy and their desire to aid Finland.

Second. That the American people are desirous of doing nothing that will endanger the peace of America.

Third. That the American people are very anxious to find the correct legal way to help Finland.

The natural question that arises is, Why doesn't Congress vote a loan or a gift to Finland?

On January 8, I rose in the Senate and said, "Not in the spirit of controversy, but rather with a desire to get more light on the subject which apparently is becoming very significant, I am posing these questions:

First. Under international law, can the Congress of the United States loan or give money to Finland? International law shows that a neutral state is forbidden to grant loans or to open credit for a combatant nation for the duration of the war.

"Credits that a neutral state may give to facilitate the sale or exportation of its food products and raw materials are not included in this prohibition."

Second. Under our constitutional form of government, has the Congress any authority to make a loan of money or a gift to Finland?

The Constitution gives specific powers to the Congress. Besides these specific powers, there are certain implied powers. There is no such power in the Constitution that confers upon Congress this authority. Should we attempt to conform the Constitution to our sympathies and our emotions?

Third. Irrespective of international law or constitutional authority, would it be a wise course for the Congress to follow, when this Nation is at peace, to loan or make a gift of money to another nation that is at war? Would it not establish a new foreign policy? Would it not be pregnant with problems for the future if the Government of the United States were to loan money or make a gift of money to Finland at this time? Would not this act open the door for pressure-group demands, all down the highway of the future? Would not such action demand that we also make a gift or loan to Poland, to Czechoslovakia, to China? If Norway and Sweden, Belgium and Holland were invaded, then would not pressure groups demand that we loan money to these nations? Then the door would be wide open, would it not, for Government loans to Finland and France?

I asked a fourth question, "If no action on the part of this Government is taken to appropriate money for Finland, will that mean injury to the cause of the Finnish Nation?" The answer to this fourth question will have to be found in the hearts of the American people.

I want to impress upon my listeners that there is a great difference between action taken by individuals or groups of citizens and action taken by the Government. We here in Congress are trustees of the people's money—trustees with limited powers, because under our Constitution those powers not given to the Congress still belong to the people. It is up to Congress to guard not only the liberties of this people, but so guard our actions here in Washington that future generations will not find themselves hamstrung because of our acts. If with reason and judgment we pursue our course and do not let emotionalism and hysteria deflect us from our course, we will keep America safe, and we will still find a way through individuals and groups to aid those who need succor and assistance. Little Sweden found the way. The Swedish Government didn't give \$15,000,000 to Finland. The Swedish people did, and Sweden has less than 7,000,000 population.

Above everything else, it is for us to keep America safe. I repeat that through individuals and groups we can do that which will not involve America in a violation of international law, a violation of our Constitution and our well-settled foreign policy.

Once and for all, the people of this country should say to their representatives: "Do not open this door. Settle this problem now, so we'll not have pressure groups or perhaps even foreign elements engineering jobs on us in all the years that are to come."

I repeat, let us not open the door that will lead us into Europe again. Let us guard our neutrality. Let our sympathies, our judgment, and our reason also be the guide of our individual action. We, as individuals and as groups, ought to do as well as little Sweden has done; and if we do that, Finland would get at least \$100,000,000 in gifts from America. She wouldn't have to borrow.

Chairman GRANIK. Thank you, Senator WILEY.

You are listening to the American Forum of the Air, presenting four Members of the United States Senate in a discussion, "Shall Congress Aid Finland?" And now we present, as our third speaker, Senator WILLIAM H. KING, of Utah.

#### ADDRESS BY SENATOR WILLIAM H. KING

Bolshevik Russia and Nazi Germany are conspiring to destroy democratic nations. The ideology of both is similar—the destruction of democracy, of religion, and of spiritual values. The Nazi government destroyed Austria and made war upon the progressive and democratic Government of Czechoslovakia. Hitler waged a cruel and devastating war upon Poland, and, in cooperation with Stalin, a progressive and independent republic was brought under subjection to Nazi and Bolshevik rule. It is apparent that Hitler and Stalin seek the destruction of democratic nations. Estonia, Lithuania, and Latvia are under the shadow of the Bolshevik government, and Finland is now being assailed by the Bolshevik regime. Democracy is alien to the philosophy of Hitler and Stalin, who seek to impose upon peace-loving and independent nations an alien and oppressive rule. Their policies find parallel only in the dark ages and in periods when cruel oriental despots carried on wars of rapine and plunder. Not only are the rights of minorities being attacked by the Bolsheviks and the Nazi but liberal and progressive governments in which peace and progress were enjoyed by millions are being blurred by the records of oppression and cruelty, and attempts to not only destroy minorities but the rights and dignities of human beings and the integrity of independent and progressive democracies. The year 1939 witnessed the dismemberment of nations and the destruction of important small peoples. If the sweep of brute force is not halted, this year may bring the complete disappearance of many small nations from the face of the earth. With each blow struck against nations, small and great, such as Finland, Estonia, Lithuania, Latvia, Poland, Austria, Czechoslovakia, it becomes apparent that the rights of all peoples have been attacked and the principles of liberty and justice assailed. A world that is not safe for minorities and for small nations is a world not safe for democracy. The inhuman and barbarous attack upon Finland is part of an organized attempt at the assassination of the character and integrity not only of all minorities but of small democratic nations. The whole concept of self-determination for small groups and small nations is being completely undermined. This is a process with profound implications for all countries and all peoples. The way to the destruction of the rights of majorities begins in the footpaths of the annihilation of minorities. The rights and majorities are guaranteed only when the rights of minorities and small nations remain inviolate.

As I have indicated, the democratic and peace-loving peoples of Europe are menaced by Nazi-ism and bolshevism. The destruction of Finland may not appease the rapacity of the Bolshevik regime, and the Scandinavian states which have made important contributions to the highest form of civilization may be the next objects of assault by Hitler and Stalin. There are indications that the Soviet Government plans the destruction of some of the Balkan States, and in far off Asia millions of people are concerned as to their future in the face of Bolshevik activities. Switzerland, Belgium, Holland—countries in which liberty is enjoyed—may not escape the ambitions of the Nazi regime. The Bolshevik Government has never concealed its purpose to extend its authority throughout the world. It seeks the destruction of all democratic nations and the reign of communism throughout the world. Finland is now receiving the assaults of bolshevism; it is standing single-handed in the Thermopylae of western civilization in fighting, not only for its own life but for the principles and ideals,

the maintenance of which is essential to the preservation of liberty and democratic institutions.

Finland is writing one of the most sublime chapters in the history of the world, and so long as there are men and women who love liberty and justice, heroic and immortal Finland will command their admiration and indeed their love. This great democratic Nation cannot be indifferent to the cowardly and brutal assaults made by the Bolshevik regime upon a small nation which loves peace and justice and whose conduct has been consistent with the highest principles of international morality.

The contest is unequal between 3,000,000 of people and 180,000, and it is apparent that the destruction of Finland by the Communists would menace not only the democratic nations of northern Europe but make more ravenous the appetites of Stalin and Hitler. There are many persons who believe that Finland fights not alone for herself but for every democratic nation, great and small. One can read in the statements of Admiral Stark, as well as others familiar with naval and military problems, that our Republic, not remotely but directly, is concerned in the fate of Finland. Whatever strengthens bolshevism and nazi-ism, whatever jeopardizes democratic nations, is not beyond the pale of American concern.

But, as indicated, this contest is unequal, and peoples everywhere who love liberty should be aroused to the importance of lending aid and comfort to Finland in this great crisis of her existence. Sweden is extending financial aid, and we are advised that many of her sons are cooperating with the military forces of Finland.

The League of Nations, of which the Soviet Government was a member, expelled it because of its indefensible course in the violation of the covenants which it had made. Members of the League are, therefore, at liberty to aid in the defense of Finland. Indeed, there may be a moral obligation to do so. Though America is not a member of the League, she was influential in its formation, and the American people cannot view with unconcern any violation of treaties entered into for the promotion of world peace and the abolition of war.

It is my opinion that the majority of the people of this Republic view with deep concern the brutal and cowardly assaults upon democratic nations, and the wicked and unjustifiable attacks upon the Finnish people.

The unequal contest in which Finland is engaged calls, not alone for moral support, but for financial aid. I believe the great majority of the American people are willing to extend a loan to Finland to aid her in securing essential supplies for defense against the Bolshevik foe.

Finland is not asking for gifts. Her record for financial integrity gives assurance that her request is meritorious, and that payment will be made. More than 20 years ago Finland was struggling for independence against Russia; and the United States and other nations, extended credit to aid her in the contest. More than \$100,000,000 were loaned to the Finnish Government and all has been paid except a small amount which is not yet due.

In contrast, neither principal nor interest has been paid by Russia upon the \$400,000,000 loaned to her by the United States. In my opinion, a loan should be made to Finland, in order that she may obtain materials to aid her in repelling the Bolshevik attacks. Such a loan would not be in violation of the Neutrality Act, or of international law. Finland has not declared a state of war nor has Russia. We employ this pretext to support our continued trade in war materials with Japan, though we know they are being used to destroy millions of Chinese men, women, and children.

No neutrality has been invoked in the Chino-Japanese conflict. Can neutrality be invoked against Finland?

We should be more concerned in extending aid to Finland than we are in supplying Bolsheviks with gasoline and other materials used in her assaults upon Finland. Hundreds of airplanes are almost daily flown over parts of Finland, and deadly bombs are rained upon hospitals, churches, cities, and towns not within the sphere of military operations. The Bolsheviks are apparently endeavoring to destroy the morale of the Finnish people by slaughtering innocent men, women, and children, destroying their homes and resorting to fiendish and barbarous practices, which can find parallel only among uncivilized people.

As I have indicated, Russia is not denied supplies by our Government which are available to her in the prosecution of her unholy crusade. Japan, likewise, in her merciless and devastating assaults upon China has been free to obtain materials which have been indispensable to her in the prosecution of her military operations.

Suggestions are made that credit be extended to Finland only for the purchase of food supplies. Finland still has some resources available for the purchase of food but her imperative needs are airplanes and materials in order that she may repel the barbarous assaults of Stalinism.

But, as I have indicated, Finland needs a loan to enable her to obtain airplanes and other military supplies. Her appeal should not go unheeded.

Chairman GRANIK. Thank you, Senator KING.

And now as our concluding speaker, in the first half of tonight's program: "Shall Congress Aid Finland," we present Senator GUY M. GILLETTE, of Iowa.

ADDRESS BY SENATOR GUY M. GILLETTE

Thank you, Mr. Granik.

In determining our attitude as a Nation toward a loan to Finland in the present crisis, it is extremely important that we Americans have the problem before us in the proper form, and not be influenced by misleading angles of thought.

From the beginning of our national history—having in mind our own struggle of Revolutionary days—the American people have been definitely sympathetic with the underdog in international complications. The wars for South American independence, the Cuban struggle, the fight of the Boer Republic for existence, the destruction of Ethiopia, the rape of Czechoslovakia, the attacks on Poland, Austria, China, and many similar episodes, have found the American people so sympathetic with those whose rights were being invaded, that these sympathies found expression in attempts to aid the various nations and peoples.

Following this trend and record, it is perfectly natural that all of us should be intensely stirred by the inexcusable attack on little Finland, and have our admiration aroused by the superb fight she is putting up in her defense. But we must bear in mind that pity or sympathy as individuals, or willingness to make personal sacrifices as individuals is an entirely different and distinct thing, from taking a position that might commit our country in the way of national involvement.

The declaration of war by the United States in 1917 was not the result of a single incident or episode. As a matter of fact, we reelected President Wilson, on a platform and in a campaign whose principal slogan was, "he kept us out of war." Speaking personally, the invasion of Belgium in 1917 did more to arouse my wrath and determine my willingness to serve in that war, than any other particular incident. But our involvement in actual war in 1918, came as a result of series of events and occurrences, and because of this accumulation, aided cleverly by propaganda pressure.

Present-day wars are waged on a threefold front—military, economic, and political. Through pressure on all these fronts, belligerents hope to break down enemy resistance. We must not blind ourselves to the fact that assisting a nation at war to acquire either munitions or food and clothing is recognized by all participants as an unneutral act. Why should attempts be made to lead anyone to believe that a loan to Finland for purchase of munitions or for the purchase of necessities and materials, other than through such agencies as the Red Cross, would be considered other than a breach of neutrality by the nations concerned? England, France, Germany, all insist on this position; none of them recognize any distinction, and each lists almost every article of commerce as contraband and is bending every effort to make its blockade effective. Does anyone think that Great Britain would willingly permit a cargo of ore, cotton, wheat, or other material to proceed through her blockade to Germany?

Finland and Russia are at war. To maintain otherwise is a subterfuge which fools nobody. Now we are faced with a situation similar to the long list of national struggles that have enlisted our sympathies in the past. We resent the invasion of a peace-loving country by a communistic tyrant. As a peace-loving people ourselves we bitterly deplore the use of national brute force against the small and weak. There is no question whatsoever as to where our pity goes and our sympathies lie. And yet, we as a nation have recognized the Union of Soviet Republics. We knew full well the atheistic doctrines on which that Government was established. We knew thoroughly that communistic leaders advocated and justified any means or methods of spreading their doctrines and securing their aim of world-wide communism; we even tolerate to a large extent teachings of this philosophy within our own borders, and permit its advocates to present their candidates for national suffrage in our elections.

Is financial aid and assistance a first step toward involvement in European war? We have recognized the fact that it is by placing on the statute books during the past few years various neutrality statutes, which all expressed that conviction by prohibiting the flotation of securities of belligerents or the extension of credit and financial aid. Should the small nations of Europe—Belgium, Holland, Sweden, Norway, Greece, or the other Balkan states—be similarly invaded by the powerful communistic nation or by Nazi Germany, is there any reason or justification for not immediately proposing a similar translation of our sympathies into tangible aid and assistance? Should we not also come to their aid if we establish such a precedent? Should we allow ourselves to drift into a position where our sympathies can be inflamed to wrath by all the tricks of modern propaganda, where it will be necessary to engage in war as the only means of justifying our participation? The advocates of such a drifting policy must be ready to make this decision: Is the United States ready to defend by armed force as well as dollars and materials the rights and independence of European countries? My interest and purpose is to disregard my own individual sympathies and wishes, and by no vote, word, or action of mine let that sympathy influence any legislative step which might well become one of a series of incidents and actions which would bring us to the edge of the whirlpool of war which is now revolving over half the civilized world, with the real probability of being drawn nearer and nearer to its horrible vortex.

Chairman GRANIK. Thank you, Senator GILLETTE.

And this concludes part I of tonight's forum presentation.

Announcer MCCORMICK. Immediately following station identification we shall continue with the extemporaneous discussion.

This is the Mutual Broadcasting System.

This is the second half of the American Forum of the Air originating in the broadcasting studios of the new Department of the Interior Building in Washington, D. C.

These weekly forums are presented over the Mutual network by WOL in cooperation with WOR.

We return you to the chairman, Theodore Granik.

Chairman GRANIK. And now as part II of tonight's American Forum of the Air on "Shall Congress Aid Finland," we present our participants again in an informal panel discussion. They are: Senator PRENTISS M. BROWN, of Michigan; Senator ALEXANDER WILEY, of Wisconsin; Senator WILLIAM H. KING, of Utah; Senator GUY M. GILLETTE, of Iowa.

Senator BROWN will open the discussion.

Mr. BROWN. Mr. Chairman, I would like to ask a question of the Senator from Iowa, Mr. GILLETTE. Naturally after hearing all of these speeches tonight I think that something that I said in my speech is probably the best thing that has been said tonight.

Mr. WILEY. Charlie McCarthy? [Laughter.]

Mr. BROWN. That is this: What do you think, Senator GILLETTE, of the situation that arises out of our former financial relations with Russia and our financial relations with Finland? The situation now is that Russia is able to buy not only on cash but on credit from the people of the United States her munitions of war and she does so with money which she ought to have paid to us.

On the other hand, Finland which at one time owed us something like a hundred million dollars has paid us. They haven't the hundred million dollars because they have turned it over to us, they are unable to buy any of their munitions whatever from the United States on either cash or credit because of their honesty and their integrity, because they paid us. Russia is able to buy from us because they did not pay us. Should we attempt to do anything to correct that situation?

Mr. GILLETTE. Well, Senator BROWN, I am glad you asked that question because I had made a notation to ask you a question along the same line. First I want to answer by agreeing with you that the statement that you made in your speech was perhaps the best point that has been made here tonight. But beyond that I can't agree with you. There is no question that the meticulous care with which Finland has met her obligations to the United States is another factor that stirs our sympathies and our anxiety to be of assistance to her. But when you draw the comparison between the Soviet Republics and Finland with reference to their attitude toward the loans heretofore made by the United States, please bear in mind that the sympathies of the American people were strongly stirred during the recent neutrality debate in connection with a desire to aid England and France, and you have made a very superb statement on the floor, I believe, with reference to the matter, and yet that war is being prosecuted to a large extent through the same funds that England and France and Germany and the other nations borrowed from us and neglected with the same enthusiasm to repay, as Russia did.

So that, while it is an unfortunate situation, it is no justification in my opinion to participate in the war.

Mr. BROWN. I think your answer is good from the standpoint, perhaps, that Mr. Stalin might look at it. I agree to that with respect to debt payments, but I think you overlooked the viewpoint of the Finnish Government. They turned over the money to us, they haven't it now, they could have had it if they had acted like their enemies and refused to pay us.

That is the underlying situation that impels me toward doing something to do justice on the part of the United States because of that situation.

Mr. WILEY. Senator, can I just break in here?

Mr. BROWN. All right.

Mr. WILEY. I would like to read a statement given by Edwin M. Borchard, of Yale University. This is very apropos of what you gentlemen have been saying. He said, speaking of George Washington, and I think it is very apropos right now: "It is the property of great men, even when they share the prejudices of their time and of their country, to know how to get free from them and how to rise superior to their natural habits of thought."

I think everybody in this country feels a tug at their heart when they think of Finland, and everyone wants to help that feels that way, but let's get away from this idea again that has been so prevalent in the last 7 years that every time a job has got to be done in this country we can let George do it; that is, Uncle Sam.

Now we want Uncle Sam to do it again, when we, the people, ought to do it; as I suggested to Senator KING, that is the way they did it back in George Washington's time, and I want to particularly call attention and challenge him as soon as you are through with your question.

Mr. GILLETTE. There is a question, Mr. Granik, that I would like to address to my good friend, Senator KING. I was reminded by something that was said by Senator WILEY of the fact that Sweden and Norway, who have a stake in this situation that is more intense than even ours, have been very, very careful, as presented by Senator WILEY, to differentiate between any action by the governmental agencies of Sweden in the way of lending aid to Finland, and the contributions, the individual contributions, of the people. In fact, the King of Sweden, by a public statement, has warned them against taking any action that could be construed as a governmental action rather than as an individual action. Why do you think that we are justified as a Congress, as a legislative branch of the Nation, in taking steps to interfere or to aid Finland at this time?

Mr. KING. In the first place, let me make one comment about your statement respecting Sweden. The Swedish Government directly and indirectly is aiding. It has, as I am advised, encouraged a large number of its citizens to go to Finland and participate in the war. That, itself, would be construed by some as an overt act upon the part of the Swedish Government. It isn't an act merely of sympathy, it is an act of self-preservation.

Moreover, as you may have learned—I will not say that it is an order by the Government, but every civil official in Sweden contributes one day's pay out of every month's salary, so that directly and indirectly, by manpower, by money, my moral support, Sweden is aiding in the war upon the side of Finland.

Coming to another question, may I say that there is not war, in the legal sense of the word, between Russia and Finland any more than there is war—and that is the interpretation placed by our State Department—between Japan and China. We have been loaning directly and indirectly \$25,000,000 to China through the Bank of China, and we have in many ways evidenced our support of China, materially, morally, and spiritually.

As I stated, it is held that there is no war between Finland and Stalin because war has not been declared. Under our Neutrality Act there has been no state of war effectuated between Finland and Russia. We have not recognized that there is a state of war and therefore we are maintaining the same relations with Russia as we have maintained when there was no controversy between Russia and Finland.

There is no war in a technical sense of the word and we are therefore not aiding one belligerent as against another in violation of the laws and neutrality or international law. No international law is being violated by our contribution, if we shall make a contribution, to Finland in this great conflict in which she is engaged.

Mr. WILEY. Well, Senator KING, might I state that whether or not there is a war within the international-law sense, it is a question of fact, and I would like to call your attention specifically to what has been said on that.

"War," as defined by Oppenheimer in his Treatise on International Law, "is the contention between two or more States through their armed forces. War is the fact recognized by international law. For a war to be in existence, two or more States must actually have their armed forces fighting each other."

Now the fact that we have an embargo law that says that certain things come into existence if and when the Government or Congress declares a state of war has nothing to do with international law, which is the result of the law of nations which has existed now for centuries, and if you want to know whether there is a war in Finland, well, just compare the war there with what there is on the western front, and you will know there is a war in Finland.

And furthermore, as this distinguished professor in Yale said, and I would like to read just a—

Mr. BROWN. Why not quote from Harvard. It is the authority here.

Mr. WILEY. No; because I am quoting Yale. I am perfectly willing to refer to Harvard, too, but I would just like to read this statement of Borchard, if I may. He said: "American sympathies for Finland may legitimately be expressed in private contributions to the Hoover committee or any other private donation. A governmental loan to Finland, whether through the Export-Import Bank or the Reconstruction Finance Corporation, is an act of intervention and of war, exposing the United States to legitimate reprisals now or hereafter on the part of Soviet Russia."

"It therefore seems to me," he said, "illegal and dangerous, however tempting, to advance public funds to Finland."

Now I made a statement a few moments ago that I just want to call to your attention, stating that back in Washington's time—and the best authority we have in this country on international law is Moore, our own Moore who served over abroad, who served here as counselor to the State Department: Back in 1798—mind you, 1798—after France had helped us, France got in trouble and the question came up whether or not this Government of ours should loan money to France and with reference to the loan of money which was solicited from the United States by the French Government in 1798 to the American envoys in Paris, the United States took the ground that such a loan would be in violation of neutrality. This is cited and approved also by Chancellor Kent. And one of the other instances was later on in 1816 in South America, when there was a war between Spain and one of the South American colonies, and that thing happened again, and we had refused to give money.

Now Senator KING said that there were certain moneys that he voted for. I challenge him to show where this country was not at war at that time.

We were at war and it was within our war powers, but any time this country has been at peace we have never taken the position that the Congress of the United States has a right to dispose of the people's money in furthering another war overseas, no matter what our sympathies were.

Mr. KING. I think the Senator is in error in stating that no appropriation has been made except when we were in war. We were not in war with Russia when we made an appropriation of \$10,000,000 for relief; we were not at war with Japan when we made a very large appropriation by reason of the catastrophes that occurred there. Moreover, if the Congress of the United States desires to make an appropriation for peace or for war, there is nothing in the Constitution that inhibits it.

Mr. WILEY. Is there anything in the Constitution that permits it?

Mr. KING. Well, there are many things that our Government may do that are not specially authorized because there is no necessity for a statement with regard to the same. There are negative rights as well as affirmative rights, and negative inhibitions as well as positive inhibitions.

But coming back to one of the points that you just made, our Government has held, the State Department—and I take that in preference to Mr. Moore, although I have a very high regard for Mr. Moore, and his work on international law is standard. But

our State Department has taken the position that there is not war between Japan and China, and we have made a loan, through a bank which we set up, of \$25,000,000 to China, and we have in many other ways and through other channels given aid and comfort to China in the contest which she is waging with Japan.

In the Neutrality Act, when it was under discussion, it was clearly stated there that the President would have the right under the act to declare a state of war, if a state of war existed between Finland and Russia. He has not done so, and I draw the conclusion from his negative action that he does not believe that there is a state of war within the definition of international law, or certainly within our concepts of what our duties and responsibilities are.

There is no state of war so far as our State Department has declared, there is no state of war so far as the terms of the Neutrality Act would imply. Therefore, there being no state of war, there is no objection whatever; if Congress desires, it may make an appropriation of one million or sixty million dollars, as called for by the bill of the Senator from Michigan, to aid in this great conflict.

But there is one point that I want to emphasize, namely, the question of self-defense. We may sneer at that suggestion. Admiral Stark's view is one which will impress itself more and more and burn into the hearts of the American people. If Finland shall be destroyed, then Sweden and Norway and Denmark will be the next objects of assault, and if the democratic nations of Europe are destroyed, obviously Great Britain and France may not win the war, and with the English fleet destroyed or nullified, then we will have to increase our Army and our Navy, we will have to police both great oceans, our liberties and our rights will be jeopardized by the triumph of the Bolsheviks and the Nazis in this great world conflict.

Mr. Brown. Suppose, Mr. Chairman, we do loan the money to Finland. Does anyone seriously think that that is going to cause us to go to war? Suppose they don't pay it; France and Britain and other European nations owe us, on an agreed basis, something like \$11,000,000,000 plus interest. We haven't gone to war over that. We are not going to war with Finland to try to collect back 25 cents apiece for the American people. Is Russia going to attack us if we loan thirty or sixty million dollars to Finland? It is unthinkable. The Russians have their hands full at the present time. I can't see this terrific danger that the Senator from Wisconsin and the Senator from Iowa point out, that it is a step toward war.

That was the favorite weapon of those who bludgeoned us in the neutrality debate, that it was a step toward war. One Senator said that we were going to be in the war in January.

Mr. KING. Both sides argued that.

Mr. Brown. January is pretty nearly over and we are not in the war, and I confidently predict that we won't be before January is over.

Now, just how is a loan of thirty or sixty million dollars going to get the United States into war? And if it isn't going to get us into war, why not let the people of the country do what everybody knows they want us to do?

Mr. WILEY. Are you addressing that question to me, Senator?

Mr. BROWN. It is open to anybody that can answer it.

Mr. WILEY. I will be very glad to attempt the answer. I don't believe, in any remarks that I made, that I said this thing would bring us into war. I said it was an open door to new foreign policy that would be very dangerous, and it has become a habit.

Mr. BROWN. That is an involved way of saying the same thing.

Mr. WILEY. It may be, but it is so easy for us to get into the habit, we who are the trustees of the people's money and trustees of the people's rights, to get careless with that money and with those rights. And while it doesn't do any good for me to deny or to say my distinguished colleague, Senator KING, is wrong—and he says I am wrong—I think that can be very well settled by saying that this bill which you introduced, Senator BROWN, when it came before the committee, was apparently kicked out the window and a new bill put in that has in it the provision that no loan can be made even through the Export-Import Bank if it is in violation of the international law as interpreted by the State Department.

Mr. BROWN. We know how the State Department is going to interpret it.

Mr. WILEY. If the Senate has a string on the State Department, that is fine. I thought they were an independent body, and that the Chief Executive alone could tell them what to do.

Mr. BROWN. I specifically asked the Department how they would interpret that question before I wrote it into the statute.

Mr. KING. Permit me to make the observation that the committee are not impeccable. They make many mistakes, and kicked a good bill out of the window; probably they have regretted it and want to bring it back again. [Laughter.]

Mr. GILLETTE. Mr. Granik, may I just amplify the answer just made by my colleague, the Senator from Wisconsin?

In response to the inquiry of Senator BROWN, nobody expects and anticipates that a war would result from a proposed loan to Finland. There is no question about that. But here is the point. The argument that you have presented, and which was also presented forcibly by Senator KING, is strangely reminiscent of the argument that was presented 20 years ago that we must get into the European war in order to prevent the Central Powers from winning and then coming over here and involving us. I refuse to see the logic in taking a step toward war at the present time as a possibility against being drawn into a war some time in the

future; an inchoate thing to take it first and step—and wars don't result from one step, they result from a series of steps and public opinion fomented and whipped up by clever propaganda. And I refuse to be excited over the possibility of a war in the distant future and take a preliminary step at the present time.

Chairman GRANIK. Thank you, gentlemen. You have been listening to the American Forum of the Air, presenting the discussion on "Shall Congress Aid Finland?" Our participants were:

Senator PRENTISS M. BROWN, of Michigan; Senator ALEXANDER WILEY, of Wisconsin; Senator WILLIAM H. KING, of Utah; Senator GUY M. GILLETTE, of Iowa.

And now for a final word from Mr. McCormick.

Announcer MCCORMICK. Thank you, Mr. Granik.

Thus we conclude another broadcast in this season's series of "The American Forum of the Air."

These broadcasts emanate from the studios of the New Department of the Interior Building, in Washington, D. C. The facilities of these broadcasting studios are extended by the Secretary of the Interior, Harold L. Ickes, in the interest of promoting educational broadcasts which present national problems discussed under non-partisan and nonpolitical auspices.

This program is arranged by Theodore Granik, who presided as chairman.

Next Sunday at this same hour Mutual will bring you another Forum. Address your comments to Mr. Granik, care of station WOL.

Stephen McCormick speaking.

This is the Mutual Broadcasting System.

## Keel-Laying of the Battleship "Alabama"

### EXTENSION OF REMARKS

OF

HON. COLGATE W. DARDEN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

ADDRESS BY HON. HARRY FLOOD BYRD, OF VIRGINIA

Mr. DARDEN. Mr. Speaker, under unanimous consent to extend my own remarks in the RECORD I include therein the very able address delivered by the distinguished junior Senator from Virginia, the Honorable HARRY F. BYRD, at the keel laying of the battleship *Alabama* Norfolk Navy Yard, Portsmouth, Va., February 1, 1940.

The address is as follows:

I am very grateful for the privilege today of speaking at this notable ceremony. I thank Admiral Simons, the Commandant of the Norfolk Navy Yard, for the courtesy he has paid me.

As a member of the Naval Affairs Committee of the United States Senate, I take a deep interest in the United States Navy and in the operation of the Norfolk Navy Yard.

It has been my privilege to work in close cooperation with the Congressman from this district [COLGATE DARDEN], whose services as a member of the Naval Affairs Committee of the House of Representatives, and recently as chairman of a subcommittee on the Reorganization of the Navy Department, give him a position of great importance in the very front ranks of those able and patriotic men who are striving to make America's Navy the most efficient in the world—big enough and strong enough to meet any emergency that may arise in a future made uncertain by the chaotic conditions of the world today.

I am glad to speak at this great yard here in Portsmouth, whose well-trained and highly skilled workmen have made a long and enviable record of high and competent public service.

This is neither the time nor the place to mention any comparison of the work of the 21 shipbuilding yards. Yet, as a Senator from Virginia, I feel a just pride in the administration of this yard and in the general recognition that the Norfolk Navy Yard stands among the first of the great navy yards of our Government, as measured by the official records for efficiency and production.

In our national preparedness program the annual report of the United States Civil Service Commission, emphasizing the importance of trained civilian personnel, is of interest. This report says:

"No Nation faced with the necessity of engaging in a preparedness program can afford to give primary consideration to the construction of equipment and secondary consideration to the recruitment of the civilian personnel upon whose shoulders rests the responsibility for success or failure of many aspects of such a program."

And it is this civilian personnel at the Norfolk Navy Yard that measures up to such high standards as to give complete assurance that they will perform their full duty as Government employees and American citizens in any emergency our country may face.

Today we lay here the keel of the battleship *Alabama*, named after a great southern State. It is the fourth United States Navy

vessel named the *Alabama*. But another *Alabama*, which never sailed under the Stars and Stripes, was the most famous of all—that was the Confederate ship *Alabama*, built in England, whose heroic exploits in the War between the States will always remain a bright page in the history of the South's bravery. The Confederate *Alabama* succeeded in sinking 70 Federal ships in 2 years. Finally, when barricaded in a French harbor, her captain accepted the challenge; left the safety of the harbor, and came out to fight until sunk by the adversaries' gunfire, thus making an honorable and glorious chapter in the naval history of our people.

As we build the new United States *Alabama* and recall the heroism of the Confederate *Alabama*, we can feel the gratification that must come to all Americans that today loyalty to American ideals knows no line between the North and the South. As we observe the destruction of democracies in other lands, America stands united to preserve American ideals—to preserve American freedom and American institutions. Our Nation was conceived in liberty and dedicated to preserve the equality of all men. Our fathers won for us this liberty and it is for us, the living, to dedicate ourselves to preserve and carry on the work which they did.

So, on this notable day in the history of the Norfolk Navy Yard we can take proud satisfaction in the confident thought that we are building here a new *Alabama* which will ever be worthy and true to the high traditions of a great Nation, a great State, and to the example of her heroic predecessor.

It was under the administration of a very distinguished Virginian, the late Secretary of the Navy, Mr. Swanson, that the present naval program was formulated, including the construction of the *Alabama*. The cost of the *Alabama* will be \$69,000,000, and 52 months will be required for its building. She will carry 16-inch guns and have 35,000 tons displacement, one of our largest battleships. Fourteen hundred officers and men will be required to man her.

America, I pray, will never again enter a foreign war, yet we must not forget that in this day of ruthless dictators and uncurbed ambitions the best insurance for peace is national preparedness. Our Navy will ever remain our front-line of defense.

When our World War veterans put their uniforms in moth balls while the world waited to see if it had been made safe for democracy, America had the strongest Navy in the world—433 combat ships built and building. In 1921, as an assurance for future peace, the United States led the naval disarmament and actually scrapped 928,000 tons of fighting ships. We find now that the other nations did not carry out their agreements. Instead of scuttling ships, they tore up blueprints. Our country then tried naval disarmament by example. No other nation followed America's example. The result was that in 1934 the United States was no longer supreme on the seas, and many of her war vessels were over-age and badly in need of replacement.

The present naval building program in America is not for aggression or to conquer new territory but is to defend this Nation from any attack, no matter from whence it comes.

The American Navy has always been a defensive weapon. Its beginning can be traced back to Lake Champlain in 1775, the first American sea force that succeeded in delaying an invading British Army and allowed American land forces to gain a vital strategic victory.

After the Revolution the American Fleet went out of existence completely until 1794, when Congress provided for the construction of six new war vessels. Then came in 1793 the sea warfare with the French, later the Barbary wars, our naval war with Great Britain in 1812, our war with Spain, and the World War.

Our naval heroes and naval exploits have challenged the admiration of the world. The bravery, the efficiency, and the patriotism of the American Navy give great pride to every American. Our Navy has met every crisis in our history and has never failed in its responsibility. American traditions and American achievements are our most valuable national possessions. And to the immortality of these traditions the American Navy has notably contributed, standing as it does today, respected and feared, honored for the patriotism of its service and possessing the affection and admiration of all Americans.

We pay tribute to our Navy, to the skill and efficiency of the civilian personnel of such high order as to be found here at Portsmouth, to the unsurpassed morale and bravery of our enlisted men, to its able and fine officers; and we thank God, as American citizens, for the American Navy.

## Parity Prices, Tariffs, and Landed Costs

### EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

Mr. CASE of South Dakota. Mr. Speaker, today, as 7 years ago, the basic problem of this country is the problem of agriculture. Prosperity on the farm means national prosperity. We hear much about the need for "parity."

Under permission granted by the House, I offer the following definitions on the subject, written by O. L. Brownlee, in an editorial in the Sioux City (Iowa) Tribune:

[From the Sioux City (Iowa) Tribune]

#### EXPLANATION OF PARITY

A Tribune reader writes from Chadron, Nebr., asking that we give a definition of parity prices, parity tariffs, and just what they would mean in terms of money to the farmer for his products.

A good definition of parity prices would be as follows:

"Parity prices represent cost of production plus the share of the national profit accruing to the number of units involved in a particular transaction as determined by a general commodity index of a given period when equal exchange value prevailed as between goods and commodities."

The general commodity index, which is the slowest changing factor in our economy, establishes the price relationship of things to each other. It is variable as wages, taxes, and other cost factors change.

Currently, parity on wheat would be about \$1.19 per bushel; corn about 78 or 79 cents per bushel; hogs around \$9.40, and cattle around \$10.50. Sheep, poultry, butterfat, eggs, etc., would be in relative proportion to that price range.

A good definition for parity tariffs would run something like this:

"A parity tariff represents a customs duty equal to the difference between the actual landed cost of an imported item and the American parity price of the domestic item which it would displace by competition or substitution, as determined by the use of a general commodity index representing a period when equal exchange values existed between goods and commodities."

In our own opinion it would be more simple and practical to impose tariffs on the basis of a general index than on the difference in cost of foreign and domestic products.

It is difficult to determine cost of production of any imported item just as it is difficult to determine the costs of two or more farmers or manufacturers in the United States. Costs vary between individuals as between countries.

The production cost of a foreign item is not important to us, anyhow. It does not become competitive with American products until it has been actually landed on American shores and freight, insurance, lighterage, and other cost items have been included in the bill we have to pay.

A domestic parity price for our products would insure cost of production and a profit to the average producer. Some producers would make more than others, of course, due to the facts of better soil or management or better factory equipment and other factors which no law can control.

Parity tariffs are necessary to the establishment and maintenance of parity prices. Our national economy never will be put on a sound basis until that principle has been adopted.

The principle can be easily and clearly expressed in law and it can be operated with the present machinery of government. It involves no subsidies, no new taxes, no new burdens, no complicated measures of administration. And it will yield a constant and adequate price for the products of our land, factories, and labor on a basis of proper exchange relationship.

Mr. Speaker, parity for producers is the direct road to national prosperity.

## Live and Let Live

### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

Mr. THORKELSON. Mr. Speaker, I note frantic efforts are made by the British propaganda machine to align us with Great Britain in the present European debacle. Mr. Churchill's plea in the Washington Post, January 21, 1940, displayed nothing so much as fear—fear of the untenable position in which Great Britain placed herself when she declared war on Germany in the expectation that the United States would fight and pay for such war. Mr. Churchill's plea to neutral nations also falls upon deaf ears, for they know the perfidious Albion too well.

I do not believe that Belgium, Holland, the Scandinavian countries, and Finland will be invaded by Germany unless she is compelled to do so by England. I rather prefer to believe that the German people will remain neutral, or give these countries which are in reality inhabited by their own kind of people as much aid as possible in the present communistic invasion.

The most inhumane government is that of Russia, and the most unjust war is that now conducted by Stalin in his invasion of Finland. The papers would have us believe that fascism and nazi-ism are world threats, when in reality they are a red herring employed by the Communist to obscure his own trail. Communism is the only "ism," and the Communists are the only individuals who are threatening not only world peace but particularly the peace of the United States. The leaders of these subversive philosophies—socialism and communism—are well entrenched in the Russian, the British, the French, and the American Governments. It is this group of hidden rulers in the invisible government who are responsible for the present international unrest, and it is this group which should pay the price for whatever may happen in the present conflict in Europe. It was this crowd of internationalists that instigated and prolonged the World War, and they are now attempting to stampede the world and us into another conflict so that they may build a world confederation of states. This confederation of states is in reality a substitute for the League of Nations. These money changers hope in this to set up a government to dominate the world, and at the expense of world powers.

Mr. Churchill's accusation of barbarism is ill-advised, as no nation has been more barbaric than England. In making this statement I do not refer to the English people, for they are O. K. I refer instead to the crossed nobility of Great Britain. This nobility is even losing caste with the British people themselves, for they are now very well aware of their origin.

What is Mr. Churchill hollering about? Practically all of the British Empire has been acquired by conquest, with little or no consideration for the native populations. England may, in her present generous mood, do something for India. Why not set India free? They want home rule, so why deny it to them?

Great Britain's history is that of a bully, not only to her foreign subjects but even to her own people. It was Great Britain that banished her own citizens to penal colonies aboard prison ships, where many of them died chained to the timbers of the ships. These same ships were well equipped with various forms of torture machines, in which the unfortunate prisoners were incarcerated to satisfy the hatreds of British rulers.

Let England investigate the lot of her own citizens in London, Liverpool, and Hull before she criticizes others for barbarism. It was the English merchant ships, owned by English Shylocks, who introduced opium in China to further exploit and subjugate the people of that great empire. This act alone broke the heart of China, and the introduction of opium is one of the blackest pages in the history of the British colonial policy. The criticism of barbarism by English statesmen is like the pot calling the kettle black.

Let us look back 160 years and see what Great Britain did for the United States. Much information can be had from Benjamin Franklin's letters. It was the English who agitated the Indians and brought about Indian uprisings and scalping of the American people. These scalps were dried and shipped to the rulers of England as trophies and evidence of British loyalty.

It was the English money changers that bribed Benedict Arnold. Here is part of a specimen of the poetry popular at that time:

#### ON GENERAL ARNOLD

At freedom's call, see Arnold take the field,  
With honor blazon'd on his patriot shield;  
His gallant feats a dazzling luster spread;  
And circling glories beam'd around his head.  
His well-earned praises were consign'd to fame;  
And fate decreed him an immortal name,  
But when, estrang'd from freedom's glorious cause,  
Neglecting honor and its sacred laws,  
Impell'd by motives of the basest kind,  
Which mark the vicious, mean, degenerate mind,  
To virtue lost, and callous to disgrace,  
The traitor hiding with the hero's face,  
His canker'd heart to sordid views a slave,  
To mammon yielding all that freedom gave,  
Enleagu'd with friends of that detested tribe,  
Whose god is gold, whose savior is a bribe,

Could basely join, his country to betray,  
And thus restore a ruthless tyrant's sway,  
On freedom's sons impose the galling yoke,  
And crush each foe to vice beneath the stroke;  
Not all his laurels in the field obtain'd,  
Not that which Phillip's son by conquest gain'd,  
Not all that once adorn'd great Caesar's brow,  
Nor all that Washington may challenge now,  
Could save a wretch, whom crimes like these debase,  
So far beneath the rank of human race.  
But stung with keen remorse, his guilty soul  
In vain shall seek repose from pole to pole;  
Perpetual anguish shall torment his breast,  
And hellish demons haunt his troubled rest;  
Not even death shall shield his hated name,  
For still the catiff shall survive to fame,  
By fate's decree, who thus pronounce his lot:  
"Too bad to die, too base to be forgot;  
Thy crimes succeeding ages shall proclaim,  
And Judas be forgot in Arnold's name."

This shows the feeling harbored by the people at that time, and it is evident that the international money changer was in no greater esteem then than he is now.

In a letter to the Marquis de Lafayette, Benjamin Franklin had this to say:

PASSY, May 14, 1781.

DEAR SIR: \* \* \* Your friends have heard of your being gone against the traitor Arnold and are anxious to hear of your success and that you have brought him to punishment. Enclosed is a copy of a letter from his agent in England, captured by one of our cruisers, and by which the price or reward he received for his treachery may be guessed at. Judas sold only one man; Arnold sold three millions. Judas got for his one man 30 pieces of silver; Arnold not a halfpenny a head. A miserable bargain; especially when one considers the quantity of infamy he has acquired to himself and entailed on his family.

The English are in a fair way of gaining still more enemies; they play a desperate game. Fortune may favor them, as it sometimes does a drunken dicer; but by their tyranny in the east, they have at length roused the powers there against them, and I do not know that they have in the west a single friend. If they lose their India commerce (which is one of their present great supports), and one battle at sea, their credit is gone, and their power follows. Thus empires, by pride, folly, and extravagance, ruin themselves like individuals.

This letter does not speak so well for the attitude of England toward the United States, and we had difficulty indeed even to exchange prisoners of war. As a matter of fact, England did everything that could possibly be done by intrigue and otherwise to destroy the United States. In this attitude she did not have the sympathy of other nations, which this letter I now quote from clearly shows:

PASSY, June 8, 1781.

TO MESSRS. D. WENDORP AND THOMAS HOPE HEYNGER.

GENTLEMEN: I received the letter you did me the honor of writing to me on the 31st past, relating to your ship, supposed to be retaken from the English by an American privateer, and carried into Morlaix. I apprehend that you have been misinformed, as I do not know of any American privateer at present in these seas. I have the same sentiments with you of the injustice of the English, in their treatment of your nation. They seem at present to have renounced all pretension to any other honor than that of being the first piratical state of the world. There are three employments which I wish the law of nations would protect, so that they should never be molested or interrupted by enemies even in time of war: I mean farmers, fishermen, and merchants; because their employments are not only innocent, but for the common subsistence and benefit of the human species in general. As men grow more enlightened, we may hope that this will in time be the case. Till then we must submit, as well as we can, to the evils we cannot remedy. I have the honor to be gentlemen, etc.,

B. FRANKLIN.

I am interested in Mr. Franklin's mention of farmers, fishermen, and merchants, for they evidently suffered then from enemy acts as they are suffering today. I, in no sense, condone attacks upon lightships, fishing vessels, and peaceful merchantmen. Lightships are placed in a position where they furnish protection for shipping, fishermen furnish food, and the merchantmen carry this food which sustains the lives of noncombatants, who are composed of old men, women, and children. Decency, it seems to me, would demand that they be left free to operate, free from attack and destruction.

England is, in reality, responsible for these attacks for her method of warfare has always been to lay down a starvation blockade. As a result of this inhumane attitude on her

part, nations so blockaded cannot help but retaliate. This finally ends in mutual destruction, starvation, and loss of life.

The question may be asked: Is this the will of the people? And the answer comes back clearly: No. For the people themselves have no desire to suffer from starvation or to enforce such suffering upon their brother men. It is, instead, the will of the rulers, of those who control the money, of those who place gold above principle. Gold under the control of an unprincipled few becomes an international power that buys weaklings and bribes those with unstable principles.

International financiers should be deprived of this ownership of gold, for it does not belong to them but is the common property of all the people in every nation. The international bankers should be placed exactly on the same basis as a private individual. When he borrows money he must furnish security. When the international bankers decide to avail themselves of the nations' monetary wealth, they should in such event be forced to furnish security for money which they require, no differently than a private citizen.

There is only one way to destroy this hold upon the world, and it is to place an embargo on all gold, repudiate gold certificates, and place the international Shylocks on the same platform as that of those who have earned this wealth and who alone are rightfully entitled to the security of it. It is time for all loyal citizens to demand that Congress take charge of this Government, in the manner in which the Constitution provides. For why should we allow a selfish group of international adventurers to operate on a plan like this:

From the moment when we shall have made ourselves sole possessors of all the gold in the world the real power will pass into our hands, and then shall be accomplished the promises made to Abraham.

Gold is the greatest power in the world—gold, which is force, reward, and the means of all pleasure, all that man fears and covets. There you have the great mystery, the deep knowledge of the spirit which rules the world. There you have the future.

If gold is the first power in this world, the second undoubtedly is the press. But what can the second be without the first? Since we cannot realize all that has been already said and planned without the help of the press, therefore our people must direct all the daily newspapers in each country. The possession of the gold, and the cleverness in using it to grease the palms of those open to bribery, will make us arbiters of public opinion, and will give us dominion over the masses.

Advancing thus, step by step in this path, and with the perseverance which is our great virtue, we shall push back the Christians and annihilate their influence.

We shall dictate to the world in what they should have faith, what they ought to honor, and what to curse. Perhaps some individuals will set themselves up against us and condemn and curse us, but the masses, docile and ignorant, will listen to us and take our side.

No doubt many of you will recognize this, particularly after you have given it serious study, for it is operating today in many nations. I am not, however, sure that our people are docile and ignorant. On the contrary, I believe the workers, farmers, professional, and businessmen, are intelligent and quite capable of doing their own thinking. I do not doubt for one moment but that the people in this country, as well as the British Empire, will set their own house in order. For it is only in such manner peace may again prevail. The dissension which reigns throughout the world today is not in any sense the wish of the people. It is, instead, to consummate a fanatical desire by a group who intend to rule and dominate the world.

Let us now discuss the conditions which existed during the World War. The British Government then, as now, did not respect our neutrality, for British warships invaded even our own 3-mile limit. This became such a serious matter that the State Department issued many protests to Great Britain, and were in reality on the verge of interrupting diplomatic relations with England.

England then, as now, furnished the United States with a list of firms with which we were not supposed to trade. And I may ask this question, What right has any belligerent to demand such acquiescence on our part? Are we incapable of running our own affairs within the United States, or must we submit to dictation from across the water? I do not think so. This advice by the British rulers should be rightfully re-

scinded by us, for it is, if nothing else, pure tommyrot and an affront to the United States.

Our ships are now intercepted by Great Britain. They are held at the British ports for examination while contraband cargo is confiscated. We even tolerate examination of our private mail, which in no sense can be considered contraband. This search of ships and seizure of cargo is so glaringly crude that one cannot but believe that deliberate collusion exists between interlocking American and British interests.

To correct this and to maintain national self-respect we should deny all shipments to England until she is willing to allow free delivery of American cargoes to neutral nations. One cannot help but admire the Japanese attitude in her demand that Great Britain release the 23 German passengers that were taken off a Japanese merchantman. It is such acts by Great Britain which arouse international ire against that nation.

It is because of this intrigue that no one should become unduly excited over the propaganda in pictures, in papers, or from the lecture platform by agents from the British Government who are now attempting to convince us that we should pull their chestnuts out of the fire, so that they may remain world rulers while we are nursing burnt fingers.

The attitude of Great Britain is clearly set forth in the Washington Post, February 4, 1940, in Mr. Oliver Stanley's first public speech, in which he makes this statement:

Great Britain was fighting for a peace wherein Germany would be allowed a place in the European family of nations, but stripped of power periodically to disturb peace for the world.

In other words, England is no different from Japan. The latter is killing Chinese to establish friendship with China, and England proposes to destroy a nation of 79,000,000 people, so they will love and defend England. A stupid policy indeed and one that can never establish peace any place. It would be much more sensible for England to ally herself with Germany to stop the Russian threat in communizing Europe. For such alliance will not only control Europe, but the Orient as well.

Mr. Stanley says:

This is no war of aggrandizement. We seek neither wealth nor territory. This is no clash of dynasties. It is a struggle for international decency. Let me try to express in one sentence what it is that is at stake—the rights of all people, small or great, to lead their own lives, to think as they will, to worship as they will, to cultivate the arts in freedom, at peace and free.

This paragraph is empty as we realize that England controls one-fourth of the earth's landed surface, and nearly all of it, as I have said, obtained by conquest without due consideration for the rights of the people in areas conquered. Why does not England bestow the right of self-determination upon India and other peoples in the British Empire that prefer to shape their own destinies? England should be the last to speak of the people's rights, because for years she did not even recognize the rights of free expression either in England or Ireland.

Mr. Stanley says:

The world cannot survive half slave and half free, and we are determined that we shall be free.

I wonder if Mr. Stanley refers to the freedom of the hidden rulers? Let those who have enslaved people in colonial possessions held by force set the slaves in those possessions free first before they appeal to the world for a freedom which they deny their own colonials.

I agree with Mr. Stanley when he says:

Make no mistake. We are not fighting only for our ideals and our ideas, but we are fighting for our lives.

In this he is right, for the invisible government today is fighting for its life and for its ideals, which are to dominate the world. The peoples of nations are very well informed and, I believe, will not involve themselves in the blunder of 1914, for that war was created to set up a world government, which, thanks to God, failed.

His reference to the Treaty of Versailles and his presumed comparison had the Central Powers won, is an expression of his own idea based upon that unjust treaty. England, herself, has provoked more wars than any other

nation in Europe, so little room is left for Mr. Stanley to sing a song of peace. I advise those who are interested in conditions that prevailed in Central Europe to read, *Why the Treaty of Trianon is Void*, by Louis Kossuth Birinyi, published by V. L. R. Simmons, 531 Cedar Street Northeast, Grand Rapids, Mich. It is indeed difficult to understand what impression Mr. Stanley intended to convey in the statement which I now quote:

For ourselves we want nothing from Germany or from the Germans. We do not desire their destruction; we do not grudge them their prosperity; we do not want to make them the helots they have made millions, or to make their land the desert they have made one-quarter of Europe. We want them to be peaceful, happy members of a peaceful, happy Europe.

I wonder what else Great Britain and France could take from Germany. After the World War, both of them grabbed all the colonies and dismembered Germany, Hungary, and other Central European states. The question may be asked: For what purpose? Will anyone have the temerity to say there was justice in the partition of Central Europe? I think not. The fact is England has never reached a point where she does not want more, and Mr. Stanley's statement is empty words comparable to the empty promises of England.

Mr. Stanley states that Germany has made a desert of one-quarter of Europe. What quarter does the gentleman refer to? The fact remains that not even one acre of land can be wasted in Central Europe, because all of it is required to sustain overpopulation.

It is not my intention to raise an argument or criticize any state in Europe, except for the fact that they are deliberately attempting to involve the United States in their own silly ventures. If England and France want to fight, their total population is well over 65,000,000 people, which should be sufficient to overcome a nation with a population of 79,000,000 people. The same powers also own gold mines and diamond mines in South Africa that may be utilized to defray the cost of their unnecessary wars. Great Britain may also draw on the markets of India to defray her warfare, as she has in the past, instead of looking to us for aid.

We paid for the World War, and do not let anyone kid you that we are not helping in this war as well, for plenty of equipment is leaving the United States for the British Empire to build up and complete the English war machine. We have been suckers for the English nobility for a long time, and I think it is high time that we forget this *hoi polloi* and turn our attention to our own reconstruction. There are too many people here who are willing to kiss the hand of the King and Queen, instead of kissing the Stars and Stripes.

In order that you may have a clearer understanding of Mr. Stanley's ideology, let me quote:

Britain came close to agreement with the French, who are determined, by one means or another, Germany be rendered powerless.

The distinguished English and French gentlemen do not speak here as angels of peace, but they speak instead as provocateurs of war. It was this attitude on the part of France—revenge—that plunged Europe into the World War, and it is the same attitude today—hatreds and revenge—that is now threatening world peace.

However, it is none of our business. We have nothing at stake to defend, and we have no bones to pick with any nations in the Occident. I do not believe that the medicine men of Europe can stampede Europe into another devastating war, for the British, French, German, and all European peoples are unwilling to sacrifice their lives in the defense of the international rulers. The world is sick of this horde of money changers, and their safety lies in becoming real nationals of such nations in which they live.

The paper further states as follows:

The Stanley speech was one of the regular week-end series by members of the war cabinet to rouse the fighting spirit of the people. In it he defended the Versailles Treaty as a generous peace, contrasting it with the kind Great Britain could expect if she called off the war now or suffered defeat at the hands of Nazi Germany.

This is nothing but deliberate deception and propaganda to build a sentiment for war in England. Why did England

and France declare war? Was it the usual English bluff and bullshiness to coerce other powers? A nation has reached a sad state indeed when the war cabinet attempts to promote the destruction of property and the lives of its own people by selling them on a war they do not want. That very statement shows that Mr. Stanley himself is apprehensive, and these meetings are for no other purpose than to instill self-confidence in the present British debacle. Mr. Stanley and others should know that if Great Britain disgorged the colonies taken from Germany in the World War peace would again prevail throughout the whole world, and such attitude on England's part would be only an act of justice.

There can be no brotherly love or friendly feeling among nations so long as we are required to travel on permits and passports, for such restrictions are evidence of suspicion. The people of the world should be able to travel unmolested and free to all nations, using gold and gold currency if necessary to facilitate such travel. This cannot be brought about by the promotion of boycotts and hatreds, for such attitude is not that of Christian civilization. It is, instead, a backlash of paganism and persecution.

We should, as a matter of fact, recall the 300-mile coastal patrol which is now plowing the waters in this zone looking for the proverbial Flying Dutchman. There is no excuse and there is no emergency and there is no rhyme or reason why our taxpayers should be charged with the cost of this 300-mile water policing force. In the first place, we cannot enforce neutrality outside of our own 3-mile limit unless we use the United States Navy, and that means war. So why, for the love of Heaven, should we allow the Government to engage in this wasteful, unnecessary spending of money?

England, herself, has said that if we attempt to enforce this it will mean war with England, so what is the big idea in having this mystic fleet churn up the waters of the Atlantic and Pacific? Is it not much more sensible to save the cost of this patrolling, since it is for no other purpose than as an aid to Great Britain, and even she objects to it.

### The Home Is the Foundation of This Republic

#### EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

Mr. BURDICK. Mr. Speaker, I am afraid we are fast drifting away from the very purpose of this Government. I do not know whether Congress represents the sentiment of the Nation on the subject of homes, but I am fearful that it does. If Congress did not represent the sentiment for the perpetuation of the home, we would have at least some hope left—the people could elect a new Congress. But, on the other hand, if this Congress does represent the wishes of the people of the Nation, then I say there is nothing within the power of man that can save this Republic from utter and final collapse. If the people themselves do not now, in this time of extreme financial involvement, stop long enough to recognize that homes must be preserved at all costs, we are well on the way to the destruction of the Government itself.

This situation presents one of the most unwarranted enigmas conceivable. The great majority of the people of this country have a well-formed fear against collectivism. They hope the day will never come in the United States when the liberty of the individual will be merged in collective activity. I share the same hope—I pray that day will never come in this Nation. But those who fear this condition most are themselves contributing most to the realization of collectivism. All the Communists in America cannot bring collectivism into being by their own power, but aided and abetted by those unthinking people who fear collectivism and yet at the same time are making that situation a distinct possibility, there is

every reason to believe that we are headed directly to that result. These people are so engrossed with the private operation of all lines of economic endeavor, so engrossed with profits and gain and greed, that the result they hope will not happen is unavoidably sure to happen.

The most charitable thing that can be said about them Christ once said:

Forgive them, for they know not what they do.

When home owners on the farms and in the cities are fighting desperately to hold on and preserve the home—the very foundation of the Government itself—these people who fear collectivism most turn a deaf ear to the entreaties of the distressed. With 2,000,000 farm homes destroyed since 1929 we can see the scope of this alarming condition. The enormity of the devastation makes no appeal to the representatives of the people who could save the situation if they would. These representatives are proud to say that they are conservatives—that they wish this Government to return to the good old days when business was unrestricted, farmers could pay their taxes and interest, people in urban homes could pay their rent and live, and business could divide up unconscionable profits at the end of the year. These conservatives do not think long enough to understand that the present financial debacle a majority of our people are in is due directly to the operation of this business system that they once knew and to which they are determined to return.

When the agricultural bill was before the House the Republicans, almost as a solid phalanx, supported the cuts that meant doing away with parity payments, finance of farm tenants, and every other aid asked by the Department of Agriculture. Enough conservative Democrats supported them to annihilate the appropriations for the farmers.

The significant thing about this stand of the Republicans is that, while the vote in the House was not made a record, the Republicans must know that the people will find out how they stood on this proposition, and with an election coming up they must feel that they either have the support of the Farm Belt or do not need it. Whatever their reason, the fact remains that the appeals made in the House to aid the farmers fell on deaf ears as far as the great majority of the Republicans in the House is concerned. They voted as conservatives. They rest their case on the false premise that they are saving the taxpayers' money in denying aid to agriculture. They knew all the appalling facts relating to foreclosed farms; they knew that loss of purchasing power by the farmers affected business and caused unemployment. Those facts have been poured into them constantly by the progressive Republicans and progressive Democrats to absolutely no avail. These conservatives have not stopped long enough to think; they are herded by the party organization. They evidently do not know that a dollar spent to help the farmer sustain himself saves \$10 in relief as soon as they drive the farmer out of his home. The slogan that they cannot overcome is, "Save the taxpayers' money, take away the restrictions against business, and let us have the old balmy days of business and profits."

I do not know how far this sentiment will go in the next election, but I for one do not subscribe to this doctrine and will not support such a doctrine no matter whom the Republicans nominate. I do not think the mass of the voters of North Dakota will support that doctrine.

On the farm-tenancy bill, for example, the Government has started a policy of finding homes for ousted farmers—ousted because they could not pay their debts. We asked for only \$25,000,000, or about enough to refinance and set up 7,000 homes. The money is not given to these farmers; the Government loans the money on long-time credit with easy interest, and the experience so far has been that all the money due has been paid back except about 2 percent. The only reason why this program has not reached more farmers is because we could not get more appropriations. We will now take these 7,000 farmers from these homes and drive them into the relief lines. What would happen? That would happen that is happening to thousands of other farmers. The relief load among farmers averages about

\$745 per family annually. Multiply that by 7,000 and the result is \$5,215,000 for 1 year alone; remember, too, that it may be the same amount the next year, and the next, and no end in sight. Now, which is the best plan, to loan these farmers \$25,000,000 annually and receive it all back except \$500,000—and a chance to get this, too—or drive them out into the public highways, where we must spend over \$5,000,000 annually? The Republicans and the conservative Democrats could not stop long enough to think about this in their mad stampede to "save the taxpayers' money."

How will any conservative explain to anybody this unwarranted, illogical, and asinine stand? The most favorable thing that can be said for the conservatives is that they are penny-wise and pound-foolish.

I actually heard Republicans in debate say that, because we cannot save all the farmers, let us not save any, because it would hurt the feelings of those we cannot save. Surely logic has taken wings. The right policy to follow is to increase the loan to the tenants and save twenty thousand annually instead of seven thousand. As long as the Government can make the record it has on repayments, it is the most profitable business in which this Government can engage when we have a deficit.

I wish I had the power of persuasion among my brother Republicans. I cannot break this Republican blindness in following party leaders. Many good Congressmen are so bound up with the "party" and are afraid to offend the party machine that they have lost the habit of thinking for themselves or, indeed, thinking at all. If these Members only knew it, the party could not punish them for their independence. I have never admitted that the moon was made of green cheese just because the Republican leader said so. I have said "no" and I have been summarily punished. I have been kept off important committees and demoted on the small ones I did have. But that has not stopped my thinking powers. This punishment was no punishment at all, for if I had to obtain positions on committees by having to follow some autocrat who happened to be in a situation where he could "demote me," I would soon be discredited by thinking men and women who sent me here. I would rather be right and stand alone than be wrong, though propped up by all the conservatives in the United States.

If we actually want to prevent collectivism from getting control of this country we had better change our line of reasoning and build a home every chance we get. It is a home that people will fight for, and history shows that without homes the people everywhere are a prey to any "ism." The Roman Empire has not become effaced from the map of the world by the power of any invader, but it went down to oblivion because the time arrived in its plutocratic government when only 2 percent of the people owned their homes. It decayed from within and did not fall because of any power from without; the Russian Government fell prey to collectivism because the time arrived in its plutocratic government when only 5 percent of the people owned their homes. If those conservatives actually want to maintain this great free Government, they will come forward and stop the movement now rampant in this country which is hourly losing more homes. For the Nation at large the tenant class now numbers 42 percent of the farm population; in many States the percentage is a great deal higher. I know of whole counties where the tenant class numbers 72 percent of all the farmers. As soon as this percentage increases a little more—and it will if we keep on denying aid for permanent stability—the time will be ripe in this country for collectivism. Then those who now ignore the pleas of the farmers will shout the loudest concerning their deplorable fate, but those voices will not be heard by an enraged people.

I can clearly see this situation because I have lived and now live as a farmer. I am a son of the pioneers who, because of loss of property through high interest rates, and poor farm prices, moved out across the whole area of the United States, settling new territory as they went. When they reached the valley of the Ohio, they found free land and made a new start, but in the appointed time, they lost again—they braved the wilderness and fought the Indians

and moved on to the prairies of Wisconsin and forgot their financial troubles by finding new land and making a new start. For 50 years more they prospered but in the allotted time they were overcome with debt and mortgages and were driven from their homes again. They took up the trail by covered wagon and moved on the plains of Dakota and found a new home and made a new start. For 50 years more they prospered, but in the same due time they were again overcome with debt, but this time the seriousness of the situation not only was presented to them, but to the entire country. They could not go farther on. They had reached the end of the trail, all lands by 1923 had been taken and there was no place to go. There was no new country anywhere that could again be exploited by the interest taker, and because of this abrupt ending of new territory, the whole Nation felt the shock. We cannot go anywhere, we must stay where we are, and the exploiting process that has been working on the farmers for 175 years must be stopped. Unless it is, the entire Nation must go down.

People must have homes. Of all the institutions of society the home comes first. The church, the school, the Government are all secondary to that great institution—the home. Unless our people are given an opportunity to make a home for themselves in this great land of plenty, then the whole scheme of Government is a mockery. It is through no fault of their own that farmers and city people are losing their homes at such an alarming rate, it is the fault of this Congress more than anything else. Just suppose we would make the funds and credit of this Government available to the people instead of to a few who get it free and in turn loan it out at unconscionable rates of interest, what would happen? Loans now averaging 6 percent could be reduced to 1 percent, and a farmer who owed \$5,000 would have to pay \$50 annually instead of \$300. Would that make any difference in 50 years?

The program of a better day is all before Congress at this very minute. The means by which collectivism can be avoided is before Congress in the following bills, and we cannot pass any of them because the conservatives want to save the taxpayers' money. These conservatives should be ready now to fight to the last ditch to restore homes in America and keep them safe; if not, then we are subject to collectivism and any other "ism" that will destroy all individual independence, that will destroy any freedom of religious worship, all freedom of speech, and place every man, woman, and child in this great, free America under bondage of autocratic and inhuman rulers.

Is that what the conservatives want? Is that what they will appeal for in the next election? In the words of Queen Elizabeth, I must say, "God save us from our friends."

I. H. Res. 217, restore to Congress the power to coin money and regulate the value thereof.

II. H. R. 7600, eliminate debt money and taxes.

III. H. R. 8264, Townsend bill.

IV. H. R. 7528, Frazier-Lemke moratorium.

V. H. R. 6151, labor-hour money.

VI. H. R. 1675, Peterson farm-tenant bill.

VII. Burdick farm-products bill (introduced today).

### Aid for Finland

#### EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

LETTER FROM THOMAS ROBINS, OF NEW YORK CITY

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Mr. Thomas Robins, of New York City:

NEW YORK, N. Y., January 29, 1940.

HON. CHARLES A. EATON,  
House of Representatives, Washington, D. C.

DEAR SIR: As a pacifist I don't want to see this country get embroiled in another war. I feel, however, that the present war is moving in our direction, and that we should do our utmost to stop it before it arrives.

Anyone who doubts that we are facing the possibility of a war should be asked to answer the following questions:

1. Is Finland, with its 3,000,000 people, capable of ultimately withstanding Russia, with a population of 130,000,000?

2. If Finland falls, will it take long for the Russians and Germans to partition Scandinavia as they partitioned Poland, strengthening themselves with iron, nickel, and food supplies which are of vital necessity to Great Britain?

3. With their defender, Britain, thus weakened, would not the Low Countries—Holland and Belgium—fall into the hands of the Germans?

4. With England in easy bombing distance of an enemy just across the channel, instead of 275 miles away as at present, would not Britain and France be forced to capitulate to Hitler?

5. In that case would not Britain, France, Holland, and Belgium be forced to give up to Germany as indemnity their fleets and colonies, which Germany has envied for so long?

6. In that event would we not be obliged to purchase from Germany the tin, rubber, and other supplies in the sale of which there is now competition between the Dutch and English possessions?

7. With Britain and France out of the way, would not Japan have a free hand in the east, seize the Philippines, and forever close the open door in China?

8. Would not we lose our export business to South Africa, China, the Philippines, and Australia?

9. Being thus weakened and threatened, would we not be compelled to protect our own shores with a Navy far larger than anything that has been dreamed of up to the present time?

10. With all our millions impoverished who are now supported by our export trade, and burdened as we should be with the cost of huge defense forces, should we not face a depression which might result in revolution and chaos in the United States?

11. Can we not insure against this dire chain of possibilities by supplying the guns and planes which our defender, Finland, now requires to stand the Russian attack?

12. If so, is it not well for us to do so without further delay?

Yours respectfully,

THOMAS ROBINS.

### Trade Agreements and the Fresh-Fruit Industry

#### EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

LETTER FROM THE INTERNATIONAL APPLE ASSOCIATION

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the International Apple Association:

INTERNATIONAL APPLE ASSOCIATION,  
Rochester, N. Y., January 16, 1940.

HON. A. WILLIS ROBERTSON,  
House Office Building, Washington, D. C.

DEAR SIR: I am writing you as a member of the House Ways and Means Committee and as one who has long been familiar with the difficulties which confronted the United States apple and pear industries as related to our highly necessary exports, and which started to become serious during the latter part of the 1930-31 season.

As you know, the International Apple Association is a nonprofit trade association. Its membership, among other places, is located in the important and leading producing sections and distributing markets of the United States. It is composed, among others, of the leading apple- and pear-shipping organizations, individual shippers and firms, outstanding growers, apple and pear cooperative associations, wholesale distributors, and exporters.

The United States has been exporting apples for over three-quarters of a century, starting, of course, in a small way. During the 1914-15 crop season our exports to all destinations had reached 7,054,503 bushels, but naturally suffered a recession during part of the first World War and particularly during the 1917-18 season. By the time of the 1920-21 crop season we had regained lost ground, and exported 7,955,303 bushels. From that season on, with various fluctuations, we rapidly expanded our exports, until during the 1930-31 season we exported 20,361,472 bushels.

This development and expansion in our exports took place during the period when world trade channels were open.

The orchards were grown and developed through a long series of years to supply not only domestic but world markets.

It takes from 10 to 15 years to bring an apple orchard into real production and about 7 years for pear orchards, plus a heavy investment.

This production cannot be shifted like an annual crop. The manufacturing plant is built. It cannot be materially abandoned, either in whole or in part, without very great capital losses.

The United States produces more apples and pears than it can consume on the domestic markets, and foreign outlets are most essential for both apples and pears.

Following the 1930-31 crop and export season, foreign trade barriers began to be serious. These trade barriers eventually assumed about every type of barrier that could be imagined, including total or partial embargoes, prohibitive duties, exchange restrictions, import permits and licenses, drastic sanitary restrictions, etc. The result was a decline in our apple exports from 20,361,472 bushels for the 1930-31 season to as low as 8,061,966 bushels in 1934-35, which represented a loss of 60.4 percent from the 1930-31 season, and to 6,718,935 bushels in 1936, a loss of 67 percent from 1930-31. During the last two crop and export seasons, to wit, 1937-38 and 1938-39, we had restored our exports to 10,957,530 bushels and 12,102,880 bushels, respectively. If it had not been for the disruptions caused by the present war, we have every reason to believe that we would have continued to show a further increase in future seasons.

This association, which, by the way, is now in its forty-fifth year, recognized the handwriting on the wall during 1930-31 and, at its annual convention held at West Baden, Ind., in August 1931, unanimously deplored economic trade barriers and international economic warfare.

At our annual convention held in New York in August 1932 this association urged the calling of an international economic conference to the end that international trade channels be kept open.

At our annual convention held in Chicago, Ill., in August 1933 the association unanimously urged that international economic peace be restored, and called for the negotiation of reciprocal-trade agreements and that power be delegated to the President to that end.

The Reciprocal Trade Agreement Act became law on June 12, 1934, and at every annual convention since then down to and including our Cincinnati convention held in August 1939, the association unanimously reaffirmed its endorsement of reciprocal-trade agreements and the act.

Not only the above but we have participated in all of the important trade agreements negotiated to date, including the filing of sworn statements and appearances at all of the important oral hearings.

There is no question that the reciprocal-trade agreements negotiated to date and taken as a whole have been of distinct assistance to the apple and pear industries of the United States. They not only stopped the upward spiral of trade barriers, which was a highly important factor, but in addition obtained concessions which have been of distinct benefit. For example, the United States-British trade agreement became effective on January 1, 1939. For the crop and export season of 1938-39, our apple exports to the United Kingdom from July 1, 1938, to January 1, 1939, showed a decrease from the preceding crop season of approximately 11 percent. After the trade agreement went into effect on January 1 and from that date to the end of the season in June 1939 we increased our apple exports to the United Kingdom by a little over 25 percent.

It is true that in various instances we did not receive all that we hoped for by way of concessions, but at the same time we appreciated the fact that when trade barriers become well established and when international economic warfare has been practiced for several years it would be very difficult to at once restore the status existing prior to 1930-31. In other words, we appreciated the fact that when the eggs become scrambled it is difficult to put them back in the shells at once.

Under the Reciprocal Trade Agreement Act and trade agreements, substantial and highly important steps had been taken in the right direction. In other words, if trade barriers, which existed prior to the advent of reciprocal-trade agreements and until those agreements could become effective, had continued, apple and pear exports from the United States would have gone from bad to worse and with disastrous consequences to these industries.

We feel that the cancellation of existing trade agreements and failure to extend the existing Reciprocal Trade Agreements Act would be a severe blow to the United States apple and pear industries and, for that matter, would be a serious blow to the restoration of international world trade generally. Such a course would turn the clock backward.

The plain fact is that neither the United States nor any other country nor the apple and pear industries of the United States can afford another era of international economic warfare and trade barriers of every name and nature. The present war has greatly disrupted foreign trade and particularly as applied to apples and pears, but that was to be expected under war conditions. This war, however, will be over some day, and when it is over the United States not only should be but very much needs to be in position to restore its foreign trade. If we are not in that position, then we are likely to become involved in an international economic warfare which will be far more violent than the economic warfare which we have been gradually escaping from since the advent of reciprocal-trade agreements.

This whole situation is of profound importance to the United States apple and pear industries. We therefore strongly urge that the Reciprocal Trade Agreements Act be extended.

It will be impossible for me to appear personally at the hearings which are now going on. I am therefore writing you as a strong supporter of the apple and pear industries of the United States and as one who is thoroughly familiar with the whole situation. You are at liberty to file this statement with the committee or read it into the committee record.

Sincerely yours,

INTERNATIONAL, APPLE ASSOCIATION,  
R. G. PHILLIPS, Secretary.

## Mr. Hanes Gives More Sound Advice to the Administration

### EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

EDITORIAL BY PAUL BLOCK

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following short editorial on the subject of taxes:

#### MR. HANES GIVES MORE SOUND ADVICE TO THE ADMINISTRATION

In June and again in July of last year, John W. Hanes, at that time Under Secretary of the Treasury, made some suggestions on tax revision before the Ways and Means Committee of the House of Representatives. On both occasions we pointed out the eminent soundness of his remarks.

In December Mr. Hanes resigned his Government post. While we do not have any private information about the reasons for his resignation, we believe that, in addition to the fact that he wished to reenter private business, he had come to realize that he could get nowhere in his attempts at sensible revision of the present tax structure while Mr. Roosevelt and his left-wing advisers remained in power. This is the same conclusion eventually and in many cases reluctantly reached by other men of business experience in Government service during the last 7 years who have finally resigned after vain efforts to make plain common sense square with New Deal policies.

Having resigned, Mr. Hanes has not abandoned his insistence on a realistic view of our tax problem. Speaking recently at a dinner of the Yale Alumni University Fund Association, he reiterated his opinions, which we heartily share.

"It is my belief," Mr. Hanes declared, "that the highest rate of taxation upon the taxpayer does not always produce the maximum revenue. When equitable adjustments in Federal taxes are proposed there seems to arise a chorus of fears, or supposed fears, that to lessen the rate of taxes will have the effect of reducing the total amount of taxes collected. I do not subscribe to that theory.

"On the other hand, I am convinced that the Treasury of the United States will collect a larger total of tax dollars with a tax bill that takes into broad consideration the effect of the dollars it will leave the taxpayer for expansion and development."

This is a position which we have frequently advanced. We have often pointed out that the ruinous burden of New Deal taxation is perhaps the chief obstacle to sound recovery. Only when private enterprise is able to expand and reemploy can our stalled economy get in motion again. But as long as the New Deal imposes taxes without regard to their effect on business and its ability to expand or even survive, progress toward prosperity will remain impossible.

It is profoundly unfortunate for the welfare of our country that the New Deal refuses to listen to men of the caliber of Mr. Hanes. But if administration ears are deaf to intelligent counsel, the Nation is still able to recognize and to approve. The continued failure of the New Deal to solve the problems of unemployment and recovery can have only one result, and that is the repudiation of the administration in November.

PAUL BLOCK, Publisher.

## The Negro a Factor in the History of the World

### EXTENSION OF REMARKS

OF

HON. ARTHUR W. MITCHELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

Mr. MITCHELL. Mr. Speaker, ladies and gentlemen of the House, hardly a day passes that some person in high

authority, either in this House or in official capacity elsewhere, does not request of me information of some kind with reference to the achievement of the American Negro. Perhaps there is less actually known about the historical background of America's largest minority group—the Negro—than about any other minority group in this country. One searches our textbooks and literary records in vain for the real facts of Negro achievement, even in America. Little or no real facts concerning the Negro prior to the introduction of slavery in the American Colonies can be found in our books and periodicals used in our schools and colleges.

About a quarter of a century ago Dr. Carter G. Woodson, a scholar and historian of recognized ability, founded the Association for the Study of Negro Life and History. The beginning was modest, but through the years this has become the outstanding organization of the world for the discovery, preservation, teaching, and the diffusion of important historical data and facts giving the true picture of Negro life in the past. Among the outstanding things which this organization is now doing I wish to mention the following: Publishes magazines, researches in Negro history, directs studies in clubs and schools, promotes the home study of the Negro by mail, produces texts on the Negro for schools and colleges, collects and preserves the valuable documents of Negro history, supplies libraries with special collections of rare books on the Negro, educates promising and enterprising young men for service in historical research, and for the last 15 years has developed Negro History Week.

In answer to the following letter which I wrote to Dr. Woodson a few days ago he sets forth in his letter to me, in a rather definite manner, the fine work this organization is doing:

HOUSE OF REPRESENTATIVES,  
Washington, D. C., February 3, 1940.

DR. CARTER G. WOODSON,  
Director, The Association for the Study of Negro Life and History, Inc., 1538 Ninth Street NW., Washington, D. C.

MY DEAR DR. WOODSON: For more than a decade I have watched with great interest and pride the fine work your association is doing in the way of preserving records pertaining to the history and achievement of the Negro in America and other countries. Because of misstatements of facts, often designedly made reflecting on the Negro, grave injustice has been done the race. Your organization seeks to correct this, and is rendering a unique service not only to the Negro but to all lovers of truth and justice.

For 15 years the organization which you founded, and which you still direct, has, through schools, churches, and various institutions and organizations, celebrated Negro History Week. This celebration is fast becoming an established institution within itself. You will be interested to know that this year I have been invited to visit at least a dozen States, and to speak on more than 50 occasions during the celebration of Negro History Week, which I understand, begins February 11, ending February 18. It must be a source of gratification to you to note the growth of this splendid institution which you have founded, and to be able to see in your own day the tangible expressions of appreciation of peoples of all races and nationalities of the fine work you are doing.

I am asking you to please write me a letter, setting forth in succinct form the work which your organization seeks to do through Negro History Week. I am frank to tell you that I expect to use whatever statement you make on this subject in some of my talks during Negro History Week, and shall probably insert the same in the CONGRESSIONAL RECORD as a matter of history for the coming generations.

Permit me to congratulate you, and to say that it has been a genuine pleasure to me to make whatever financial contributions I could to your splendid work, and to help you in this unique job in all other possible ways.

With best wishes, I am,

Sincerely yours,

ARTHUR W. MITCHELL.

THE ASSOCIATION FOR THE STUDY OF  
NEGRO LIFE AND HISTORY, INC.,  
Washington, D. C., February 5, 1940.

HON. ARTHUR W. MITCHELL, M. C.,  
United States House of Representatives, Washington, D. C.

SIR: Replying to your inquiry, I desire to say that during Negro History Week we feature the work of the Association for the Study of Negro Life and History. The aim of the association is to collect the records of the Negro and treat them scientifically in order that the race may not become a negligible factor in the thought of the world. The past of the Negro race has been so obscured and belittled by propagandists that little is known of its creditable record. Today, as a rule, we take notice of only the undesirable Negroes and ignore those who are struggling to climb upward. Few persons in public

life today think of what the Negro has thought and felt and attempted and accomplished.

To direct the attention of the public to this long-neglected aspect of our history the Association for the Study of Negro Life and History was organized in Chicago September 9, 1915, by Carter G. Woodson. This learned society publishes two magazines, researches in Negro history, directs studies in clubs and schools, promotes the home study of the Negro by mail, produces texts on the Negro for schools and colleges, collects and preserves the valuable documents of Negro history, supplies libraries with special collections of rare books on the Negro, and educates promising and enterprising young men for service in historical research. The various monographs and reports produced by this scientific body, as well as its two magazines, the Negro History Bulletin and the Journal of Negro History, are used throughout the country by schools and libraries.

The Association for the Study of Negro Life and History finds by scientific investigation that the record of the Negro is not to be despised. Even in Africa the Negro race achieved much for which it has not been given credit. There are historians and anthropologists who say that the Africans first discovered the use of iron; first domesticated the sheep, goat, and cow; and first stimulated Europe toward fine art. Some have found among the Mossi in Africa what they consider the first evidence of trial by jury. It is generally conceded that when Europeans first began to penetrate Africa during the fifteenth and sixteenth centuries they found the natives as far advanced in their political and social organization as the Europeans themselves were in the ninth and tenth centuries. This the Africans had accomplished with little or no help from Asia or Europe. Evidences of this progress were found in the well-organized African kingdoms and empires like Ghana, Manding, Mossi, Songhay, Hausa, Bornu, Congo, Dahomey, Ashanti, Loango, Bechuana, Monomotapa, and Uganda.

Brought to Europe, the Negro even there demonstrated his capacity in spite of handicaps. Juan Latino excelled the scholars of Spain in Latin; Juan de Pareja won his way as a noted artist there, and so did Sebastian Gomez. Miguel Kapranizine became among the Portuguese such a theologian that they made him the vicar of the convent of Santa Barbara in Goa. Le Chevalier de Saint-Georges reached the high rank of a musician and soldier in France; Lislet Geoffroy distinguished himself there as a scientist; and General Dumas, the head of the great literary family of France, won laurels as a soldier in the defense of that land. Angelo Soliman stood out as a general in the service of the Holy Roman Empire. Abram Hannibal, the grandfather of Alexander Pushkin, became one of the builders of modern Russia. In Holland, J. E. J. Captein impressed scholars as a theologian and philosopher. A. W. Amo so moved the circle of scholars at Wittenberg that after taking his degree at that institution they made him a professor.

Later, when European explorers came to America, Negroes were with them to play a prominent part. In the discovery of the Pacific Ocean, Balboa carried with him 30 Negroes, including Nufio de Olanco. In the conquest of Mexico, Cortez was accompanied by a Negro, who, finding in his rations of rice some grains of wheat, planted them as an experiment and thus made himself the pioneer in wheat raising in the Western Hemisphere. Negroes assisted in the exploration of Guatemala and the conquest of Chile, Peru, and Venezuela. Negroes accompanied Ayllon in 1526 in his expedition from the Florida Peninsula northward and took a part in the establishment of the settlement of San Miguel, near what is now Jamestown, Va. Negroes accompanied Narvaez on his ill-fated adventure in 1526 and continued with Cabeza de Vaca, his successor, through what is now the southwestern part of the United States. There Estevanico, a Negro, discovered Cibola, the seven cities of the Zuni Indians. Matthew A. Henson, the last to appear in the role of explorer, was chosen by Commodore Peary to accompany him to the North Pole.

The first important contribution of the Negro to the development of America was toll. First as indentured servants and then after being debased to the status of slaves, Negroes supplied the demand for labor necessitated by the expansion of trade in the commercial revolution of the modern era. Negroes cleared the forests of our Southland, drained the swamps, prepared the soil for the production of its staples, and dug from the earth nuggets of precious metals. In that section, too, appeared Negro mechanics and artisans, using the skill which was natural to the African even in his native land. These Negro workers shod horses, cast farming implements, made vehicles, constructed boats, and built railroads, which provided the South with a network of transportation facilities.

While thus at toll the Negro showed inventive genius in producing labor-saving devices. Negroes assisted Eli Whitney in his experiments with the cotton gin and McCormick with his reaper. James Forten perfected a machine for handling sails; Henry Blair patented two corn harvesters; Granville T. Woods stimulated industry with his electrical patents; Elijah McCoy brought machinery nearer to perfection with his lubricating devices; Norbert Rillieux revolutionized the manufacture of sugar with his vacuum pan; and Jan E. Matzeliger revolutionized the shoe industry with the lasting device for making shoes with machinery.

While helping to develop the country, the Negro has done his part in defending it. As a soldier, the Negro has acquitted himself with honor in all American wars. Negroes served with the Colonial forces on land and sea and helped to shape the destiny of America. Brave men of African blood followed the British standard during the Seven Years War until Montcalm was vanquished by Wolfe on the Plains of Abraham, thereby making English institutions possible in

America. During the struggle of the Colonies with the mother country, more than 3,000 other soldiers of African blood lived up to the record of heroism of Crispus Attucks on the Boston Commons; Peter Salem at Bunker Hill; Salem Poor at Charlestown; Pompey at Stony Point; Austin Dabney in Georgia; the 700 Negroes at Monmouth; and the daring regiment in the Battle of Rhode Island. Negro soldiers stood out with equal valor in the War of 1812. They fought bravely under Perry and Macdonough on the sea. Men of color came to Andrew Jackson's rescue in the Battle of New Orleans in 1815, and by their bravery elicited from him highest praise for their defense of the land of their fathers.

In the Civil War 178,000 Negro soldiers convinced observers that they could not be excelled in maintaining the honor of the Nation, and therefore were entitled to the rights of citizens. Their fighting at Santiago in the Spanish-American War was all but wonderful. The Tenth Cavalry and the Twenty-fourth Infantry distinguished themselves at Carlisle as the heroes of the hour. In the World War Negro troops and officers acquitted themselves with honor.

The Negro is a natural artist. He has the gift of producing things useful and pleasing to the eye. He has, therefore, been accredited with achievement in both the industrial and fine arts. Numerous implements, utensils, weapons, musical instruments, and personal adornments made by the natives of Africa show expert workmanship and exceptional skill. In the fine arts the African has left such striking evidences of his aesthetic development in the Sherbro figures, the Megaliths of Gambia, the bronze sculptures of Benin, and the ornate productions of the Congo. In the tombs of their kings, on the ornamented vessels, and on stones of the highlands have been left other striking evidences of this art. The solutic rock painting on the cliffs of South Africa shows an ideal of beauty as expressed by a most fertile imagination. In America, Edward M. Bannister was painting with success before the Civil War; at the same time Edmonia Lewis was working toward renown as a sculptor; and since their day Henry O. Tanner has made a place for himself among the most distinguished of all American painters. With the promising efforts of William Edward Scott, William A. Harper, A. A. Motley, J. L. Wells, Lois M. Jones, J. L. Porter, and Aaron Douglass in painting, and with the advance of Meta Vaux Warrick Fuller, May Howard Jackson, and Augusta Savage in sculpture, we are assured that the American Negro is standing on the threshold of great things in fine arts.

This same productive imagination is evident in the striking poetry produced by Negroes even when in primitive condition in their native land. In the folklore, the charming tales handed down from sire to son, in Africa is found evidence of this same art in tender and gracious touches. Art is found also in the very telling of these stories with a wealth of descriptive detail in a sort of recitative chanting and crooning very much like a song. Taken abroad and taught the means of expression in modern languages the African exhibited this poetical power in a manner which Americans and Europeans can better understand in reading the productions of James Weldon Johnson and Paul Laurence Dunbar.

In dramatic art the Negro has also given a good account of himself. The Negro is naturally an actor. Inasmuch as he has never permitted his mind wholly to dominate his body, he finds expression much easier than in the case of other people. What other theatrical persons have to spend years in acquiring the Negro exhibits spontaneously. In the story telling and the folk drama of Africa the actors are most original in the imitation of things in their respective environments. There is that frequent imitation of the voice of the thing impersonated, admirable use of gestures, which sometimes show as many as three simultaneous motions of the body. Of the many persons who have undertaken to imitate the Negro on the stage none has as yet been able to manifest that art to take the place of the Negro in the histrionic sphere, although racial antagonism has often supplanted the Negro elsewhere. Ira Aldridge, Richard B. Harrison, and Paul Robeson are cases in evidence.

Of the value of Negro music, the testimony is almost universal. Even in his untutored condition, the slave sang his "canticles of love and woe," chanted wildly in that darkness which only a few rays of light brightened. This was a significant contribution, an art still lacking appreciation but getting a hearing now and then from persons who have sufficient penetration to enter the soul of an oppressed people. Clothed in their primitive dignity, these spirituals are now being understood as artists are beginning to focus their attention on this important background of the Negro. Marion Anderson, Roland Hayes, and Caterina Yarborough have demonstrated what the Negro can do in this art.

Attention to this spiritual side of the Negro has been productive of a keener appreciation of the art of the Negro. It has tended also to invite attention to the unexplored background of the race, to discover whether or not there may be other contributions of the Negro to civilization. The result has been first to force scientists to revise their estimate as to the Negro, who has long been regarded as an inferior. A few years ago investigators accordingly began to say that although the Negro did not reach a high stage of development in other respects, he did excel in art. Further investigation has convinced these same thinkers that they should revise this opinion again so as to say that the Negro not only reached a high level of culture in art but that he made valuable contributions in other spheres. This last effort has required a sweeping revision of the former estimate of the Negro to the extent of considering him as being equal to others belonging to the family of mankind.

Since the days of emancipation the Negro has measured up to the highest expectations. Toward this end the race was greatly stimulated by that matchless orator and sane statesman, Frederick Douglass. During the reconstruction the Negro gave a good account of himself as a citizen and as a statesman. The majority of the Negro leaders of that day advocated high ideals. The participation of the Negro in the affairs of the Government was denounced and opposed from the very beginning; but despite the mire of corruption into which the Negroes were drawn by the white men who profited thereby at the expense of the freedmen, the race decisively demonstrated its capacity for citizenship and its right to all of the honors within the gift of the Nation. The Negro has never imposed upon the Government such colossal evils as the "credit mobliler," the "whisky ring," the Tweed ring, and the "star-route frauds."

The achievements of the Negro in freedom have been all but wonderful. Under the leadership of one of the greatest educators of all time, Booker T. Washington, American Negroes have met the most rigid test of civilization in first acquiring material things and thus permanently attaching themselves to the communities in which they live. In proportion to their population Negroes constitute a larger percentage of those gainfully employed than any other element of the country. Negroes now own a million farms, 31 percent of those employed have gone into industry; and in spite of their low wages, lack of credit, and handicaps have built homes, churches, and schools worth more than \$2,000,000,000. In the effort to facilitate labor and to increase the comforts of life this race has given the world that universally known agricultural chemist, George Washington Carver.

In teaching the history of the Negro, however, we do not mean to dim the luster of any star in our firmament. We should not learn less of George Washington, "First in war, first in peace, and first in the hearts of his countrymen"; but we should learn something also of the 3,000 Negro soldiers of the American Revolution who helped to make this Father of his Country possible. We should not fail to appreciate the unusual contribution of Thomas Jefferson to freedom and democracy; but we should invite attention also to one of his outstanding contemporaries, Benjamin Bannaker, the mathematician, astronomer, and advocate of a world peace. We should in no way detract from the fame of Perry on Lake Erie or Jackson at New Orleans in the second struggle with England; but we should remember the black men who assisted in winning these victories on land and sea. We should not cease to pay tribute to Abraham Lincoln as the savior of the country; but we should ascribe praise also to the 178,000 Negroes who had to be mustered into the service of the Union before it could be preserved, and who by their heroism demonstrated that they were entitled to freedom and citizenship. We should in no way whatever withhold assistance from the effort to make the world safe for democracy, but we should teach our citizenry history rather than propaganda and thus make this country safe for all elements of the population at home.

Respectfully yours,

C. G. WOODSON, Director.

If we are to have genuine democracy in our country, our largest minority group must come in for its proper consideration, recognition, and credit, as well as for its responsibilities and contributions in the form of work, taxes, war burdens and risks. I observe with much interest and satisfaction that as we draw away from the bitter days following the close of the War and reconstruction in the South, the growing tendency among the people of the dominant race to be more tolerant and considerate toward this minority group. In many parts of the country Negro History Week is being celebrated not only by the colored school but by thousands of white schools, whose pupils are realizing more and more the necessity of a knowledge of all of our people.

There is no more striking evidence of this growth of racial interest on the part of the white citizens of this country than the rapidly changing attitude of the white press. The great metropolitan daily newspapers and hundreds of magazines published throughout the Nation have joined with Dr. Woodson and others in their effort to give the world the proper information with reference to the Negro. There was a time when the Negro had to commit some sort of heinous crime in order to have his name appear on the front page of a newspaper and in the editorial columns. Thank God, this is no longer true. It is no unusual thing now to find the Negro favorably mentioned in the headlines of our newspapers, and to find scores of magazines carrying creditable accounts of Negro endeavor and achievement. In this, democracy is taking a firm root and is growing as the time passes. This is our hope. It is the hope of the Nation, because it is true now as always that righteousness exalteth a nation; injustice is a reproach upon any people.

## Trade Agreements and the Woolen Industry

## EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

## LETTER FROM THE SECRETARY OF STATE

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Secretary of State:

JANUARY 16, 1940.

The Honorable A. WILLIS ROBERTSON,  
House of Representatives.

MY DEAR MR. ROBERTSON: I refer again to your letter of December 7, 1939, forwarding a letter and accompanying pamphlet which you received from Mr. F. Eugene Ackerman, of New York, N. Y., relative to the woolen industry. I appreciate the opportunity to present some facts which show that the apprehensions with regard to the effect of the trade agreement with the United Kingdom upon the American wool-textile industry are wholly unfounded.

Mr. Ackerman's letter and pamphlet give the impression that the American wool-textile industry is in a serious condition, and that this is the result of concessions made to the United Kingdom in the trade agreement which became effective on January 1, 1939. The facts would seem to bear out neither of these contentions. The wool-textile industry has been extremely active since the first of last year, and conditions in the industry throughout 1939, while the trade agreement with the United Kingdom has been in effect, have been vastly improved over conditions in 1938.

The developments in the wool-textile industry since the trade agreement with the United Kingdom has become operative provide one more significant illustration of the fact that carefully devised tariff reductions can be made which stimulate international trade without causing harm to the domestic industry. I am sure you will be interested in a few figures relative to the outstanding improvement in conditions in the wool-textile industry during the past year. The following index figures (relative to the woolen and worsted industries), which appear in the Federal Reserve Bulletin, speak for themselves:

## Indexes

	1938 (average)	1939 (January- October average)	Increase (percent)
Machinery activity.....	69.1	102.6	48.4
Consumption of raw material.....	82.8	125.4	51.4
Factory employment.....	63.1	84.4	33.7
Factory pay rolls.....	50.1	67.7	35.1

While it is true the wool-textile imports have increased, it is also true, as the foregoing factual data make clear, that conditions in the domestic industry have improved very substantially.

Imports of wool textiles during 1939 were equivalent to only a small percentage of the domestic production—not more than 4 percent according to reliable estimates. The statement in the pamphlet which you forwarded, that there would have been more employment in the United States if wool-textile imports had not been permitted, is based upon an oversimplification of the problem. It assumes that the domestic market, for wool manufactures and for everything else, is a purely static market, and that all that counts is having 100 percent of it. But that is a false conception. If all imports were prohibited, foreign countries, obviously, would not be able to import from us and the millions of dollars paid annually in wages to the many thousands of workers producing commodities exported from the United States could not be paid and the workers could not be so employed.

Furthermore, the increase in our export trade that results from the improved treatment our goods receive in foreign countries as the result of trade agreements increases employment here and consequently enlarges the domestic demand for American products such as domestic wool textiles. If we shut out imports, we shut off exports too, and the domestic market then becomes a poor market.

The point is driven home by inquiring whether it is better for our wool manufacturers to have 100 percent of a poor home market or 96 percent of a good one. How was the domestic industry faring in 1932, when Hawley-Smoot embargoes were giving it practically every shred of the home market, but of a ruined home market? Was not the income of the industry practically at rock bottom? Was not employment in the industry at a low ebb?

In connection with statistics relative to imports of such raw materials as wool noils, waste, and rags, it is apparent that in-

creases in these imports merely provide further evidence of improved conditions in the wool-textile industry during 1939. Imports of raw materials were naturally restricted in 1938, a period of stagnancy in the industry. The increased imports of noils, rags, and waste in 1939 reflected the expansion in demand for raw materials caused by the acceleration in manufacturing activity. Incidentally, it is noted that exports of wool rags from the United States during the first 10 months of 1939 in fact exceeded imports by more than 800,000 pounds.

Mr. Ackerman's letter to you implies that domestic wool growers would have a larger domestic market if it were not for imports of manufactures of wool. In reality, the United States is not able to produce economically sufficient apparel wool to meet the demands of the American manufacturing industry in times of normal activity. The domestic production of raw apparel wool annually totals about 435,000,000 pounds (on a greasy shorn basis), while the consumption of wool in the United States has exceeded this figure in every year during the last 10 years, with the exception of 1934 and 1938. For example, consumption of raw wool in the United States totaled 579.5 million pounds in 1937, 666.4 in 1936, and 748.4 in 1935. As regards carpet wool there is practically no production in the United States, and consequently it is necessary to import this type of wool to supply the raw material for our factories.

There is enclosed, for your further information, a copy of a letter I sent to the president of the Continental Mills on May 15, 1939, on the subject of the effect of the trade agreement with the United Kingdom on the wool-textile industry.

Sincerely yours,

CORDELL HULL.

## The American Aviation Industry of Today

## EXTENSION OF REMARKS

OF

HON. DOW W. HARTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

## RADIO ADDRESS BY COL. JOHN H. JOUETT

Mr. HARTER of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address upon the American Aviation Industry of Today by Col. John H. Jouett, president of the Aeronautical Chamber of Commerce of America, Inc., delivered January 27, 1940, over the Mutual Broadcasting System:

Much is being said and written about the aircraft industry of the United States. The romance of flying is still fresh in our minds and forever fascinating. We are interested in flying over our country and the seven seas in great transport planes. We have the keenest interest in watching the tens of thousands of young Americans learning to fly. In recent months the deadly destructive powers of an army in the air have consumed hours of radio time and countless pages of our newspapers. We Americans, looking at the war from across the broad Atlantic, have realized that a nation must have a strong air force to protect itself against an enemy. Thus we have before us the contrast between peaceful flying in our own country and the horrors of air raids abroad. That is why we in the aviation industry are besieged with inquiries from the public concerning the business of building airplanes in the United States.

For many years our industry has held an important place in the industrial and economic life of our Nation. Thirty years ago it was passing through a period of infancy marked by malnutrition because few people wanted anything to do with it. The World War gave the child a period of enforced growth. Here in the United States we started out with two or three airplane plants and a few hundred persons building airplanes. The industry expanded so rapidly that it soon was hiring 150,000 persons. At the time of the armistice we were turning out airplanes at the rate of thousands of planes a year. That was a production in excess of any possible need in a post-war era, and the result was disastrous deflation.

The industry continued to grow mentally, however. Courageous men continued to invest money in the development of the airplane, and it was improved from year to year, but the industry remained physically small. There was little or no commercial flying for many years. The military needs of our country were met by a small industry, and the tendrils of an export trade were nourished into strong and far-reaching branches. Throughout that period the troubles of the deflation days following the last war remained indelibly imprinted in the minds of those manufacturers who had faith enough in the future to carry on.

The building of new plants and the gradual expansion of existing factories were planned by wise and cautious management who understood our peacetime requirements for airplanes and who wanted to meet any increased production needs caused by an emergency.

That emergency has now reached us, and it finds the industry in the extremely healthy condition of being able to meet all domestic needs of our country, both military and commercial, all our normal export trade, and the sudden military demands from some of the countries in Europe now engaged in war.

Meeting the sudden procurement programs of those nations preparing for war in 1938 and the needs of those actually engaged in war in 1939 forced our aircraft industry to expand its facilities to an appreciable extent. I must repeat, however, that the expansion which already has taken place, as well as that which may be added later, must be gaged by poignant memory of the post-war deflation of 1919. As the burnt child fears the fire, so does the aircraft industry fear overexpansion. Mistakes of the World War period will not be repeated.

We now have a very large airplane manufacturing industry with plants throughout all the great industrial areas. We have 45 airplane plants and 13 engine factories, scores of companies making instruments and accessories, and others in 50 or more allied industries working on aviation equipment.

The industry has grown up. It has developed into an efficiently planned and well-managed business.

Our companies at present have a backlog of orders amounting to about \$625,000,000. That compares to \$125,000,000 a year ago. That is a gain of half a billion dollars in 12 months—in orders. Two months ago the manufacturers were turning out about \$18,000,000 worth of flying equipment every 30 days. It rose to \$20,000,000 last month, and now is \$25,000,000. During the next 4 months it will double. That ability to increase production at such a rapid rate is the result of the private enterprise which has put manpower, machines, and raw materials into motion for the mass production which can rise to any emergency.

Our industry has been ready for the urgent demands placed upon it thus far; and it is prepared for the future.

This month American manufacturers have a production capacity of 16,000 planes and 18,000 engines a year. Before the end of 1940, without adding any plant expansion other than that already under way, they will be able to turn out planes at the rate of 23,000 a year and aircraft engines at a rate of 35,000 a year. Of that potential number of engines, 25,000 would be of 1,000 horsepower or more. Whether such numbers of planes and engines are manufactured in any given period depends, of course, on whether anybody wants them.

We do not know what our own United States air forces will need in the future. They must come first. At present our manufacturers are making deliveries to our Army and Navy air services, either on time, as required in the orders, or well ahead of delivery schedule. We stand prepared to serve our national defense first.

After that we intend to take care of our commercial business. The American public has invested millions upon millions of dollars in the development of our plants and our ability to turn out superior planes that are the envy of others the world over. The people have invested other millions in the flying activities that make us potentially the greatest air power on earth. It is up to the manufacturer of aircraft to continue to develop and supply our own public with the best machines that our traditional inventive genius, backed by adequate private capital, can produce.

After our own needs come our export markets. For 20 years this industry has struggled to develop that export trade—under all kinds of handicaps and foreign competition. That trade beyond our shores has been built up year by year and nation by nation until today it covers 91 countries, dominions, and colonies out of a possible market of less than 100.

If plans for additional equipment among air lines, both in the United States and in more than 20 other countries, are carried out, our manufacturers should have a backlog of approximately \$40,000,000 in transport equipment alone within the next few months. Meanwhile, we have made very real progress in private flying. Our new models are improved in design and performance. The number of new planes produced for the private owner in 1940 was approximately 3,700, slightly more than 100 percent above 1938. Improved economic conditions and the pilot-training program of the Civil Aeronautics Authority, which is now being carried on in over 400 colleges throughout the United States to train 10,000 pilots every year, have contributed to a greater demand for private planes of all types. They range from the light plane to the 5-passenger executive models. We have also noted increased interest in this kind of equipment among the countries of Latin America, where we expect to develop large markets for private-owner planes. The life of the export trade of the United States, in the aeronautical field no less than any other, depends upon its peaceful and orderly continuation and expansion. No one knows this better than the manufacturers of airplanes, engines, propellers, and accessories.

The war in Europe will end, and when it does the feverish post-war activity for the domination of export markets will occur, as history shows it has always occurred in the past. We must let no impulsive action or policy at this time jeopardize the future of our export trade. Now, what does this increased activity in aircraft production mean to the average American? What does it mean to those who wish to work in aviation?

A year ago we employed 30,000 men in our manufacturing plants. Today that number has doubled. It is now 60,000. That 100-percent increase in employment was created by large orders for both military and commercial planes. It also has caused a rapid upswing in employment throughout the 50 or more allied industries which contribute to the finished flying machine.

Quantity orders for planes of the same model have brought about a modification of the industry's labor requirements and have per-

mitted adoption of straight-line production methods. This simplification of manufacturing technique has reduced the ratio between skilled and unskilled labor formerly required when the demand for aircraft limited production to comparatively few machines of the same model at one time.

Today the manufacturers find that they can use a much larger percentage of unskilled and semiskilled labor, which results in a great saving in time required for training personnel. For that reason we do not see any serious shortage in the future, although 1940 will be the greatest productive period in the history of the industry.

What will it be tomorrow? From what I know about the rapid growth of the industry, I should say that more places will be made for young Americans in our industry every year from now on.

Meanwhile our manufacturers are increasing their research and engineering development facilities wherever possible. Some are building their own wind tunnels and other laboratory equipment. Whole sections of their engineering departments are developing new planes, engines, propellers, and other accessories to make flying even faster, more reliable, and more economical. New manufacturing equipment is also contributing to American progress in producing better planes. As an average over many years, the manufacturers have devoted to development work approximately 10 percent of their total sales.

Reports received by the Aeronautical Chamber in recent weeks show that the industry is continuing to make improvements more rapidly than ever before, because with increased business it can afford greater expenditures for research and engineering.

In recent news items there has been some mention of the possibility that output of airplane engines will become a "bottle neck" in airplane production. I must ask by what yardstick the so-called bottle neck is measured. The principal constructors of engines are expanding their plants. Almost unlimited sources of subcontracting are available. We have the utmost confidence that the needs of our national defense, even under emergency requirements, can be met by the aircraft industry as it is now constituted. Any productive expansion far above national requirements must be gravely considered from the point of view of future economic health.

The entire industrial growth of the United States and its world leadership in mechanical quality and production methods have been the outcome of individual initiative and effort, coupled with dogged perseverance and ingenuity. A generous system of patent protection and an absence of governmental restriction have been the vehicles which have carried all American industry forward to its present recognized leadership. Aircraft manufacturing is no exception. It has been developed on the same American principles as our other leading industries. Its pathway is now beset with temptations which involve untimely expansion advocated by the unwise counsel of hysteria. These temptations are well recognized by those aeronautical leaders who, through years of bitter experience, have guided the growth of American aviation to its present state of well-balanced productivity. Such a development and its continuation can only occur in a nation such as ours, where industrial accomplishment is unhampered by the restrictions imposed on business by governments less democratic and less farseeing than that in the United States.

### The 1940 Census

#### EXTENSION OF REMARKS

OF

HON. MATTHEW A. DUNN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

#### LETTER FROM THE SECRETARY OF COMMERCE

Mr. DUNN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent by Secretary of Commerce Harry L. Hopkins to Senator CHARLES W. TOBEY:

DEPARTMENT OF COMMERCE,  
Washington, February 3, 1940.

HON. CHARLES W. TOBEY,

United States Senate, Washington, D. C.

MY DEAR SENATOR TOBEY: This is in reply to your letter of January 31, in which you characterize certain questions to be asked in the approaching census as departures from precedent and invasion of the privacy of the individual.

Surely you know that the census is 150 years old this year—one of the oldest activities of the Federal Government; that it has been provided for in the United States Constitution; and that it has been taken every 10 years since 1790. Surely you know that, almost throughout this Nation's entire life, the census has provided the basic facts for democratic guidance not only of individuals and public officials at all levels, but also of agriculture and industry. The census has survived and grown stronger, through all sorts of political administrations, because it is so designed, and has been

so conducted, as to command the continuing respect and confidence of a free people. Any sincere public official should regret seeing this long and splendid record damaged for purely partisan political reasons, and that is why I am replying to you at such length.

Your entire discussion of the census is based upon misconception of it. First, you write as if census questions concerning home mortgages were new this year. The truth is that 50 years ago, in 1890, such questions were first included in the census during the Republican administration of President Benjamin Harrison, and that these questions were specifically ordered by Congress. I quote the exact language of the law:

"That it shall be the duty of the Superintendent of Census, in addition to the duties now required of him by law, to ascertain the number of persons who live on and cultivate their own farms, and who live in their own homes, and the number who hire their farms and homes, and the number of farms and homes which are under mortgage, the amount of mortgage debt, and the value of the property mortgaged. He shall also ascertain whether such farms and homes have been mortgaged for the whole or part of the purchase money for the same, or for other purposes, and the rates of interest paid upon mortgage loans."

Questions concerning this same subject—value of nonfarm homes, mortgage debt, and rate of interest—again were included in the census of 1920.

Indeed, this whole furore about personal questions in 1940 is absurd. I can well imagine how much more vivid your complaint would be if it were proposed that, in 1940, each person be asked to state the value of all the real estate he owns and the value of all other property he owns. We are not asking these questions. But the first of them was asked by the Whigs in the census of 1850 under President Zachary Taylor. Both of them were asked in 1860 and 1870 under Democratic President Buchanan and Republican President Grant.

As for asking people who rent their homes the amount of rent they pay, that question was first placed in the census list in 1930 under President Hoover.

Second, you express alarm over the fact that the answering of census questions is compulsory. The truth is that the laws have contained penalties for refusal to answer these questions ever since the first census in 1790, and that nobody has complained seriously and almost nobody has been penalized, because the American people, on the whole, recognize the basic value of this work.

Third, you create an impression that the 1940 census is something new and strange which shatters precedents and somehow carries a threat of dictatorship. The truth is that the law under which the 1940 census will be taken, with the single exception of the housing schedule, is the Fifteenth Census Act, sponsored and recommended to Congress by Herbert Hoover while he was Secretary of Commerce, and enacted while he was President. Except for the supplementary census of housing, no new decennial census legislation has been enacted since Mr. Hoover left the White House.

On this point let me quote Representative E. Hart Fenn, chairman of the House Census Committee, as he opened the hearings on the Fifteenth Census Act on January 11, 1928:

"Before I came to Washington I communicated with the Secretary of Commerce and the Census Bureau \* \* \* and this bill was referred to me by Mr. Hoover \* \* \* it is what I may characterize as the bill which the Department of Commerce and the Bureau of the Census consider advisable to be adopted for the taking of the Fifteenth Decennial Census."

Fourth, the method of selecting enumerators which is in force today is such an old and traditional method, having been concurred in by both political parties far longer than the memory of any living man, that it needs no comment from me.

I make these political references with the utmost reluctance, and only because your letter forces me to do so. The census, an established and valued American institution, should not be made the butt of partisan, political sniping. Its questions are not its own. They are the questions to which large and responsible groups of American citizens are demanding the answers.

Now where do the questions come from? The Census Bureau calls together, in conference after conference, representatives of business and industry and labor and all other large groups primarily interested. They sift down a multitude of questions, always seeking to reduce the number to a few of the most basic, most broadly significant inquiries. Literally thousands of questions have been rejected during the past year—many of them useful questions—so as not to burden the public.

Then these questions are further sifted by the Central Statistical Board of the Bureau of the Budget, and finally by the Census Advisory Committee, a group of widely known experts from outside Government circles. This committee includes Dr. Robert E. Chad-dock, of Columbia University; Dr. J. Frederick Dewhurst, of the Twentieth Century Fund; Paul T. Cherington, market analyst; Dr. William F. Ogburn, of the University of Chicago; Dr. Willard L. Thorp, of Dun and Bradstreet and economic adviser to the Secretary of Commerce; and Dr. Murray R. Benedict, of the University of California.

Thus these questions represent, as far as the Census Bureau can ascertain by vast labor and pains, the wishes of the American people. In fact, the questions on the population schedule were tried out with nearly 200,000 persons in the Indiana test census. There the questions on earnings were answered with very little hesitancy.

What hesitancy was displayed came chiefly from the higher-income groups whose objections vanished when they learned that all they needed to state was "over \$5,000." If, however, there should be objectors among those of lower incomes, it must be said that the law prescribes severe penalties—\$1,000 fine or 2 years in prison, or both—for any census taker who reveals any of this personal information. Throughout the long history of the Bureau there have been very few cases of it.

Your views on the housing census apparently have been formed without knowledge of the facts, and are out of step with the wishes of the American people. Literally thousands of large business and industrial interests and associations, along with groups of many other types, want the picture of American housing. The builders cannot take the risk of large operations without knowing the facts. This is a situation which has been known for years to any person who cared to read about current affairs. The files of the Census Bureau are full of requests for this information.

Your fears about the invasion of people's privacy, and about the widespread misuse of this confidential information by the census takers, will hold up only so long as you labor under the delusion that this activity is something new. This, of course, is completely false.

There is almost unlimited experience to prove that the American people are willing to cooperate in providing the facts sought by the census, and to prove further that census enumerators, with very rare exceptions, respect the confidence entrusted to them. The census is not essentially different from decade to decade. A few new questions are added each time, out of the experience of the immediate past; but the same general method applied to your parents and your grandparents now applies to you. Yet can you recall any important outcry concerning misuse of census information in your entire lifetime?

The whole theory of democracy is based upon confidence in the individual and in his willingness to cooperate, in proper fields, for the common good. I have faith both in the people who will ask these questions and those who will answer them.

The one thing which might do serious violence to the 1940 census, and thus to the national welfare, would be the wide circulation of false charges that it is something new and fearsome.

I assure you that it represents no departure from precedent, either in the law under which it operates or the mechanics by which it is carried out. The 1940 census, as in the past, finds us taking our regular inventory of democracy in action.

Sincerely,

HARRY L. HOPKINS,  
Secretary of Commerce.

## Public Opinion Strongly in Favor of the Hull Program

### EXTENSION OF REMARKS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

Mr. KITCHENS. Mr. Speaker, the Gallup poll which appeared in the Washington Post of February 4 shows that a great majority of the informed public opinion supports Secretary Hull's trade-agreements program. This poll commented as follows:

Among those who have definite views on the question, even a majority of Republicans are in favor of the treaties.

Now, I am well aware that this does not represent the attitude of our friends on the other side of the aisle. I have a sort of long-shot hope, however, that a number of them will be converted during the next few weeks.

As indicated, the Gallup survey found no substantial differences in the attitude of Republicans and Democrats on the question; 71 percent of those answering the poll were favorable to this program.

During the recent hearings before the Committee on Ways and Means, a number of prominent Republicans appeared in favor of extending the Trade Agreements Act. The leading Republican editors and newspapers favor extension.

Incidentally, on the same page of the Post with the Gallup poll survey I was attracted by the following statement under the heading, "Hull's fan mail begins to pour in." After commenting on the popularity of the Secretary, we find this statement:

And, strange to say, the percentage of his mail protesting against the trade agreements has dropped sharply—down to about one letter in a hundred.

The above-indicated poll is somewhat in line with newspaper opinion as recently published by James S. Twohey Associates, Inc. According to their analysis, 82 percent of the newspaper opinion was favorable to the Hull program, 9 percent was unfavorable, and 9 percent noncommittal or mixed.

Such conservative Republican papers as the Boston Evening Transcript have come out strongly for the trade-agreements program in the following language:

We strongly favor many basic precepts of the Republican Party; we are firmly convinced that it will be ill advised if it goes before the American people in the coming election with the proposition that tariff control should be restored to Congress where it would be subjected to the logrolling and alliances of special interest sectional pressure.

Under congressional control there will be no guaranty that Congressmen, intent on serving powerful pressure groups, would not propel this Nation toward such excessive and calamitous protectionism as the Hawley-Smoot law. This law contributed its share to the building of high trade barriers which became one of the causes of the present war.

Mr. Speaker, the enlightened public opinion of America today knows that undue restriction, obstruction, and prevention of national and international trade through excessive high tariffs and other schemes, instigated by selfish and monopolistic seeking groups, cause universal suffering, friction, unemployment, discontent, and thereby create the real basis for most of our wars.

The Hull trade program on the contrary generates a spirit of international friendliness, peaceful relations with all nations, greater general exchange of products, a better, more general, and higher standard of living everywhere, and is a great enemy of war.

## Obligations of Soviet Russia to the United States

### EXTENSION OF REMARKS

OF

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, February 8 (legislative day of Wednesday, February 7), 1940

### LETTER FROM SECRETARY OF STATE

Mr. PITTMAN. Mr. President, I ask leave to publish in the RECORD a communication to the Foreign Relations Committee from the Secretary of State, responding to the request of the committee for comments upon Senate Resolution No. 219, submitted by the Senator from Michigan [Mr. VANDENBERG], in which the President was requested to report to the Senate whether the Government of the Union of Soviet Socialist Republics had fulfilled the obligations contained in the agreements entered into between that Government and this Government on November 16, 1933.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF STATE,  
Washington, January 30, 1940.

The Honorable KEY PITTMAN,  
Chairman, Committee on Foreign Relations,  
United States Senate.

MY DEAR SENATOR PITTMAN: I have received your letter of January 19, 1940, inviting such comment as I may feel disposed to make on Senate Resolution No. 219 of January 18, 1940, in which the President was requested to report to the Senate, if not incompatible with the public interest, whether the Government of the Union of Soviet Socialist Republics had fulfilled the obligations contained in the agreements entered into between that Government and this Government on November 16, 1933.

Although the agreements of November 16, 1933, between the two Governments were concluded simultaneously with the establishment of diplomatic relations between them, the maintenance of diplomatic relations has not been made "wholly contingent," as the wording of the resolution would appear to indicate, on the fulfillment by the Soviet Government of the obligations set forth in these agreements. Whenever this Government has cause to believe that another government has failed to live up to agreements with it, it is accustomed to make use of the very channels which exist by virtue of diplomatic relations, in order to bring this failure to

the attention of the other government, to endeavor to effect an adjustment of resultant divergencies of views, and to attempt to prevent similar differences from taking place in the future.

During the years which have elapsed since the establishment of diplomatic relations between the United States of America and the Union of Soviet Socialist Republics, this Government on several occasions has had ground to believe that the Soviet Government was not fully living up to the obligations undertaken at the time of the establishment of such relations. On such occasions this Government has made appropriate representations to the Soviet Government. In certain instances these representations have yielded constructive results; in others, they have disclosed divergencies in the interpretation of the agreements in question.

It was the opinion of this Government in August 1935 that the Soviet Government had violated its obligations not to interfere in the internal affairs of the United States when it permitted the Seventh All-World Congress of the Communist International to convene in Moscow.

Accordingly, on August 25, 1935, the American Ambassador to the Soviet Union addressed a note of protest to the Acting People's Commissar for Foreign Affairs. A copy of this note is attached hereto as enclosure 1.

On August 27, 1935, the Acting People's Commissar for Foreign Affairs presented a note in reply to the Ambassador in which it was denied that the Soviet Government had taken upon itself obligations of any kind with regard to the Communist International. A translation of this note is attached hereto as enclosure 2.

The Department of State on August 31, 1935, issued a statement in which it maintained that the language of the agreement between the two Governments "irrefutably covers activities of the Communist International." A copy of this statement is attached hereto as enclosure 3. There has been no further exchange of views or communications on this subject between the two Governments.

In connection with the work of the American Embassy in Moscow regarding the protection of American citizens and interests in the Soviet Union, a number of cases have come to the attention of this Government involving the arrest or detention of American citizens by the Soviet authorities. In the opinion of this Government, the Soviet Government in the handling of some of these cases was not living up strictly to its undertakings relative to the rights of citizens of the United States to legal protection. Following representations made by this Government the American citizens under arrest were eventually released, and at the present time, so far as this Government is aware, no American citizens are under detention in the Soviet Union, except a number whom the Soviet Government considers to be citizens of the Soviet Union rather than of the United States.

This Government has not had occasion to make representations to the Soviet Government for violations of any of the other obligations assumed by the Soviet Government in the agreements of November 16, 1933.

In addition to concluding certain agreements at the time of the establishment of diplomatic relations, the American and Soviet Governments exchanged views with regard to methods of settling all questions of indebtedness and claims outstanding between them. This exchange permitted the hope for a speedy and satisfactory solution of these questions. Subsequent negotiations, however, terminated unsuccessfully. On January 31, 1935, the Department of State issued to the press a statement, a copy of which is attached hereto as enclosure 4, pointing out that "there seems to be scarcely any reason to doubt that the negotiations which seemed so promising at the start must now be regarded as having come to an end."

There is attached hereto for your convenience as enclosure 5 a publication of the Department of State which sets forth the various agreements entered into between the Governments of the United States and of the Soviet Union on November 16, 1933.

Sincerely yours,

CORDELL HULL.

#### [Enclosures:

[1. Note, dated August 25, 1935, addressed by the American Ambassador at Moscow to the Acting People's Commissar for Foreign Affairs of the Soviet Union.

[For the press]

DEPARTMENT OF STATE,  
August 25, 1935.

The following is the text of the note presented today to the Acting People's Commissar for Foreign Affairs at Moscow by Ambassador Bullitt and thereafter made available to the press at Moscow by Ambassador Bullitt:

"Under instructions from my Government, I have the honor to call attention to the activities, involving interference in the internal affairs of the United States, which have taken place on the territory of the Union of Soviet Socialist Republics in connection with the Seventh All-World Congress of the Communist International, and, on behalf of the Government of the United States, to lodge a most emphatic protest against this flagrant violation

of the pledge given by the Government of the Union of Soviet Socialist Republics on November 16, 1933, with respect to non-interference in the internal affairs of the United States.

"That pledge, which was given by the Government of the Union of Soviet Socialist Republics as a result of the discussions which took place prior to the establishment of diplomatic relations between the United States and the Union of Soviet Socialist Republics, reads in full as follows:

"WASHINGTON, November 16, 1933.

"MY DEAR MR. PRESIDENT: I have the honor to inform you that coincident with the establishment of diplomatic relations between our two Governments it will be the fixed policy of the Government of the Union of Soviet Socialist Republics:

"1. To respect scrupulously the indisputable right of the United States to order its own life within its own jurisdiction in its own way and to refrain from interfering in any manner in the internal affairs of the United States, its territories, or possessions.

"2. To refrain, and to restrain all persons in Government service and all organizations of the Government or under its direct or indirect control, including organizations in receipt of any financial assistance from it, from any act overt or covert liable in any way whatsoever to injure the tranquility, prosperity, order, or security of the whole or any part of the United States, its territories, or possessions, and, in particular, from any act tending to incite or encourage armed intervention, or any agitation or propaganda having as an aim, the violation of the territorial integrity of the United States, its territories or possessions, or the bringing about by force of a change in the political or social order of the whole or any part of the United States, its territories, or possessions.

"3. Not to permit the formation or residence on its territory of any organization or group—and to prevent the activity on its territory of any organization or group, or of representatives or officials of any organization or group—which makes claim to be the Government of, or makes attempt upon the territorial integrity of, the United States, its territories or possessions; not to form, subsidize, support, or permit on its territory military organizations or groups having the aim of armed struggle against the United States, its territories, or possessions, and to prevent any recruiting on behalf of such organizations and groups.

"4. Not to permit the formation or residence on its territory of any organization or group—and to prevent the activity on its territory of any organization or group, or of representatives or officials of any organization or group—which has as an aim the overthrow or the preparation for the overthrow of, or the bringing about by force of a change in, the political or social order of the whole or any part of the United States, its territories, or possessions.

"I am, my dear Mr. President,

"Very sincerely yours,

"MAXIM LITVINOFF,

"People's Commissar for Foreign Affairs, Union of Soviet Socialist Republics.

"MR. FRANKLIN D. ROOSEVELT,

"President of the United States of America,  
The White House."

"My Government invites particular attention to the obligations of the Government of the Union of Soviet Socialist Republics contained in the paragraph No. 4.

"In view of the fact that the aim and activity of an organization such as the Congress of the Communist International, functioning on the territory of the Union of Soviet Socialist Republics, cannot be unknown to the Government of the Union of Soviet Socialist Republics, it does not seem necessary to present material to show the aim of the Congress of the Communist International with respect to the political or social order of the United States or to quote from the published proceedings of the Congress to show its activity relative to the internal affairs of the United States, as evidenced in the discussion at the Congress of the policies and activities of the Communist organization in the United States and the determination and formulation by the Congress of policies to be carried out in the United States by the Communist organization in the United States. Nor does it appear necessary to list the names of representatives or officials of the Communist organization in the United States who were active at the above-mentioned Congress and whose admission into the territory of the Union of Soviet Socialist Republics was, of course, known to the Government of the Union of Soviet Socialist Republics.

"As I have pointed out to the People's Commissar for Foreign Affairs when discussing earlier violations of the undertaking of November 16, 1933, the American people resent most strongly interference by foreign countries in their internal affairs, regardless of the nature or probable result of such interference, and the Government of the United States considers the strict fulfillment of the pledge of noninterference an essential prerequisite to the maintenance of normal and friendly relations between the United States and the Union of Soviet Socialist Republics.

"The Government of the United States would be lacking in candor if it failed to state frankly that it anticipates the most serious consequences if the Government of the Union of Soviet Socialist Republics is unwilling, or unable, to take appropriate measures to prevent further acts in disregard of the solemn pledge given by it to the Government of the United States.

"I may add that it is a source of regret that in the present international situation the development of friendly relations between the Russian and American peoples will inevitably be precluded by the continuance on territory of the Union of Soviet Socialist Republics, in violation of the promise of the Government of the

Union of Soviet Socialist Republics, of activities involving interference in the internal affairs of the American people."

[Enclosure 2]

[Translation of note as received by the Department of State from Ambassador William C. Bullitt at Moscow. The note was handed to Mr. Bullitt today by the Acting People's Commissar for Foreign Affairs]

Moscow, August 27, 1935.

MR. AMBASSADOR: By note of August 25 of this year you invited my attention to the activity of the Congress of the Communist International, which took place at Moscow; and, referring to the note of the People's Commissar for Foreign Affairs Litvinov to the President of the United States of America, Mr. Roosevelt, under date of November 16, 1933, protested against this activity, considered by your Government as a violation of the obligations of the Government of the Union of Soviet Socialist Republics concerning noninterference in the internal affairs of the United States provided for in the note of November 16, 1933.

In connection therewith I consider it necessary to emphasize with all firmness that the Government of the Union of Soviet Socialist Republics has always regarded and still regards with the greatest respect all obligations which it has taken upon itself, including, naturally, the mutual obligation concerning noninterference in internal affairs, provided for in the exchange of notes of November 16, 1933, and discussed in detail in the conversations between the President of the United States of America, Mr. Roosevelt, and the People's Commissar Litvinov. There are contained no facts of any kind in your note of August 25 which could be considered as a violation on the part of the Soviet Government of its obligations.

On the other hand, it is certainly not new to the Government of the United States that the Government of the Union of Soviet Socialist Republics cannot take upon itself and has not taken upon itself obligations of any kind with regard to the Communist International.

Hence the assertion concerning the violation by the Government of the Union of Soviet Socialist Republics of the obligations contained in the note of November 16, 1933, does not emanate from obligations accepted by both sides, in consequence of which I cannot accept your protest and am obliged to decline it.

The Government of the Union of Soviet Socialist Republics, sincerely sharing the opinion of the Government of the United States of America that strict mutual noninterference in internal affairs is an essential prerequisite for the maintenance of friendly relations between our countries and steadfastly carrying out this policy in practice, declares that it has as its aim the further development of friendly collaboration between the Union of Soviet Socialist Republics and the United States of America, responding to the interests of the people of the Soviet Union and the United States of America and possessing such great importance for the cause of universal peace.

Taking advantage of the occasion, I invite you to accept the assurances of my high esteem.

N. KRESTINSKI.

[Enclosure 3]

[For the press]

DEPARTMENT OF STATE, August 31, 1935.

[Confidential release for publication in morning papers of Sunday, September 1, 1935—not to be previously published, quoted from, or used in any way]

In connection with the protest lodged by Ambassador Bullitt against the violation by the Soviet Government of its pledge of November 16, 1933, with regard to noninterference in the internal affairs of the United States, and the reply of the Soviet Government thereto, the Secretary of State today made the following statement:

"The recent note of this Government to the Government of the Soviet Union and the reply of that Government raises the issue whether that Government, in disregard of an express agreement entered into at the time of recognition in 1933, will permit organizations or groups operating on its territory to plan and direct movements contemplating the overthrow of the political or social order of the United States. For 16 years this Government withheld recognition—as did many other governments—mainly for the reason that the Soviet Government had failed to respect the right of this Nation to maintain its own political and social order without interference by organizations conducting in or from Soviet territory activities directed against our institutions.

"In 1933 this Government, observing the serious effects upon peace and prosperity of the many partial or dislocated international relationships throughout the world, took up anew the question whether the United States and the Soviet Union, two of the largest nations, could not find a way to establish more natural and normal relations which would afford a basis for genuine friendship and collaboration to promote peace and improve material conditions both at home and abroad. After various stipulations in writing had first been carefully drafted and agreed upon by representatives of the two Governments, recognition was accorded to the Government of the Soviet Union by this Government in November 1933. One of the most important provisions of the agreement thus reached was the pledge of the Soviet Government to respect the right of the United States 'to order its own life within its own jurisdiction in its own way and to refrain from interfering in any manner in the internal affairs of the United States, its territories, or possessions.' The essence of this pledge was the obligation assumed by the Soviet Government not to permit persons or groups

on its territory to engage in efforts or movements directed toward the overthrow of our institutions. The representative of the Soviet Government declared in writing that 'coincident with the establishment of diplomatic relations between our two Governments it will be the fixed policy of the Government of the Union of Soviet Socialist Republics: \* \* \*'

"4. Not to permit the formation or residence on its territory of any organization or group—and to prevent the activity on its territory of any organization or group, or of representatives or officials of any organization or group—which has as an aim the overthrow or the preparation for the overthrow of, or the bringing about by force of a change in, the political or social order of the whole or any part of the United States, its territories, or possessions."

"The language of the above-quoted paragraph irrefutably covers activities of the Communist International, which was then, and still is, the outstanding world Communist organization, with headquarters at Moscow.

"In its reply of August 27, 1935, to this Government's note of August 25, 1935, the Soviet Government almost in so many words repudiates the pledge which it gave at the time of recognition that 'it will be the fixed policy of the Government of the Union of Soviet Socialist Republics \* \* \* not to permit \* \* \* and to prevent' the very activities against which this Government has complained and protested. Not for a moment denying or questioning the fact of Communist International activities on Soviet territory involving interference in the internal affairs of the United States, the Soviet Government denies having made any promise 'not to permit \* \* \* and to prevent' such activities of that organization on Soviet territory, asserting that it 'has not taken upon itself obligations of any kind with regard to the Communist International.' That the language of the pledge, as set out above, is absolutely clear and in no way ambiguous and that there has been a clean-cut disregard and disavowal of the pledge by the Soviet Government is obvious.

"The American Government, having previously made oral complaints of failure by the Soviet Government to carry out its pledge and being deeply concerned over the growing instability of international relations and the dangerous consequences thereof to peace and economic recovery, sought most earnestly in its note of August 25 to impress upon the Soviet Government the sanctity of its pledge to the end that there might be between the two nations continued development of friendly and official relations and valuable collaboration in many beneficial ways. When in its reply the Soviet Government indicated an intention entirely to disregard its promise 'to prevent' such activities as those complained of it struck a severe blow at the fabric of friendly relations between the two countries.

"To summarize, in view of the plain language of the pledge, it is not possible for the Soviet Government to disclaim its obligation to prevent activities on its territory directed toward overthrowing the political or social order in the United States. And that Government does not and cannot disclaim responsibility on the ground of inability to carry out the pledge, for its authority within its territorial limits is supreme and its power to control the acts and utterances of organizations and individuals within those limits is absolute.

"It remains to be seen to what extent the intention indicated by the Soviet Government's reply, which is directly contrary to 'the fixed policy' declared in its pledge, will be carried into effect. If the Soviet Government pursues a policy of permitting activities on its territory involving interference in the internal affairs of the United States, instead of 'preventing' such activities, as its written pledge provides, the friendly and official relations between the two countries cannot but be seriously impaired. Whether such relations between these two great countries are thus unfortunately to be impaired and cooperative opportunities for vast good to be destroyed, will depend upon the attitude and action of the Soviet Government."

[Enclosure 4]  
[For the press]

DEPARTMENT OF STATE,  
January 31, 1935.

[Confidential release for publication in morning newspapers of Friday, February 1, which do not appear on the streets before 9 p. m., eastern standard time, Thursday, January 31, 1935—not to be previously published, quoted from, or used in any way]

The Secretary of State had a conversation today with Ambassador Troyanovsky. Assistant Secretary Moore, Ambassador Bullitt, and Mr. Kelley, Chief of the Eastern European Division of the Department of State, were also present. This evening Secretary Hull made the following statement to the press:

"You will recall the fact that in an effort to arrive at an agreement with the Soviet Government with respect to debts, claims, and credits for trade, negotiations have begun more than a year ago in Moscow and continued in Washington, but that no understanding had been reached when Ambassador Troyanovsky left Washington in October to visit Moscow.

"In our last conversations with Ambassador Troyanovsky, prior to his departure, we submitted for the consideration of his Government a proposal representing the limit to which we believed we could go without complete sacrifice of the interests of American claimants and without unduly pledging the credit of our Government for the purpose of facilitating trade between the United States and the Soviet Union.

"The Government of the United States indicated its willingness to accept in settlement of all claims of the United States and its

nationals against the Soviet Government and its nationals (and of all claims of the Soviet Government and its nationals against the United States and its nationals) a greatly reduced sum to be paid over a long period of years. The Government of the United States indicated that it would accept payment through the application of a rate of interest beyond the ordinary rate of interest on credits extended to the Soviet Government with the financial assistance of the Government of the United States. To facilitate the placing of orders in the United States by the Soviet Government on a long-term credit basis, the Government of the United States was prepared to make, through the Export-Import Bank, to American manufacturers and producers requiring financial assistance in connection with the granting of credit on such orders, loans to a very large percentage of the credit granted. It was contemplated that the length of the credit extended would vary according to the different categories of goods, and the Soviet Government was advised that the Government of the United States was not averse to making special terms in exceptional cases at the President's discretion. It was intended that the loans extended to American manufacturers and producers should constitute a revolving fund for the continuous maintenance of Soviet purchases in the United States.

"We hoped confidently that this proposal would prove entirely acceptable to the Soviet Government and are deeply disappointed at its rejection. In view of the present attitude of the Soviet Government, I feel that we cannot encourage the hope that any agreement is now possible. I say this regretfully because I am in sympathy with the desire of American manufacturers and agricultural producers to find a market for their goods in the Soviet Union and with the American claimants whose property has been confiscated. There seems to be scarcely any reason to doubt that the negotiations which seemed so promising at the start must now be regarded as having come to an end.

"It will be for the Board of Trustees of the Export-Import Bank to determine whether or not there is any good reason for continuing the existence of the bank."

## Land and National Security

### EXTENSION OF REMARKS

OF

HON. PRETISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, February 8 (legislative day of Wednesday, February 7), 1940

RADIO ADDRESS BY HON. JOSH LEE, OF OKLAHOMA

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting address delivered by the distinguished Senator from Oklahoma [Mr. LEE] over the Columbia Broadcasting System on February 7, 1940. The subject of the address is Land and National Security.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the air, let me express my appreciation to the Columbia Broadcasting System for this opportunity to discuss with you the subject of land and national security.

Our Government has in the past turned to the land as a means of taking care of the unemployed who accumulate periodically. Every time there was a depression the Government would open a new frontier for settlement and drain off the disinherited, but today there are no new frontiers to open. Therefore, our Government must provide means of helping the family farmer to purchase and pay for a farm of his own.

At the present time, big-scale farming is sweeping the family farmer from the land and sending him to town to seek employment on the relief rolls. Big land owners are discharging their tenants and farming their land with power machinery, but the family farmer who farms only a small unit cannot do this. The size of his farm will not justify power machinery.

Therefore, he either goes broke and moves to town or else he buys power machinery and rents the farms of his neighbors and they go to town. In either case the present tendency is for the family farmer to be crowded off the land and start his trek down the highway with the sharecroppers.

This threatens the very security of our Nation. Today 42 percent of all of the farms in the United States are farmed by tenants. In Oklahoma, Arkansas, Texas, and the deep South the percentage is almost two-thirds; i. e., two-thirds of the land is farmed by tenants. But the most alarming fact about it is that tenantry in the United States is increasing.

I am convinced that the Government can solve this problem; first, by reducing the farm benefit payments to the big-scale operator and correspondingly increasing them to the small unit farmer;

second, by giving the tenant farmer a chance to own the land that he tills.

The Government can by insuring the mortgage give these tenant farmers an opportunity to buy farms of their own. This can be done without taking money out of the Treasury but by simply extending the Government's credit to the farmer in the same manner as it is now being extended to the city dweller through Federal housing. Give the farmer easy terms so he can make the farm purchase itself.

Such a measure has already passed the Senate and is now pending before the House Agriculture Committee. Such a program as this offers permanent relief from unemployment. Place a family on the farm with the hope of becoming the owner of that farm and you have started a self-sustaining program.

Such a program would increase our national security. Put people on pavement and they will starve, but put them on the land and they will live. The best way to help a man is to help him help himself. This program will do just that.

We must not only find jobs for unemployed men but we must rehabilitate the men themselves. We can do that only by giving them an incentive. There is nothing that will rekindle the fires of hope as will the opportunity to own land.

We have in the past been wasting the two greatest assets in America—men and soil. One is indispensable to the other. The erosion of the soil and the erosion of character are simultaneous processes. With the washing away of the fertile, virgin soil of America we have also suffered tremendous erosion in human character. You cannot maintain a great nation on eroded, unfertile land. Neither can you conserve the fertility of the soil when it does not belong to the man who runs the plow.

You cannot maintain a great nation when the majority of the people own no property. Many of our farm tenants and sharecroppers have already lost hope and are now in a fit mood to listen to the dangerous doctrine of "isms." There is no fall so dangerous as the fall of those invisible towers of faith. The answer is to make possible a farm for every farmer and a home for every family.

William C. Bullitt, former Ambassador to Russia, tells this story. He attended a dinner a few years back in Moscow with some of the old Bolsheviks who subsequently were purged. They were talking about the early days of bolshevism, when Communist Russia was struggling for its existence. They were conferring with Lenin about the menacing drive of the White Russian armies when he surprised them by saying that he believed the peasants ought to be allowed to own their farms just as in capitalistic countries. Several of the old Bolsheviks present replied: "Oh, no. We couldn't vote for that. It would be contrary to orthodox Marxism."

Whereupon Lenin retorted, "You fools, don't you understand? Let the peasants feel the land, hold it, run it through their hands. Then they will fight for it against the returning landlords, and win. Afterward we can take it away from them and communize it."

Which is just what Lenin did. The peasants, fighting for their own land, put up a magnificent battle. The Whites were stopped and Russia became a great power, whereupon the farms were collectivized.

Today the Finnish-Russian war presents a parallel. The Finns are fighting for their own land. But the Russians are fighting for their collectives, and, consequently, fighting with a remarkable lack of zeal.

The love of Americans for the land is one of our great national traits.

There is something inspiring and majestic about the feel of ownership. As a man walks on his own soil and gets the feeling that there is something firm and substantial under him, it makes a better man of him, willing to die if need be for that small plot of earth, but which is even more important, it makes him willing to live, work, suffer, and sacrifice in order that he may continue to own that land.

This desire to own land is one of the most powerful motivating influences inherent in humanity. Because of it, America was settled in an unbelievably short time. This urge to own land pushed our frontier farther and farther west in the face of the dangers and hardships of frontier life.

Fifty years ago teeming thousands of land-hungry people waited the signal on the Kansas-Oklahoma border. They waited the signal that would open new land to settlement in the Territory of Oklahoma. Every one of these new settlers had a dream of an empire, and that empire was 160 acres of land and the ruler of that empire was the settler himself.

As these settlers became homesteaders, the feeling of ownership was strong upon them. They became rooted to the soil. They became a part of the community. They lived on little and did without much. Their sacrifice was cheerfully made because of the hope of full and complete ownership of that tract of land. No matter whether the soil was rich, fertile bottom land, or whether it was thin, unproductive hill country, that pride of ownership, that feeling of possession, was the same.

But many of these farms have been deserted. The families have moved to town to get on W. P. A. and the farms have been taken over by big-scale operators, who farm them with power machinery. The trees in the small family orchards have died. The yard and garden fences have been moved to make way for the tractor. Only a few landmarks tell the story of a farmer who once made a home there for his family and farmed that land with the help of his family, but finally was forced to leave the land because of economic conditions over which he had no control.

We must make it possible for the real dirt farmers to own the land which they till. Then these deserted homesteads will be rehabilitated. Once more the small-family orchards will become snowy white in the springtime and hang low with a burden of fruit in the harvest time. Once more the farmer's children will sing and whistle as they go about their chores and we will have rekindled the fires of patriotism in the hearts of men.

The best answer America can give today to communism is home-ownership. We must launch a Nation-wide, back-to-the-land program. The family farmer is the bone and sinew of America. We must save him in order to save ourselves.

It is when the great mass of our people own no property that we are in danger. It is only in misery and distress that people turn to communism. Consider our tenant farmers who move from one place to another. Consider our sharecroppers who drift along the highways without food, raiment, or shelter. How much patriotism could you expect of them? They camp here tonight. They have no loyalty for the land on which they camp, because they move on tomorrow, but give them a chance to own a small plot of that land and see what a miracle it will work.

If you want our people to sing, "My country, 'tis of thee; I love thy rocks and rills," then let them own some of those rocks and rills. When a man tills his own soil he is twice fed by it. In addition to the fruit it produces, there is a spiritual manna that feeds his soul and inspires him to noble deeds. When a man leans up against the forks of his own apple tree you cannot persuade him to plan the destruction of his own country.

I thank you.

## Taxation in Nebraska

### EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, February 8 (legislative day of Wednesday, February 7), 1940

EDITORIALS FROM THE MCCOOK (NEBR.) GAZETTE AND THE ALMA (NEBR.) JOURNAL

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials on the subject of taxes, one appearing in the McCook (Nebr.) Gazette, and an answer thereto appearing in the Alma (Nebr.) Journal.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Alma (Nebr.) Journal]

Below the Journal reprints an editorial from the McCook Gazette and an answer thereto:

#### "HOW ALMA PAYS TAXES"

"The little city of Alma, according to the Omaha World-Herald, has been tax-free since 1934, because the city light has paid the expenses of city government.

"How did it do it?

"Turning to the report of the Federal Power Commission for January 1, 1939, we find that among cities of 1,000 or 2,500 population, Alma ranks thirty-fifth in its charge for 25 kilowatt-hours of electricity; that is, there are 34 cities in Nebraska in that class which charge less, Central City, for example, charging only \$1.13 for what Alma charges \$2 for; for 100 kilowatts Alma ranks forty-seventh, forty-six of the forty-seven cities of her class having a lower rate; for 250 kilowatts Alma ranks forty-ninth, only three cities of her class having a slightly higher rate.

"Alma, then, is not tax-free at all. The electric-light users are paying the taxes through an exorbitant power rate.

"And this means nonresident property owners go scott free of city taxes.

"The above analysis of municipal ownership as applied to the city of Alma, is not unlike a huge majority of municipally owned utilities, where taxes are low and rates are high. High enough to more than offset the difference as far as the local consumer and taxpayer is concerned."—McCook Gazette.

The above article appeared in a recent issue of the McCook Gazette, and after looking into the affairs of the city of McCook (which, of course, is really none of our business) we wish to make a few comparisons. Alma, population 1,235; McCook, 6,688. McCook, with more than five times our population—should have a much lower power rate than Alma—does have a lower rate. The Gazette is no doubt misled by thinking the published rates are actually the amounts collected from our power users.

During the year of 1939 discounts have been given to all users of electrical energy as follows: March, 50 percent; and 25 percent in each of the following months: May, July, September, and December, making the reductions for the year average 12½ percent.

Now let us make some comparisons on rates for 1939.

## RESIDENCE

Cost of 15 kilowatts—McCook, \$1.25; Alma, \$1.05.  
Cost of 100 kilowatts—McCook, \$4.20; Alma, \$4.375.

## COMMERCIAL

Cost of 50 kilowatts—McCook, \$2.50; Alma, \$3.50.

## POWER

Cost of 150 kilowatts—McCook, \$6; Alma, \$5.25. For large users, 6,000 kilowatts—McCook, \$144; Alma, \$115.95.

## WATER

For city water, Alma charges 15 cents per thousand gallons for the first 4,000 gallons, and 5 cents per thousand gallons for all in excess of that amount. McCook, after a discount of 10 percent, is allowed 9 cents per hundred cubic feet for the first 25,000 cubic feet, and 7.2 cents per hundred cubic feet for all in excess of that amount. They charge \$2.25 minimum for 3 months; Alma charges a minimum of 60 cents per month, or \$1.80 for 3 months. Changing cubic feet to gallons, they get 12 cents per thousand gallons for the first 18,750 gallons, and 9.6 cents for all in excess of that amount. For 100,000 gallons Alma collects \$5.40; McCook, \$10.05.

McCook levies 18 mills city tax; Alma, none. And in Alma a very large majority of homes are locally owned. We do not know about McCook.

One of our citizens, owning a modest \$2,000 home and using 100 kilowatts electrical energy per month, would pay the city for the year 1939, \$52.50, with no city tax; while if he lived in McCook and owned a \$2,000 home, he would pay the Power Trust \$50.40 for electrical energy, and in addition he would pay the city of McCook at the rate of 18 mills on \$2,000, or \$36, making \$86.40, compared to our \$52.50.

As to public improvements, we are sure we have a better street-lighting system and better parks than McCook. Our library may not be as large as theirs, but it is just as good. Even our alleys are floodlighted in the business district, and our stores are more free from back-door robberies than most cities that we know anything about. Thieves do not like light.

We like our system, and if you want to call it sales tax, O. K., for we collect 99.50 percent plus, and you do well to collect 70 percent on your 18 mills, but even then we hope you like your system. We have never criticized any other town in the State of Nebraska on the conduct of their local affairs, and the above is not a criticism but a comparison.

## Foreign Island Possessions Near American Coast

## EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 8 (legislative day of Wednesday, February 7), 1940

ARTICLE BY FREDERIC WILLIAM WILE

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD an article entitled "Foreign Islands Near United States Feared—France and Britain Should Pay Debts With Them, Ex-Envoy Feels." This article was published in some American newspaper in 1932. It is by the pen of Mr. Frederic William Wile, and I thought it would be of interest to my colleagues and to the readers of the CONGRESSIONAL RECORD, due to the fact that much has been said upon this subject in recent months. It is interesting to note that our former colleague, Senator Gore, of Oklahoma, on July 8, 1932, presented a resolution which proposed then that the Secretary of State ascertain whether any of the European powers indebted to the United States would prefer to transfer to the United States, in lieu of cash payments, colonial possessions, and so forth.

There being no objection the article was ordered to be printed in the RECORD, as follows:

FOREIGN ISLANDS NEAR UNITED STATES FEARED—FRANCE AND BRITAIN SHOULD PAY DEBTS WITH THEM, EX-ENVOY FEELS

(By Frederic William Wile)

Charging that the British and French insular possessions in the Caribbean Sea "constitute potentially a battery of guns pointed at the heart of the American continent," Arthur H. Geisler, from 1922 to 1930 United States Minister to Guatemala, proposes the voluntary transfer of these islands to the United States "as an expression of good will."

Mr. Geisler, one of the country's recognized authorities on Central American affairs, holds that such an offer would be a

suitable gesture on the part of Great Britain and France in connection with their expectation—likely in 1933 to take the form of a demand—that their respective war debts be heavily revised downward. The former diplomat, a lawyer in Oklahoma City, was recently in Washington discussing his project at the Capitol. The junior Senator from Oklahoma, Thomas P. Gore, Democrat, now has a resolution pending, suggesting the transfer to the United States by our European debtors of the German colonial possessions acquired by them as the result of the World War.

## LEAVES MEMORANDUM

Mr. Geisler left with interested authorities in Washington a memorandum of his plan, which reads as follows:

"Extending from off the coast of South Carolina, past Florida and on down toward the coast of Venezuela, there are the following groups of islands held by Great Britain:

	Square miles	Population
The Bermudas.....	19	30,814
The Bahamas.....	4,396	60,367
Jamaica.....	4,450	974,742
Leeward Islands.....	715	124,518
Windward Islands.....	516	183,557
Barbados.....	166	168,299
Trinidad and Tobago.....	1,974	397,100

"France exercises sovereignty over Martinique (385 square miles, 235,000 inhabitants) and Guadeloupe (582 square miles, about 200,000 inhabitants) and several smaller isles.

"Into the same category of European possessions may be placed the colony of British Honduras (8,598 square miles, 50,286 inhabitants) or Belize, as the Central Americans call it, adjoining Guatemala on the east. That includes practically all of the European holdings in the region of the Gulf of Mexico and the Caribbean Sea, except a few small islands held by Holland which is not indebted to the Government of the United States.

"The present ownership of those colonies dates back more than 150 years, to the days when France and England had projects of empire involving Louisiana, Mexico, and Central America, when Great Britain was planning to control the Nicaraguan interoceanic route, and France intended to build the Panama Canal. It will have been observed that the aggregate area of the islands is relatively small. Those held by the British are only equal in extent to a square of 111 miles by 111 miles, or approximately the size of the State of Maryland. The area of the French holdings is about that of a small county. Some of these colonies have much of the time been economic burdens upon the public treasuries of Great Britain and France. But they were valued as naval and military bases from which to dominate the mainland.

## DECLARES NEED GONE

"During the last century and a half conditions have changed. The United States has come into existence. It purchased Louisiana from France. The Monroe Doctrine was promulgated against the further acquisition of territory in America by European governments. The United States with the acquiescence of England and of French interests for which recompense was given built and now owns the Panama Canal and has an exclusive option on the Nicaraguan Waterway. In consequence of these developments the European powers no longer have need of the Caribbean fortification sites for purposes of defense. Their lack of need in that respect may be compared to that of America in reference to islands in the channel between England and France or in the Mediterranean. It may be noted that the United States neither has nor seeks any territory in Europe.

"To say that those possessions in the Gulf of Mexico and the Caribbean Sea constitute potentially a battery of guns pointed at the heart of the American continent does not imply that France or Great Britain will ever make war upon the United States or on any of the other American countries in that region. However, it is conceivable that one day some country or other may attack America. It is quite possible that then Great Britain and France may find that their interests or necessities impose neutrality upon them, while those possessions, or some of them, will perhaps be needed as additional bases for America's defense. The security of the American continent requires that those potential military and naval bases in American waters be under American control.

"History records numerous cases of the transfer of colonies, prompted by good will or policy of state. There were, for instance, the conveyance of Louisiana by France to the United States in 1803 and the transfer of Helgoland in 1890 by Great Britain to Germany. The Helgoland transfer was part and parcel of a three-cornered deal whereby the British acquired supremacy in Zanzibar from the French and the Germans and the British waived all claims to the island of Madagascar in favor of France.

## UNITED STATES ACTION LEFT FOR LATER

"Whether upon the relinquishment of those colonies the United States will wish to extend its own sovereignty over all or any of them is a question to be considered when the occasion arises. It is possible that the Congress may prefer to accept only such of them as are best suited for the defense of the continent, leaving the others to form independent governments or to join existing republics, although perhaps the people of most of the lands under consideration would, for economic reasons and other causes, prefer to become part of the United States.

"During the past century several American statesmen have envisaged the desirability of Europe's relinquishing the possessions

under consideration. As recently as July 8, 1932, Senator Gore, of Oklahoma, presented a resolution which proposes that the Secretary of State ascertain whether any of the European powers indebted to the United States would prefer to transfer to the United States, in lieu of cash payments, colonial possessions received by such European governments from Germany as a result of the war, or whether they would prefer to assign to the United States islands they hold in American waters. As the erstwhile German colonies consist entirely of holdings in the regions of Africa, Asia, and Australia, there might eventually be voiced considerable opposition in the United States to their acquisition by the United States. Furthermore, it may not be quite opportune to press any part of that resolution. Possibly the fact that Mr. Gore has not yet urged its adoption indicates that the Senator himself believes that Great Britain and France may prefer to initiate the idea of such cessions rather than having America suggest them. At any rate, such an offer on the part of the British and the French would undoubtedly be deemed a pleasing act by American taxpayers to whose shoulders our European debtors would shift a part of their obligations to the United States Treasury."

### Tribute to the Late Senator Borah

#### EXTENSION OF REMARKS

OF

HON. JOHN A. DANAHER

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, February 8 (legislative day of Wednesday, February 7), 1940

POEM BY GUY H. LAGROE

Mr. DANAHER. Mr. President, I ask unanimous consent to be permitted to insert in the RECORD a poem written by Guy H. Lagroe in memory of the late Senator Borah, entitled "The Grand Old Statesman, Senator William E. Borah."

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

THE GRAND OLD STATESMAN, SENATOR WILLIAM E. BORAH

Each age has one great soul to offer men,  
And causes freed of swollen lust and greed,  
For thus a generation gilds its name,  
And makes nobility a living creed.

Sheer emptiness would crown a nation's days,  
And history would run a selfsame course,  
If it were not that lofty souls came oft  
To lift men's eyes to some immortal source.

Thus one day's race of men bequeathes to those  
Who follow next or come at later time  
Its link of thought, of work, of hope, of aim,  
The hard, enduring conquest made sublime.

Once happy is that man who measures true  
In youth or early manhood to that task,  
And while he rides to lead the mighty throng,  
Finds need of neither sword nor armoured mask.

In envy men may call his daring vain,  
May call him fool and lazy lag behind.  
Yet some far goal and star is strong enough  
To soothe the weary limbs and draw the mind.

Twice happy he through manhood's settled span,  
Who shirks not once his clear, allotted duty,  
And courses on, without the thought of self,  
To win for other men some part of heaven's beauty.

Though others dare not follow for the fear,  
But sit to whisper failure by the road,  
Because a jealous stain sits on their hearts,  
He strives to ease the coming morning's load.

In worship, science, art, or government,  
Whate'er he touches turns to men's esteem,  
And what could not have been for want of hope  
Is made both real and perfect by his dream.

Thrice happy he when silence creeps around,  
And in the evening's shade of age he stands,  
To meditate upon the trails he blazed and won,  
The hopes he stirred, the heights he now commands.

Ye noble warrior out of Idaho,  
True statesman, legal sage, and glorious name!  
God grant thee honor with the immortal few,  
Whose generations fan the historic flame!

—Guy H. Lagroe.

### The Census

#### EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 8 (legislative day of Wednesday, February 7), 1940

#### EXTRACTS FROM CENSUS BUREAU REPORT

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain extracts taken from a report of the Census Bureau.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From Census Bureau Report, Significant Facts and Trends Indicated by 150 Years of Census Taking]

BILLIONS IN VOLUME AND WAGES IN RETAIL AND WHOLESALE DISTRIBUTION AS SHOWN BY CENSUS—HOW THE CONSUMER'S DOLLAR, SPENT IN TRADE, MAINTAINS VALUES AND TAXES—AVERAGE DOLLAR VOLUME OF STORES—INDEPENDENTS AND CHAINS

##### GETTING GOODS TO CONSUMERS

The vastness of the organization necessary to get the products of farm and factory from the producer to the consumer is graphically illustrated by census records.

A history of the development of merchandising in this country—retail, wholesale, service, hotels, theaters, construction—would be as replete with romance, with interesting and revealing sidelights, as is the history of manufacturing. Unfortunately this fascinating story cannot be developed from census records as the business census was taken for the first time in 1929.

Prior to 1929 it was impossible to tell within 500,000 the actual number of retail stores in the United States.

##### EARLY DAYS IN MERCHANDISING

The early history of merchandising is largely tradition. We know that George Washington operated a grist mill and perhaps sold feed and flour to his neighbors. We know that Abraham Lincoln and a partner operated a grocery store. We have fragmentary pictures of the highly personalized businesses of our early years—importers in New Amsterdam; Yankee traders who covered the world as our first wholesalers and exporters; fur traders who set up trading posts in the West in advance even of the wave of civilization that was pushing relentlessly westward; showboats on the Ohio and Mississippi and barnstorming road shows which were the forerunner of our modern stage, motion picture, and organized commercial sports. We know something of the start of great department stores; of great chain-store organizations; of vast theater circuits; of great wholesale and mail-order houses. But the picture of the year-to-year developments in this vast machinery of trade and service during the transition from one-man enterprises to great aggregations of capital serving millions of customers with millions of employees, is missing.

##### CUSTOMER DEMANDS SERVICE

When the customer goes into a store and buys an article over the counter, he knows that he pays more than the manufacturer's or producer's cost of that article. In addition to this intrinsic cost he is paying something for service, for convenience, for risk, for invested capital, for management and perhaps for credit. As the standard of living increased, the customer demanded more and more service and convenience. The census records on the vast distribution machinery indicate not only the extent and cost of this service but how this additional payment of the customer flows back to the benefit of the customer through pay rolls supporting an army of clerks; through rents and taxes which maintain billions of investments in land and buildings, and through the maintenance of the large sector of population, all themselves customers of the goods that farmers, manufacturers, and others produce.

##### GREAT VOLUME OF TRADE

The census figures on the extent of the wholesale and the retail activities of the Nation are staggering. The First Census of Business in 1929 showed that there were 1,543,158 retail stores in the United States, with 1,510,607 proprietors and firm members not on the pay roll. These stores had 3,833,581 full-time employees, 676,559 part-time employees; and to the full-time employees they paid in wages \$5,189,667,960, and to part-time employees \$161,387,515. These retail stores had stocks on hand worth, at cost, \$7,262,582,920; and the total of their sales for the year was \$49,114,653,269—10 times as much as all the money in circulation at that time.

The 1933 survey of retail stores at the bottom of the depression showed 1,526,119 stores with 3,433,652 full-time and part-time employees (against 4,402,940 in 1929), who received wages of \$2,910,445,000 as their part of the sales amounting to \$25,037,225,000.

The Business Census of 1935 revealed 1,653,961 retail stores with 3,961,478 full-time and part-time employees who were paid \$3,623,289,000 in wages. Sales had advanced to \$33,161,276,000.

In addition to these retail stores, and providing them with merchandise, were 169,702 wholesale establishments with sales in 1929 of \$69,291,547,604. These wholesalers employed 1,605,042 people; they paid in salaries and wages \$3,010,129,535, and the value of their stocks on hand was \$5,246,739,657.

#### WHOLESALE VOLUME LARGER

The fact that wholesalers' gross business shows a volume 40 percent greater than the total sales volume of retailers is explained by the fact that, in addition to serving retailers, wholesalers sell industrial goods such as coal, oil, steel, machinery of all kinds, supplies to railroads, to mines and to factories, exports to all parts of the world, and make direct sales to institutions which do not have their counterpart in retail sales.

The census of 1933 showed the number of wholesale establishments at 163,583 with employees of 1,187,688, pay roll of \$1,659,487,000, and sales of \$30,009,590,000.

Two years later the census of 1935 showed that wholesale establishments numbered 176,756; that they employed 1,277,717 people; that they paid in wages \$2,049,483,000; and that their sales amounted to \$42,802,913,000.

How this vast organization of wholesalers and retailers served to cushion the shock of the depression is indicated from the fact that their volume of employment, and payments in wages and salaries did not decline as deeply as their sales.

#### CHAIN-STORES AND INDEPENDENTS

Of the 1,653,961 retail stores in 1935, 1,419,855 were single stores, 53,951 were two-store and three-store independents, and 343 were local branch systems. There were 127,432 chain stores of which 17,964 were local chains; 1,925 were manufacturer controlled.

The sales ratio of chain stores in 1929 was 20 percent of the total retail sales. This rose to 25.4 percent in 1933 and dropped to 22.8 percent in 1935. Chains increased their sales nearly 19 percent between 1933 and 1935 while they reduced their number of stores 10 percent, increasing their sales per store 31 percent. Independents increased their sales nearly 36 percent and the number of stores more than 9 percent, with a 24 percent increase per store between 1933 and 1935. Sales per store for independents in 1935 averaged about \$16,450, whereas chain units averaged about \$59,200.

#### THE COST OF OVERHEAD

It cost retailers, according to the 1935 retail census, 22.9 percent of their sales to cover pay roll, rent, advertising, supplies, heat, light, power, taxes, insurance, interest, etc. Compensation for proprietors of incorporated businesses is not included. All retailers required an average of 48 percent of their operating expense for pay roll. Rental costs averaged 3.91 percent of sales in leased premises and rent constituted more than 16 percent of operating costs.

The average annual wage for full-time employees was \$1,017 in 1935 and the pay roll (except proprietors) consumed \$10.93 out of each \$100 of sales. About \$12 more was required for all other expenses, and \$75 per \$100 of sales for replacing the goods sold.

#### SUMMARY OF TRADE VOLUME

Roughly, then, the 3 surveys of the great machine necessary for the retail distribution of goods from the producer to the consumer show a volume of business which averages \$40,000,000,000 per year. To do this retailers employ from 5 to 7 million wage earners, depending on the current state of business, and pay them in wages from 5 to 7 billions of dollars annually. Wholesalers employ an additional 1,500,000 workers and pay them more than \$2,000,000,000 annually. Much of the total volume of goods this machine handles has previously been processed or fabricated in American factories, themselves turning out \$60,000,000,000 worth of goods and employing over 10,000,000 people with wages of more than \$10,000,000,000. Part of the goods for which they find a market comes from the nearly 7,000,000 farms which employ more than 10,000,000 other workers. Production and distribution employment is further increased by nearly 2,000,000 employees of service businesses, theaters, hotels, and laundries, and by 1,000,000 workers in the offices of insurance, real estate, and financial institutions.

This whole picture of the operation of American business made possible by a study of census facts is impressive evidence of the cooperative character of the Nation as a whole and of the daily efforts of approximately 50,000,000 gainful workers to bring home on Saturday night the wages whose expenditure keeps the machine functioning.

#### LABOR GETS NEARLY HALF

The woman who goes into a store and spends \$100 may know that approximately \$25 of it goes to the maintenance of the retail distribution machinery. Nearly \$11 of this \$25 is used by the retailer to pay wages, and these wage earners probably consume the products, in turn, that give her husband a livelihood. These wages enable the worker to pay rent and taxes to help maintain the school system which she enjoys; to pave the streets and to maintain the benefits of communal living. Of that \$25, nearly \$4 goes to the landlord or to pay maintenance on owned premises. This contributes to the property values, adds to community tax revenues, and likewise helps to maintain the facilities of community convenience. Another part of it goes to the insurance agent and to the insurance company, another bit goes to the newspaper for advertising, to pay printers who are also consumers of goods.

Even that portion of the \$25 which goes to the profit of the retailer, if there is a profit, flows back into trade because the retailer probably has a family to support; he pays taxes, he buys gasoline and clothing and supplies, which in turn support other industries.

#### RETAIL STORE SALES AVERAGES

As to the profit the retailer earns, the census figures make interesting revelations. Even in 1929 when retail sales mounted to forty-nine billions the average store did an annual business of only about \$32,000. The fact was that only about 22 percent of the stores, however, did that much business. More than 75 percent of the stores in that good year sold less than \$30,000 and the combined sales of this 75 percent of stores was about 25 percent of the total. About 25 percent of the stores did 75 percent of the retail business.

In extreme contrast, 25 percent of the total business was done by 1 percent of the stores, each of which did more than \$300,000.

More than 43 percent of the stores did less than \$10,000 each and their aggregate sales were 5.69 percent of the total. One-half of all of the stores did only 8.6 percent of the total, an average per store of less than \$5,500. The average per store for the remaining 50 percent was \$58,000 and their aggregate sales were 91.4 percent of the total.

#### SMALL STORES JUSTIFY THEIR EXISTENCE

The census figures indicate that a \$12,000 retail business can make a modest living for the proprietor provided he works in the store in lieu of a paid employee, has merchandising ability, and has a sufficient amount of invested capital. The figures show that there is an insufficient margin in such a business to cover interest on borrowed money, and, to make a profit every cash discount must be taken. The thousands of small stores, therefore, which provide the means of livelihood for many thousands of families, and perform a useful service of convenience to the consumer in increasing the number of contact points, are insignificant in their total sales volume but are a necessary part of the distribution machinery of the country. They survive by providing service and convenience as well as merchandise.

### Disgracing an Industry

#### EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

#### EDITORIAL FROM JUSTICE

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "Disgracing an Industry" from Justice, published by the International Ladies' Garment Workers' Union, for February 1, 1940:

[From Justice]

#### DISGRACING AN INDUSTRY

We have been reading a lot these days about manufacturers, some of them "big shots" in their respective industries, being caught in the meshes of the wage and hour law and compelled to make restitution to their workers of wage and overtime underpayments.

Nearly all of these workers belong to the "forgotten" type of wage earners—shipping clerks, office help, floor girls, and home workers. These workers have no union to protect them. They are easy prey for any chiseler who stretches a long finger after their hard-earned dimes and pennies.

When the union insists on the right to investigate the books of suspected wage manipulators and agreement violators among employers, we hear no end of grumbling about its "unreasonable attitude," about "interference with business," and similar lamentations. Now the United States Government has set out to look into the books and records of violators of the wage and hour law—and what a crop of petty larceny, small-time cheating, and dime snatching it is discovering.

The other day the entire cloak and suit market was shocked when the firm of H. & J. Block, manufacturers of children's wear, was indicted by a Federal grand jury on a charge of having violated the provisions of the Fair Labor Standards Act on 17 counts. Government reports allege that the total filched from the firm's lowest-paid employees over an extended period runs in the neighborhood of \$10,000. Underpayment of the 25 cents minimum hourly wage and falsification of records are among the charges against the firm.

Last month 11 members of the Hand Knitcraft Institute were ordered by the Government to pay back to their home workers the stupendous sum of \$250,000. Last week the Commodore Knitting Mills was ordered to pay back to several hundred of their home workers from Maine to Pennsylvania \$27,000 and to keep "proper and accurate" home-work records. Many of these home workers were discovered to have been earning the munificent sums of 3 and 5 cents an hour.

The case of the William Bass Dress Co. falls in the same category but may be painted in kinder colors. This firm "forgot" to pay its office staff for overtime over an extended period to the tune of nearly \$3,000. When the Government investigation revealed the fact, the firm made full restitution.

Many of these employers play, or like to play, an important part in their industry and in the community. Some like to parade as public figures and occasionally give generously to many causes. Yet they would stoop to common cheating of their lowliest employees and would face violations of the law of the land and penalties running to many thousands of dollars. Whichever way you look at them, they are small potatoes, mean little human beings.

The papers are full of violations of the wage-hour law practiced in the South. Here we have a bushel of cases right in our own "back yard," in the East, in an organized industry where decent work conditions have been won after years of struggle for all union men and women.

They point a moral.

Shipping clerks, floor girls, office workers, home workers—all the unorganized with no union to protect them—may have their pockets picked at any time. Let them not be scared—if they are not getting what is coming to them, let them complain immediately to Uncle Sam. The union, on its side, we can promise these workers, will keep a vigilant eye on every possible and actual violator of the law and will help to bring them to book. It will, in addition, help to expose these cheats before the industry and the general public and will keep their records on its files for future reference.

### The Housing Census

#### EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

Mr. MILLER. Mr. Speaker and Members of the House, this morning I received a petition circulated in a small town in Connecticut by a woman who, for the past several years, has been active in various club work. This woman writes me that she had never seen so much interest in a petition; in fact, several people had called her on the telephone asking for the opportunity to put their names on the petition which they understood she was circulating. You have perhaps guessed by this time that this petition is in opposition to the "too intrusive census questions."

The last session of Congress provided for the taking of a housing census. This approval was granted in good faith on the assumption that it would be a housing census and nothing else. Now we find that a questionnaire has been prepared to carry out the provision of the housing census and, in the opinion of an overwhelming majority of citizens with whom I have talked, that questionnaire goes far beyond the required needs of a housing census. It is a well-known fact that this census will be taken by political appointees, most of whom will work in the communities in which they reside. Just why it is necessary for our citizens to make known to a census enumerator the amount of income; the amount of mortgage on their home; whether or not they are reducing that mortgage annually, semiannually, or quarterly, and so forth, is beyond my comprehension.

Many people feel that the Federal Government is doing far too much snooping into the private lives of its citizens. May I express the hope that those responsible for preparation of this questionnaire will take the time to read the excellent address made in this House by the gentleman from Texas, the Honorable HATTON SUMNERS, on the one hundred and fiftieth anniversary of the founding of the Supreme Court.

Yesterday an effort was made to strike the funds carried in the appropriation bill under consideration for the taking of this housing census, as it seemed to many of us that only in this way could we prevent the Federal Government from asking these too personal questions. Perhaps from the remarks

made on the floor during this debate, those responsible for these questions will learn that they do not meet with the approval of the Members of Congress.

### Great Lakes-St. Lawrence Seaway Canal

#### EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

EDITORIAL FROM THE UTICA (MICH.) SENTINEL

Mr. ENGEL. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record and to include an editorial from the Utica Sentinel, of Utica, Mich., entitled "The Seaway," which is a strong argument for the construction of the Great Lakes-St. Lawrence seaway canal. The editorial follows:

[From the Utica (Mich.) Sentinel]

THE SEAWAY

Mr. C. H. Callaghan, manager of the Maritime Association of the Port of New York, lists seven reasons why the proposed St. Lawrence seaway would be a "flop." He claims:

1. The proposition is unsound.
2. It would impose tax burdens without corresponding benefits.
3. It would divert a lot of traffic from the railroads.
4. It would unbalance freight rates.
5. It would injure employment generally.
6. It would impair property values, reducing tax returns.
7. There would be serious dangers in navigating the seaway.

Now, the gentleman in question is no doubt a whole lot smarter than a mere country editor can ever hope to be, or he wouldn't be in his present job. Also—and this is important—he wouldn't be singled out to make a case against anything so logical as the seaway.

However, though he has done well, the reasons as cited don't stand up under thoughtful questioning:

1. Is it sound that the naturally navigable connection of the heart of the Nation with the seven seas be forever blocked? Has this gentleman been employed to oppose the opening of Washington's inland empire by a series of expensive Federal projects which will make the Columbia navigable?

2. Is not the proposal to connect two of the country's most populous cities and all their vast hinterland with the seaboard, as well as developing great waterpower, any less a probable tax load, for example, than T. V. A.? And has the gentleman yet been chosen by the big southern power companies to help them block that project?

3. Is not his effort in its last analysis an effort to serve the exclusive interests of certain railroads, which connect the great Middle West to the port of New York, and the interests of those interested in that port? And if such diversion is to be dreaded, why does New York want to sell the barge canal to Uncle Sam?

4. Have we not a governmental commission empowered to keep freight rates in balance?

5. Would not the seaway, encouraging a sea-going trade that already exists, build up the great Middle West commercially, industrially, and populously; and would not that help employment?

6. Can it be proved that New York property values would suffer? And even so, should Albany be shut off from her national water route to the sea simply because New York City is located at the Hudson's mouth, and by so doing Gotham's property values might be conserved?

7. And will it be any more dangerous navigating the Lakes and the St. Lawrence when we have the seaway than it is now?

Our conclusion is that the Port of New York Authority is being bluffed by those big eastern railroads into believing that something dreadful will happen to it and them. It won't. What they may lose of their stranglehold on us people out here they'll make up in more friendly gains.

Let the Middle West and the lake country grow and they'll take care of New York. New York grows only as we do.

Anyway, despite Gotham's ill-advised obstructionists, the enterprising race that dwells on both sides the Laurentian border are too numerous, too strong, and too determined to be denied their natural right. European peoples fight many wars to reach the sea, but all we ask is the right to bring the sea to us. We'll be paying the most of the taxes on this—as well as most of all the taxes that other great Federal projects entail. Inspired fallacies won't hold us back forever.

## Politics and the W. P. A.

## EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

RADIO ADDRESS BY HOWARD O. HUNTER, DEPUTY COMMISSIONER OF THE WORK PROJECTS ADMINISTRATION

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Howard O. Hunter, Deputy Commissioner of the Work Projects Administration, over the Columbia Broadcasting System, speaking from the studios of WJSV, in Washington, D. C., Saturday, February 3:

The W. P. A. will probably be in politics up to its neck from now until November. It has already been tossed into the political arena by sundry political candidates; and it no doubt will stay there as a convenient straw man for other candidates, large and small, throughout this election year. Among the early sharpshooters in the popular political pastime of sniping at the unemployed and the Federal work program are Governor Bricker, of Ohio, and Governor James, of Pennsylvania. More about these gentlemen later.

The public may expect all sorts of accusations, adding up to the major charge that W. P. A. employment is being manipulated for political purposes. The public may also expect a resurrection of old stories about politics and relief which have been so convenient in the past to those who either wish to dodge the issue of unemployment relief or who are intellectually sterile as to proposals to handle it.

Politics in the W. P. A. has been a honey of a smoke screen for many politicians and many newspaper stories. And it will continue to be such for the next 9 months. The American voting public may just as well look forward, either with eagerness or disgust as the case may be, to a rehash of all this business of politics in the W. P. A.

Frankly I am not only willing but anxious to have the question of the W. P. A.—or to put it another way, the question of the proper method of relief for the unemployed—become a main political issue. But I would require a good deal more to be said about this question than simply shop-worn generalities.

The political questions about the W. P. A. and unemployment that should be discussed are these: With unemployment still existing, should the Federal Government, in cooperation with the States and localities, provide a program of useful work for the needy unemployed; or should the Federal Government return this problem to the States and local communities? Should the unemployed have an opportunity to work on useful public projects at a security wage, or should they accept less than a subsistence dole in the form of a grocery order or direct relief?

Such political questions are worth the examination of the public and the debate of all political candidates.

However, if recent political blasts of the Governor of Ohio and the Governor of Pennsylvania are to be taken as examples of what we have to look forward to this year, then the political discussion of unemployment is simply going to degenerate into mud slinging and windmill fighting.

For instance, in order to divert the public's attention from ineptness in handling a State relief problem, the Governor of Ohio recently charged that the W. P. A. was punishing the State of Ohio because it had dared to elect a Republican Governor. This punishment was in the form of reduced W. P. A. employment quotas. He also charged that the W. P. A. had enormously increased its employment in Ohio in 1938 in order to keep him from being elected. Neither of these charges, nor any of the other charges made by Governor Bricker, was substantiated by one single fact, and Governor Bricker cannot substantiate them.

Let me tell you in just a few words what did happen in Ohio in 1938.

Cleveland, January 1938: A sudden and unprecedented rise in unemployment. Steel mills and automobile plants closing down overnight. Reports by Cleveland economists of an unemployment figure of 220,000. A problem of hungry and needy people far beyond the ability of the city to handle. Urgent requests from the city government (Republican) for increased W. P. A. aid.

Detroit: Thirty thousand people from one motor plant fired overnight. An increase of 100,000 unemployed in 2 months.

Chicago: Steel mills, railroads, packing houses, farm implement companies, discharging men by the thousands. A wave of recession and unemployment striking like a tornado through the industrial Middle West.

LXXXVI—App—41

February 1938: A conference of mayors of hard-hit middle western cities, all political parties represented. The cold but dramatic facts presented. A committee of five of these mayors sent to Washington to secure additional W. P. A. money and help. On the committee, the Democratic mayor of St. Louis, the Democratic mayor of Chicago, the Socialist mayor of Milwaukee, the Republican mayor of Detroit, and the Republican mayor of Cleveland. Congress acted and acted quickly in appropriating additional funds.

Half a million—a million—then a million and a half were given W. P. A. jobs. The recession was broken. Hundreds of thousands of families in the depressed areas were saved. The W. P. A. was credited by Republican and Democratic officials alike and by an enormous body of public opinion as an agency which not only prevented mass starvation but also provided useful work and cash wages to help revive a stricken region. If this was politics then it was an American way of politics for the preservation of democracy.

Now as to the Governor's absurd charge that the W. P. A. did all of this in Ohio, and particularly Cleveland, in order to beat him at the election. Certainly the 270,000 unemployed and needy men and women who were put on the W. P. A. in Ohio in that recession will dispute that charge. The charge has also been denied by public officials in Ohio, including the Republican mayor of Cleveland. And as a matter of fact, in the month just before the election the W. P. A. actually decreased its rolls in Ohio because of the beginning of a business upturn. For further illustration, let's examine this general charge in the light of what happened right across the lake in Michigan.

In Michigan the national administration was certainly desirous of having the Democratic candidate for Governor elected. My listeners will remember that there was a clear-cut New Deal campaign on in Michigan. And yet, in the important 2 months preceding the election, the W. P. A. made a sharper cut in its employment in Michigan than it did in any other State in the Union. In those 2 months immediately preceding the 1938 election we cut W. P. A. quotas in Michigan from 206,000 to 161,000. A cut of 45,000. Why? Because at that time industrial employment in Michigan began sharply to improve, and improved at a much faster rate than in most other States; and, accordingly, the W. P. A. reduced its quota, as it always has in periods of rising private employment.

The Governor of Ohio knows perfectly well that the W. P. A. today is operating on an appropriation one-third less than it had in 1938. The Governor of Ohio also knows, as does the Wall Street Journal and the Cleveland Manufacturers' Association, which are not New Deal agencies, that industry and business have recently picked up in Ohio at a sharper rate than the average for the country. The Governor of Ohio also knows that W. P. A. employment for these same reasons has been reduced in other parts of the country as well as in Ohio. He also knows that today, while Ohio has but 5.4 percent of the national population, it has 6.7 percent of W. P. A. employment. This is not discrimination.

Now Governor James, of Pennsylvania, was the next to take up the cudgels. The Pennsylvania Governor had no particular springboard to jump from, so he started his fire by writing a letter to the W. P. A. Commissioner for the purpose of getting some newspaper publicity. Governor James simply made the general statement that the W. P. A. was manipulating the Pennsylvania quota for political reasons. Aside from the fact that this is simply not true and that the Governor presented no evidence that it was true, the best answer that could be given to such a general charge is that the W. P. A. has offered Pennsylvania for the last 6 months a larger quota for employment than Pennsylvania has been willing to employ.

To indicate the absurdity of the Governor's charge and that of editorial writers on the Philadelphia Inquirer—they make the statement that the W. P. A. has consistently failed to fill its own quota of job allotments in Pennsylvania. That is very much like saying that if a charitable person furnished a well-cooked beefsteak to a hungry man, the charitable person is then open to criticism because the hungry man does not eat the whole steak. The W. P. A. has been and is today, even with its decreased appropriation, ready and willing to provide at least 20,000 more jobs in Pennsylvania if Pennsylvania will provide good projects on which to employ them.

Perhaps you may be interested to tie up Governor James' political blast with the fact that he, like the Governor of Ohio, is faced with the task of doing something about his own State-relief problems.

Now we are promised a "speech a day" attacking the W. P. A. for discriminating against Pennsylvania. And so it goes and so it will go until November. But these cases are cited chiefly as types of what we may expect—and not for the purpose of further advertising the good gentlemen in question.

I do not make any claim that the W. P. A. today is providing jobs for all of the needy unemployed. I will not dispute a claim from either Ohio or Pennsylvania that there are persons eligible for the W. P. A. who are not today being employed. I do, however, emphatically state that the W. P. A. employment in Ohio and Pennsylvania is thoroughly fair in proportion to the rest of the country based on the appropriation made available to us by Congress.

Now, I want to say something really important to the American people and in saying it I want to make a complete distinction between the question of relief in politics and the question of politics in relief. Political candidates—local, State, and National—are going

to keep the question of relief in politics open. That is their privilege in a democracy, and it should have free and wide discussion. But some will generalize, distort facts, and invent untruths, and that probably is also part of the political game.

However, when it comes to the question of politics in relief, insofar as it applies to the W. P. A., I give you the pledge of the Commissioner of the W. P. A. and all of his assistants that there will be no such thing. This is not only the desire of those of us who administer this program but it is also the specific intent of your Congress.

A year ago Congress put into the W. P. A. law drastic provisions against the use of W. P. A. funds for political purposes; against political activity on the part of any administrative employee of the W. P. A., and this act has since been reinforced by the Hatch Act which prohibits any political candidate, or for that matter anybody else, from making promises, for the purpose of securing votes, to any person receiving Federal relief benefits.

I assure you that these restrictions, so far as the W. P. A. is concerned, will be completely enforced. I assure you that charges of the improper use of W. P. A. funds for political purposes or the improper political activity on the part of any of our employees will be promptly investigated, and where found true will be punished to the limit of the law.

There will be thousands of candidates for political office this year in every community in all of the 3,000 counties in the country. No doubt some of them will attempt to make political capital out of unemployment and relief. Wherever they touch the W. P. A. they will be promptly checked.

Some of the ways in which people might try to use the W. P. A. politically include the promises of certification for jobs in return for votes, attempts to pad pay rolls, the coercion of workers on projects and threats against them if they don't vote right. Such actions are intolerable to all of us. I am not simple minded enough to say that attempts to follow such practices will not be made, but I am confident enough of the W. P. A. organization and its integrity to assure you that they will not be tolerated.

I want to emphasize that in the past, when charges of politics in the W. P. A. have been investigated, ninety-nine out of a hundred times such charges have involved people entirely outside of the W. P. A.

At the same time I want to say a word directly to our W. P. A. project workers—some two and a quarter million today and some five million others who have at one time or another worked for the W. P. A.—and that word is simply this: The fact that you are not employed in private industry, that you are in need and consequently are now working on useful public projects and receiving your pay from the Government, in no way diminishes your rights as an American citizen. You have every right and liberty to participate in an election for public office and to select and vote for any candidate of any party who may be your choice. The laws of the United States protect you in exercising that right. I know that a few people have publicly proposed that the right to vote be denied to people who receive relief or W. P. A. jobs. I also know, however, that the overwhelming majority of American people in every walk of life and every political party thoroughly resent such a proposal. I know, further, as do thousands and thousands of others, that instead of being recipients of charity you who work on the W. P. A. are, on the contrary, helping to build America and that you are entitled to and should exercise your personal rights as a citizen.

Finally to all my listeners in business, government, industry, relief, and what not, I will say that the W. P. A. may feel called upon occasionally to answer phoney and funny attacks on the W. P. A. as a political agency, but that regardless of such attacks we propose to run the W. P. A. as an agency for the benefit of the unemployed and the whole country without any consideration of politics. We feel that with the backing of the laws of Congress and with the cooperation of the mass of American citizens we are perfectly able to do just that very thing.

### The Slum-Clearance Program

#### EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

EDITORIAL FROM THE JOURNAL OF COMMERCE

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal of Commerce of New York City for February 5, 1940:

[From the Journal of Commerce, New York City, February 5, 1940]

#### THE SLUM-CLEARANCE PROGRAM

While the present federally financed and subsidized slum-clearance and low-rent public-housing program is in full swing,

its extension continues to hang in the balance. An economy-minded Congress naturally dislikes to depart from the drive to scale down Federal expenditures, which it has had the courage and restraint to launch in the present session, despite the imminence of a national election. On the other hand, many Members of Congress recognize that the slum-clearance program constitutes one of the less objectionable and, socially, more necessary types of Federal expenditure.

The passage of the pending bill, already approved by the Senate, to expand the loan fund of the United States Housing Authority by an additional \$800,000,000, with a relative increase in the authorized subsidies, is not of immediate urgency. The public-housing projects under this program for which contracts have already been let or are to be let will not be completed, with few exceptions, until late this year or during 1941. However, if slum clearance is to be conducted on a reasonably continuous basis, an expansion of the authorization this year or, at the latest, early in 1941 is eminently desirable.

The United States Housing Authority Administrator reports that requests for \$1,000,000,000 of additional loans have already been filed with him in anticipation of the increases in the authorization. The funds available under the present law have all been allotted. A large proportion of the 180 further requests pending, covering projects in 32 States, emanate from rural and suburban communities rather than metropolitan centers. A broadening of the present public-housing program would thus occur, should the pending amendment be enacted into law, especially since 25 percent of the new authorization is reserved for rural rehousing.

Like all new ventures into a complicated field, the Federal low-rent public-housing program has suffered from practical defects. By and large, however, those concerned with its administration have shown a readiness to correct errors and to avoid as far as feasible competition with private enterprise in the building field. Hence a good case could be made for authorizing the expansion of the loan fund at this time to permit the United States Housing Authority to proceed at leisure with the approval of the additional projects already pending before it, despite the very urgent need for economy in Federal expenditures that now exists.

### Organizations Which Have Indicated Their Support of Mundt Antipollution Bill, H. R. 7971

#### EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

Mr. MUNDT. Mr. Speaker, under leave granted me by the House I am attaching hereto a partial list of the patriotic and conservation organizations which are actively supporting H. R. 7971, which bill I introduced and which is known as the Navigable Waters Antipollution Act.

I would like to call the attention of my colleagues to the high quality of public service and unselfishness represented by this long list of constructive, Nation-building organizations. You will find there every Nation-wide conservation organization of any size or scope, and more important than that, even, you will not find in this list a single industry or group which is today polluting the public waters. H. R. 7971 not only outlaws any new forms of pollution in the navigable waters of America but it sets up a reasonable, orderly, and moderate program for correcting and controlling the destructive forms of pollution which are now making open sewers and poison pots out of some of the greatest rivers and streams in America. Since it is an honest step in correcting an obviously serious situation, H. R. 7971 has received the support of citizens of all walks of life and of all parties as well as the active endorsement of community serving organizations of many kinds.

H. R. 7971 HAS SOME OPPONENTS, TOO

Because H. R. 7971, variously referred to as the Mundt bill or the Navigable Waters Antipollution Act is the only legislation now before Congress which seriously challenges the practice of certain industries and cities whereby they thumb their noses at the public interest and contaminate with selfish indifference the public waters of America, it has some opposition of which, incidentally, friends of clean-streams legislation are very proud. We are proud, for example, that in lists of those opposing H. R. 7971 are found the major polluters of America. Realizing the unpopularity of putting

their selfish interests above the health and recreational interests of the public, most of these organizations have switched from outright opposition to antipollution legislation to enthusiastic, active, and open support of a bill bearing the misnomer of "antipollution legislation" but actually providing what is tantamount to a 10-year breathing spell for polluters. The bill for which polluters have had their support listed in previous issues of the RECORD is known as S. 685, was introduced by Senator BARKLEY, I believe, by request, and a rule for its consideration by this body now reposes on the Speaker's desk. It will be the first piece of legislation bearing the label of "pollution legislation" upon which this House will have an opportunity to vote. It must be defeated or recommitted to committee for further study before this body will be given an opportunity to vote on H. R. 7971 or any other genuine pollution-eliminating legislation for which the friends of clean streams throughout America are clamoring. Hearings on H. R. 7971 have not been held. They will not be held until and unless S. 685 is defeated or recommitted. Consequently, to vote for effective antipollution legislation Members must first dispose of S. 685 by defeat or recommitment, so the path will be cleared for consideration of a bill which sincere conservationists and sportsmen can support.

#### S. 685 SPENDS \$1,000,000 PER YEAR FOR "POLLUTION INSURANCE"

At first glance it must seem to Members who have not studied the legislation that the spectacle of the biggest polluters in America actively supporting S. 685 is a strange paradox indeed. Either the polluters are losing their sanity or they must see in S. 685 legislation to befriend them and protect them in their dirty business of poisoning the public waters with industrial and municipal wastes. A study of S. 685 reassures one and all about the continued sanity of America's polluters. At no place except in its title does S. 685 even mention the phrase "control of pollution." Its supporters among polluting industries proudly recommend it to their fellow travelers in public filth as a "study bill." It is precisely that and nothing more, and it would appropriate \$1,000,000 annually from an exhausted Federal Treasury for purposes of studying the problem of pollution and of establishing Federal control of State health departments by subsidizing them to the extent of \$700,000 per year. It criticizes pollution and appropriates a million dollars a year of the taxpayers' money for the purpose of scolding it, but it sets up no standards of purity and does positively nothing by way of controlling pollution practices. The opportunity to share in the \$700,000 annual "bureaucratic melon" is one reason why many State health departments have written Members in favor of S. 685, and the hope of preventing vigorous antipollution legislation by passing a vapid bill limited to critical adjectives indicates the reason why polluters are exerting organized pressure on Congress to pass S. 685 and give them a buffer against genuine clean-streams legislation. It is easily seen, therefore, why conservation organizations, Legion posts, women's clubs, individual sportsmen, outdoor magazines, and others who are unselfishly interested only in cleaning up the streams of America are saying, "No pollution legislation at all is better than S. 685. If we cannot make progress in pollution control, let us at least not take this backward step."

There follows a partial list of organizations which have indicated their support of the Mundt pure-streams bill, H. R. 7971, and which, by the same token, oppose the passage of S. 685:

#### ORGANIZATIONS WHICH HAVE INDICATED THEIR SUPPORT OF MUNDT PURE-STREAMS BILL

The Council of the American Association for the Advancement of Science.

American Nature Association.  
American Wildlife Institute.  
National Wildlife Federation.  
National Association of Audubon Societies.  
National Council of Garden Clubs.  
American Fisheries Society.  
International Association of Game, Fish, and Conservation Commissioners.

Izaak Walton League of America.  
Association of Midwest Fish and Game Commissioners (North Dakota, South Dakota, Nebraska, Minnesota, Wisconsin, Iowa, and Illinois).

Square Circle Club (Field and Stream magazine).  
National Sportsman magazine.  
Hunting and Fishing magazine.  
Outdoorsman magazine.  
Brotherhood of Locomotive Engineers.  
Bloomfield Fish and Game Club, Bloomfield, Conn.  
Calumet District Clean Streams Committee (a citizens' committee with headquarters in South Holland, Ill.).  
Chicago Conservation Council.  
Union Conservation Club, Wheeler, Ind.  
Glen Park Civic Club, Gary, Ind.  
Pittman Square Civic League, Gary, Ind.  
West 45th Civic Club, Gary, Ind.  
Woods, Waters, and Wildlife Association, Gary, Ind.  
Iowa Federation of Women's Clubs.  
Maryland State Game and Fish Protective Association.  
Maryland Outdoor Life Federation, Inc.  
Maryland State Game and Inland Fish Commission.  
Michigan United Conservation Clubs.  
Gasconade County Wildlife League (Missouri).  
New Jersey Federation of Sportsmen's Clubs.  
New Jersey Board of Fish and Game Commissioners.  
Forum of Politics, State Teachers College, Albany, N. Y.  
New York Association of Biology Chairmen (New York City).  
Green Mountain Club (New York Section).  
Sportsmen's Council of the Marine District of New York.  
League of Ohio Sportsmen.  
Stillwater (Okla.) Woman's Club.  
Western Pennsylvania Sportsmen's Club, Pittsburgh, Pa.  
Crafter-Ingram Sportsmen's Association, Crafton, Pa.  
Allegheny County Sportsmen's League, Pittsburgh, Pa.  
Arnold Sportsmen's Club, Arnold, Pa.  
Westmoreland County Sportsmen's Association (Pennsylvania).  
Gulf Coast Rod and Reel Club, Beaumont, Tex.  
Aviation Post, No. 651, American Legion, Chicago.  
Lafayette Post No. 51, American Legion, Uniontown, Pa.  
Columbus (Nebr.) Chamber of Commerce.  
Utah Wildlife Federation.  
McDermott Post, No. 144, American Legion, Albany, Wis.  
Guy Drews Post, No. 88, American Legion, Manitowoc, Wis.  
Francis B. Pritchard Post, Veterans of Foreign Wars, Oil City, Pa.  
Oil City (Pa.) Chamber of Commerce.  
Fraternal Order of Eagles 493, Connellsville, Pa.  
Associated Fishing Tackle Manufacturers.  
Johnson Motor Co., Waukegan, Ill.  
Evinrude Motor Co., Milwaukee, Wis.  
Century Boat Co., Manistee, Mich.  
Champion Motors Co., Minneapolis, Minn.  
Muncie Gear Works, Muncie, Ind.  
National Outboard Association.

### Antipollution

#### EXTENSION OF REMARKS

OF

#### HON. STEPHEN BOLLES

OF WISCONSIN

#### IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

#### LETTER FROM THE NATIONAL ASSOCIATION OF AUDUBON SOCIETIES

Mr. BOLLES. Mr. Speaker, I ask unanimous consent to extend my remarks and include therein a letter from the National Association of Audubon Societies on the Barkley bill, S. 685. The letter follows:

The above bill is represented to be an antipollution bill. We are informed that it has been favorably reported on by the House Rivers and Harbors Committee and a rule issued by the Rules Committee; that it may be brought up shortly for a vote in the House; that it was passed by the Senate at the previous session of Congress.

In our opinion this bill should not be passed, as it does not appear to us to offer means of effectively and promptly reducing or eliminating pollution of navigable streams.

On the contrary, it provides for 10 years' further study of a situation so bad and so well known that immediate action, in our estimation, is called for. We see little if any point in spending a sizeable sum of money, as provided for in this bill, on further study of the situation. The bill, we understand has the support, in general, of those who are currently polluting our navigable streams.

May we, therefore, urge your favorable consideration of a policy which would involve a vote against the Barkley bill, S. 685, if brought up for a vote and in favor of its being recommitted to the House River and Harbors Committee for reconsideration.

# America's No. 1 Problem—Unemployment—Being Submerged in Wave of Political Balderdash and Bunk

## EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, February 8, 1940*

RADIO ADDRESS BY HON. JAMES C. OLIVER, OF MAINE

Mr. OLIVER. Mr. Speaker, under permission granted to me by unanimous consent of the House to extend my remarks, I am pleased to incorporate herewith a statement which I broadcast over station WCSH, Portland, Maine, on Saturday, January 27, 1940:

Citizens of the First District, 2 weeks ago, when I discussed with you the national problems as they are focused into the limelight through congressional consideration, I dwelt at some length on current and continuing unemployment as America's problem No. 1. Because of my persistency in dwelling on this critical paradox, wherein millions of willing and able Americans are denied the opportunity to work in this great country of ours, I have felt that the constant reference to unemployment might be somewhat boring. But, in view of the many statements made during the past 10 days by leading statesmen and those who are seeking high public office, to this same effect, namely, that unnecessary and involuntary unemployment is public menace No. 1, I feel more justified in continuing my reference to this absurd situation wherein our youth, as well as our older and more experienced citizens, mill around daily looking in vain for work opportunities.

Ladies and gentlemen, it is not only tragic but it is downright criminal for us as an intelligent and aggressive people to endure and tolerate the continuance of unemployment in this Nation. The fiscal headache resulting from continued Budget deficits for the past decade stems from this absurd lack of jobs. The debt frankenstein becomes even more horrible because men and women are not working. Terrific burdens of taxation continue to add up to even more staggering totals simply as a result of idleness. Class tension and labor extremism are fostered by the host of unemployed who are daily in competition with those more fortunately employed. Those on the extreme right and the extreme left of our public opinion become more sharply antagonistic and unreconciled because of the problem which, acute today, grows even more acute as year follows year with no determined approach to the necessity of people going back to work. The Dies committee investigation of un-American activities, which I supported this very week in Congress, finds its reason for being in the fact that resentful men and women of this Nation develop because there are no work opportunities for the submerged 8 to 10 percent of our people. Our young people graduating from high schools and colleges are asking, as they have a right to ask, "What does this all add up to and what is this all about?" They know that there are enough natural resources and there are enough industrial plants in this Nation to provide jobs for all if the people of this country are eating, clothing themselves, and sheltering their families on decent standards. These inquiring younger members of our society know full well that there is something sadly out of balance, and they completely realize that there must be some way to put the razzle-dazzle parts of this economic puzzle back together so that they and all others who want to work can find the job opening through which each and every one of them can work out his own destiny. Friends, this is our problem, and this generation which is now running the show must find the answers.

It is true that for the past 10 years politicians have not been willing to find that answer, but it is also true that you, the people, have not demanded that public officials shall find the answer. We have had attempts made to palliate and salve over this cancer which is eating away at the very soul of this great Nation. Work relief has been provided, but work relief is not what our good men and women want. They want jobs at productive enterprise and they want decent wages for their work. This is nothing new that I am saying, but we must face the fact that we have tolerated this needless condition for 10 long years and we are still stalling and drifting so far as a solution is concerned. Unemployment is the challenge of 1940 to democracy, and we cannot afford to let Presidential appeals for national unity nor distracting issues of foreign wars conceal the problem.

It is a human problem, and no wide-awake and no thoughtful American is being misled by the current ballyhoo regarding the state of the Nation's prosperity. A truly prosperous nation contains no unemployed host of its citizens as does the America of today. You know that, and so do I. What's more, we know that a truly prosperous nation earns its way as it goes and finds no difficulty in balancing any sensible budget of normal expenditures for the pur-

poses of sound government. And we know that any truly prosperous nation, if wisely governed, at all times possesses defenses ample to protect that prosperity and its harvest, avoiding the necessity of frantic and wasteful efforts to erect such defenses in the face of threatening peril from without or from within. The very best and the most effective defense against such perils to our welfare and our prosperity is the continued employment at productive enterprise of our people and all of our people.

During the past 2 weeks in the House, the membership, under the leadership of an economy-minded Appropriations Committee, has made deductions in two supply bills of some \$125,000,000. But—and this is the significant fact—these two bills, even after the pruning, still carry the staggering sum of between two and two and a quarter billions of dollars. There are still a dozen or more bills appropriating money yet to come. Doubtlessly the total appropriations for 1941 fiscal year will add up to nearly nine billions. Our income may total six billions for the similar period. Where are we headed after 10 years of such a devastating and demoralizing deficit procedure? Mr. Morgenthau says we can safely increase the national debt to fifty billions, and I say to you that we cannot and should not increase the public debt by one thin dime. Our conscientious Secretary of the Treasury is a splendid man, but he is only a man, even as you and I, therefore his statements and his opinions are not in any sense of the word "infallible" or the last word. We have had enough of debt. Debt is the curse of this Nation. There is no more need for this Federal Government of ours to go into debt than there is for us to endure the unemployment of 10,000,000 citizens. Congress, which is the medium of expression and action of and for the people of this country, has the constitutional right to coin and regulate the value of our money, and Congress has the constitutional right to levy taxes in the interests of the general welfare of the people. With these two sovereign rights there is no need for deficits and debt, and there is no reason under the sun for unemployment. Today and for the past three-quarters of a century, we have been shackled and we have been strangled by a financial octopus which thrives on debt accumulations and deadening deficits, both public and private. The productive possibilities of this Nation are stalemated by the debt system of finance, which hangs around our collective neck like a millstone. Our present Secretary of the Treasury and his associates think completely in terms of debt. There are those of us, however, who are thinking in terms of work. But we cannot go to work until and unless you, the people, begin to question more insistently the present practice of relying on extension of debt as the sole stimulus of production. This past week, following up previous correspondence with Chairman Eccles of the Federal Reserve Board, I requested information officially as to the percentage of our money which comes into circulation and use as the result of the creation of debt. I expect that his answer will confirm me in my opinion that nearly 90 percent of our medium of circulation results from the issuance of evidences of debt either public or private. How can any person defend such monetary procedure when all must realize that a continuance of debt expansion through the extension of credit must eventually pyramid to a point where it collapses of its own weight, bringing in the wake of that collapse mass unemployment and misery. Neither this administration nor preceding ones have done anything about this all-important proposition. Nor have I heard any Presidential candidate touch upon the subject. President Roosevelt, in his inaugural speech, did promise to drive the money changers out of the temple, but this promise unfortunately has only resulted in giving the temple to the money changers.

The plight of our elderly citizens wherein thousands in this State and hundreds of thousands over the country are unable to secure even the pittance of that which is called old-age assistance, the unemployment of our youth and the consequent slamming in their faces of the door to opportunity, the misery of nearly half of our people, occasioned by starvation annual incomes, all of these un-American paradoxes are the direct result of financial strangulation of our productive machine caused by our blind adherence and obedience to a debt-money practice foisted upon us by the greedy international and national master minds of finance.

It is not only the misery of the unemployed and their families which disturb me but it is also the decreased amount of production resulting from the idleness of millions with its consequent lowering of the standards of living for all as it becomes a tremendous toll which America must pay. If we estimate during the past decade the cost of this man-made and man-caused depression, we find that potential production could have totaled at least \$1,000,000,000,000 while we actually have used not more than \$600,000,000,000 worth of goods and services. This entailed a net loss of \$400,000,000,000 which every man, woman, and child of this country suffered. It is also interesting to note that during the 1920's our production increased some 43 percent while our population was increasing 16 percent but in the 1930's our production decreased some 11 percent from the previous decade while our population continued to increase by 8 percent over the 1920's. In other words, with a larger population during the past 10 years we have had much less production to use thereby actually decreasing the standards of living. So do not think that you, just because you have a job at present, can safely ignore or be distracted from the unemployed status of your neighbor or friend. You not only pay the bill in decreased standards of living for yourself and family but you also pay the bill through taxation in keeping millions continuously unemployed in America. But in spite of the most important significance of this unemployment crisis I do not know of any congressional organization that has

been set up to wrestle with it. I do not know of any privately endowed foundation or institution which has taken unto itself the responsibility of doing anything about it. During the past 2 weeks, several Members of the House have discussed the advisability of organizing a bipartisan group to make it our business to study and review the monetary approach to this No. 1 problem constituted by the jobless. But we are limited by the lack of time and funds to do the job which must be done. We are also handicapped by the lack of a nationally known and trusted statesman who could and should be the keyman in such an effort. There is one such Member of the Seventy-sixth Congress and that is Senator NORRIS of Nebraska, who could lead such a fight against the common enemy of unemployment because of the universal confidence and respect which is accorded him by the whole country. Independent and fearless, he would be the figure around which would rally those of us who do believe that the people can be put back to work—those of us who believe that every Tom, Dick, and Harry of this Nation is entitled to the fullest opportunity for dignified, constructive work. It is my sincere hope that in the near future I may be able to report to you that such a group has been organized and that we are applying ourselves to the job of finding the real approach to the creation of jobs for all who are willing and able to work.

In closing let me agree with you that the balancing of the Budget is desirable and necessary, let me insist that constantly recurring deficits must be eliminated, let me state wholeheartedly that our traditional rights and principles of Government and our American freedom of individual initiative and enterprise must be safeguarded and preserved. But let me at the same time emphatically call to your attention in no hesitating terms that the one way to accomplish those results is to put people back to work. This brings me right back to where I started—America's No. 1 problem is unemployment.

And so, amid the ballyhoo and the bunk of a political Presidential year, let us not forget the simple truth involved in that assertion made by me 2 weeks ago and confirmed since then on several occasions by those who are considered to be in the top flight of Presidential politics on both sides of the political picture. In the next few months do not be blinded by the political eyewash and balderdash but rather be determined to require, as you estimate candidates for public office, that each and everyone who seeks your favor shall have some specific suggestions to offer in connection with a permanent solution of the unemployment problem.

Until 2 weeks from tonight, good wishes and good night.

### Tallulah Bankhead's Gift to Finland

#### EXTENSION OF REMARKS

OF

#### HON. LISTER HILL

OF ALABAMA

#### IN THE SENATE OF THE UNITED STATES

Thursday, February 8 (legislative day of Wednesday, February 7), 1940

POEM BY H. C. CARLISLE

Mr. HILL. Mr. President, inspired by Miss Tallulah Bankhead's generous gift of \$3,000 to the suffering people of Finland, Mr. H. C. Carlisle, of Alabama, has written a tribute to her which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

#### TALLULAH BANKHEAD

T-here's a noted little lady,  
A-ll unspoiled by wealth and fame,  
L-iving to make life worth living,  
L-ifting high her family name,  
U-sing her unusual talents,  
L-ast of all for self alone,  
A-s she, true to early training,  
H-appily helps others on.

B-orn and bred in Alabama,  
A-labama's favored child—  
N-ationally and uniquely  
K-nown, for those on whom she's smiled—  
H-armonizing with her talents  
E-legance of heart and mind,  
A-lways with Tallulah Bankhead  
D-o her bit to aid mankind.

### Abraham Lincoln

#### EXTENSION OF REMARKS

OF

#### HON. GEORGE H. BENDER

OF OHIO

#### IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

Mr. BENDER. Mr. Speaker, every nation in the world has its heroes. But some men are heroes to the entire world. Some element in the nature of human beings compels us to revere the memory of those great people who have left the tracings of their character upon the pages of history. We stand in tribute before them, because we see in their lives the patterns we seek to follow. Millions of American boys and girls in our country have thrilled to the story of Abraham Lincoln. They have sat in the comforts of their homes to read a tale more absorbing than any fiction. No one who reads can find in any language a record more fascinating than the life of Abraham Lincoln.

Here truly was a man who belongs to the ages. He was more than a great man. He was a man so simple, so humble, so human that those who lived about him did not realize his stature. During his lifetime his opponents poured ridicule and abuse upon his head. More than once he was deeply hurt. More than once he found himself tired and depressed. A dozen times he was tempted to give up. The tremendous burdens visited upon him during the years of the Civil War were crushing in their force. On every side he found suspicion and discouragement. The members of his Cabinet were skeptical of his judgment; in fact, President Lincoln's Secretary of State thought so little of his Chief that he once asked for authority to run the Government in place of the President. But Abraham Lincoln was not destined to surrender. Through bitter adversity he fought on. He did not give up, because it was not within him to give up a cause he thought right.

Truly this is the mark of his greatness. He championed causes which seemed to be lost. The preservation of our Union, the maintenance of a strong Federal Government, the doctrine of human freedom—no issues more magnificent have ever troubled the minds of Americans. Yet no causes have ever been so bitterly fought. Abraham Lincoln stood his ground on every one of these grave issues. He stood his ground in the conviction that he was right, in the certainty that no matter what his contemporaries said of him, his descendants would approve his works.

Here was a life which deserves the study it has received. Literally hundreds of books have treated the career of Abraham Lincoln from the moment of his birth on February 12, 1809, to the day of his death on April 15, 1865. It is a recital which deserves retelling again and again. For if ever a man's life has been an inspiration, that life was Abraham Lincoln's.

The people of a dozen nations, young and old, have followed the thrilling episodes of Lincoln's life from those early days in Kentucky, Indiana, and Illinois. No American can check his pride at the recollection of young Abe Lincoln clearing the forest, building the log cabin which was to be his home. Those early years bring the tang of pioneering days right into our modern era of city streets and flying planes. We can still see Lincoln sailing down the Mississippi to New Orleans, looking for a market to sell the produce of his neighbors' farms. We watch him ferrying passengers across the Ohio River from the Kentucky shores. We join him in the operation of his general store at New Salem, Ill.

The picture brings back nostalgic memories of America's early days, memories almost forgotten in the rush and excitement of our pressing problems. Most of us have almost forgotten that not so many years ago the people of our Nation faced periodic outbursts of Indian warfare. Abraham Lincoln brings back those memories to us. Like the hardy young backwoodsman he was, he served as an officer of Volunteers in the campaign against Chief Black Hawk's Indians. He did

not know much about military affairs, but he won the affection of his men. He acquired new ambition for the future.

By the time he was 24 years old Abraham Lincoln had run unsuccessfully for the Illinois State Legislature and had failed in business. Of course, he was discouraged. But he had read Blackstone's Commentaries; he had learned the value of hard physical labor. He had sharpened a keen mind for the great tasks before him.

If any man had come to Abe Lincoln in 1834, when he was just 25 years old, to prophesy that the young man would one day be the President of the United States, no one would have laughed harder than Lincoln. But in his twenty-fifth year the upward march began. He was elected to the legislature. Two years later he received his license to practice law, and went off to Springfield, the new capital of Illinois, to begin a new life. For 8 years he served continuously in the legislature. By 1846, when he was 37 years old, Lincoln was elected to Congress, where he earned the unpopular distinction of opposing the war against Mexico. His fortunes sank once more, for he knew that he could not be reelected to Congress. But he was content because he had voted as his conscience dictated. He did not consider his election as important as his vote.

All this time Lincoln was learning. He watched men around him who compromised with their convictions. He refused to join them. In Congress he voted 40 times for the famous Wilmot Proviso, excluding slavery from all lands acquired as a result of the War with Mexico. He introduced a bill to abolish slaveholding in the District of Columbia.

Freedom was a living thing in Lincoln's mind. It meant the opportunities he had enjoyed himself. It meant the right to fight one's way upward along the ladder. It meant hardships, rebuffs, determination. To Abraham Lincoln it meant the privilege of placing conscience above wealth. He turned down many a case in the days when he was practicing law because he could not bring himself to believe in his client's cause.

Lincoln returned to Illinois, following his term in Congress, to resume his old life. He was almost 40, virtually unknown outside the limits of his own State. Seemingly, he was content to remain at home with his wife, Mary Todd Lincoln, and his three boys. He declared himself "unfit" for political life, no longer interested in making a career for himself in politics. The pleasures of "traveling the circuit," practicing law through a score of counties in company with the circuit judge, telling good stories, making friends with the people he loved, occupied his time and his mind.

Peace and quiet were not written in Lincoln's destiny. It was an age when men's thoughts were torn by matters of grave importance. The slavery issue would not die. Not even the Missouri Compromise could kill the belief in men's hearts that slavery was wrong, immoral, unjust. By 1854, the battle was raging again. The Kansas-Nebraska bill made possible the extension of slavery into lands which the Missouri Compromise had declared forever free. It was too much for Abe Lincoln.

All his life he had believed that slavery was wrong, that no man had a right to own another. There were other men, too, in the United States who agreed with Lincoln. Their views were so imperative that they could not be satisfied with any existing political party. The Whigs were dying. The Democrats were afraid of the wrath of the Southland. It was a historic moment. It was a moment in American life of which every citizen can well be proud. It was the signal for the birth of the Republican Party, dedicated to the proposition that all men, black or white, must be equal in the eyes of the law. It does not matter how much the modern-day opponents of the Republican Party minimize its importance. The truth remains. Opposition to human slavery was the fundamental issue upon which the Republican Party was established. It will be forever to the glory of the partisans of the Grand Old Party that they stem from the greatest single cause in American history. It will be forever to our glory that the doctrine of those men who founded Republicanism was placed upon a plane so high that it captured Abraham Lincoln.

"Free men," the words were magic to Lincoln. He dropped his allegiance to the Whigs and joined the Republicans at Bloomington in 1856. He did more than join the new party. He inspired the convention. When the audience shouted for him to speak he answered their call. He plunged into his thoughts with passionate emotion. Those who have recorded the scene tell us that the men and women who heard him cheered and cried. When he spoke his final words, "We must highly resolve that Kansas must be free," the people who were present declared they had heard the greatest speech ever made in Illinois. Newspaper reporters who were present were spellbound. They had heard a man speaking out his soul.

Abraham Lincoln's fate was sealed on that afternoon in Bloomington. He could no longer escape the calls of public service. Within 2 years his nomination for the United States Senate on the Republican ticket was a certainty. When he addressed the nominating convention Lincoln made one of America's most famous speeches. He said to his followers:

A house divided against itself cannot stand. I believe this Government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided.

The words were challenging. They brought a torrent of criticism upon his head. But Lincoln knew his mind. He challenged his rival in the famous Lincoln-Douglas debates to answer the basic issue. His impressive words made him the idol of every citizen who cherished human freedom.

Is slavery wrong?

Lincoln demanded.

That is the real issue. That is the issue that will continue in this country when these poor tongues of Judge Douglas and myself shall be silent. It is the eternal struggle between these two principles—right and wrong—throughout the world.

Lincoln lost the race for the Senate, but that loss gave him the Presidency. By 1860 the Nation knew Abe Lincoln well. His friends from Illinois stood solidly behind him. The people who knew him best were all for him. It was a thrilling Republican convention. When Lincoln was nominated he made one of the most unusual campaigns in the history of our Nation. From the nomination in May to his election in November, he made only one speech, and in it he said—

The time comes upon every public man when it is best for him to keep his lips closed. That time has come upon me.

The Nation knew where Lincoln stood. The people of America knew that he would not waver. He never did. Through the long trying days of the Civil War to the day of his assassination 5 years later the policies he urged were the policies of the Nation. His personality dominated the affairs of our Government as few others have ever done. His courage gave strength to those who despaired.

On the anniversary of his birth every citizen of our Nation should remember him; every man and woman who values the ideals of human liberty should recall the famous words of his Gettysburg Address. Millions of American boys and girls who have learned them by heart should repeat them on this day:

Fourscore and seven years ago our fathers brought forth on this continent a new Nation conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great Civil War, testing whether that Nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final resting place for those who here gave their lives that this Nation might live. It is altogether fitting and proper that we should do this. But in a larger sense we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead, who struggled here have consecrated it far above our poor power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us, that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, and for the people shall not perish from the earth.

These are the immortal words of immortal Lincoln. I commend them to a Nation whose spirit too deserves immortality.

### A Voice From Across the Sea

### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

### LETTER FROM SINO-KOREAN PEOPLES LEAGUE

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter from the Sino-Korean Peoples League.

SINO-KOREAN PEOPLES LEAGUE,  
Washington, D. C.

#### A VOICE FROM ACROSS THE SEA

FELLOW CHRISTIANS: Bible institutes, girls and boys Bible clubs and seminaries have been closed in Korea.

Recently Australian Presbyterian Mission and Board have both decided that they cannot conscientiously allow their church members to go to the Japanese Shinto shrines to pay obeisance to the Shinto Kami or gods. Hence the Japanese Government closed all their schools.

A few weeks ago an American missionary sent word that the "Pyongyang Seminary, the Women's Bible Seminary, all Presbyterian Bible institutes, and even the Bible clubs in which we had 1,500 boys and girls, are all closed. Because of these conditions I went to see Mr. Grew, the American Ambassador \* \* \*; he is interested and anxious to help. He realizes that missionaries are being squeezed out just as American businessmen are being squeezed out \* \* \*."

#### EVEN PASTORS ARE COMPELLED

The Presbyterian Foreign Mission Board recently appealed to the Department of State:

"You will regret to learn that most recent advices indicate that a still more serious situation is developing. Attendance at the shrine is being required not only of educational institutions but pastors of churches and religious bodies are compelled to take part in the ceremonies. Severe punishment and long imprisonment are being inflicted upon any persons who on conscientious grounds refuse to conform to this requirement. Our entire work in Chosen (Korea) is being imperiled."

#### BACKGROUND

On December 14, 1935, the education ministry council suddenly drafted a religious bodies bill, making a drastic revision of educational system. The ministry declared:

"Today it is impossible to improve education without the aid of religion. The foundation of the new policy for improving the educational system is the worship of Amaterasu Omikami and the place of worshipping the Imperial Ancestor is to be established in each school."

NOTE.—It is significant to note this declaration and its very wording and its implications.

This declaration was a direct violation against the Christian religion and the so-called religious freedom granted under the Japanese Constitution. Hence many protests were made. Even the Japanese Christians in the beginning made joint protests with the missionaries and the Koreans. However, protests were of no use. The Shinto militarists were bent on performing an operation on the heart of Christianity. The design of the Japanese Government was to Japanize Christianity as they did to Buddhism, "Ryobu Shinto," half Christian and half Shinto.

Pressure was brought upon the Christians in Japan, and particularly in Korea, where an absolute military iron-rule governor general is now performing this operation.

Last May a Japanese Christian pastor in Tokyo went to the length of preaching the need and justification of changing the doctrine of "Trinity." He urged the addition of Shinto Kami and made it the doctrine of quadrinity.

#### "WE MUST LOOK AHEAD"

Last January 3, 1940, President Roosevelt, in his message to Congress, advised that:

"We must look ahead and see the kind of lives our children would have to lead if a large part of the rest of the world were compelled to worship the god imposed by a military ruler or were forbidden to worship God at all \* \* \*."

This is precisely what is happening in Korea. The Shinto militarists are forcing the Christians to violate their faith contrary to the Ten Commandments. They are forced to pay obeisance to

Shinto Kamis or deities. This, they say, is not a religious but a patriotic exercise.

What may now take place in Korea will soon affect Manchuria, north and south China. Eventually it will have a disintegrating effect on the spiritual quality of Christians in America. The results would be like an empty bag—it will never stand the test of a true Christian when a greater crisis comes.

"We must look ahead" to the future mission work in the Far East. To capitulate under the Japanese Shintoism in the name of missionary expediency will mean the signing of Christianity's death warrant. Christianity must be saved; it is the only hope for the world.

#### BISHOP WELCH FIRST PROTESTANT LEADER TO COMPLY

Regrettably, Bishop Herbert Welch, who was then the head of the Methodist mission, accepted the Japanese Government's decree, thus starting a train of horrible events to the present state of affairs. Bishop Welch's decision to go to the Shinto shrine gave the Japanese the much-needed weapon to plunge into the other Protestant denominations who stood pat on the principle of the Ten Commandments. It brought about the disintegration of Christian unity and harmony in the mission fields. Since then the Japanese have conveniently used the Methodists to force the Presbyterians to do that same.

Early in 1936, in Honolulu, Hawaii, Bishop Welch, in his interview, said that the Methodist decision was and is a "tentative" one. Today, after 4 years, there is no visible sign of any change of this so-called tentative decision. Frankly, his acceptance was largely a policy of expediency, not dreaming of the far-reaching repercussion it may cause upon Christianity in the Far East.

#### AMERICAN JOURNALIST CRITICIZES MISSIONARIES

Not long ago Mr. A. Morgan Young, a well-known journalist, who lived in Japan for more than a generation, made a searching and just criticism of the missionaries who are on the Japanese side indirectly aiding the Shinto militarists to carry on this diabolical scheme. He emphatically stressed and warned that the belief of in the "actual divinity of the Emperor and the omnipotence of the god-emperor combined with Shinto requirement of blind acceptance of it becomes a dangerous threat to world civilization."

#### ANCESTOR WORSHIP AND MISSIONARIES

Up to the end of 1935 missionaries in Korea strongly condemned and disapproved of the "ancestor worship" of the Koreans. The Korean Christians were urged and demanded that they refrain from participation of the ancestor-worship rituals. The burning of incense before the "Shinju"—meaning "spiritual tablet" of their ancestor—were said to be idolatrous, hence against the Ten Commandments.

Therefore, the outward manifestation of becoming a good Christian was to destroy, burn, or do away with this "Shinju," which has been handed down to them for centuries and generations. It often meant the breaking up of families—love between father and son, etc. Today these very same missionaries who only a few years ago were so strong as the Christians to go and bow—pay their obeisance to the Shinto deities. While they know the Shinto rituals are far more religious in every respect in comparison with the Korean ancestor worship, one wonders whether the Shinto militarists, who are non-Christians and anti-Christians, are more worthy and intelligent to define the true interpretations of the Ten Commandments than the bishops and other Christian leaders. Every American missionary who has accepted the Japanese version are trying to defend their "tentative" decision.

#### NATIONAL SHINTOISM

The Society of International Cultural Relations, an organization headed by the brother of the Japanese Emperor, former prime minister, counts, viscounts, religious, political leaders, minister of imperial household, and what nots, in 1937 published a book entitled "Guide to Japanese Studies."

Under the chapter of Shintoism, on page 140, it said:

"Nihonshoki and Kojiki is the essence of the Japanese spirit, which has been the basis of the religious life of ancient as well as modern Japan. \* \* \* The Japanese people regarded them as their Bibles which fostered their religious faith and racial spirit."

NOTE.—In these books "Bible" contains the accounts of the creation, hell, division of land and waters, and the divine ancestor of the Japanese Emperor, Amaterasu Omikami, a female supreme deity.

#### EMPEROR DESCENDANT OF GODS

On pages 148-149:

"The Emperor Meiji, a descendant of the gods, wrote a famous poem—

"Yomo no umi mina harakara to omo yo ni,  
Nado namikaze no tachisawaguran."

"which may be translated as: 'We regard all the countries outside the seas surrounding Japan as our brethren, but why must the seas be disturbed by heavy winds and waves?'"

"There is an expression, 'A god incarnate.' The Emperor Meiji was such a noble character that we all look upon him as a revelation of God in this world. This poem of his is an expression of the mind of his great divine ancestor, Amaterasu Omikami."

NOTE.—Amaterasu Omikami, the above-named Emperor, and other war deities are said to be enshrined in the national Shinto Shrines in Korea. These are the deities to which the Christians refuse to bow, pay obeisance, and worship. Are they wrong? Would you?

Last December 2 an American citizen of Japanese ancestry in Tokyo, correspondent for the Honolulu Star Bulletin, wrote to the paper:

"I had the good fortune to be sitting in the press section less than 20 feet away from the imperial balcony. It is probably the last time I shall ever be that close to the emperor, who is revered as a living god in this country." (Japan.)

#### FEAR PSYCHOLOGY AMONG MISSIONARIES

This peculiar fear psychology has been evidenced not only in Korea but prevalent in America. On occasion American missionaries who returned to America from Korea have shown marked evidence of this fear psychology. They fear to speak out loud concerning the true situation in Korea—they will always end their whispered conversation with a plea of warning not to tell their superiors. They fear that they might be reprimanded or the Japanese officials may retaliate against them on their return. They fear their mission schools may be closed because of their speech or behavior; they fear that their jobs may be jeopardized; they fear that other Christian denominations may take advantage over their stand—on the whole, they show signs of possessing a mortal fear psychology, unhealthy for any Christian leader, particularly a missionary living in a so-called heathen country.

As far as one can surmise, this fear psychology is to a large degree due to the lack of backing of their missionaries by the Christian leaders in America.

#### CHRISTIAN LEADERS IN AMERICA DIVIDED

Hundreds of Christian leaders in America are well aware of these conditions in Korea—Korea, the great mission field in the Far East. However, knowing this and its need of some concerted action by the Protestant denominations, the leaders stand divided.

As far as our experiences are concerned, the South and North Presbyterian Foreign Mission Boards are and have expressed their willingness to sit in a round-table conference and discuss ways and means to find a solution on the common ground for a positive and a constructive policy. We hope the Methodists, too, will take this step soon.

On several occasions I have heard American officials making this remark in Washington, D. C.:

"The missionaries themselves are divided on this issue."

No longer is this grave situation a denominational one; it is a searching and a challenging problem affecting each and every Christian leader of all Protestant denominations in America.

#### TIME FOR ACTION, NOW

We sincerely believe now is the opportune and the psychological time to take a positive united action. The Far Eastern conflict between China and Japan is coming nearer to some sort of peace. The United States-Japan Navigation and Commercial Treaty of 1911 has expired. There will be many events in the near future which will bring about definite political, social, and economic changes. This will give the Christian leaders a golden opportunity to prove their statesmanship in aiding the various Government leaders to bring about a just and humanitarian peace.

Here in America you have freedom of religion, freedom of speech, freedom to learn the truth, and the freedom to do a justice to fellow men on the principle of Christian brotherhood. Let us be frank, honest with conscience, and face the truth. Will the American Christian leaders here in America make compromises with the devil in the name of denominational expediency? In the name of denominational prestige and denominational security and power at the expense of Christianity?

Fellow Christians, we fervently and humbly pray that you make immediate inquiry as to the speediest means of taking a united Protestant action to solve this grave issue.

A positive cooperation and collaboration between all Protestant denominations now will not only solve the Shinto Shrine issue, it will also bring constructive aid to a true Christian understanding among the Christians within America.

May we make the following suggestions:

First. Call a joint Protestant foreign mission board conference in Washington, D. C., in March 1940.

Second. Make a joint Protestant representation to the American State Department making known the findings and recommendations of the conference with the ultimate view of getting diplomatic aid in the clarification of the Shinto Shrine issue.

Third. This joint Protestant representation be made before the resumption of or negotiations for a new United States-Japan Navigation and Commercial Treaty.

"O beautiful for patriot's dream that sees beyond the years  
Thine alabaster cities gleam undimmed by human tears  
America! America! God shed His grace on thee  
And crown thy good with brotherhood from sea to shining sea."

"Can we whose souls are lighted  
With wisdom from on high  
Can we to men benighted  
The Lamp of Life deny?  
Salvation! O Salvation!  
The joyful sound proclaim  
Till each remotest nation  
Has learnt our Saviour's name."

Humbly submitted with prayer.

KILSOO K. HAAN,  
Washington Representative, Sino-Korean Peoples League.

## As the British See Our Foreign Policies

### EXTENSION OF REMARKS

OF

### HON. HAMILTON FISH

OF NEW YORK

### IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

#### ARTICLES FROM THE CHICAGO TRIBUNE AND NEW YORK JOURNAL-AMERICAN

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include some newspaper articles quoting the British view of the administration's foreign policies:

[From the Chicago Tribune of January 10, 1940]

#### ENGLAND RENEWS DRIVE TO INDUCE UNITED STATES TO JOIN WAR—PRESS SEES ROOSEVELT AS EMPIRE'S CHAMPION

LONDON, January 9.—British public opinion appears to be getting the conviction that it is only a matter of time before the Roosevelt administration induces the American people to abandon their neutrality and enter the war on the side of Great Britain and France.

In the press and public utterances the point is stressed that its neutrality will not secure America from the menace of Adolf Hitler and that this war is a moral challenge to American ideals and freedom.

What seems to be a renewed propaganda onslaught to get the United States to join in open hostilities is under way. The war, which has not yet exploded except on the sea and in the air, is heralded not as an ordinary war but as something of a crusade, in which America cannot afford to stay out.

#### GIVE CREDIT TO ROOSEVELT

Articles in today's press indicate that the political circles here believe that good progress has been made in influencing public opinion in America to abandon its neutrality. Credit is given to President Roosevelt for this tendency which is alleged to be taking place.

The papers assert that the tenor of Mr. Roosevelt's last message to Congress, as compared with what he said last September, shows that America is moving slowly but steadily toward participation in the war under Mr. Roosevelt's guidance.

The Daily Telegraph declares:

"President Roosevelt promised America's fullest cooperation in reorganization of international trade. The promise is most welcome, but it still leaves a gaping void. Nevertheless, anyone who compares the President's last message to Congress with that of 10 weeks ago cannot fail to note a striking difference in tone. It is the difference between 'we are determined never to enter this war' and 'we will not enter this war unless.'"

"American public opinion often moves in what seems to us a mysterious way, but it moves and is moving, and with the American President for its guide and interpreter, one may be reasonably confident of its general direction."

#### BEAVERBROOK BEHIND DRIVE

The growing belief by some persons in England that the United States will, under Mr. Roosevelt, abandon its neutrality is linked with the campaign started last Saturday by Lord Beaverbrook, the press lord. He sought to show that the British in 1917 thought the money then advanced to them by Congress for prosecuting the war was an outright gift and not a loan, together with the idea that collection of war debts by the American Government was a cruel and mean afterthought.

The Daily Telegraph for the past 2 days has been developing the theme of American abandonment of neutrality, pointing out the parallel of the present moment with that of 1916 when Woodrow Wilson was elected President on a "He kept us out of war" program and shortly afterward moved in the direction of war.

The Telegraph tells the Americans that if the empire countries lose this war it will be bad commercially for America and the circle of customers for American business will be greatly restricted.

#### CALL IT "FREEDOM WAR"

It expresses the belief that England and France now are fighting the battle of freedom in behalf of America as well as of Europe and declares:

"If the United States had accepted a more reasonable role than that of an onlooker at the European conferences of 1919 until 1930 the results might have been different."

Declaring that no nation is so responsible as the American to an appeal to its sentiment, the Daily Telegraph stresses the special crusade nature of this war.

"Nations, like individuals, will not throw themselves into a crusade by some overpowering emotion, whether of faith or fear," it says. "Hence the sacred cause of the Allies needs a powerful and continuous presentation to the conscience of those who at present

do not see the danger near or are lukewarm in their support of privileges won and transmitted to them by their forefathers."

In seeking to get America in on this "sacred cause" of Great Britain and France and a crusade "not to make the world safe for democracy but safe for decent governments and decent nations to live," the Daily Telegraph quotes Dr. Nicholas Murray Butler, president of Columbia University, as saying that this tragic mess in Europe is the direct and overwhelming fault and responsibility of America for not having years ago taken a hand in European affairs.

[From the New York Journal-American of February 7, 1940]

**BRITAIN HINTS ROOSEVELT WILL SUPPORT ALLIES—OFFICIAL SAYS PRESIDENT WANTS TO JOIN "CRUSADE"; SEES UNITED STATES IN WAR**

OXFORD, ENGLAND, February 7.—Official British belief that President Roosevelt wishes a "change" in America's isolationist policy, and that the United States may be swept into the war was plainly intimated today in a speech by an executive of the British Information Ministry.

Lecturing at Oxford University, Sir Frederick Whyte, director of the American division of the ministry, declared:

"The neutrality act showed where America's sympathies lay. The instinct of isolation in America is still deep rooted. The change desired by President Roosevelt may be slow in coming."

"Considering the vehemence of the American temperament, it is not inconceivable that these sympathies may one day sweep America into the crusade which today she shuns."

Sir Frederick rebuked English critics who have been impatient with the neutrality policy of the United States, and urged them to reconsider their attitude for the sake of better Anglo-American understanding.

He made it plain he considers the American neutrality law as evidence that the sympathies of the United States are with the Allies, and that these sympathies may bring America into the "crusade."

It was Sir Frederick's second lecture on America's position in current world affairs. In an Oxford lecture last Monday he became the first British Government official to suggest that the Anglo-French cause is also the cause for which the United States might in the future choose to fight.

### Stream Pollution

#### EXTENSION OF REMARKS

OF

**HON. JOHN McDOWELL**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

ARTICLE BY GEORGE ROBEY

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Robey which appeared in the Citizen of Columbus, Ohio, on January 29, 1940:

[From the Columbus (Ohio) Citizen, January 29, 1940]

OUTDOORS—TWO BILLS

(By George Robey)

It was evident at the recent convention of the League of Ohio Sportsmen that advocates of clear, pure streams are tired of being put off with promises on the matter of municipal and industrial pollution. Action is being demanded.

Consequently, the Mundt bill is receiving the almost unanimous support of sportsmen throughout the United States.

Threatening to upset the equanimity of the convention which had been otherwise unstormy was the appearance on the floor of a lobbyist from Cincinnati from whence comes the strongest opposition to the Mundt bill. His opposition comes naturally from the fact that the bill no longer provides merely for the investigation of pollution without proposing to do anything about it. And so it is only to be expected that the opposing element would turn their support to the Barkley bill, which would create bureaus, or at least committees, to investigate pollution but which would give no one any power to act when the committees found pollution to exist.

Just why anyone should think it necessary to make further investigations to determine the fact that pollution exists when there is so much evidence of it all about us is a matter which the sponsors of the Barkley bill seem unable to answer. In their defense of that bill—and defense it is because almost everyone opposes it—the advocates say that we have had enough Government interference without State problems and that therefore the pollution problem should be a State problem.

That is exactly what it has been for a great many years. The trouble is, no headway has been made in solving the problem. However, granting that the Government interference angle might have some merit, there is nothing to be gained merely by tossing the problem right back into the lap of the State without providing some means by which they may and must enforce new antipollution laws or at least the ones they already have. So the Barkley bill accomplishes nothing, and the gentleman from Cincinnati found a veritable hornets' nest down on his head when he tried to sell the bill to delegates at the League of Ohio Sportsmen convention.

On the other hand, let's see what the Mundt bill provides. Quoting from section 3 (a) to show the relation of Federal authority to existing agencies:

"The Chief of Engineers shall, after careful investigation and in cooperation with the Surgeon General of the United States Public Health Service, the Chief of the United States Biological Survey, the Commissioner of Fisheries, which three shall constitute an advisory committee, perform the duties imposed upon it by this act and shall make rules and regulations as may be necessary for carrying out its provisions."

Section 5 establishes the position of the States with regard to pollution: "The consent of Congress is hereby given to two or more States to enter into agreements or compacts, not in conflict with any laws in the United States, for cooperative effort and mutual assistance for prevention and abatement of water pollution and the enforcement of their respective laws relating thereto, and to establish such agencies, joint or otherwise, as they may deem desirable for making effective such agreements and compacts."

### Flood Control in the Ohio Valley

#### EXTENSION OF REMARKS

OF

**HON. JAMES G. POLK**

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

ADDRESS BY BRIG. GEN. THOMAS M. ROBINS

Mr. POLK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, "Flood Control in the Ohio Valley," delivered by Brig. Gen. Thomas M. Robins, Assistant to the Chief of Engineers, before the Ohio Valley Conservation and Flood Control Congress at Portsmouth, Ohio, on February 6, 1940:

Back in 1824, when this vast Ohio Valley was a sparsely settled wilderness, the Corps of Engineers made a survey of the Ohio River with a view to the improvement of navigation. In the report of the two officers who made the study we find the statement, "The Ohio has its banks so high as to be seldom overflowed." That statement was no doubt made because neither developments nor encroachments were at that time such as to warrant any concern over occasional floods. We have gone a long way since that 1824 survey and if there was any lack of foresight involved in the statement quoted, I am willing to look lightly upon it, for the growth of industry and population in the valley has exceeded any logical estimate which those early engineers might have made. However, this valley development progressed in a typical early American fashion, without serious regard of the hazards involved in encroaching on the flood plain, and slowly but surely it came to pass that the river which "seldom overflowed its banks" became a menace to life and property as well as an artery of commerce.

Having the problem of flood control in the Ohio Valley on our hands as a concrete fact, it seems fitting that we briefly orient ourselves as to the existing policy with respect to this work, what is being done, and what remains to be done.

For many years the Department has been aware of the problem of controlling floods on the Ohio River system, but no concrete action in the matter has been taken until recently because of the lack of legislative authority to undertake the necessary improvements. In 1852 Charles Ellet, a civil engineer of the Engineer Department, first proposed, as one step toward Mississippi Valley flood protection, the construction of reservoirs on the Ohio and its tributaries. He saw that such works would be of value not only for the reduction of Mississippi floods but even of greater value for diminution of Ohio River flood stages and improvement of navigation. The Tygart Reservoir, completed 2 years ago, is one such as Mr. Ellet advocated. During these early years flood data were gathered by the Department, but activities were limited by congressional mandate primarily to improvements for navigation. Proposed flood protective works were considered to be of Federal interest only to the extent of their direct benefit to the navigability of streams. Accordingly a report of a board of officers made in 1912 found that a series of storage reservoirs in the Allegheny and Monongahela Rivers would be of only limited value to navigation on the Ohio and consequently could not justify great Federal participation.

In March 1913 a devastating flood struck the valley. The Secretary of War directed a board of engineer officers to investigate and report upon flood conditions in the valley of the Ohio River and in the drainage area of Lake Erie. The board investigated in detail conditions at 66 localities within the next year and submitted its report recommending detailed surveys and setting forth a program. The board concluded that no one method of flood control could be recommended to the exclusion of others, and stated that "the subject of flood protection and flood prevention is one of great national import. . . . The interests of navigation and of interstate commerce demand that the Federal Government seek a remedy and join with the local interests in applying it."

As a result of the report of the board convened in 1913, further studies on several Ohio River tributaries were authorized, and another report on the flood-control situation was submitted to Congress by the Department in December 1916. This report was noteworthy for its conclusion that the undertaking of works for flood control "should preferably not be based on the uncertain and indefinite benefits that may accrue to navigation, but on the certain and positive benefits that will accrue in the protection of life and property from loss and in the prevention of the interruption by floods of general interstate commerce and the interference with the mails."

The report from which I have just quoted went to Congress at a time when the attention of the world, including the United States, was focused on war rather than the protection of mankind in its endeavor to achieve a higher civilization. The results of the first World War were far reaching, and for a decade progress in flood control, along with other measures for conservation of our water resources, was at a standstill.

In 1926, in cooperation with the Commonwealth of Pennsylvania, the Department made detailed studies of the Allegheny and Monongahela Rivers. Then, in 1927, Congress, realizing that it was high time something should be done toward water conservation, authorized the well-known 308 surveys of the major rivers of the country in the combined interest of navigation, flood control, power development, and irrigation. These studies included the Ohio River and 23 of its tributaries, and the first of the reports thereon was submitted to Congress in 1930.

The major flood in March 1936 demonstrated the need for a national policy with regard to flood control more conclusively than all the reports previously written. The Nation became conscious of a grave responsibility, and the 1936 Flood Control Act became law. This law sets forth an admirable national policy for flood control. I am sure that you gentlemen are familiar with the 1936 act, as well as the 1937 and 1938 Flood Control Acts which followed, and shall therefore not dwell further upon them.

Under existing law the flood-control projects adopted for the Ohio River Valley involve construction of some 74 storage reservoirs and local protective works for 130 communities. The total estimated cost of these projects is \$640,000,000. Toward the completion of all these projects Congress has authorized to date a total expenditure not to exceed \$190,000,000, leaving an additional expenditure of \$450,000,000 yet to be authorized before the comprehensive plan for protection against floods on the Ohio River system can be carried out.

Of the sum of \$190,000,000 now authorized to be spent on Ohio River Valley flood control, \$59,600,000 has thus far been allotted. With the funds so far allotted there have been completed or placed under construction 13 reservoirs and local protective works for 13 communities. Before the close of the present fiscal year it is expected that 16 more projects (1 reservoir and 15 local protective works) will be placed under way. The progress being made is a substantial step forward, but so much work remains to be done that accomplishments to date should be considered only as an incentive to speed completion of the program.

In his last annual report to Congress the Chief of Engineers states that during the fiscal year 1941 over \$63,000,000 can profitably be expended on flood-control work in the Ohio Valley. Plans are now complete, or near enough to completion, to enable the initiation without delay, after sufficient 1941 funds become available, of 5 additional reservoirs and 11 additional local protection projects. At the same time, if sufficient funds are made available during the next fiscal year, rapid progress can be made toward completion of those flood-control projects now under way or expected to be placed under way in the near future.

It is not for me to say how much money the Nation can afford to spend for flood control in any fiscal year, but I feel it is my duty to point out how important it is from both a social and economic standpoint that authorized flood control projects throughout the Nation, and particularly in the Ohio River Valley, should proceed to completion at a reasonably uniform rate. With irregular or intermittent progress, another catastrophe, such as we all remember too well, may overtake us, proper planning and orderly execution of the work become well nigh impossible, and in the last analysis the cost is bound to be more than the taxpayer should be called upon to pay.

From the standpoint of national defense, the Ohio River Valley is one of the bulwarks of the country and must be depended upon to produce a large proportion of our material needs in time of war. Until the existing flood hazard is removed there is always the danger of the flow of supplies and equipment from the Ohio River Valley being interrupted. The country cannot afford to have this happen during a war and the only way that such a

happening can be forestalled is by completing the comprehensive plan for flood control in the Ohio River system.

The Corps of Engineers has given its best effort with a view to protection of our people against destructive floods and has today a Nation-wide organization engaged in planning and constructing flood control works, which I believe is second to none in earnestness of purpose and efficiency in execution. I can assure you gentlemen that this organization will continue to serve to the best of its ability whether the times be good or bad, and that it appreciates the aid and support of the Ohio Valley Conservation and Flood Control Congress.

## National Resources Planning Board

### EXTENSION OF REMARKS

OF

HON. KENT E. KELLER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

Mr. KELLER. Mr. Speaker, I wish to call attention to just two or three basic points in this whole matter, which touch on the broad aspects of what we are trying to do in the United States today. I think it can be safely said that no matter what side of a political question one stands on we can all agree that here in the United States we are demonstrating a system of government, a system of economics, and a way of life that can succeed without resort to the controls that characterize the heavily centralized governments abroad. Those governments have employed their peculiar kinds of planning, which have led to the regimentation of the lives of their citizens. They have claimed great accomplishments and some enthusiastic individuals in this country have been ready to praise that accomplishment and borrow the methods.

In this country where the need for planning is readily admitted, but where no one wants to trade loss of liberties for the kind of planning that means regimentation, we have tried a different method to accomplish the benefits without reaping the evils. We have tried planning for our democracy in a democratic way. An advisory planning agency which has no powers except to advise was established in 1933 to help formulate programs which might be used to adjust the national welfare to the disturbing economic conditions—not just for the period of the depression but for the long term.

By this method the final decision as to the value and wisdom of any plans remains in the hands of the Congress of the United States. Nothing can be imposed on our people unless the Congress imposes it. For example, when this planning agency considered all the results of research in the field of energy resources, it developed its findings and recommendations, which were transmitted by the President to the Congress. It then remains with the Congress to say whether or not the program for energy resources shall be carried out. Certainly no one here is going to assert that Congress does not want all the information and suggestions that experts can give it. An advisory agency of this kind is one part of that scientific administration, so highly developed in modern business, which is needed in the governing of our Nation.

I realize that the Congress can call on the various Government departments for their expert information and advice, but I realize also that there are a great many problems today whose solution demands information from many different Government departments. In such cases the National Resources Planning Board has acted in the past and can continue to act as the correlator of pertinent information and advice from authorities in different fields. I believe the Congress has an example of this in the case of its Concurrent Resolution 24, Seventy-fifth Congress, first session, calling on the National Resources Planning Board for its study of the Territory of Alaska. It has other examples in the reports that have been transmitted to the Congress by the President. I cite such reports as Energy Resources and National Policy; Report

on the Cut-Over Region of the Northern Lake States; the Report on Water Pollution in the United States, which was made House Document No. 155 in the last session of Congress; and the Report on Technological Developments, of which the House had printed 10,000 copies for the use of its Members and their constituents.

There is not much question of the value of this type of advisory planning unit. It may be that the full worth of this organization will be thankfully measured in terms of the welfare of our children, instead of in terms of how much it spends or saves within the limits of any one fiscal year.

A great deal has been said here and elsewhere about what this Board is and is not. It seems to me a brief statement of how it came into being and how it developed to its present position is extremely pertinent at this point.

In 1933 when it was realized that governmental expenditures for public works would have to take the place of money that was formerly spent by business, it became immediately clear that such expenditures should be in line with some sound program that would insure future benefits. The National Planning Board was appointed under P. W. A. to begin formulation of such a program. Members of this Board understood that a properly developed program could not be born, full-blown, overnight. It tackled a dual job of advising on immediate expenditures and developing a long-time program. Its first sound conclusion was that any such program would have to be based on comprehensive, integrated plans for natural resources. The National Resources Board was thereupon appointed in June 1934 to develop a land, water, and mineral-resources program and to encourage the States to develop similar programs through State planning boards. In January 1935, the President transmitted to the Congress the basis of these natural resources programs in the report of the Board, dated December 1934.

With its planning for the physical resources of the Nation well begun, the Board intensified its attentions to the use of these resources. Thus it began its studies in an effort to determine something about the population for whom our resources are being conserved. Thus the National Resources Committee appointed in June 1935 found it necessary to study such problems as the amount of production necessary to meet the needs of the population, to study how much income the population receives and can spend in purchasing the goods produced. Along with the attention given to such problems, the Board has continued its attention to the problems of land, water, and mineral resources, reorienting these in the light of problems of the day. Thus, because of the many complexities of the problem of power, it has seemed advisable to study all energy-producing resources so that no phase of the power problem is lost sight of through overemphasis on one or two manifestations of that problem.

From the very first day the National Planning Board was appointed, down through 1934, 1935, 1936, 1937, and right down to date, all of these problems have been studied with a view to their bearing on the problem of public-works planning. Advice from the States has been repeatedly sought in an effort to develop non-Federal programs of public works planned as much as 6 years in advance. Consultation has been held with all Federal agencies concerned with public-works programming so that plans for a program of Federal public works can be maintained 6 years ahead. For this reason, it was the most natural thing in the world for the functions of another unit of the Government with similar responsibilities to be transferred and merged with the National Resources Committee under the reorganization plan. In that manner the National Resources Planning Board was formed, having the functions of the old Employment Stabilization Act as well as the functions carried from the beginning by the National Resources Committee.

To conclude, I only want to point out that the Congress cannot afford to deprive itself of the billions of dollars of future value to come from the work of this organization, just because it is disinclined to spend three-quarters of a million dollars for this purpose during the next fiscal year.

## National Youth Administration

### EXTENSION OF REMARKS

OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

Mr. MILLS of Arkansas. Mr. Speaker, with the thought in mind that the greatest asset that we have in America is youth, and that youth is perhaps handicapped at the present time in its effort to adjust itself to a changing economy, I desire to make a few statements with reference to the National Youth Administration and its work in my State in assisting young men and women to become useful citizens. We are very proud of the record that is being made by the State administrator, Mr. J. W. Hull, and his assistants in Arkansas in teaching boys and girls how to make a living as well as how to live.

The public is familiar with the facts concerning the creation of the National Youth Administration by Executive order of President Roosevelt on June 26, 1935, at which time the President said that the young people of the Nation should "have their chance in school, their turn as apprentices, and their opportunity for jobs—a chance to work and earn for themselves."

In Arkansas the N. Y. A. is operating under two broad programs:

(1) Out-of-school work program: Part-time employment for out-of-school boys and girls on work projects designed not only to give these young people valuable work experience but to benefit youth generally and the community in which they live. These workers are selected from low-income families and must be between 18 and 25 years of age. Projects must be sponsored by some public agency and must be located on public property. Through a cooperative agreement with the State public-welfare commission, youth who work on N. Y. A. work projects are certified to the N. Y. A. by the various county public-welfare agencies.

(2) Student work program: The student work program in Arkansas sponsored by the National Youth Administration has provided and is still providing part-time employment for needy high-school and college students between the ages of 16 and 25 so that they can continue their desired educational life.

In 16 resident training projects located in various sections of the State many Arkansas young people are assembled in groups from 50 to 150 where they live. Being on the project location full time, these young people have a double opportunity to gain work experiences, receive valuable training in related training classes, as well as the wholesome experience of developing habits of social adjustment. The State department of education, through its various vocational-education divisions, has cooperated and is still cooperating with the N. Y. A. in providing supervision and vocational instructions to enrollees assigned to the various resident training projects.

Although the N. Y. A. has furnished and is still furnishing thousands of Arkansas young people with needy work experiences in order that they might find themselves vocationally and to learn the type of work they wish to follow as a vocation, this Federal agency is also leaving monuments in practically every county in Arkansas in the form of public buildings which will add to the well-being of the State's citizenship for years to come. It has been the desire of the N. Y. A. in Arkansas through its out-of-school work program to build those things by youth and for youth in order that the buildings might be of service to the present-day youth and the youth of future generations.

In order that a clearer picture of the out-of-school work program might be had, it is well to note that 16 vocational

and shop buildings are now under the process of construction, while 43 such buildings have been completed. Thirty-five home-economics buildings have been completed and 9 are now under construction. Sixty-one school buildings have been completed and 25 still are under construction. Fifty parks and playground projects have been completed, with four such projects still in operation. In order that the picture might be shown in outline form, you will find below a table giving the type of construction, the number active, and the number complete.

Type of project	Active	Complete
<b>A. CONSTRUCTION</b>		
Vocational and shop buildings.....	16	43
Home-economics buildings.....	9	35
Gymnasiums and auditoriums.....	22	13
Airport hangar.....	1	
Practice home.....	1	
Model farmhouse.....	1	
Teacherages.....	5	4
Bus garages and shelters.....	1	7
Other school buildings.....	25	61
City libraries.....	2	1
City halls.....	1	6
City fire stations.....	1	2
City garages.....		2
Courthouses.....	1	
Community buildings.....	1	6
Sidewalks.....	8	7
Amphitheaters.....	1	1
Forest-buildings units.....	3	
Park and ground improvement.....	4	53
Athletic fields.....	7	13
Brickmaking.....	1	
Office buildings.....	2	1
Drafting.....	2	2
Making marble markers.....	1	
Other construction and remodeling projects.....	2	33
Total construction projects.....	123	287

In Arkansas we have sponsored by various public agencies 17 woodworking shops. In these shops youths assigned have not only received experience in every phase of woodwork but have received training periods in which they secure instructions in the use of various tools and power equipment. Materials used in these workshops are furnished by some public agency desiring articles to be made. These workshops are located in the following cities, so planned to be of service in some way to practically all counties: Fayetteville, Fort Smith, Mansfield, Russellville, Atkins, Des Arc, Lonoke, Little Rock, Helena, Vick, Camden, Texarkana, Warren, Hope, Newport, Searcy, and Forrest City.

At the present time there are 16 resident training projects located in the various sections of the State. Some of the resident training projects are sponsored by State-supported institutions of higher learning. Institutions sponsoring a resident project are as follows: Arkansas Polytechnic College, Russellville; Arkansas State Teachers College, Conway; A. M. and N. College for Negroes, Pine Bluff; State A. and M. College, Magnolia; Arkansas State College, Jonesboro; and Junior Agricultural College, Beebe.

Resident projects located at the above-mentioned schools provide not only a well-rounded work-experience program but also affords the enrollees an opportunity for some college work as well as a well-rounded related training program supervised by the faculty of the above-mentioned institutions.

Other resident-training projects located at various points in the State provide a well rounded work experience program and related training activities to isolated youth who cannot be reached by what is known as the local out-of-school work project activities. These resident-training projects include, among many other work activities, auto mechanics, metal work, woodwork, experimental and practical farming, brick masonry and many types of construction work. The resident-training projects not sponsored by an institution of higher learning but by some other public agency are located as follows: Lake, Fort Smith, Ark.; Huntsville, Ark.; Clarks-ville, Ark.; Couchdale, Hot Springs, Ark.; Solgohachia, Ark.; Batesville, Ark.; Melbourne, Ark.; Porta Village, Magnolia, Ark.; Jerome, Ark.; Monticello, Ark.

I have mentioned above a number of times a well rounded work experience and related training program. To be more

specific, such a program includes work experiences of various types, training in subjects related to their work experiences, a program in recreation, a program of health under which are secured the services of the State and county health officials along with materials and literature available for health education and hygiene. The above-mentioned well-rounded program also includes education toward a well-rounded social life. In this respect there has been made available to us the assistance of local social organizations. This, of course, will include the outstanding citizens of the State and communities who give their free time in addresses and in personal and group conferences.

In order that the girls in Arkansas might have an opportunity to earn and learn, there are at present in Arkansas seven part-time resident projects. These projects are developed and operated on the theory that at some time these girls will be homemakers. The program developed is in the field of homemaking of a practical nature, taking into consideration cooking, sewing, home management, gardening, child care, as well as a well-rounded social life. Where facilities are available, the girls are given the privilege of taking high-school or college work relating to a homemaking activity. The part-time projects affording the above type work and training for the girls in the State are located in the following cities: Lonoke, Ark.; Hot Springs, Ark.; Helena, Ark.; Nashville, Ark.; Texarkana, Ark. (white girls); Texarkana, Ark. (Negro girls); Wynne, Ark.

In the above-mentioned part-time resident projects Mr. Hull has found the officials of the county departments of health, the home-demonstration agents, and the State home-economics departments most helpful in assisting in the development of the homemaking related training programs. The N. Y. A. has had the wholehearted cooperation and support of the above-mentioned organizations and officials.

In Arkansas there are in operation 38 projects known as clerical assistance and service projects. These projects offer through the cooperation of many public agencies work experiences of the "white collar" type. Work experiences and related training activities are in the fields of clerical activities such as typing, shorthand, mimeographing, office management, filing, and interviewing. These projects reach a high type of youth who have had sufficient educational background and work experiences to benefit by such projects.

In 487 schools in the State we have participating at the present time 4,857 high-school students. It is well to remember that the educational forces through the various superintendents and principals of our public schools are wholly responsible for the operation of the student work program. The above-mentioned school officials have accepted wholeheartedly the responsibility in the selection of the youth who shall participate in this program, the development of a constructive out-of-school work program for the youth, as well as the supervision of the work done by the participating youth.

The sincerity in which the school officials have accepted this responsibility is worthy of everyone's consideration.

In 24 colleges in the State there are at the present time 1,144 college students receiving N. Y. A. assistance through a part-time employment program. Here, again, we find the college officials accepting the responsibility of selection, the development of a works program, and providing supervision for the student work program. The cooperation of the various colleges with the N. Y. A. in relation to the college work program is of the very highest type. No better cooperation could be expected from any college or individual. Taking both the school work program and the college work program into consideration, at present there are 6,007 youth remaining in school due to this cooperative student work program.

To further explain the operation of the complete N. Y. A. program in Arkansas it might be wise to mention the part taken by the State advisory committee and the various local advisory committees in the State. One of the purposes of these committees is to work with the various N. Y. A. officials in studies of the needs of the youth of the State and youth of

particular localities. By this means it is possible to develop projects of such a nature that meet the needs of the youth as they exist in the various localities. The advisory committees also assist in developing related training programs, as well as soliciting the help and assistance of all public-spirited groups and individuals. By the use of the above-mentioned committees, the public is better advised of the program and its objectives.

The work of the National Youth Administration in Arkansas has proved successful, as is evidenced through the following quotations from Arkansas newspapers:

The National Youth Administration is a New Deal agency that has won commendation both for the ideals that impelled its organization and for its achievements.—Walnut Ridge Times-Dispatch.

We believe that the work being done by the N. Y. A. very important to the future of our State. The agency is playing a very important part in the betterment of the social and economic lives of our young people.—Forrest City Times-Herald.

The N. Y. A. program should be carried on as a part of our educational program, either as a separate unit or through consolidation with some other department.—Russellville Courier-Democrat.

Judging by the good that is being accomplished in this section as well as throughout the State, and realizing that only a beginning has been made in this work, this paper feels that no better money can be spent than that which is benefiting the youth of our country. The N. Y. A. should be enlarged and made an independent organization.—Batesville News-Review.

The N. Y. A. was created 4 years ago as a depression emergency program. It has proven practical and constructive and should remain part of our national educational program.—Marianna Courier Index.

There has been little or no criticism of the N. Y. A., one of the few governmental agencies which has escaped. Like the C. C. C., its purpose is above reproach. We trust the N. Y. A. will continue to do its job of providing opportunity for our youth to prepare for the future.—Blytheville Courier News.

Recently, we said editorially that one of the finest things to come out of the New Deal was the C. C. C., and we might add here that another of the finer efforts of the New Deal is the N. Y. A. \* \* \* There is no question about how much the National Youth Administration has helped the young people of Arkansas, is still helping them, and will continue to do so.—Lake City Sun Times.

The New Deal has produced a bumper crop of alphabetical agencies, some of which we consider excellent, some only fair, and some practically worthless. There is one, however, which we can endorse without any qualifications or reservation—the National Youth Administration.—Wynne Daily Star-Progress.

Wise economy in Government does not call for too drastic a reduction in the funds made available for an agency doing the task assigned to the National Youth Administration.

### Stream Pollution Control

#### EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

LETTER FROM P. G. PLATT

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. P. G. Platt, secretary of the Izaak Walton League of America:

IZAAK WALTON LEAGUE OF AMERICA,  
PENNSYLVANIA DIVISION,  
Wallingford, Pa., February 3, 1940.

To All Pennsylvania Congressmen:

We urge your unalterable opposition to S. 685, which is, in our opinion, a "pork barrel" subterfuge pollution-control bill, sponsored

by polluting industries and blessed by existing State and local control agencies because of the pleasing subsidy contained therein.

House Document No. 155, the basis for S. 685, makes grateful acknowledgment to a group of manufacturers who are naturally anxious to preserve the status quo of pollution; we believe the President to have been exposed to bad advice in accepting this document as the basis for his recommendation to Congress, and are definitely opposed to both the philosophy and the appropriations contained in S. 685. If we cannot have an honest pollution-control measure at this time, let us be content with things as they are for the present, rather than to enact into law a bill providing for appropriations with which to postpone action.

Most respectfully yours,

P. G. PLATT, Secretary.

### An English Viewpoint

#### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

Mr. THORKELSON. Mr. Speaker, our papers have expressed themselves freely upon their attitude toward Germany, and those who oppose them are labeled "Nazi," "Fascist," and "anti-Semitic." For the past 6 or 7 years it appears to have been a crime to state an opinion in regard to Germany, in spite of the fact that it may be entirely just. As a matter of fact, it is just, and to clarify this point I shall quote to you from an English paper so that you have the English people's viewpoint on the status of Germany—May 6, 1939:

TRICKED INTO ENCIRCLEMENT—REASONABLE GERMAN TERMS TO POLAND

Hitler's speech and his denunciation of his two pacts with Britain and Poland bring the Government face to face with the grave consequences of encirclement. It was inevitable that Germany should regard the Anglo-Polish military alliance as an unfriendly act destroying the basis upon which both the Anglo-German naval pact and the Polish-German agreement were made. So now we see the last bonds between axis and entente broken by the grave menace to European peace.

The loss of the Anglo-German naval agreement is particularly serious, as this pact was entirely to Britain's advantage, removing a nightmare of a naval race similar to that which culminated in 1914. Now this one sane achievement of our diplomatic relations with resurgent Germany is sacrificed for the sake of Polish intransigence. Hitler, checked in his eastern expansion of German interests, is showing signs of turning back to the west with the most ominous consequences. So does the Government blunder ever closer to catastrophe.

#### HITLER'S OFFER TO POLAND

For what have we sacrificed our naval security in the North Sea? The answer can now be given after all the scaremongering and panic in the press has done its worst. In his speech Hitler gave the terms of the proposal he made to Poland, which were eminently reasonable.

(1) Danzig to return to the Reich.

(2) Germany to have a road and railway through the Corridor with extraterritorial rights to connect East Prussia with the rest of Germany.

It is my desire to interrupt here to emphasize the fact that Germany requested two minor privileges, which the English people themselves agree were no more than right and just. If these had been granted, there would have been no war in Europe. As a matter of fact, Germany obligated herself to enter into a 25-year nonaggression pact, which would have benefited not only Poland and Czechoslovakia and other central European states, but would have been of the greatest benefit to the British Empire itself. Why did not England accept it? I shall let you read their own version of these negotiations:

(3) In return Germany—

(i) To recognize Polish economic rights in Danzig.

(ii) To guarantee Poland a free port in Danzig.

(iii) To accept the frontiers between Germany and Poland as final (despite the fact that many Germans would remain under Polish rule).

(iv) To conclude a new 25-year nonaggression pact.

(v) To have the independence of Slovakia guaranteed jointly by Germany, Poland, and Hungary, ending the provisional German protectorate.

Surely no reasonable man is going to argue that these proposals were not timely and in the best interests of European peace. The Corridor, dividing east Prussia from Germany, has been condemned by all progressive opinion, and yet Hitler asked not for its return to Germany but merely for a means of free communication. Danzig is obviously a German city and its return to Germany is already conceded by European diplomacy, and yet Hitler was prepared to guarantee Polish rights in the Danzig port. Most astonishing of all was the renunciation of German control of Slovakia, which is given in maps published by Left papers as already a part of Greater Germany.

Hitler for once had tried the method of negotiation so highly praised by the democratic governments and Mr. Roosevelt. What was the result?

#### MILITARY RESISTANCE

Poland promptly mobilized her army. The British Government [presumably properly informed as to the terms presented by Germany] hurriedly offered a guaranty to Poland and invited Beck to London. With all this encouragement, Poland sent a flat rejection of the German proposals and made quite footling countersuggestions, conceding nothing.

Now that the British people know the real cause of all the fuss about Polish independence, we may expect considerable indignation. It is quite disgraceful that our Government, apparently out of mere pique over Czechoslovakia, should have encouraged the Poles to refuse such reasonable terms for the settlement of long-standing grievances, especially when the release of Slovakia from German domination was to be gained in return. Even more reprehensible was the violent campaign in the press, accusing Germany of all sorts of designs upon Poland, which could have been ended in a moment by the Government publishing the real German proposals most acceptable to reasonable British opinion.

#### ENCIRCLEMENT BY STARVATION

In fact, the British people have been tricked into acceptance of encirclement by deliberate misrepresentation of the nature of German demands on Poland. Hitler's attempt to negotiate on outstanding and universally recognized grievances was met by armed resistance through mobilization and military alliance, without the British people being given an opportunity of considering the merits of the German case. Secret diplomacy has once more sabotaged European peace.

It is all very well for Chamberlain to claim that he does not wish to "encircle" Germany by promising a pact of nonaggression. Military alliances to deny Germany even the most reasonable revision of long-recognized grievances in eastern Europe arising out of the notorious Versailles Treaty are encirclement. Trade delegations to purchase raw materials and foodstuffs from eastern European states, which we have in abundance in our Empire, are an attempt at what has been called appeasement by suffocation, and are encirclement. As Senator PITTMAN said recently in relation to American moves against Germany:

"Why shoot a man when you can starve him to death?"

Encirclement need not involve military attack. It may operate more surely and more fatally by denying access to economic resources in a long process of virtual starvation. But will 80,000,000 Germans and their 70,000,000 central European allies and associates wait until they are starved out?

The Government is rapidly creating an explosive situation in which war becomes inevitable. When will the British people call a halt to this madness?

#### A BASIS OF NEGOTIATION

Hitler's speech was extremely sarcastic and even bitter, but he did not shut the door upon future negotiation. Both Anglo-German and Polish-German agreements can be renewed by mutual arrangement, and Hitler is obviously prepared to enter into a conference on outstanding difficulties. Now is the time for the British people to insist upon a real effort for peace. As it is obvious that we were tricked into encirclement over Poland, so now we can demand a review of this mistaken policy in the light of a general European settlement.

Mosley has already laid down the basis of such a settlement in four simple points. They are as follows:

- (1) Disinterest in the east of Europe.
- (2) Disarmament in the west of Europe.
- (3) Return of the mandated colonies we do not need.
- (4) Development of that quarter of the whole globe which belongs to us—the glorious heritage of British Empire.

#### REVISION OF VERSAILLES

The fact is that peace can only be assured by a complete and final revision of Versailles. What does this involve? Versailles had one fundamental basis—*vae victis*. Almost all its provisions were drafted with the object of keeping the German people down and preventing them ever attaining world influence. If Versailles is to go, and no progressive mind has thought otherwise, then the German people must return to world influence equivalent to their numbers and cultural attainments. They must have colonies like other European powers, and lacking the imperial domain of Britain or France some sphere of influence among the backward peoples of eastern Europe, who as agrarian states have such a fundamental need of close economic cooperation with a great industrial nation like Germany in order to develop their resources.

What objection is there to such a settlement, which would give an outlet to German energies in a direction least likely to conflict with our own? Russia and her red friends in western Europe are no doubt alarmed at Hitler's *Drang nach Osten*, but that is no

concern of Britain or the Empire, especially when communism has been the bitterest enemy of British Empire.

#### THE FEAR COMPLEX

The only valid objection is based upon fear, which is always the gravest cause of war. A stronger Germany would menace Britain. Considering the vast extent and resources of the Empire, why should 70,000,000 white Britons and 500,000,000 colored subjects fear Germany? This is an admission of democratic weakness under financial exploitation when faced by the unity and efficiency of national socialism in Germany.

Instead of seeking allies among the backward peoples of eastern Europe to hamper German growth and help defend Britain, we should set our own house in order. Growing German power can be easily offset by developing British power by modern methods. The democratic system must go. Financial power must be subordinated to the national will. Then we can take our stand on our own ground in western Europe as the strong man armed, and build a greater Britain more than able to hold its own with Hitler's greater Germany.

I have inserted in this RECORD three articles published in an English paper, which I am reasonably sure is not subsidized by the international financiers, but is instead a publication that represents the viewpoint of what I have often referred to as the middle class or common people. I prefer to listen to this group, for in the final decision it is they that set all nations right.

It is not my intention to discuss each of these articles, but I shall ask you to read them instead, for they are thought-provoking and very important at this particular time. The point I want to make is that these articles are not mine, and I am not responsible for them, but they are instead published by English people and in English papers. They are free from American interpretation. In other words, they are purely English.

### The Money Problem

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

Mr. ALEXANDER. Mr. Speaker, under permission to extend and revise my remarks in the RECORD, I submit the following letter from a constituent, Mr. O. M. Thomason, together with an accompanying memorandum regarding our economic distress and its relation to the Federal monetary system.

Due to the hundreds of letters and other messages I have received regarding this angle of our national problems, I submit the article, as I know there is great interest in the matter:

WILLERNIE, MINN., February 7, 1940.

HON. JOHN G. ALEXANDER,

House of Representatives, Washington, D. C.

MY DEAR SIR: Mr. T. O. Fredell's letter to you led me to set down a few figures which I pass on to you. I read very closely what so many Members have to say about economy, and am made to smile derisively at times.

The repetition that "we can't afford it" sent me to documents tending to show that we can afford it—can afford most anything. The difficulty lies not in inability to produce goods but the inability to distribute them. Our inability to distribute them arises out of our failure to provide the means by which distribution is effected.

Such means is purely technical—the same as production is technical. What is physically possible can be made monetarily possible. We regulate physical production, but permit monetary supply to seek its own level. The two should be made to synchronize at a regulated and controlled price level.

Why is Congress so strict in guarding the weights and measures, yet so negligent in regulating the value of money?

These are questions that keep coming up in my mind.

As a means of trying to stimulate a little different thinking, you have my permission to cause to be inserted in the RECORD the attached letter.

To note the fluctuation of prices see Senator ELMER THOMAS' chart. As money becomes dearer, through scarcity, prices go down. Dollars go up in value because they are scarce compared to goods. The dollar is now 1.326, while the price level is around 70. This is something Congress must regulate.

Yours sincerely,

O. M. THOMASON.

## MEMORANDUM REGARDING MONEY VALUES

FEBRUARY 7, 1940.

Hon. JOHN G. ALEXANDER,

House of Representatives.

My DEAR SIR: The daily rising, unlimbering, and blazing away at our "mounting debts" upon the part of many Congressmen indicates a misunderstanding of the "nature" of our economy. Ours is an economy of debt, not of credit. The only way we can have "prosperity" is by going in debt. All our money is "borrowed" into existence. If all our debts were paid, both public and private, there wouldn't be a dime in circulation.

I'm not going to drag out the bugaboo of inflation. The bankers keep that dangling before our frightened eyes all the time. But I will say that scarce money means dear money, hence low prices. The "founding fathers," of whom we hear much and do little, knew the difference in "fixed" weights and measures and "regulated" money value. Money value is determined by its circulating quantity relative to the quantity of goods. As industry expands circulating money volume (or credit), must increase pro rata or there will be a disparity in relative values.

## THE REGULATED DOLLAR

Due to unscientific monetary control (by private money makers), the commodity price level in 1914 was 68 and dollar value 1.46. Due to inflation, during the war, by 1920 commodities were up to 1.67, according to Government statistics, and dollars down to 64. Then the Federal Reserve Board called for payment of some \$18,000,000,000 in loans, and prices nose dived while dollars soared and the two met at approximately 100. By 1927 the deflation set in operation in 1920 began to "take" and dollars rose to 1.67 in 1933, while commodities were back to 64. All this fluctuation comes from one cause—unscientific "regulation" of the value (which is determined by circulating quantity) of money.

All this chaos and confusion helps to direct men's minds on our debts, hence on expenditures, and sets up the cry to economize. It releases tearful exhortations to save and pinch even while people are in need of food and clothing—of which we have a potential abundance. We do not have an actual abundance because we are frightened at debt. Frightened at debt under a debt economy.

## WHEN MEN WORE SILK SHIRTS

We drag out the \$50,000,000,000 the first World War cost us and dangle that before horrified eyes. But that did represent something. We did produce, even if to destroy. Men worked and got good wages, even if they paid some of the money for silk shirts (silk shirts are more comfortable than flour-sack shirts). The fifty billions the war cost us was not a total loss. No farms were foreclosed on. No doles were tossed out. Few idle men were deteriorating and being inoculated with "subversive" doctrines.

So let's dismiss that insignificant sum and take a look at another economic waste—a total loss—with compound interest. The National Resources Committee, authorized by Congress, in the introduction to its June 1939 report, page 2, column 2—turn and read it, you Congressmen—makes a sensational statement. Bluntly, it estimates—conservatively, too; perhaps short by \$50,000,000,000—that in the 6 years between 1929 and 1937, due to nonuse of manpower, machines, and resources, the Nation suffered an economic loss of \$200,000,000,000. That is four times as much as our loss in the war. It amounts to \$10,000 for each hour since the birth of Christ. It would have paid for four times all the automobiles and trucks made in the United States since 1900. It equals all the accumulated wealth of the Nation—seven times the value of all our farms, or five times the value of all our factories, or seven times the value of all our railroads.

## WE LOST \$200,000,000,000

I notice (H. Doc. No. 272), the report of the Committee on Roads (April 27, 1939), that to build six transnation two-way and four-way highways—three north and south and three east and west—across the country would cost \$2,899,800,000. Congress will debate long and loud about where the money is to come from. And yet the \$200,000,000,000 would build over 400,000 miles of such roads. But not one penny of that vast possible wealth ever saw the light of day. The goods were not produced because there was no market for them. There was no market because of empty pockets. We are no better off than we were in the hand-tool days. Then we were poor because we couldn't produce. Now we are poorer because we don't know how to distribute, hence do not produce.

Let's break down that vast sum some more. We could have wired for electricity 9,400,000 homes at a cost of \$2,933,000,000 and had \$7,050,000,000 left to apply on old-age pensions. We could have paid off the farm-mortgage debt of the Nation, aggregating \$7,645,000,000, and had \$22,933,000,000 left to apply on old-age pensions—not doles. We could have installed bathrooms in 5,750,000 homes at a cost of \$2,875,000,000 and had \$8,525,000,000 left to apply on old-age annuities.

## LOST OVER 5,000 SCHOOLHOUSES

We could have set up educational endowments of \$3,000,000,000—twice the amount of such present endowments—and had \$3,000,000,000 left to apply on annuities for the Nation's aged. We could have built four \$250,000 schoolhouses in every county in the Nation and had \$11,019,000,000 left to apply on security for the aged. We could have built a million-dollar airport in every county in the United States at a total cost of \$3,073,000,000 and had \$11,019,000,000 left to apply on old-age pensions.

We could have doubled the \$5,000,000,000 we spent for soil-erosion prevention, making it ten billions instead, and had another

\$10,000,000,000 to apply on old-age annuities. We could have created a trust fund paying \$200 a month to each deaf and blind person in the United States totaling \$9,000,000,000 and had another \$9,000,000,000 to apply on retirement annuities for the aged.

## COULD HAVE DOUBLED RELIEF

We could have built 20 New York Triborough Bridges and 2 Panama Canals at a cost of \$2,258,000,000, and had another \$2,258,000,000 to apply on old-age annuities. We could have doubled the relief and recovery program, making it \$37,374,708,000 (for the 6-year period) instead of half that, and had another \$37,374,708,000 to apply on old-age pensions. We could have set up an endowment fund of \$1,536,752,000 to maintain a League of Nations and a World Court combined and had another \$1,536,752,000 left to apply on old-age dividends.

In other words, after paying all the sums named above (out of what we lost by nonproduction in 6 years), we could have had left to apply on old-age pensions, retirement dividends, or whatever you want to call it, a grand total of \$117,707,460,000. Divide that by 6 years and we have \$19,519,576,666.66 per year, or \$1,626,388.88 a month, which would give each one of 8,000,000 elders \$203.33 monthly.

## NOT CRACKPOT OR UTOPIAN

There is nothing fantastic, crackpot, or Utopian about those figures. They are authoritative and reliable—furnished by conservative departments of the Government. The only amazing thing is that we do not blush with shame at the realization. That shame should arise out of the admitted fact that we could have produced that amount of wealth, in addition to what we did produce, yet did not do it.

The alibi that the volume of circulating money did not justify such production is childish. What is physically possible can be easily made financially possible. The physical problem, the possibility of producing abundance, has been solved, at least potentially. The line between necessary scarcity and possible plenty (physically), was crossed in 1909. At that time technology came to man's rescue and said, "Here, let me do that. You take a rest." But man's troglodyte mind refused to let his nimble hands (which had become electric hands, steel hands), do the work. As a result starving, naked, houseless man goes about the streets throwing ashes on his bowed head wailing to stop the machine, destroy the machine—dump fruits, plow under crops, kill pigs—give us back the hand tools of the caveman.

All this arises out of the fact that we do not believe that wise provision of the Constitution which says Congress shall regulate the value of money.

Yours sincerely,

O. M. THOMASON,  
Willernie, Minn.

I invite further advice and suggestions.

## The Pure-Streams Bill

## EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

## EDITORIAL FROM OUTDOOR AMERICA

Mr. ALLEN of Pennsylvania. Mr. Speaker, with the unanimous consent of the House of Representatives to extend my remarks in the RECORD, I include therewith an editorial on the pure-streams bill introduced by the gentleman from South Dakota, KARL MUNDT. This editorial was written by Kenneth A. Reid, conservation director of the Izaak Walton League, and it appeared in the February issue of Outdoor America. This editorial presents a strong case for Congressman MUNDT's bill, and I hope that all those Members who are interested in the elimination of stream pollution will read the following remarks:

[From Outdoor America]

On January 17, Congressman MUNDT reintroduced the league's pure-streams bill, which was referred to the House Rivers and Harbors Committee with the new number, H. R. 7971. Representing 6 years of legislative experience, it gives the utmost consideration both to State control agencies and polluters; yet it maintains in the background for use when existing agencies are unable or unwilling to function the Federal authority so essential to accomplishment.

Many loose charges have been made against the Mundt bill to the effect that it was "drastic," that it "ignored and supplanted State control agencies," "required complete elimination of all pollution immediately under threat of criminal prosecution," and similar

scare statements. We challenge all of the above and invite those who continue to make them to choose their own classification—ignorance of the facts or deliberate misrepresentation of them.

The issue has not changed since the league started the present Federal pure-streams movement in December 1934 with the Dern-Loneragan conference. On the one side representing this original movement for uniform and Nation-wide control of pollution we have the Mundt bill, supported by conservationists; opposing it under the excuse of more study and investigation, but with no control authority whatever, we have the Barkley bill, supported by the same industrial polluters who have always opposed every constructive attempt to abate their pollution.

Undoubtedly many well-meaning but uninformed people have honestly supported the Barkley bill under the erroneous belief that it afforded some control over pollution. But the real leaders of this opposition movement support it because they know full well that it has none, and, further, that its passage would constitute the best possible insurance against their fear of an effective bill.

Those who would block the public demand by passage of a subterfuge bill claim that no further control of pollution is desirable or necessary, and that polluters are willing and anxious to clean up with the friendly advice and assistance of the Federal Government. We can understand a child's belief in fairy tales, but to expect intelligent adults who know the history and status of pollution to subscribe to such doctrines is asking too much.

Polluters have always had the opportunity to act voluntarily. Most States have had antipollution laws on their books for years and some of them contain adequate authority if enforced. State and Federal bureaus have studied the subject intensively for more than 25 years and already have more factual data than could be used in an active abatement program during the next decade. And finally for more than 6 years, Federal grants and loans have been available to municipalities for sewage-treatment works. Yet pollution remains a major national problem.

What do the opposition forces propose to do about it? They propose as a remedy the Barkley bill which relies entirely on voluntary action and continuation of existing agencies and methods. They point to existing treatment plants as evidence that no additional authority is needed.

Polluters who have cleaned up and polluters who have not are two different birds. The former have proved that they are susceptible to existing control agencies, but unfortunately our present problem involves only the latter. These are largely the recalcitrants who by their continued pollution have proved their immunity to existing agencies and methods these many years, and who obviously have no intention of doing anything about their pollution unless forced to by some additional authority.

The Mundt bill contains that additional authority; the Barkley bill does not. The Mundt bill squarely faces realities with a practical remedy; the Barkley bill would merely preserve the status quo.

If every Member of Congress would take the time to compare the two bills we would have no doubt of a satisfactory outcome, but due to misunderstanding and bad advice, the Barkley bill is now on the House calendar and may be up for a vote any day while the Mundt bill is still in committee.

The cause of pure streams demands that the Barkley bill be stopped. That is necessary, preliminary to passage of the Mundt bill—and the time for action is now.

### Arkansas Friendly to Co-ops

### EXTENSION OF REMARKS

OF

### HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

EDITORIAL FROM THE FORT SMITH (ARK.) TIMES-RECORD OF JANUARY 29, 1940

Mr. CRAVENS. Mr. Speaker, pursuant to the leave granted to extend my remarks in the RECORD, I include an editorial appearing in the Times-Record, of Fort Smith, Ark., under date of January 29, 1940, dealing with the question of the taxation of electric cooperative associations in Arkansas. The editorial is as follows:

[From the Fort Smith (Ark.) Times Record of January 29, 1940]

#### ARKANSAS FRIENDLY TO CO-OPS

Congressman RANKIN, of Mississippi, turned loose bitter criticism of Arkansas in a public statement the other day without knowing his facts.

The Mississippi Congressman is an ardent advocate of rural electrification. Someone told him that the cooperative rural electrification projects in Arkansas are being assessed for taxation by the State corporation commission, so he leaped to the conclusion that

an unfriendly State administration was trying to do his pet cooperatives wrong. He put a statement in the CONGRESSIONAL RECORD charging that Arkansas had made a move "calculated to cripple if not destroy rural electrification by placing a tax on rural power lines," built with Federal money.

The truth is Arkansas has been most hospitable to the idea of rural electric cooperatives. The 1937 legislature passed an act authorizing their organization which was suggested by the Federal authorities promoting this type of organization. The State utilities commission has been most friendly to the rural cooperatives and has given them every assistance in getting started. The private utilities in the State have not fought the rural cooperatives, at least not in any way which has come to our attention. On the contrary, they sell the rural cooperatives electric energy at low prices. The private utilities are glad to see the rural cooperatives get into business. They mean electric consumers. The private utilities cannot extend their lines into sparsely settled rural areas unless they can see sufficient business at sufficient price to pay operating costs, plus taxes, and retire the whole cost of the investment. The rural cooperatives are able to get generous Federal grants and loans, which materially reduce their first investment. They can provide electric service to areas too sparsely settled for the private utilities to serve, and at prices the private utilities cannot offer.

The rural electric cooperatives in Arkansas are subject to taxation under the Constitution. In fact, if the Constitution were strictly followed, they would be taxed on a basis fairly comparable with the privately owned utility, because the Constitution requires uniform taxation on the same classes of property. The assessments against the cooperatives are very low and so far none of the cooperative officials in this State have made a complaint about them.

### Pack Up This War

### EXTENSION OF REMARKS

OF

### HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

Mr. THORKELSON. Mr. Speaker, in order that we may understand that warfare in England is not unanimous, I shall quote from the December 7, 1939, issue of Action. This is generally known, but in no sense does information of this sort appear in our own daily papers. As a matter of fact, our daily press, for some reason or another, is a bigger and better booster of war in Europe than the press of England.

PACK UP THIS WAR—HYPOCRISY EXPOSED—WHAT ABOUT AGGRESSION NOW?

Russia has invaded Finland. She has no excuse for doing this. She cannot in the name of nationality claim that she rescues Russians from Finnish rule; she cannot claim that she needs living space.

When the Soviet give as a reason for their action the conditions in Finland, the same reason would enable them to invade any country whose government they disapproved, and to impose upon that country a Soviet Republic by force of arms. In fact, they take this action against Finland instead of a great power merely because she is small and weak.

Their reasons are nakedly imperialist and strategic.

The capital of Finland was immediately bombed and civilians were killed. An ultimatum was sent to Finland, according to the Daily Herald, demanding that—

"Finland must surrender to Russia before 3 o'clock tomorrow morning, otherwise Helsinki and all the bigger towns will be razed to the ground."

As a result even the Daily Herald is moved to say:

"This is as open and unashamed a piece of aggression by a great power against a small one as any in the sorry story of international anarchy."

What, then, is the attitude of government and parties? Mr. Chamberlain stated the attitude of the government:

"They deeply regret this fresh attack on a small independent nation, which must result in fresh suffering and loss of life to innocent people."

Not a voice in Parliament was raised demanding action against Russia. "They regret"; that is all that Finland got to help her. But Poland has the whole might of Britain and France placed at her command for a bloody war. Why the difference? Why in the eyes of financial democracy is the crime of Russia so much less than that of Germany? Is it because Germany desired to free the German city of Danzig and many other Germans from Polish rule, while Russia's reasons are merely strategic? Is that the difference which secured for Germany a war and for Russia a trade pact?

While this crime was being planned Russia received a bouquet as well as a trade pact from the Prime Minister of Britain. After the Soviet had forced their way into Poland, Latvia, Lithuania,

and Estonia, and only a month before they finally invaded Finland, Chamberlain was still deceiving himself that the Soviet meant to "prevent aggression," and this absurdity was dutifully cheered by his Conservative followers:

"I remember that in an earlier speech, on May 31, M. Molotov issued a warning that his Government would not be drawn into international conflicts. He said also on that occasion: 'We stand for the cause of peace and for the prevention of any sort of development of aggression.' That is also the position of His Majesty's Government, and I am not disposed to disturb myself over the flights of fancy in which M. Molotov indulged when describing the aims of the Allies." (Prime Minister—Hansard, February 10, 1939.)

At the same time Halifax was busy finding excuses for Russia's action in Poland. He stated in the House of Lords on October 27: "They would never have taken that action if the German Government had not started it." Will he now answer this question: Did Germany start the attack on Finland? If not, what fresh excuse will he find for his Soviet friends? But Halifax at his most fatuous cannot compare with his new colleague, Churchill, who as recently as April 3 last observed:

"No one can say that there is not a solid identity of interest between the western democracies and Soviet Russia, and we must do nothing to obstruct the natural play of that identity of interest. . . . Rumania, Poland, the Baltic States all feel easier because this great mass of Russia is friendly behind them and lies there in a broad support." (House of Commons, April 3, col. 2502, vol. 345.)

Can anyone pretend much longer that these men are fit to govern a great nation in a great age?

Will any supporters of financial democracy answer this further question if they can?

According to their own principles, have they any conceivable excuse for not fighting Russia now on behalf of a small nation, as they claim to have fought Germany for a small nation? They have no excuse—their attitude toward Russia makes their statements and action against Germany pure hypocrisy.

The German war is finally exposed for what it is—a financial and political vendetta. Every word that British Union uttered is proved true up to the hilt.

#### BRITISH UNION ATTITUDE

What then is our attitude toward the Russian-Finnish war? Again we pursue our long-declared policy with unswerving consistency. Britons fight for Britain only—we mind Britain's business. It is the principle of the parties in parliament to interfere in every quarrel that is going; it is not our principle. We only fight when the life and interest of Britain or British Empire is threatened. We are only interested in this case because it exposes the hypocrisy of the political conspiracy to sacrifice British life and Britain's safety in the quarrels of Jewish finance.

The interest of Britain in this matter is only very indirect. As was pointed out in a previous article, it is probable that Russia has committed four out of her five acts of aggression in the last 3 months (Latvia, Estonia, Lithuania, and Finland) in order to fortify her rear in the west against counterattack before she attacks British Empire in the east.

In fact, more reason exists for Britain to intervene in Finland than in Poland, but certainly not sufficient reason to warrant any departure from British Union's policy. Free from the western quarrel, with calm and confidence we would await any Russian attack on British Empire in the east. We cannot run around the world nipping in the bud possible preparations to attack us—we must be sufficiently strong and prepared to be able to crush any attack when it comes.

Therefore, British Union would intervene neither in Poland nor in Finland. We defend Britain and British Empire alone. But to those politicians who blatantly before the world now betray every principle for which they ever pretended to stand, we say:

"Your hypocrisy stinks to heaven—you are exposed for what you are. Make way for the British people and a British peace."

Mr. Speaker, I have taken the liberty to quote from this publication, *Action*, which is published in England. I shall neither take from it nor add to it, but let the article speak for itself.

Mr. Speaker, in the *Chicago Sunday Times*, January 28, an article appeared with the title "Keep Out of Peace, United States Told":

LONDON, January 27.—"Let America do what she will about the war, but for God's sake don't let her have anything to do with the peace," A. P. Herbert, humorist and novelist, pleaded today.

"Last time she left us with a large baby, calling it the League of Nations," said Herbert, a Member of Parliament, at a London Press Club luncheon. "Now she is, I understand, busily dressing up its poor little corpse and calling it a Federal Union."

"I have no doubt that once again after the war she will pop off home again the moment the child begins to yell. No, sirree!"

Such expression as this no doubt is intended to be humorous. However, the League of Nations was not our infant, and neither is the Federal Union, in spite of the fact that it is fathered by Clarence Streit. In view of this, and so that we may have a better understanding of this new attempt to involve the United States in a world league, I shall quote from an English paper *Action*:

LXXXVI—App—42

#### FEDERAL UNION EXAMINED

(By Oswald Mosley)

It is a dreary business to review the chickens which the ideologues are always counting before they are hatched. It is dreary because the whole process is so remote from reality at a moment when only reality counts. Why then do it? For one reason, and one reason alone. To have a look at these dream chickens gives us at least a reflection of what certain people desire and, therefore, affords us some idea of what other people are doing. The chickens which are being counted so carefully are the peace terms which they wish to impose on Europe after the easy and speedy defeat of Germany and the final "overthrow of Hitler." At present scores of busy little men are almost exclusively occupied with the new world they are going to create after the war. Most of them are still as much the prisoners of their idle wishes and feeble fantasies as they have been for the last half century or more. Through two or three generations they have chattered; and they will chatter to the end. The only strong feeling, let alone strong action, that they have ever experienced, is evoked by their fear of anyone, at any time, actually doing any of the things about which they have talked for so long. Most of them would be horrified if they were made to see what they were really doing now, or to realize the nature of the forces which their easy talk may really benefit. For some of the most sinister forces in the world may benefit from the cheap chatter of some of the silliest and most innocent types which even the decline of democracy has produced.

In analyzing federal union and its results, it must, therefore, be clear that I do not accuse all, or even most, of its devotees of any sinister motives. On the contrary, many of them have the very best intentions; with the ideologue the complaint is usually of the head rather than of the heart. Also it is quite conceivable that some "eminent statesmen" who, in varying degrees, pay tribute to this idea, do so in all innocence and with the best intention. The idea is being assiduously circulated and it is not surprising that politicians who are always at a loss for any idea, and particularly now are at a loss for any war aims, should eagerly seize any idea that might put a little uplift into their flat perorations. A conservative, for instance, may well feel the necessity for something a little more definite and inspiring at this grave hour than the clarion call of his leader, Mr. Chamberlain, in the last debate on November 27: "I say now that none of us knows how long this war will last, none of us knows in what direction it will develop, none of us knows when it is ended who will be standing by our side and who will be against us." Such a bright light of the mind, and such a clear call of the spirit, may be too acute for the average Conservative. They, as well as the Labor Party, show signs of seeking refuge in federal union. It is so much easier to dream about "after the war" than to get on with the job either of stopping the war or of winning it. The feeble paranoiac type seeks refuge from reality in the roseate illusion of what is misnamed a mind. This is the eternal refuge of the spirit.

#### AMERICAN ORIGIN?

What, then, is federal union? Like some other afflictions of the British, its first symptoms apparently came from America. By an extraordinary coincidence in fact it comes from the land that is blessed by the possession of Wall Street. How entirely unexpected this is the reader will observe from a description of the proposal.

In brief, we understand this is proposed: The nations of the world are to have a federal union on the lines of the original Federation of the separate American States. Each nation is to surrender much of its sovereign right to a central international authority. In particular, nations are to surrender to this international authority the right to defend themselves, and imperial nations such as ourselves are to surrender to the international authority all our colonial empire. The international authority will have an international force at its disposal resting mainly on air power. If any nation is recalcitrant or challenges in any way this international authority, it will be bombed into a submission, which, after the surrender of its own forces to the international authority, it would be powerless to resist. In the extremes of this proposal, we should all lose national citizenship. We should no longer be Britons, Frenchmen, or Germans; we would be citizens of federal union!

Such, as I understand it, is the full development of the proposal. How far the various parties go toward supporting all or part of this extreme the reader can study for himself in the various quotations which the editor has undertaken to supply. It is at least apparent that the old "new world record" of the last war has been touched up in some degree by all parties with the new federal polish.

Now, who benefit from this policy? (Let me again say that it is possible for either politicians, writers, or ordinary citizens generally to support it in entire ignorance of the results.) I say without hesitation that the interest which would benefit from "federal union" policy is the biggest racket which Jewish finance has yet attempted to swing across western civilization. They have done pretty well, these usurers, already; they hope to do better. They have tied Britain down to an international system a hundred years out of date. They have even entered British Empire to develop sweated labor of the Orient to undercut the standards of the west which gave them their power. With the propaganda of the money power they have persuaded the British to pursue their quarrels which had no earthly interest to the British people. Now they go further. They want our colonies that they may carry to a lucrative conclusion the job of sweating the black to the ruin of the white, who costs too much. They want our power for their international use in name as well as in fact, so that British force can never again be used for British ends but only for their ends.

## UPROOTING PATRIOTISM

They want above all to uproot even the sense of patriotism and nationality because the organized nation, expressing the will of a great people is not only the last remaining obstacle in their path to world dominion, but the last possibility of any challenge to their power when such a people decides to win freedom from the slavery of world finance. Without force of our own and confronted by overwhelming international force in their hands; without colonies of our own, but confronted by the competition of sweated black labor exploited by them in what were our colonies; without the right even to call ourselves British, let alone to organize what our fathers won by heroism, and transmitted to men with the manhood to hold and to develop the greatest heritage on earth; without strength, without Empire, without name, what should we be—slaves, branded before our fathers and before history as the slaves of Jewish finance.

"What proof have you of those beliefs?" I may be asked. I answer: When we see a crime let us seek the motive—who benefits from the death of nations as much as the force that knows no nation? I believe that any such international force would be controlled by international Jewish finance, because for centuries they have been organized internationally, while we in our days of greatness and happiness have always been organized as a nation; because the money power which they possess is the existing and established international force; because that force has ever ruled by the division and break-up of civilizations from within; and because the sense of nation and of patriotism is the last conscious entity which it has to destroy before assuming world dominion.

## Taxation of Electric Cooperatives in Arkansas

## EXTENSION OF REMARKS

OF

## HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

Mr. CRAVENS. Mr. Speaker, in a recent address, which appears in the RECORD of January 25, 1940, my friend the distinguished and earnest gentleman from Mississippi [Mr. RANKIN] had occasion to criticize taxation by Arkansas taxing authorities of rural electric lines constructed and maintained by cooperative associations. It is not my plan to enter upon a discussion of the question of whether such associations should be taxed or not. My purpose is to clear up the unfair implication created, unintentionally, no doubt, by the assertions of the gentleman from Mississippi. The impression has been left that the taxing authorities of Arkansas are doing an illegal and unwarranted thing in taxing the property of electric cooperatives, and in doing so are motivated by a sinister influence wielded by the Power Trust. Such an inference is unfair to the taxing officials of the State of Arkansas. Under the constitution of that State, all property not expressly exempted by the constitution itself must be taxed. The property of the kind now under consideration is not in any of the exempted classes. The constitution of the State further expressly provides that property not exempt by the constitution itself must be taxed. The Supreme Court of Arkansas has consistently held that the legislature is powerless to relieve from taxation property not exempted by the constitution. To fail to tax such property would lay the taxing officials liable to a well-founded charge of gross neglect of official duty. I am confident that no one familiar with the situation as above disclosed would counsel such a course. Until the people of Arkansas themselves determine that additional property should be exempted and express that conclusion in an amendment to their constitution—not a difficult procedure—the taxing officials of the State will have no other alternative but to tax property of cooperative electric associations.

The officials of the cooperatives themselves fully appreciate the necessities of the situation. It is my information from reliable sources that they do not, under the constitution, demand or expect the pursuit of a different course. It is conceded that such cooperatives have, in taxing matters, been dealt with fairly and have been shown every possible consideration.

What I have said should not be construed as indicating opposition to cooperative electric associations. My attitude

is to the contrary. At the present time I am engaged in aiding the extension of cooperative electric facilities and in the enlargement of the scope of their activities. My sole purpose in presenting the above picture is to clear the taxing officials of Arkansas of the unwarranted inferential charge made against them, and to demonstrate that in taxing the properties of electric cooperatives the officials of Arkansas are only doing what a proper respect for their legal duties requires of them.

## Praise for National Youth Administration

## EXTENSION OF REMARKS

OF

## HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ARTICLE BY RAYMOND CLAPPER

Mr. VOORHIS of California. Mr. Speaker, there is no greater duty before Congress than the conservation of the human resources of America. And there is nothing more essential in that regard than to see to it that our young people have opportunity for worth-while training and to help build their Nation.

Let us never be guilty of economizing at the expense of the character of the youth of America. In this regard I give you the following article by Raymond Clapper:

[From the Washington Daily News of January 31, 1940]

PRAISE FOR N. Y. A.

(By Raymond Clapper)

EL PASO, TEX., January 31.—Maybe the National Youth Administration is one of those extravagant New Deal spending agencies. Possibly it is one of those expenses we could get along without. Even Mr. Roosevelt himself seems tempted to give it the ax.

But I spent a little time on the receiving end of N. Y. A. out here in the great open spaces, and I know there are ambitious young fellows in Texas working out an education in ways that would be impossible without the assistance of N. Y. A. Some of our well-fed, well-heeled economizers in the East who were fortunate enough to be educated by wealthy parents no doubt subscribe to the theory that it is only pampering these youths to help finance a college education for them. Let them stay on the farm. Don't arouse ambitions in them that can never be fulfilled.

Well, I discover in going around that some of our leading citizens who are so violently opposed to institutions like the National Youth Administration are not so opposed to subsidizing college students for football teams. In one Middle Western city I happened to be in a business office. My host proudly pointed out a strapping young fellow working in the large office which we were passing through.

"He's a star back on our team," my host said. "They have given him a job here and he is a good worker. This office always provides a job for one man on the team."

At another stop I learned that several boys—six, I think—at the nearby college were carried on the police department pay roll as undercover men. Some question was raised about using college boys in that way. It developed that it was only a practical way of financing a few students who were needed on the football team. So the city taxpayers willingly accept the expense of that subsidy. The boys help make a good team, and the team brings thousands of dollars' worth of business into town during the football season. Those college-boy undercover men are considered a good civic investment.

At Amarillo, Tex., you can drive out a few miles from town to West Texas State Normal College and find something that will restore your confidence in post-depression youth. If anyone in the East thinks that the American spirit is dying out of the younger generation—that it has succumbed to defeatism—let him take a look at any college in the western country.

At West Texas College, N. Y. A. is helping 100 students, men and women, work their way through school. Part of my income tax, and some of yours, goes toward paying them \$15 a month. In exchange the students work 50 hours a month. Some I met were working as library assistants. Others were cataloging the rich Texas historical material which is being accumulated here in one of the most remarkable collections of frontier source material to be found anywhere. As they work they are learning. They are doing some of the most useful work at the institution. They are at the same time training themselves to become teachers of the next generation. In my time I have seen a good many billion dollars appropriated in Washington, and none of it could go to any more useful

or more constructive purpose than this \$15 a month that goes out to these young Texas men and women, who come mostly from hard-pressed ranch families.

N. Y. A. also is supporting a large squad of boys who are somewhat below college grade. About 70 of them are here, learning to be carpenters, airplane mechanics, sheet-metal workers, welders, stone- and brickmasons. They are building school dormitories and school buildings while learning their trades. They receive \$30 a month and work 4 hours a day for it.

I visited dormitories where students do their own housework on a cooperative basis. Thus they obtain their college education at a cost of \$15 a month. They may bring food from their ranches and sell it to the college commissary at market prices. In one dormitory the girls have managed to cut their expenses to \$13 a month. That takes hard work, planning, and sacrifice which the manicured dolls in eastern girls' schools would consider far beneath them.

Even if N. Y. A. is going to add a few million dollars to the national debt, I as a taxpayer consider it a good investment—insofar as the money goes to these students and not to padded overhead. For here you are giving a chance to the most ambitious young men and women, the ones with real stamina. They are willing to put themselves through work that would be disdained by eastern college boys who are being educated on dad's checkbook to grow up as smug reactionaries. This country will be better off for these young people who, in 2 or 3 years, will be out teaching the next generation.

I could write much more and give you more facts. But it isn't popular copy. Some people might think I was a "red"—those people who don't know Americanism when they see it.

### The Pacific Northwest Bulb Industry

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

EDITORIAL FROM THE OREGONIAN, PORTLAND, OREG.

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian of February 3, 1940:

[From the Oregonian, Portland, Oreg., of February 3, 1940]

#### TWILIGHT OF AN INDUSTRY

In 1926, the Bureau of Plant Quarantine of the Department of Agriculture put an embargo on iris and narcissus (primarily daffodil) bulbs from Holland because they were infected with eelworm (nematode). On the basis of this decision, bulb farmers of the States of Oregon and Washington made an investment of millions of dollars. They have built a branch of agriculture which during recent years has been supplying 90 percent of the American market. The bulbs they have been shipping annually to various parts of the country would fill several freight trains.

Now—arbitrarily and without opportunity for a hearing—the Pacific Northwest bulb industry has been sacrificed by Secretary of State Hull for the purposes of a trade treaty with Holland. And on August 15, last year the Bureau of Plant Quarantine cooperated with Hull and lifted its embargo.

Puff! goes our Oregon-Washington investment of several millions, our pay roll, and our new branch of agriculture.

Though the full force of Holland competition has not been felt yet in all the varieties of daffodil and iris bulbs, one item will tell the story. A year ago the variety known as No. 1 King Alfred could be sold by Oregon and Washington growers for \$42 a thousand, at the farm. Today the Holland agencies are offering to deliver to the dealers in the various parts of the country for an average of \$40. To meet this competition, considering freight and handling rates, Oregon and Washington growers have to come down to about \$20 at the farm.

And the worst of the whole mess is that both Mr. Hull, in his refusal to provide tariff protection, and Lee Strong, of the Bureau of Plant Quarantine, in his refusal to continue the embargo, appear to have been moved by theory rather than by new facts. Nematode is just as dangerous as it ever was. It is a disease peculiar to narcissus and iris in the bulb family, but transferable to other plants, and so permanently dangerous. It cannot be detected except by cutting a bulb open and examination in a laboratory. Holland bulbs are still infected. American growers have gone to great expense to use the hot-water treatment, so that they have the disease under control.

But Mr. Hull has a theory of tariff reductions, and under the reciprocal trade treaty law he is empowered to make treaties behind closed doors. He made a treaty with Holland which fixed a tariff of \$6—not enough to take care of the freight differential. And then Mr. Strong, of the Bureau of Plant Quarantine, fell in with Mr. Hull. He cast out the embargo.

After all, what do the bulb growers of the far Northwest amount to? It is a scant population out here at best, and the growers are a scant few in this scant population. Why worry? (Hadn't Mr. Hull even taken a chance on the destruction of lumber for the benefit of eastern manufacturers?)

What if western Oregon and western Washington do happen to be the only parts of the country with a climate comparable to Holland, where the long spring season, after flowering, allows the bulbs to fill out? What if the Department of Agriculture did deliberately create the daffodil and iris industry by its embargo action of 1926? What if the honor of the Government of the United States does happen to be involved? After all, that was a Republican phase of the Government which brought the Northwest bulb industry into existence, creating pay rolls and income. There is another Government now, with a short memory, and committed to the more abundant life—for Holland.

### American Aviation Goes Forward

#### EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

ADDRESS BY ROBERT H. HINCKLEY

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include parts of the following able and informative address by Mr. Robert H. Hinckley, Chairman of the Civil Aeronautics Authority.

Every time I see a great air liner in port or in flight I think of it as the end product of thousands of hours of painstaking work in scientific laboratories. The curve of the wings, the N. A. C. A. cowling, the adjustable pitch propeller, the delicate yet dependable instruments filling the panel, the lightness and strength of the metal covering and internal structure. I think, too, of the marvelous efficiency of the motors and of the high octane fuels, of the quality of lubricants, of the radio system, and of the passenger comfort. But never do I forget that the place of origin of this modern miracle was Kitty Hawk, N. C., and that the original creators were two brothers who knew how to use the scientific method. Neither do I forget that you meet each year to report new discoveries and thus honor the men who closed an age-old debate on December 17, 36 years ago. They proved that men could fly. Their achievement was one of those revolutionary scientific demonstrations that smash centuries of so-called hard-headed logic.

One of your distinguished members suggested to me that I "express some basic ideas about aeronautical engineering, research, and applied aerodynamical science." I appreciate the compliment. However, I am not going to venture out beyond my own depth into the sea of science.

There are certain things about science which a sensible administrative official must understand. He must have a healthy respect for the problems which science has solved, and an eagerness to use these solutions wherever they will further his work.

#### RESEARCH IS VITAL

In public work, just as in private enterprise, a large proportion of your actions can be based upon precise scientific knowledge. And I hope you realize that every public official is extremely grateful for this, because each time he can turn to a formula he can act promptly and confidently, avoiding the turmoil of controversy and debate.

As you well know, we depend on formulas devised by you to solve problems of design, of airworthiness of airplanes, of reliability of communication systems and the like, and the list of scientific facts on which we can lean is growing all the time. But in a dynamic activity such as aviation, new problems are arising also.

I do not mean by this either to state or to imply any criticism of science for not always being able to see into the future. Rather, I want to take you away from your science and into those realms of government—and there are more of them than you might realize—where for various reasons there are no calipers for objective measurement, and decisions must be based upon opinion.

I want to talk to you as businessmen and as citizens, rather than as scientists. You are businessmen, in the sense that your own work depends, broadly, upon the welfare of the business of aviation. I have been a businessman much longer than I have been a Government official. But my brief public experience has been a revelation to me, showing me problems in public administration that I never dreamed of in my own business.

#### REGULATION IS NEEDED

And then you run into this no man's land of science where there are no objective yardsticks, where human opinions and human emotions color every judgment. For example, how far shall we carry Government assistance to aviation? How far centralized

control? At what point shall we abridge the rights of the individual flyer for the sake of the public? Shall we also abridge his flying freedom to protect him against himself? Shall we set up rigid standards both for airline pilots and airline equipment, or how far shall we trust private industry? What is our obligation toward operators who come running to us with minor problems and ask us to regulate, regulate, regulate? How far shall we go to eliminate competition? What is wasteful competition? What is the regulatory relationship between the Federal Government and the various States? Shall we promote airports and trust the planes to follow, or promote planes and trust the airports to follow, or both, and how much of each? Right now we have the problem of determining how much the larger airports of the country, where many scheduled airliners land, are to be restricted so far as their use by private owners and small commercial operators is concerned.

These are just a few of the questions that pop at us, and for which we have no scientific answers. Of one thing we are sure: We do not know all the answers. We want to sit down and hear everybody who wants to be heard, and determine a common-sense course of action.

I am going to talk about government in aviation. Of course, I mean democratic government. I am going to describe for you a number of our difficulties. It would not be necessary to endure these difficulties if this country was run like modern-day Germany or Russia. In those countries the all-high merely would issue a decree which said, "This is how it will be; let there be no further discussion."

Well, we all pay something for every blessing we enjoy, and we pay for democracy by wide-open discussion and wide-open handling of the public business. We have our own crystal-clear way of meeting our problems. If we want, for example, a continuing permanent policy in aviation, all we have to do is to demonstrate the public desirability of that policy. That may be a little trouble. It may entail explaining ourselves a great many times, and living somewhat in a goldfish bowl. That is what we pay, in a democracy, for individual freedom.

Take conservation. The American people believe it is wise, and are willing to spend public money for it. Any time they change their minds, they can stop.

#### AVIATION GOES FORWARD

Aviation is no different from conservation or any other public activity. You have to prove your case. But if you do prove it, your program is safe no matter how any election goes, or who is at the helm.

Those of us in this room are all wrapped up in aviation. But I am going to talk about government, because we must serve aviation in a way that will strengthen, instead of weaken, the bigger thing which is our form of government.

The Civil Aeronautics Authority is only 18 months only, so that everybody still can remember clearly how and why it was created. We all remember that aviation awoke one morning to the realization that it was in a desperate condition. "Chaotic" is the way a congressional committee described it. Unbridled, ruinous competition had frightened off investors and ruined many operators. Government services to the industry were scattered in small segments through numerous unrelated Federal agencies. And so aviation requested one central authority with which it could deal. The Civil Aeronautics Authority was that authority.

Since that time we have had to plot and travel a new course somewhere between the old-fashioned, dog-eat-dog, laissez faire competition and the other extreme of absolute monopoly. We have had to guide and service the fastest-growing public utility the country has ever known in a way that would maintain competition and private initiative.

I don't mean the industry should not criticize. Constructive criticism is good medicine for governmental bureaus. Bureaus have an inevitable tendency to grow smug. Their officials tend to lose their sense of responsibility to the public—to feel they know more than those with whom they deal—to resent being questioned.

Their values get distorted and they are sometimes short on humility. Sometimes the need for a regulation disappears, but the regulation does not. It is kept alive by the bureaucrats who seek to perpetuate themselves, or fall victim to the easy habit of inertia to any and all change. The best insurance against such dangers is for us to keep the door always open to recommendations and criticisms.

You have a habit of wanting to know a speaker's scientific background; and you might very properly say to yourselves, "What are his technical qualifications?" I imagine most lay speakers who appear before you feel the same hesitancy that I feel. But I can assure you that people in general, whether qualified or not, have no hesitancy about telling public officials exactly how to run the most complex public functions.

#### N. A. C. A. DOES GOOD WORK

Only a short time ago a well-known political figure without any knowledge of scientific matters advised the President of the United States that certain governmental agencies had only ornamental use. Among these governmental agencies he included the National Advisory Committee for Aeronautics. Yet, I am sure that an objective study of the evidence would show that, for every dollar expended by the Government through the National Advisory Committee for Aeronautics, many dollars were returned in cash dividends.

Another example of this tendency to make hasty judgments because of a particular bias and lack of knowledge was called to my attention recently. One of the greatest banking figures in America, in addressing the Congress on Education for Democracy, bitterly criticized the current "tendency toward overlegislation in the United States." On the same newspaper page was another statement by an ex-candidate for the Presidency of the United States, crying out with equal violence that there ought to be a law. Speaking as an independent oil operator, he charged that the oil crisis was due to "Ruthless and arrogant big business refusing to cooperate with conservation authorities." Believe it or not, he urged the President to call a special session of Congress to enact legislation for strict control of the oil industry. So we have two men of similar political convictions, one bitterly criticizing overlegislation in general, and the other demanding more Government regulation in his own behalf.

I do not know to what extent the Institute of Aeronautical Sciences will extend its field to include the problems which we might classify under the general heading of human behavior. I know that the solution of such problems is very difficult. I know that the units of measurement in these fields are few and that the methods for making such measurements are being developed. But that is no reason for ignoring them, and I note with commendation that you have on your program workers in the field of medicine. These workers play a very important part in aviation, although they may not have developed as many formulas or units of measurement or exact methods of measurement as are needed in that field. Every field you conquer means fewer headaches for administrators.

#### CRITICISM IS WELCOMED

By saying that we welcome criticism and want a great many people to express themselves I do not mean that we want to pass a lot of rules. We do not want to pass a single regulation that is not absolutely necessary. We recognize that a pioneering activity such as aviation needs especially to be left free from over-regulation. Daniel Boone would have had a hard time making his reputation under a modern bureaucracy, what with nonresident hunting and fishing licenses in each State, and knowing what game was in and out of season and having to pass examinations on marksmanship, swimming, and meteorology.

This may sound ridiculous; but if we take down our hair and talk facts, some of our own rules can produce at least a chuckle. We say with great solemnity, in print, that no private aircraft shall take off unless it has enough gas and oil (taking into account the wind and other factors) to reach its intended destination. We actually have that rule. We have another which declares that the wheels of a private plane must be blocked or roped, or its parking brakes fully on, before its motor is started. Now consider what happens to a fellow who has a plane with foot brakes and a self-starter but no parking brakes. He must block his wheels before starting his motor. But he isn't going anywhere unless he has somebody else there to take away the blocks, or unless he puts on power and jumps the blocks, because it's against the rules for him to leave his ship with the motor running. And if you are a woman flyer and become pregnant, you must stop flying immediately, because you are deemed to be in an abnormal physical condition.

I wish every man seriously interested in aviation could sit officially with us for a while and watch the steady procession of people coming to us and asking us to pass more regulations. Everybody is opposed, as a general principle, to much regulation. He is opposed, that is, until some particular thing comes along that goes his own way, and then he cries out that there ought to be a law.

The Census Bureau has refused to ask more than about 3 percent of the questions submitted, yet I will predict that nevertheless it will be criticized for too much snooping into people's personal affairs. So the governmental aspects of aviation aren't much different from the governmental aspects of other things. Our concept of this situation is that we should hear everybody concerned, and gather very complete evidence, but that the Civil Aeronautics Authority's working relationship with the industry—particularly since the whole field is new—should be kept as fluid as possible, with mandatory regulation at a minimum.

#### DANGER IS NOTED

We recognize clearly that an acquisitive tendency often is present in Government—that bureaus seek to gather unto themselves entirely complete facilities for a given function, so that they will be entirely self-sufficient, and not have to depend either on other bureaus or outside facilities. Thus they are in complete control.

We do not want this complete autonomy for the Civil Aeronautics Authority. And because the statement sounds very pious and a little too good to be true, I hasten to add that we are not motivated by piety, but by some common-sense observations.

Someone in the administration said recently that private enterprise is judged by its successes, while Government is judged by its failures. And that philosophy is behind this policy of ours.

If I might make so bold, the same is true about aircraft with nonstall and nonspin characteristics. We have them now, of course, but their arrival was exceedingly tardy and beset by all sorts of controversy which is far from ended even yet.

I am not complaining about these things. I am merely stating facts. Industry can make a thousand mistakes and be remembered only for the thousand-and-first success. Government cannot. This causes the constant temptation in Government to drift with the tide. On one extreme it may mean the piling up of restric-

tive rules just because people ask for them, and on the other extreme it may mean doing nothing. When in doubt, say "no." There is safety in doing nothing. I may make a mistake, and Government is judged by its mistakes. So I'll find a reason against this proposal and stop it. It may be that a one-eyed aviator can't fly. If I say he can, and 200 of them do it without accident, then I was right, but if one of them crashes, I did wrong. No, sir, one-eyed aviators must not be permitted to fly. I, as a Government official always open to criticism, can't take a chance.

Perhaps you can see, then, why we turn willingly to nongovernmental facilities whenever we can for much research, aircraft testing and servicing, pilot training, and the like. They then will share the responsibility with us, and help us to avoid the bureaucratic sickness.

#### SAFETY IS FACTOR

Of course, the Civil Aeronautics Authority has to take the lead. It has to create the set-up. One of our biggest problems right now is how much of our authority we can properly delegate, and it's another of those fields of pure opinion. We are working on it, along with numerous other problems such as, shall we subsidize feeder lines, shall we promote safe-type aircraft, and what is our relationship with aviation authorities of the various States?

I believe we all will agree that one of the basically important things to the industry is the number of people who own and fly aircraft. Several months ago I asked our people a few questions in this field, and I was startled to learn that nobody ever had compiled the answer. I merely wanted to know the statistical story of those who buy private planes—how long they keep them, whether their second planes are better; that sort of thing. The great achievements of the commercial carriers give us in general a pretty rosy picture over the last couple of years, and it is something of a jolt to make such a simple inquiry in the private field and draw a blank.

Well, our people have done some rather elementary research since that time, and I want to tell you about it. We made a cross-section study of the private ownership of airplanes in this country during the past 8 years. We found that the average life of a private airplane was 6 years. But we made the very unpleasant discovery that the life of an airplane owner, as an owner, was far shorter than the life of his first plane.

In short, four out of five of all those who bought their first planes during this period had got rid of them within a mean period of 2½ years, and had not bought others. Over half had disposed of them in 2 years, and one-third had got out of the ownership field in 1 year.

The "mortality" of ownerships is so great today that 2,900 new owners must be found each year to maintain the present total without increase.

What is the answer? We don't know. It may be, as some would say, too much bureaucracy; too many log books and inspectors, too much required practice. It may be too few airports, so that a flyer's destinations are limited. It may be any of a score of things, or, more likely, a combination of several.

At any rate, aviation as a whole must diagnose this trouble and cure it. We hope that all of you will go to work on it with us.

#### PILOTS ARE TRAINED

One thing we already have done, of course, is to arrange for the training of thousands of new civilian pilots. We feel certain that if you create a great many new flyers you are going to produce, inevitably, a considerable number of new owners.

America, traditionally, depends for its national defense largely on its civilian facilities. Instead of building military roads, we build great commercial highways, knowing full well that these highways can be used in case of a national emergency, including, of course, war. The same holds true for our steel mills, our textiles, our chemical plants, and even our airplane manufacturing plants.

Because of the development of totalitarian states with their aggressive policies, it may be that we have put too much dependence on civilian facilities. That I do not know, but I am sure that we must at least have those civilian facilities. This holds especially for the field of aviation, for I am quite sure you will admit that the airplane is changing the world as no other single instrument of our day. But it holds not only for the airplane as a machine; it holds for the human material that must control this machine. Moreover, it takes longer to train a pilot than it does to build an airplane.

It seemed, therefore, desirable to kill two birds with one stone—to develop civilian facilities, including pilots and civil aircraft factories, as a defense measure; and at the same time to advance use of the airplane and knowledge about the airplane through civilian activities. If by any happy chance we do not have to defend ourselves, there will be nothing but profit, because the expansion of our civilian facilities is long overdue.

How did we go about meeting these two problems? First, we prepared a plan of action within our own organization. Then we discussed it with State aviation officials, with officials of our educational systems, including the office of education, with the operators of private commercial schools and the builders of civil aircraft. We did not forget the Army and Navy, because our defense services have had years of experience with pilot training.

But in order to test it out, we obtained from the National Youth Administration \$100,000 to conduct a group of experimental courses

at 13 colleges in various parts of the country. Three hundred and thirty students were enrolled, of whom 97 percent finished their training and received certificates of a private pilot grade.

Following the completion of the experimental course, we called in the operators of the commercial schools who had been conducting the flight training, and the college officials who had been directing the ground schools. We obtained from both groups valuable suggestions for the improvement of our original plan.

#### COLLEGES PARTICIPATE

As the result of this careful preparation, we were able to go before congressional and senatorial committees and present objective evidence of the desirability and workability of a much larger program. This program is now being carried on in 437 colleges and universities throughout the country and the territorial possessions. That is the policy of using the nearest thing to a scientific approach that was immediately available.

Congress wisely provided that at least 5 percent of those we train in this larger program should come from noncollege young people. We have met this requirement by arranging for the training of 700 young people, or approximately 7 percent of the total to be trained, by commercial operators and to be supervised largely by local committees of interested citizens. Wherever a State has a director or commissioner of aviation, he has been asked to supervise this part of the program for his State. In other States the training has been turned over to chambers of commerce who, in turn, have called on their aviation committees to perform this public service. That is a policy of simple democracy, of not limiting this opportunity to college students alone.

Now what has been the response of students to this opportunity? There is enough money in this program to permit 10,000 young people to learn to fly this year. Each of those who qualifies for flight training has to put up a \$40 fee of his own money. Yet the 437 colleges and the 75 noncollege stations were literally swamped with applicants. We do not know what the total of applications was, but we are confident that if we had had the facilities, it would have been no trouble at all to enroll 50,000 young people. In one university, there were 1,200 applications for a quota of 30 places in the course.

The demand did not stop there. When we started ground schools for those who had qualified, 3,000 additional college students enrolled and started ground training, even when assured they cannot have flight instruction this year. These 3,000 are being carried by the universities and by their own funds, without cost to us.

The situation in the noncollege group is even more startling. Here, it now appears, at least 10,000 applicants between 18 and 25 years of age will pay \$10 each for the privilege of taking a ground course and competing for 700 places in the flying course. They are doing this with their eyes open to the fact that 93 percent of them will have to fail. Their enthusiasm is so inspiring that a number of chambers of commerce have raised private funds to increase the local quotas.

It should interest you to know also that every applicant for flight training must present the written consent of his parent before he is allowed to enroll in the flight-training course. This last provision alone is in dramatic contrast to totalitarian states, where parents are punished if they in any way interfere with the wishes of youth to follow the proposals of the government.

It seems to me, then, that our procedure in the flight training is in line with the best democratic philosophy. The Authority did not hesitate to tackle it; did not play safe in fear of failure. It obtained the advice of all the interested groups in the field of aviation and education instead of depending on the decision of a few agency officials. It reached out to educational and flight-training institutions where facilities were already set up instead of creating bureaucratic units of its own that it could supervise with an iron hand, without interference from anyone else. It showed confidence in these local units by leaving to them many details of administration and operation.

The same policies have been followed in our pilot-selection research program. This enterprise has been turned over to the National Research Council, an agency of the National Academy of Sciences. The National Research Council was originally set up by President Lincoln and reorganized under President Wilson to serve the Government in research whenever requested. A distinguished committee of scientific men has been appointed by the council to give direction and advice to workers in university laboratories who will conduct researches on problems of selection and training of pilots. Thus the existing facilities in many of our best universities have been made available to us.

I know that I have slighted much of the work being carried on by the Civil Aeronautics Authority by describing in some detail the organization and operation of the civilian pilot-training program, but it seemed to me that the newness and, to some extent, the novelty of this program offered an excellent illustration of the way a service agency can operate and avoid the pitfalls of bureaucracy.

#### CITIZENS TAKE INTEREST

I hope you will not feel that my detailed recital of some of the problems of public administration was intended to bring you a tale of woe. The clash of free opinion is tremendously stimulating. The wheels of Uncle Sam's big wagon may creak pretty loudly at times and it may break an axle now and then, but it does keep moving forward at the head of the entire human parade.

## Is Our's a People's Government?

## EXTENSION OF REMARKS

OF

HON. DONALD H. McLEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

ADDRESS BY HON. DONALD H. McLEAN, OF NEW JERSEY

Mr. McLEAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an address made by me before the Hamilton Club, of Paterson, N. J., on January 11, 1940, at the celebration of the birthday anniversary of Alexander Hamilton.

The address is as follows:

I want you all to know how very much I appreciate the distinction and honor conferred upon me by this invitation, and I thank you, Mr. President, for your generous introduction.

The privilege of being designated as the guest of honor on the occasion of the celebration of the birthday of Alexander Hamilton is one of which any American may be justly proud.

It is quite appropriate that such a celebration should be held here in the city of Paterson, founded by him, and by the club which was organized to perpetuate the memory of his life and works.

It flatters me to be here under such favorable auspices. As has been said, I am a son of Paterson. Many of you I have known. Others I have known about. Some of you had already attained positions of respect and importance when I was a youth about town, and I assure you of my appreciation of your presence.

We have come to commemorate the birthday of Alexander Hamilton, and incidental thereto, to celebrate the golden anniversary of the Hamilton Club, and I am sure that you, like myself, are especially happy to be here on the occasion of the elevation of Robert H. Cunningham to the presidency of the club. I claim a lifelong friendship with him, and it is altogether fitting that I should be here tonight to share the honor and distinction you have conferred upon him.

The best testimony to a man's worth is his recognition by elevation to a position of importance by those with whom he comes in daily contact. Bob's elevation to the presidency of the club is evidence of the esteem in which he is held by his associates. It should be to him a source of much satisfaction and ever remain one of his cherished memories. I am glad to be here to congratulate him on this occasion and to wish him every success.

The reference to my early life in the city serves to remind me of the editorials that Mr. Joe Crowell used to write for the Morning Call. It was Mr. Crowell's habit to go around on Market Street and sit on the front porch of the United States Hotel and see who there was to write about—anyone who had come back to town and was renewing old acquaintances. In that day Paterson was famous for the minstrel men, baseball players, circus performers, and the like who had gone into the world to seek their fortune. It was the habit of all such, sooner or later, to return—some came back blessed with good fortune, others down on their luck. The parable of the prodigal son was often reenacted. Mr. Crowell had gone forth to the Civil War and had himself wandered afar. He had experienced the thrill of coming back home and this qualified him to extend a sympathetic welcome. Naturally, everyone he met told him how glad they were to be back, and Mr. Crowell would return to his desk, his mental processes stimulated by his emotions, and prepare an editorial about the pull the city had for its own. He would prove beyond all doubt that once one was a Paterson boy he would always be a Paterson boy. I have never been quite able to give up calling Paterson home, or to forget all that it has been to me.

Tonight we celebrate the birthday of Alexander Hamilton. America has a great heritage in the example set by its patriots, and it is well for the country on important anniversaries that we remind ourselves how it came about that we made a success of free government, and that we refresh our memories of those who laid the foundation for it and whose example is so worthy of emulation.

We celebrate particularly because of Hamilton's part in the building of the city of Paterson. Important as that accomplishment was, the mention of his name must turn our thoughts to Hamilton, the great American, and his services to the Nation.

Of the judgments of Hamilton rendered by his countrymen, Washington's confidence in his ability and integrity is perhaps the most significant. Chief Justice Marshall ranked him second to Washington alone. In person, he was short and slender; in carriage, erect, dignified, and graceful. Friends he won easily and held in devoted attachment by a frank, generous, warm-hearted, and high-minded character. "The roll of his followers," writes Henry Cabot Lodge, "is enough of itself to establish his position in American history." He was not popular, nor did he strive after popularity; but his memory and achievements are imperishable. He lived for the public good. Eloquent and refined, able and brilliant, the

embodiment of devotion, integrity, and courage. A scholarly student, captain of artillery when but a boy, private secretary and confidant of General Washington, Member of Congress and the Constitutional Convention, Secretary of the Treasury, lawyer, and economist—American history presents no more striking character, no one who has left a deeper mark upon our political institutions. His public life began precociously and ended prematurely. Before he was of age his powers were acknowledged and his reputation was established. Before he was 50 all was over.

Hamilton was doubtful of the success of the Federal Government under the newly adopted Constitution, but he set about to make it work, and his contributions to the establishment of the permanent Government are rated highest among his accomplishments.

The establishment of the city of Paterson was not an isolated undertaking. It was part of Hamilton's plan in the purpose "to form a more perfect Union." After the surrender at Yorktown, and as a result of the successful outcome of the struggle for liberty, the Colonies had risen to the dignity and importance of sovereign States. The effort to exist as such, independent of each other, resulted in chaos and led to the adoption of the Constitution. Hamilton was convinced that the new Nation could not long survive unless it provided itself with the means of producing sufficient textiles and manufactured products, and Paterson is the result of his suggestion that there should be developed a manufacturing center of national importance.

It was no boom town that Hamilton determined should be built at the great falls of the Passaic. It was to be a prosperous, progressive, manufacturing city, making its contribution to the national welfare. The scheme adopted for its development had to surmount many vicissitudes, and laid itself open to severe criticism, but Paterson survived and has been an important spoke in the wheel of national progress. Financial disaster, even fire and flood, coming close upon each other, could not impede it, and it is today making its contribution in the development of the greater city envisioned by Hamilton that should extend along the Hudson from Perth Amboy northward. What brought this about? Was it the thrift and industry of its people, taking advantage of its natural resources, or was it because of the governmental scheme under which it was developed? Probably a combination of the two; and we who are concerned with the future welfare of our country can profit by a comparison of the purposes of the founders with the present-day conception of our Government.

Is ours a people's government?

Its founders intended and provided as definitely as they possibly could that it should be—that there should be no dictator or totalitarian state arise on the American Continent. The sacred rights of personal liberty and free enterprise were to be jealously guarded, and no one will deny the success of the plan.

What made the Government established under the Federal Constitution successful was the restraints that were embedded in it—its checks and its balances. All rights not delegated to the Federal Government were expressly reserved to the States and the people thereof. The jurisdiction of the Federal Government over such matters as had been delegated was divided into three separate and distinct parts—the legislative, the executive, and the judicial. The jurisdiction of the several branches was defined, and restraints were provided to prevent the encroachment of one branch of the Government on the other and the Federal Government from usurping the rights reserved to the States. By disregarding these restraints the power of the Federal Government is expanded, and the more that power is expanded and our everyday life directed from Washington, the further the Government becomes removed from popular control.

We are warned against subversive practices and propaganda. We are told that Communists and Fascists and other organized groups would overthrow our Government by force. Serious as we know that threat to be, there is a more serious challenge beyond it. The danger is that those who are charged with the responsibility of preserving our Government may themselves provide the machinery by which it can be destroyed.

We are today permitting and encouraging weakening practices. The purposes of constitutional restraints are lost sight of. They are either disregarded or there is resort to unique and subtle devices to circumvent them. The tendency of the time is toward a system which will destroy the sovereignty of the States and render them mere administrative agencies of the Federal Government.

For example—and these are only a few of the illustrations I might cite—under authority of present-day enactments which contain provisions giving him authority to make rules and regulations, the President may by Executive order alter or supplement the provisions of law and entirely change the purposes of Congress.

It is no longer an exaggeration to say that in many matters trial by jury has been abolished and that fines and penalties are imposed without due process of law. We are establishing boards and bureaus with full jurisdiction to promulgate rules and regulations which have the force and effect of law and to prosecute under them. This situation brought forth only yesterday, in a case wherein the National Labor Relations Board was respondent, this observation by the circuit court of appeals: "This case illustrates the danger of placing in a single agency the multiple duties of prosecutor, judge, and executioner."

The States and their essential agencies have enjoyed immunity from Federal taxation, the Federal agencies immunity from taxation by the States. The principle has been that the Federal Government and each of the States is a separate and distinct sovereignty, immune from taxation one by the other. This rule was declared by John Marshall in the very beginning of our national

existence as an attribute of sovereignty and necessary to prevent the destruction of our dual system of government, because, as Webster said, "the power to tax involves the power to destroy."

Today's thought would abolish that rule, and we have already opened the door through which the Federal Government may enter, armed with the bludgeon of taxation, and destroy the essential agencies of the States, and likewise the States may attack the essential agencies of the Federal Government, as was attempted by the State of Maryland against the Bank of the United States, and which was prevented only by the intervention of the Supreme Court in *McCulloch v. Maryland*.

Today Federal officers set up corporations under State laws for carrying on Federal activities. The invested capital is a contribution by the Federal Government. The corporation claims for itself all of the rights and privileges of an artificial person, and at the same time demands immunity from obligations imposed by State law, claiming to be an agency of the Government of the United States. These corporations are organized to borrow Government money from each other, to distribute relief funds, to increase patronage rolls, and to avoid the legal requirement of making appointments from the classified civil service. By this method statutory direction and limitation on the activities of public officials is avoided.

There is no justification for this unique procedure. Surely if Congress deems it necessary or wise to carry out a Federal function in corporate form, it can so provide, and has done so in many instances. It is but another illustration, to put it mildly, of the lack of understanding on the part of some of the functions of Congress, or it is an intentional purpose of evasion.

Again, the Constitution provides that treaties with foreign nations shall be made by and with the advice and consent of the Senate. There was sound reason for this Constitutional limitation on the powers of the Executive. Its purpose was to prevent the President from involving the country in entangling alliances with foreign countries.

Today our commercial relations with foreign nations are arranged by so-called reciprocal trade agreements. These so-called agreements with foreign nations are not submitted to the United States Senate for ratification. It is contended that in making them the advice and consent of the Senate is not required because they are agreements and not treaties. Such a distinction cannot be supported by anyone's definition of either the word treaty or agreement. A treaty is an agreement. A treaty differs from any other agreement only in that it is an agreement with a foreign nation; and Congress, in disregard of constitutional restraint, has delegated to the Executive the power to make trade treaties with foreign nations with the possibility of consequences it has always been our purpose to avoid.

Such agreements affect the revenue, and under the Constitution revenue measures should originate in the House of Representatives. It is no matter of chance that this is so. Its purpose is that by control of the purse strings the control and direction of governmental activities will remain with the people through their elected representatives.

Under this new program Congress no longer shapes our tariff policy. The so-called reciprocal trade program is admittedly a tariff-reducing program. If our tariff duties are too high, they should be altered, but altered in the proper way—by congressional action. "But," say its proponents, "it's too big a job for Congress. It is too complicated, it leads to scandalous practices, and should be done by experts, and adjustments made only pursuant to an agreement with some foreign nation that would bring concessions from such foreign nation for the exportation of our products." These are the words of a United States Senator. His admission that his job is too complicated for him and might tempt him into scandalous practices, and that in the discharge of his duties he should have the assistance of a foreign nation, is a serious self-indictment. He should allow his place to be filled by someone else who is capable of discharging the duties he was elected to perform.

The President finds it necessary to defend the charge that in this matter of trade agreements legislative powers are being transferred from Congress to the Executive and that the practice could lead to entangling foreign alliances. Does this not indicate that there is some basis for the charge?

It is not my purpose here to make a political argument against pending legislation; it is only to illustrate the disregard of constitutional limitations and restraints which accompany the program and the simple manner in which all legislative power may be delegated to the Executive, no matter to what political party he may belong.

There is another practice which weakens the resistance of the States and invites the domination of the Federal Government. The enactment of the income-tax amendment is responsible for the increase in the practice of granting subsidies to the States. The inadequate revenue systems of many States have made it difficult for them to finance the numerous activities of present-day demands. The Federal Government, taxing on a national basis with tremendous resources made available by the system of direct taxation, under the income-tax amendment is called upon to assist in various enterprises alleged to be for the welfare of the Nation as a whole, and there has developed a system whereby subsidies are granted to the States. The suggestions for Federal aid uniformly come from States less fortunate, hoping to benefit through the medium of Federal taxation out of the resources of others. By accepting these subsidies the States must conform to certain requirements laid down in the Federal statutes, admitting a degree of supervision and control which threatens State independence.

The practice of granting subsidies is not new, but the amount of these subsidies has increased from \$110,000,000 in 1925 to the billions that are now appropriated annually. These grants are frequently made on condition that similar appropriations be made by the respective States. Under this system a State is compelled to undertake work which it might not wish to undertake or lose its share of the Federal appropriations, in which case it is compelled to contribute in taxes to work of other States of which its people disapprove and from which they derive no benefit.

Our own State of New Jersey for the fiscal year ending June 30, 1938, contributed over \$210,000,000 in taxes to the Federal Government. These taxes were paid by the same people who paid taxes for the maintenance of the State and local governments. During that same year New Jersey received from the Federal Government for various relief purposes only a little over \$73,000,000—about 33½ percent of its contribution. Therefore, if a resident of New Jersey paid to the Federal Government an income tax of \$600, only about \$200 was returned to the State in Federal grants, the balance being spent in localities far removed from the State and for purposes about which the New Jersey taxpayer had little or nothing to say.

These grants are made on condition that working conditions dictated by the Federal Government should govern the operation for which the money was appropriated, and that specified materials should be used and hours of labor regulated and controlled by Federal mandate. There is pending in Congress a bill providing that the Federal Government shall make contributions to the States for the purpose of education, but, in order to obtain such contributions, the State must conduct its educational system according to the dictates of the Federal Bureau of Education. Large contributions of money have also been made to farmers, but to obtain these contributions the farmer must comply with the dictates of the Federal Government as to the kind and quantity of the crop he produces. It requires no stretch of the imagination to recognize here practices comparable to those of dictator nations.

The obvious political significance of these Federal grants makes it easy for those in control of the purse strings to comply with the demands. The political mind, in its desire for perpetuation in office, is ever ready to yield to those influences which will provide for a constituency benefits which otherwise might not be enjoyed. These influences are peculiarly active at present. They reach their zenith around election time, and they direct our thoughts to a day when the States will no longer be separate, independent entities, possessing their own sovereignty, but will exist merely as puppet States or administrative agents of a federalized Government.

In what I have had to say my purpose has been to bring you to a realization of the tendency of the present day to concentrate all power and authority of Government, both State and National, in a single Government at Washington, and that our disregard of constitutional limitations is gradually concentrating all legislative authority in the Executive, contrary to the fundamental principles upon which our Government was founded.

At the beginning the Constitution was but a skeleton. Hamilton, Marshall, and the others hung flesh upon it and made it a living thing. For some time we have been dissecting it and soon the sources of our constitutional law will be as indefinite and difficult to ascertain as the unwritten constitution of England.

It can be truthfully said that increase of population, the enlightenment of our people through broader means and opportunity for education, the development of transportation and communication have added to our governmental problems and have a tendency toward centralization, but it is equally true that our Government has proven itself capable of meeting every emergency incident to changing conditions, and that the safety valves which have served useful purposes must be preserved if we are to have a people's government.

My first introduction to politics came one night in June of 1896. It was a great night for Paterson. It was a great night for the State and for the Nation. A Patersonian had been nominated for Vice President of the United States. A vast concourse of people had assembled at the armory for a great reception on the return of Garret A. Hobart from the Republican National Convention. Others assembled on Market Street adjacent to the Erie Railroad station to form an escort. I went with my father to participate in the parade. There was a man by the name of Ludlum who was familiarly known around the town as "Punk." "Punk" was the local agent of an express company, and in the enthusiasm of the moment had contributed a horse and wagon to carry the fireworks that were to be set off along the line of march of the parade, and with the wagon loaded with all of the flowerpots, roman candles, skyrockets, and red fire, he took up his position in front of the Nelson-Morris beef houses, prepared to lead the way and keep the line of march illuminated.

While waiting for the train the fireworks became ignited and the entire load went up in almost one explosion. Skyrockets and roman candles flew into the crowd, through the windows of the beef houses, and onto the roofs of buildings. Some naturally struck the hind quarters of "Punk's" horse. There was a great commotion. According to the narrative as told by the late Tom Duggan in the *Daily Guardian*, the horse separated himself from the wagon at about Paterson Street, and did not stop running until he reached the Cottage on the Cliff, above the falls, where he was found the next day. As my father told the story afterward, someone standing near him said he hoped that "Punk's" misfortune was not an omen that the whole campaign would blow up, because if it should, the country would have Bryan with free silver, popular election of United States Senators, prohibition, woman suffrage, and what not. Well, it was not such an omen. The campaign did not blow up—McKinley and Hobart were elected—and the country entered upon

a period of progress and prosperity greater than it had ever known. Singularly enough the years following brought about the adoption of many of Bryan's ideas, but the changes that have been made were adopted by the orderly processes provided in the Constitution for its amendment, and prove the capacity of the American people for self-government and the statement of Sir James Bryce, an English critic, that our system is the most scientific yet devised for the government of a free people.

Recently there was held the one hundred and fiftieth anniversary of the commencement of the Congress of the United States under the Constitution. On that occasion the Chief Justice of the Supreme Court, Hon. Charles Evans Hughes, said:

"We shall do well on this anniversary if the thought of the people is directed to the essentials of our democracy. \* \* \* We have a national government equipped with vast powers which have proved to be adequate to the development of a great nation, and at the same time maintaining the balance between centralized authority and local autonomy. \* \* \* In our 48 States we have the separate sources of power necessary to protect local interests and thus also to preserve the central authority \* \* \* from breaking down under its own weight. \* \* \* If our checks and balances sometimes prevent the speedy action which is thought desirable, they also assure in the long run a more deliberate judgment. And what the people really want, they generally get. With the ultimate power of change through amendment in their hands they are always able to obtain whatever a preponderant and abiding sentiment strongly demands.

"We not only praise individual liberty but our constitutional system has the unique distinction of insuring it. \* \* \* We protect the fundamental rights of minorities, in order to save democratic government from destroying itself by the excesses of its own power. The firmest ground for confidence in the future is that more than ever we realize that, while democracy must have its organization and controls, its vital breath is individual liberty."

It's a great place, this America. The spirit and purpose of Alexander Hamilton and his associates created it, and the same spirit and purpose should be our inspiration to preserve it to ourselves and our posterity.

## The National Youth Administration

### EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

LETTER FROM STATE ADMINISTRATOR OF THE N. Y. A.,  
TOPEKA, KANS.

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Miss Anne Laughlin, State administrator of the N. Y. A., Topeka, Kans:

FEDERAL SECURITY AGENCY,  
NATIONAL YOUTH ADMINISTRATION FOR KANSAS,  
Topeka, Kans., February 5, 1940.

Congressman JACK HOUSTON,  
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN HOUSTON: Quite naturally, you must have, in order to weigh the benefits of the National Youth Administration program, a statistical report of its accomplishments. It is impossible, however, through cold figures, to paint a picture of the results of any attempt to help young people, or of what needs to be done for them. Also, we know it is easy to let the pendulum swing too far and allow emotion to shunt out sound analysis. I want, however, to transmit to you as graphically as possible both the conditions necessitating a youth program, and the results of what we in Kansas have been doing on the N. Y. A., particularly during the past fiscal year.

It is unfortunate that the youth program, by some, has been viewed as a form of relief. This carries with it, either earned or not, the stigma of a hand-out. Until a youth reaches a job in private employment through one channel or another, he is the recipient of assistance through tax-supported institutions. Never have we thought of the schools in terms of relief, and now it is clear that we should similarly view any help on the part of the Federal Government, either through N. Y. A. or C. C. C., as an educational and training contribution, and not as an embryonic relief measure.

Possibly, in the minds of some, youth needs have been considered as results of the depression. However, I think recent reports of the American Youth Commission and data made public by the N. Y. A. reveal that some of the problems are entirely new on our social and economic front. In the first place, the machine age, which largely speaks for itself, has reduced the number of available jobs in our production system. Not only have adults been displaced as a result of mechanical inventions but also there has been

little need for a supply of young workers to be taken into the various enterprises. Obviously the depression has very strongly entered here, but it is not the sole factor.

The second important factor which must be kept in mind is the change in our population. The last two Federal census reports show that the percentage of middle-aged and old-aged is increasing, due to the contribution science and medicine have made to the health of man. Youth being in a minority, their needs are therefore quite naturally not given the same degree of emphasis as the needs of the older group. Although the assistance provided the aged is right—and we trust that more will be done in this direction—it is undoubtedly true that until the N. Y. A. and C. C. C. came into existence we were passive in our consideration of youth problems.

It is a well-known fact that our western frontier no longer offers itself as an opportunity for ambitious young people. In the past free lands offered an opening for idle youth. In fact, it is my understanding that the total area given by the Federal Government to individuals in the form of free land was equal to the territory east of the Mississippi and north of the Ohio River. Moreover, rather than farms offering a vent for the out-of-school youth, the young people from farms by necessity are having to turn to urban centers.

All of this presents an entire new youth front, and the net result is approximately 4,000,000 young people between the ages of 16 to 24 in the United States who are out of work and out of school. This figure represents more than one-third of the total unemployed in the country.

With a lessened demand and an increased supply of available workers, requirements for jobs are raised and youth are confronted with the dilemma that they can't be employed without experience, and they can't get experience without jobs. Bringing this picture down to our own doorstep, Kansas' share of the total youth who are unemployed is approximately 42,000, as determined by the Unemployment Compensation Commission. A recent survey of our own, made with the cooperation of schoolmen and welfare officers, indicates approximately 25,000 of this group to be definitely needy. We have been able to employ approximately 5,244 of them a month on N. Y. A. out-of-school projects. This leaves a balance of some nineteen to twenty thousand who are in need of employment but who cannot be aided under our present appropriation.

It is interesting to note that our appropriation for this year in the Nation as a whole of \$100,000,000 is only approximately the cost of one battleship and yet by means of it around 380,000 young people have been permitted to attend high school and college, and 50,000 who are out of school have been given project employment. These would be our youth derelicts without this assistance.

In our State, with a total allotment of \$1,528,896, we have been able to provide employment for approximately 7,000 high-school students and 3,000 college and graduate students, and slightly over 5,000 out-of-school youth. Not only has this money gone for wages, but also a small percentage of it has been put back into business channels through purchases of material and equipment. Also, part of it has gone for adult supervision.

The total amount spent solely for youth wages will be approximately 75 percent of our total allocation.

To provide a picture of the actual physical accomplishments on our out-of-school program, we have attached to this letter a report for the fiscal year ending June 30, 1939. In viewing these tangible results, I hope you will keep in mind that every completed item represents sound training under competent supervision for thousands of young people who never have had an opportunity for a work experience. Also, many of them as a result of their jobs, have been able to obtain work in private employment which otherwise would have been closed to them because of a lack of the required experience.

In order that you may have a somewhat clearer picture of our work projects, we are enclosing a few enlargements of typical construction work. The pictures were finished and enlarged on our photographic project in Topeka.

Of the money spent for student work, this represents actual work being performed by these students. Unless definite project employment is furnished by the school heads for those selected, no money will be advanced to an institution for the program. Consequently, many practical contributions have accrued to the participating institutions.

On our out-of-school program, youth wages are approximately \$14 a month, for 56 hours of work. High-school students receive from \$3 to \$6 a month, and college students from \$10 to \$20, with graduate students being permitted to earn as high as \$30 a month.

Although our report of physical accomplishments as appended to this letter indicates the nature of the projects on which our out-of-school youth are employed, you will no doubt be interested in a break-down of a few as they are actually operating.

We have found that girls need something more than part-time employment. In the first place, the majority of them who are out of school have never had an opportunity of receiving adequate instruction in homemaking, health hygiene, budgeting an income, etc. Therefore, after considerable experimenting, we worked out a semiresident-project plan to which girls would be assigned for 2 weeks a month, under trained home economists. At these centers they are not only given employment on a sewing project but also are given class instruction in various types of related training and also courses to meet their specific needs. There are 22 of these work centers for girls operating at the present time in Kansas, with an average enrollment of 40 girls. They are paid \$20 a month for their work, and out of this is deducted a sufficient amount to pay

their subsistence. After a year's training in one of these centers, we have found that the net results are girls whose morale has been strengthened, whose personality has been developed, and who have learned to care for a home properly and plan for the future.

We have also found it desirable to establish resident projects for some of our boys, and two projects of this type are operating in conjunction with educational institutions. The largest is at Fort Hays College and the other at Kansas Wesleyan College. At Fort Hays both girls and boys are assigned, and they are permitted to take part-time academic work in the college and are also given vocational courses consisting of scientific farming for the boys and clerical instruction for the girls. It is interesting to note that although these young people come from our certified needy group, they are accepted on the campus on the same plane as regularly enrolled students.

Our project at Salina Wesleyan is sponsored by the city of Salina, and it operates solely for boys. A large stadium is being constructed for the city and will be used by the college. It provides complete training in construction work for the 46 boys who are assigned. They, too, are given the opportunity of taking part-time academic work at the college. The courses given to the boys included applied electricity, engineering, drawing and design, mathematics of construction, and a construction seminar which offers practical related work through demonstrations and discussions of cements, paints, geological formations, rock dressing, and masonry.

Other resident-work projects for boys, although operated on a part-time basis, are at Eureka, Garnett, and in Sheridan County where a State lake is being developed.

Still another example of a successful resident project is our photographic unit in Topeka, where girls selected from the State as a whole are given training in photography. We found after last year's operation of this project that we were able to place in private employment the majority of the girls, in fact all of them who were able to absorb the training offered. This year we have reason to believe that we will place 100 percent of them in private employment.

Of course our resident program is only a phase of our total out-of-school plan of operation. We have many small projects throughout the State which not only are giving a worth-while work experience to the young people, but which also are netting the sponsoring agencies valuable physical improvements. On all of our projects we require related training courses which are offered either by our supervisor or by cooperating individuals, as local businessmen, school superintendents, etc.

Our ultimate goal is, of course, to find youth a place in private industry. We have realized that there are many young people not eligible for project assignment who still merit every consideration. In order to meet this need we have assigned a junior counselor in the State employment offices in Kansas City, Wichita, and Topeka. The sole responsibility of these men is to interview job applicants and attempt to place them in private employment. Their contact with businessmen has been most profitable and results in approximately 300 either part-time or full-time placements a month.

I know that you also will be interested in a brief report on some of the specific activities in your congressional district.

Our largest projects quite naturally are in Sedgwick County, where, localized in Wichita, 217 youths are now working. An old county welfare building has during the last few years been developed by youth labor into a successful youth center, in which is housed a diversified group of projects, including woodworking, weaving, book repair, arts and crafts, cooking, and sewing. You are, no doubt, familiar with this development, which has been of untold benefit to the unemployed youth in Wichita.

In each of the high schools in the Fifth Congressional District student work programs operate, where 757 students are employed. Four hundred and thirty-five college students are similarly assisted, with average earnings of \$15 a month.

Since the inception of the National Youth Administration in Kansas we have at all times attempted to administer the program with a view toward providing the maximum benefits to our share of the Nation's unemployed youth.

I cannot but hope that our adult citizenry will soon fully appreciate the danger which confronts us if we continue to allow 4,000,000 youth to remain outside of the school doors and without jobs. I also hope that it will recognize the distinct contribution which the National Youth Administration has made to this group, the while remembering that we have been able but to make a start on a problem which is terrifically large.

Sincerely yours,

ANNE LAUGHLIN,  
State Youth Administrator.

## Responsibility Apparent to Improve Health of Citizens Through Adequate Medical Facilities

### EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

Mr. RANDOLPH. Mr. Speaker, the energy burned up by sickness requires just as much to sustain and replace it as does the energy burned up by productive labor. The protection of health is therefore not alone an individual service to the ill and afflicted. It is a national economy that turns waste into useful works.

Sickness and disease exact a costly toll of our economic system. That cost is not measured by the money we spend on hospitals and medical treatment. It is measured by the wasted effort that goes to fight illness where such service is inadequate or not available, to say nothing of the suffering, impoverishment, and hopelessness that sickness brings down on individual families.

#### ILLNESS TAKES BIG TOLL

More than 70,000,000 persons lose more than 1,000,000,000 days from work as the result of sickness, according to studies made by the United States Interdepartmental Committee to Coordinate Health and Welfare Activities. The estimated cost of illness and premature death in the Nation was put at approximately \$10,000,000,000 a year. The American Medical Association has asserted that during 1938 a patient was admitted to one of the country's registered hospitals every 3.3 seconds.

The preservation of health as an obligation of the community is as old as our Nation. Only as our Nation grew, however, did we come to appreciate the effect of individual health on the health of the entire country.

In our early days treating the sick was largely a local affair. The modern age, however, so tied our great urban masses together and at the same time left many of our rural sections so isolated from modern science that the prevention of disease and the treatment of the sick became a mandatory defense of our whole people.

Fortunately as our problems increased, medical science entered its greatest age of discovery and opened scientific avenues to physical well-being that promised one of the most humane and effective economies of our civilization.

The world had grown up about us so rapidly that we had a long way to go even to catch up to the common standards of health that we recognize as essential today. But a new conception of public health, medical care, and adequate hospitalization sprang up. During this century in the United States we saw a remarkable growth in these fields, in the development of public sanitation, in protection of our water and food supplies, in the safe disposal of our sewage, and in the broader medical and hospital services that we provided.

#### HOSPITALS ON INCREASE

Of the 6,852 registered hospitals in the United States in 1928, only 661 were established during or earlier than 1875. Only 2,070 had been established by 1900. During the present century we not only tripled our number of hospitals, but we replaced many old ones with modern institutions.

From 1923 to 1928 we were building hospitals at the rate of \$200,000,000 a year. Even that, however, was doing little more than to keep us from slipping backward, for it provided only a 1-percent increase over the 6-year period in the number of hospitals. As we built new ones older hospitals had to be replaced or abandoned.

We might, however, have steady progress in equipping the Nation for its constant fight for its life and physical welfare. The depression, however, struck, and on top of all the other

woes it brought we were forced virtually to stop our work for a healthier nation.

Compared to the \$200,000,000 we had been spending annually to hold our own against the care and cure of illness, our expenditures dropped to only \$36,000,000 in 1933. On the basis of the previous rate of replacement and expansion needs the Nation in that year was faced with an accumulated deficiency in hospital facilities of about \$550,000,000.

This was one of the pressing needs for which the Public Works Administration was created in 1933. While the grants and loans it made available States and local communities were able to resume their building for better health.

#### P. W. A. AIDS PROGRAM

During its 6½ years P. W. A. has allotted funds for the construction of nearly \$400,000,000 in hospitals and hospital facilities on 743 projects sponsored by State and local bodies.

This work has meant 107,849 additional beds in 2,056 hospital buildings in all the 48 States, the District of Columbia, Alaska, Hawaii, and Puerto Rico. Approximately 45 percent of these projects have been in States that do not contain large metropolitan areas. Many of the hospitals were built in communities which heretofore had been without adequate hospital facilities.

Of the \$397,253,706 total estimated cost of these non-Federal hospital projects P. W. A. provided \$151,180,760 in grants and made \$25,747,796 in loans toward the sponsors' share of the cost.

In addition to non-Federal construction there have also been 152 Federal hospital and sanitarium projects built from P. W. A. funds, with a total estimated cost of \$37,002,852. These projects, for veterans, Indians, the military service, and at Federal prisons, have added 13,911 beds, making a total of 121,760 additional beds for all types of P. W. A. hospital projects.

The number of additional hospital beds provided under the P. W. A. program is not the whole story of this program, although it is an important part of it. A large number of hospital projects were not for wards alone, but provided necessary services and utilities for hospital operation. Hundreds of projects have been for installing or improving kitchens, boiler plants, power and light plants, nurses' homes, administration and staff quarters, garages, water-supply systems, and other service features. Still another field in which P. W. A. construction was done has been that of medical and dental schools, clinics, dispensaries, and research centers.

In addition to the many hospitals where accommodations are provided for both whites and Negroes, 5,838 additional beds have been furnished in 19 States for the insane, for general treatment, for tuberculars and other afflictions of the Negro race.

P. W. A. hospital construction was undertaken at a critical time. In 1934 and 1935 P. W. A. construction was accounting for 82 and 84 percent, respectively, of the year's hospital building. Over a period of 5½ years the P. W. A. program constituted 35 percent of all hospital construction.

Of the total P. W. A. non-Federal hospital expenditures, 64 percent has gone to State hospitals and institutions, 23.6 percent to city projects, 9.4 percent to counties, and the rest to combinations of these or to nonprofit private institutions.

#### HEALTH PROGRAM HELPED

This relieved a crisis in hospitalization, although it did not restore the predepression rate of progress. In most cases it no more than cared for the growth of normal needs or replacements, and sometimes fell below that. It could not provide for past deficiencies. The President's technical committee at the National Health Conference in 1938 estimated that the Nation needs a normal annual increase of 25,000 beds, and that 36,000 beds a year for a 10-year period should be added to the existing number to meet the demand. In addition, the committee recommended that some 500 health and diagnostic centers should be set up in areas now inaccessible to hospitals.

The continued demand for increased hospital facilities was indicated in the fact that when P. W. A. returned 5,043 applications to public bodies on September 6, 1939, because of lack of additional funds, these included 203 applications for hospitals and institutions with an estimated construction cost of \$105,486,892.

The President's proposal for a \$10,000,000 hospital construction program by the Federal Government is a recognition of the continued need for better health facilities, particularly in certain neglected areas of the country. It is in line with his message to Congress in 1939 when he said:

I have been concerned by the evidences of inequalities that exist among the States as to personnel and facilities for health services in different sections and among different economic groups. These inequalities create handicaps for the parts of our country and the groups of our people which most sorely need the benefits of modern medical science.

Under date of February 1, 1940, I wrote Dr. Thomas Parran, Surgeon General, United States Public Health Service, as follows:

I am very deeply interested in the message which the President sent to the Congress on January 30 in which he proposed that consideration be given to a program for the construction of small hospitals in needy areas of the country, especially in rural sections, not now provided with them.

I further assured him I was most sympathetic to the proposal of the President.

#### LABOR IS ASSISTED

A vital byproduct of this maintenance of our hospital system in the years just past has been the employment and industrial stimulation it has produced. Hospital construction has been an important field in the public works undertaken through P. W. A. whereby men have been given employment both at the site of construction and in the industrial fields that were activated by such work. The entire P. W. A. program, including hospital projects, has in 6½ years provided a total of more than 7,000,000,000 man-hours of labor in construction or in the fields of production, fabrication, and transportation. And it has, in addition, left us with needed works that will serve us for years to come.

P. W. A. non-Federal hospitals fall largely into four major classifications: General hospitals, institutions for the insane and feeble-minded, tubercular sanatoriums, and homes for the aged and indigent.

Insane asylums and those for the feeble-minded and for epileptics constitute more than 30 percent of the cost of those for which P. W. A. allotments have been made. In 1934 only 10 States in the United States even approached adequate facilities for these cases, and these States were slightly over their capacity. P. W. A. construction has added measurably to these accommodations, but the additions have often been virtually offset by the growing need.

General hospitals have constituted nearly 25 percent of the cost of P. W. A. hospital construction, tuberculosis sanatoriums 12.7 percent of the total, and homes for the aged and indigent not quite 4 percent.

Adequate hospitalization is a basic necessity for a healthy, productive nation, and to maintain it requires constant and continued effort and attention. It is a part of a national drive against disease that incorporates sanitation, protected food and water-supply systems, modern, safeguarded sewerage systems, and the broadening of medical attention to meet the needs of all sections and communities. It was a drive that was well launched when the depression struck at us, and that was resumed with the cooperation of Federal and local governments under the Public Works Administration and our national and local health services.

And P. W. A. has made a remarkable record. It is ready today to swing into action on a moment's notice. If we fail to carry on a hospital program at this time, it would be a national loss.

I am in favor of making use of this great organization to carry on the work of bringing the Nation's hospital facilities to the point where the normal demands of the population can be met.

## The Sandy Hook Pilots

### EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

ARTICLE FROM THE MARITIME EXCHANGE BULLETIN OF AUGUST 1939

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks, I include the following brief article from the Maritime Exchange Bulletin of August 1939 regarding the valuable service rendered to the shipping and commerce of our Nation by the harbor pilots stationed at Sandy Hook:

[From the Maritime Exchange Bulletin of August 1939]

#### THE SANDY HOOK PILOTS

The earliest authenticated record of pilots stationed at Sandy Hook is the year 1694, when the Assembly of the Colony of New York ordained "that there shall be four men appointed and commissioned \* \* \* who shall constantly attend at some convenient place near the Hook with a boat to give all aid and assistance to vessels bound for this port."

There have been Sandy Hook pilots in service continuously ever since, and while the early pilots evidently went off from the Hook in a small boat to meet vessels their successors of 170 years later were cruising 600 to 700 miles east of New York in able little schooners. There were in the middle of the nineteenth century 32 pilot boats out of the port of New York and about 150 pilots. Competition was fierce and casualties in men and boats heavy due to the hazards of the service. In 100 years 64 pilot boats and 165 lives were lost. Their losses were climaxed in 1895 by the loss of the *George H. Warren No. 5* with 12 men in a gale at sea. Shortly afterward the steam pilot boat *New York* was put in service and the extreme offshore cruising was ended. The pilots of the various competing boats decided to unite harmoniously, select their own officers, and work together for the greater benefit of commerce and themselves. With minor changes, that arrangement is in force today.

Through so many years of history, entwined as it is with the growth of the port of New York, as well as that of our country, the association has developed an esprit de corps with a background and history of which it is proud. Space allows the mention of only some of the highlights in this record.

In 1799 there were 21 pilots. In 1811 there were 10, manning 4 boats. When war was declared on Great Britain by our Government in the following year 1 of these boats was immediately dispatched to Gothenburg, Sweden, then a rendezvous for American merchantmen, to warn them of the approaching hostilities. This she did and passed from port to port repeating the warning. Weeks later, when the war news came to Europe through official channels, all American vessels in northern waters were either well on their way home or tied up in neutral ports safe from the enemy ships detailed to capture them.

Sandy Hook pilot boats were commissioned as privateers in this war. The *Teaser* captured 12 British vessels, mostly brigs and schooners, and recaptured the full rigged ship *Margaret* with a cargo valued at \$50,000.

In Greenwood Cemetery, Brooklyn, stands the pilot monument. This was erected by public subscription to Thomas Freeborne, Sandy Hook pilot of the bark *John Minturn*, wrecked on the Jersey coast in a terrific northeastern gale and snowstorm in February 1846.

In 1851 Sandy Hook pilot Dick Brown won the famous cup when he sailed the yacht *America* to victory at Cowes.

The Civil War was vividly brought home to the pilots when the Confederate cruiser *Tallahassee*, commanded by John Taylor Wood, captured and burned the pilot boats *James Funk* and *William Bell* off Fire Island. Wood later said that, "My object in capturing these vessels was to secure a pilot who could be paid or coerced to take the ship through Hell Gate into Long Island Sound. \* \* \* When abreast of the navy yard, to open fire, hoping some of our shells might set fire to the buildings and any vessels that might be at the dock. But no pilot could be found who was willing to undertake it."

Many feats of salvage, as well as the saving of lives, have been performed by the men of Sandy Hook. In the days of sail, pilot-boat schooners towed disabled vessels many miles to safety. The *Nettle No. 20*, the *Perkins No. 13*, and the *G. W. Blunt No. 11* made outstanding rescues of this type. In 1874 the latter boat took off the crew of the bark *Alfred*, dismasted and on her beam ends, and towed the hulk for 12 days, finally anchoring her in the North River. In March 1886 the liner *Oregon* collided with a coal schooner off Fire Island. There were 840 people aboard the *Oregon*, with lifeboats for less than half. Sighting the sinking vessel at

daylight, the pilot schooner *Phantom No. 1* proceeded to take her people aboard. Pilot Parker, in charge, saw readily his 75-foot schooner could not begin to accommodate them all. Sighting an eastern-bound schooner on the horizon, he sailed off, hailed, and directed her to the wreck, where she assisted the *Phantom* in taking all hands off in safety.

During the World War 22,000 vessels were piloted with only 3 serious accidents, and in 3½ hours one day 69 ships were handled without mishap. Throughout the war the *New York* and *Sandy Hook* were station ships for the United States naval guards, who, with the pilots, were put aboard and taken off all neutral vessels entering and leaving the port of New York.

One day during the existence of prohibition and "rum row" an obviously mishandled schooner was sighted by the *New York*. Upon investigation she was identified as the *Mary Beatrice*, of British registry. There being no answer to the pilot's hail, a yawl containing Pilot Hall was lowered, and he proceeded to board the little vessel, sailed her to quarantine, and signaled the authorities there.

This vessel was manned by 15 Chinese. They had boarded her in Habana, paying the white men in charge \$250 apiece to be smuggled into the United States; \$5,000 more was to be paid when they disembarked here. She had anchored off New Jersey awaiting the return of her skipper, who had ostensibly gone ashore to arrange for the transfer of his passengers. He did not return, and the crew of 2 whites and a Negro demanded the money they knew the Chinese retained. A fight ensued, in which the 3 sailors were killed and 2 Chinese wounded. The Chinese were not seamen. Only fair weather and good luck had enabled them to reach Sandy Hook, where the vigilance of the pilot boat prevented their landing.

Nineteen hundred and twenty-three saw a great rush of immigrants to our shores, as well as the adoption by the authorities of a most dangerous arrangement (as far as ships and lives were concerned) for deciding on the admittance or rejection of the newcomers. An imaginary line was drawn between Forts Lafayette and Wadsworth. Here, too, were stationed immigration inspectors to clock the ships as they crossed the "line." No vessel with the new month's quota of immigrants aboard could cross the line before midnight of the last day of the old month under penalty of returning her passengers whence they came. The same penalty held for those vessels unfortunate enough to lose the race into quarantine once 8 bells noted the passing of July into August.

July 31, 1923, found 11 liners with about 8,000 souls aboard awaiting the zero hour below the forts at the Narrows. It will suffice to say that all 11 were anchored safely in Quarantine in 9 minutes, a tribute to the expertness of the pilots handling them.

The regulations compelling ships to take such risks were, mainly through the insistence of the pilots, soon replaced by another and completely safe arrangement.

The steam pilot boats *New York* and *Sandy Hook* have emulated their predecessors of the old days in the work of saving life and property at sea.

When the outward bound *Fort Victoria* was rammed and sunk off Sandy Hook during dense fog 10 years ago, the *New York* and *Sandy Hook* rescued her 400 passengers and crew. The *Victoria's* pilot, who was at the ladder about to be taken off by the pilot boat when the collision occurred, returned to the bridge, where he and the master remained until the vessel sank under them, meanwhile directing the towing of the disabled vessel by the pilot boat *New York*, which attempted to haul her into shallow waters.

The wreck of the *Fort Victoria* lay for many months near Ambrose Channel, plainly marked at either end by gas buoys and awash at low water. The wreck was frequently steered for at night and in hazy weather by coastwise vessels, which did not employ pilots, and whose navigators mistook the wreck buoys for those designating the entrance to Ambrose Channel. It was due only to the good will and spirit of service of the pilots, who warned many of those vessels of their error, that millions of dollars were saved steamship companies and the underwriters.

When the *Morro Castle* was destroyed by fire a few years ago the *New York* acted as a rudder to the burning and unmanageable hulk, while it was towed by a Coast Guard cutter.

Sick or injured persons, as well as stowaways, are often removed from south-bound vessels and transported ashore, or in the latter case turned over to the proper authorities. It is needless to say how invaluable these gratuitous services are to shipping.

There are 100 pilots licensed by the States of New York and New Jersey, acting under the supervision of their respective boards of commissioners. The pilotage rates are statutory.

Applicants must be between the ages of 18 and 26, pass a stringent physical examination, and be high-school graduates or hold officers' certificates before admittance to service. Apprenticeship averages about 8 years and terminates after the apprentice has been master of the pilot boat. The last year is spent in company of pilots aboard vessels of the various types.

A pilot is first licensed for vessels of 18 feet draft. This draft is increased annually for 7 years, if warranted, when a license to pilot any vessel is granted by the board of commissioners.

The association buys and maintains its own boats, offices, etc., and cares for sick and retired members.

In addition to the main pilot service at New York, there are subsidiary branches to the various ports in the Kill van Kull, Newark, and on the Hudson River to Albany.

Stationed off Sandy Hook are the pilot boats *New York* and *Wanderer*. The *Sandy Hook* recently sunk, is about to be replaced by another boat.

## Patriotic Atheists

### EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

ARTICLE BY WESTBROOK PEGLER

Mr. GEYER of California. Mr. Speaker, I do not always find myself in agreement with Mr. Westbrook Pegler, but the philosophy he displays in the accompanying article is so thoroughly American that I believe it should be read by every believer in American democracy.

I quote from his column in the Washington Post under date of February 8, 1940:

[From the Washington Post of February 8, 1940]

FAIR ENOUGH

(By Westbrook Pegler)

PATRIOTIC ATHEISTS

I have begun to doubt the wisdom of confronting every organization and all individuals with a disavowal of communism and fascism and saying, in a leering way, "Sign here." That practice encourages the loathsome patriot to drape the flag around him like a shawl and go around putting people on a spot who are better citizens than himself.

It contains an insinuation that the organization or person in question is a doubtful case and that compliance is a sign of cowardice or refusal a sign of sedition. Of course, every loyal American hates communism and fascism and, on proper occasions, takes the oath of allegiance with dignity and solemn feeling and is willing to take it again, as the officers of the Military Establishment and public officials do.

Once sworn the oath would seem to be binding unto death, but for some reason it is thought to have a term and, like vaccination, to require renewal, every now and again. Still, people don't object if the circumstances are such as to justify the ceremony, as in obtaining a passport, enlisting, or joining a patriotic organization.

But no man or woman should be required to stop dead in traffic and repeat the oath for anyone who takes it upon himself to go on the prowl of traitors, and the same resentment occurs when, in a public gathering, some loud-mouth fraud says, "We are now going to sing The Star-Spangled Banner, and any dirty traitor who doesn't get up will get such a going-over that he will never get up."

There is a time and place for everything; and, although patriotism is never really out of place, organizations and people have other business besides denouncing communism and fascism. Anyway, Americans have a right to believe in communism or fascism. We can forbid actions but not beliefs, and we have laws and police to take care of situations in which persons who so believe—for the two beliefs are practically identical—attempts to overthrow the Government by violence. To me belief in these "isms" seems inconsistent with Americanism, but the Constitution doesn't see it that way, and there is no profit in destroying the Constitution just to beat someone else to it.

Nobody enjoyed more than I did the embarrassment of the Youth Congress last summer and the more recent confusion of the Student's Union when they were confronted with resolutions against communism, but there are other ways of ascertaining where organizations and persons stand.

There is no law by which any group can be compelled to adopt any resolution, and none should be penalized for exercising its rights. If a group or individual is following a line—Communist or Fascist—that will become plain in time without our resorting to tricks.

Fortunately, in these cases, the resolutions were introduced by members and were pertinent business, but it can easily be foreseen that the application of such tests can become a terrible nuisance, if not a menace.

For here we have a violent organized propaganda to the effect that all citizens who are not Christians of the most conventional, church-going type—which also means, incidentally, the showering-down type or kosher-keeping Jews—are necessarily atheists, and, therefore, enemy aliens.

Now, a man has a right to be an atheist, and he may be atheist and a reactionary Republican at the same time; or a man may be a Christian in his own heart, according to his own interpretation of Christianity, but not a church Christian—and, in fact, an opponent of churches—and still be a loyal, law-abiding American; or a Jew may abandon his religion and be a capitalist and a loyal citizen.

But if we come to the point of admitting that unbelief in religion or nonattendance at any church is proof of communism and somehow punishable, we are on the way to an inquisition and the estab-

lishment of a religious racket under Government sanction. In that case a man could be challenged on the street by any hot-eyed fanatic to declare his belief in religion and show his church credentials, paid up like a union card and mauled around or jailed away as an enemy of the state for failure to affirm.

The right to be a Christian is established and respected everywhere in the United States, but the right to be an atheist is equally important. The assumption that an atheist is a Communist and, therefore, a conspirator against the American Nation is false; and it should be added that a patriotic atheist does a little more than his share as a citizen, in view of the fact that he pays taxes right along to carry the heavy load imposed on all the taxpayers, including infidels, by tax-exempt church properties.

## Extension of the Trade-Agreements Act

### EXTENSION OF REMARKS

OF

HON. THOMAS A. FLAHERTY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

EDITORIAL FROM THE BOSTON EVENING TRANSCRIPT OF  
JANUARY 29, 1940

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Evening Transcript of January 29, 1940:

[From the Boston Evening Transcript of January 29, 1940]

#### THE HULL TREATIES

This newspaper believes that the welfare of this Nation and of the world generally would be better served by the continuation of the Trade Agreements Act than by the adoption of tariff ratification by the United States Senate.

In assuming this position we are not unmindful of the many arguments against this program, nor are we unmindful or unappreciative of the position against the Trade Treaty Act taken by the six New England Governors and many other prominent Republicans in Congress.

While we strongly favor many basic precepts of the Republican Party, we are firmly convinced that it will be ill advised if it goes before the American people in the coming election with the proposition that tariff control should be restored to Congress, where it would be subjected to the logrolling and alliances of special interests and sectional pressures.

Under congressional control there would be no guaranty that Congressmen, intent on serving powerful pressure groups, would not propel this Nation toward such excessive and calamitous protectionism as the Hawley-Smoot law. This law contributed its share to the building of high trade barriers which became one of the causes of the present war.

Advocates of congressional tariff control may sincerely intend and expect to avoid a return to extreme protectionism. But tariff reductions are not consistent with the kind of reciprocity that goes on when Congress writes a tariff law. All the pressures make for increases, not decreases.

The United States does not have to export or die, but unless it can export, it must resign itself to growing governmental controls in order to protect the Nation from the depressive effects of unchecked surpluses. Hundreds of thousands of our workers depend upon a thriving foreign trade and many industries find their margin of profit determined by a foreign market for their products. Our cotton growers must sell one-half their crop abroad. Our growers of wheat, corn, and tobacco, must either sell their crops or be forced to plow them under. Our makers of automobiles, electrical and leather goods, and of many other products must discover markets opening up to them or they must adopt policies that restrict production and elevate prices. The opening of foreign markets will help to free private enterprise, on the one hand from socialistic government control and on the other from managerial policies that are in their essence monopolistic and restrictive.

But we cannot promote foreign trade—we cannot find outside markets for our own products unless we are willing to buy from abroad. This means that we must be willing to make gradual reductions in our tariff walls and that we must grant some concessions in order to create outlets for our industry and agriculture.

We believe at this time we should not abandon the leadership we have assumed against economic warfare by means of the trade program. This program with its most-favored-nation provision, permits us to generalize our concessions to all nations with whom we have negotiated most-favored-nation arrangements, and these nations do the same for us. This has enabled us to counteract the trend toward autarchy and economic isolation, with its threat to living standards and democratic government.

We believe that the reciprocal principle of accelerating normal trade between the nations must prove particularly useful after the present war, when the temptation will be great to repeat the post-Versailles mistakes of attempting to recuperate behind excessive trade barriers. It is fundamental that the United States should, for the good of the world and itself, cooperate with all peaceful efforts to find universal stability. The reciprocal-trade program reflects a willingness to assume this responsibility more than does high protectionism.

We are aware that special interests deem themselves to have been injured or likely to be injured by certain concessions in the 22 treaties already consummated. We believe all legitimate protests should be examined and steps taken, through customs quotas that reduce the amount of imports or through reopened negotiations, to remove real injuries. But we cannot forget that a similar concentration of protests from special interests was instrumental in putting over the Hawley-Smoot tariff. Nor can we forget that 1,000 economists signed a petition addressed to President Hoover predicting that this tariff bill would have disastrous effects upon the Nation as a whole. Today the economists are almost as unanimous in the view that the Trade Agreements Act has operated and will continue to operate in the best interest of the country as a whole. We are convinced that in this matter, as in all others, the general welfare must have prior claim over segments of our economy.

The present war, moreover, should offer an opportunity for the State Department to smooth out any inequities in the treaties, since, in the main, the war needs of the major nations are sharply curtailing the amount of goods they could send here in competition with our own.

We do not regard the trade agreements as a political or partisan question, but as a peculiarly national one that should be elevated above any temptation to make of it a political, sectional, or group football. Indeed, such conservative newspapers as the New York Herald Tribune and the Providence Journal have lined up with Secretary Hull behind the trade agreements. We want the trade program renewed because it has placed tariff making upon a scientific and flexible plane free from the political horsetrading, which, not only impairs our economy, but has been a powerful corrupter of government.

We do not deem this program to be undemocratic nor an unwarranted abandonment of congressional prerogatives. So long as Congress retains the power of reviewing its administration and of adjusting it at regular intervals, we see no reason for fearing a dangerous growth of executive authority.

In subsequent editorials we will discuss statistically and in greater detail the many phases of this program. But in the rightness of its theory and in the net effects of its practice, the trade-agreements program represents a progressive step which is designed to preserve rather than to jeopardize democratic free enterprise and enlightened social improvements.

## Red Apples and Red Scares

### EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

LETTER FROM EXECUTIVE SECRETARY OF THE AMERICAN  
YOUTH CONGRESS

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I submit a letter from Joseph Cadden, executive secretary of the American Youth Congress, to John Hamilton, chairman of the Republican National Committee. It makes interesting reading. The letter follows:

DEAR MR. HAMILTON: We thank you for your letter of February 3, in which you tell us how to run the American Youth Congress and decline to send a representative of your party to the American Youth Congress Citizenship Institute on February 11.

My first reaction to your letter was to recall that a decade ago your party was handing out red apples to youth; now we find you handing out "red" scares. Neither procedure seems to cope with the very fundamental problems which are facing the young people of this country, and which we hoped a representative of your party would discuss with us. Shooting at Communists instead of shooting at the problems doesn't kill off the real enemies of American democracy and American youth—unemployment, lack of adequate educational, housing, and health facilities, and the threat of war.

The four and a half million young people cooperating through the American Youth Congress do not share your lack of faith in the Bill of Rights, which, if you recall, contains no "ifs" and "buts" to exclude Communists or any other minority group (such as your own) from the American scene.

No one can seriously contend that the expulsion of the fractional number of young Communists from the American Youth Congress can provide jobs for the 4,000,000 young Americans who are out of school and out of work. The experience of other countries leads us to believe it can only result in the elimination of every type of dissenter.

The American Youth Congress prefers to address itself to the real problems and to those who have the power to alleviate them, i. e., labor, business, and government. We are not tied to the political apron strings of any party. We have a program for jobs, civil rights, and peace, and we exercise our right to vote with that program in mind.

I repeat that I regret your refusal to send a representative of your party to discuss the problems that millions of young Americans cooperating in the organization believe to be the most pressing matters of our time. I need hardly add that if ever your party has a program which it feels can stand the test of full, free discussion, we shall be very happy indeed, in accordance with our principle of permitting all points of view, to have a representative of your party at any of our gatherings.

Very truly yours,

JOSEPH CADDEN,  
Executive Secretary.

### Good-Neighbor Policy

### EXTENSION OF REMARKS

OF

HON. FRANK CROWTHER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

ARTICLE FROM THE WASHINGTON SUNDAY STAR OF  
DECEMBER 17, 1939

Mr. CROWTHER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star of December 17, 1939:

[From the Washington Sunday Star of December 17, 1939]

IS UNITED STATES GOOD-NEIGHBOR POLICY YIELDING RESULTS IN AMERICAS?—UNCLE SAM IS A SENTIMENTAL FELLOW WHO GIVES MUCH AND APPARENTLY IS GETTING LITTLE IN RETURN

(By Herbert M. Bratter)

A sentimental old fellow is Uncle Sam. Like Benjamin Franklin's spinster, he is grateful for small favors. A foreign nation has merely to pay him its debts to evoke his lasting friendship. Yet even if the foreigner defaults "Tio Sam" retains his amicable attitude.

In Latin America particularly is this the case. Uncle Sam not merely responds to the slightest friendly overture. Wearing his heart on his sleeve, this caballero of the north seeks out the senoritas of the south, paying impartial court to all.

His is a soothing serenade. Sometimes it charms. More often it goes unanswered, as in Argentina and Mexico. His songs are not all in Spanish. He sings in Portuguese, too, his golden tunes. In gracious response to a \$17,200,000 Export-Import Bank loan last spring the Brazilian Government tossed him a rosy promise to resume early payment on the defaulted debts; or so, at least, it was reported to us. But the rose has withered, and the old defaulted debts are still in the same condition.

Under the courting caballero policy Washington has this year received more visiting dignitaries than in any comparable period since the World War. From Cuba and Nicaragua, from Haiti and Brazil, high dignitaries have come to thank us in advance for Government credits.

#### MONUMENT TO A BORROWER

Someone has describe the period of reckless foreign loans of the 1920's as "frenzied finance." The present period may be characterized as "friendly finance."

The loans Washington is making are not large in our eyes. But to the borrowers in these hard times they are considerable. According to press reports they are planning a monument in Nicaragua to President Somoza for his success in borrowing \$2,000,000 in Washington.

Our Latin American overtures are not limited to mercenary methods. We are striving in scores of ways, official and unofficial, to make the Americas one happy family of nations. We call and attend pan-American conferences, committees, and meetings. We set up interdepartmental groups in Washington to rack their brains for ways to confer benefits on the countries to our south—benefits in agriculture, mining, trade, education, etc. We lend them our experts; we exchange professors and students with them; we seek new markets here for their goods; our Army bombers visit them

on good-will flights; we send them our best in broadcasting efforts, entirely free of charge; we subsidize shipping and airplane lines to knit them closer to ourselves and to each other; we foster a pan-American highway; we advertise their tourist attractions to our people.

#### WHERE ELSE?

Where else can you find a nation voluntarily propagandizing among its own people in favor of its neighbors? Yet that is precisely what we are doing, officially and unofficially. For a whole winter season the Department of Interior broadcast weekly in this country a series called "The Brave New World," designed to make Latin Americans better known and understood here.

The campaign to cultivate the United States of America for our Latin neighbors is proceeding on a much broader front than most people would imagine. A recent survey by the National Committee of the United States of America on International Intellectual Cooperation required 159 typewritten pages to describe inter-American cultural activities in the United States. The single-spaced list of organizations alone fills 6 double-column pages. In addition to the Pan American Union and United States Government organizations, intellectual relations with Latin America are being cultivated here by a long list of unofficial groups, universities, libraries, and business enterprises.

If "the Lord helps those who help themselves," our good neighbors to the south of the Rio Grande in the years to come should be in a position to benefit from the educational work we are doing here for them. In view of all we have been reading about foreign propaganda in the United States, it is worth reflecting that the Latin Americans are in the unique position of having us do it for them gratis.

#### SLOW WITH RECIPROCITY

Despite such widespread efforts, the good-neighbor policy seems slow in producing the reciprocity we desire. In various respects our investors, our businessmen, our tourist industry, and our broadcast business suffer from injurious Latin American policies.

In the matter of composing unpaid loans held by our investors, virtually no progress has been made. Many Latin American bonds are still selling at default prices. A few days ago in New York a block of Mexican Government railway bonds exchanged hands at a quotation of  $\frac{1}{4}$ ; that is, \$2.50 per \$1,000 face value. Speculators are hesitant to buy such bonds because it costs more to keep them in a safety-deposit box than the entire price of the securities. At present low quotations considerable amounts of Latin American bonds have been bought up by the defaulting governments themselves.

In the sphere of commerce, American exports are handicapped by exchange and import controls in many Latin American countries, some of which grant to European goods a preferred position over American merchandise seeking to enter the country. Efforts to procure trade agreements with Argentina and Uruguay have been conspicuously fruitless.

#### UNITED STATES INVESTMENTS SUFFER

Elsewhere American direct investments have been bodily taken over or threatened by some Latin government. Bolivia has nationalized American oil lands. Mexico for years has been taking American-owned farm lands, and in 1938 seized an estimated \$150,000,000 of American oil properties. Latin America would benefit by further American investments in mining and manufacturing, yet the trend toward economic nationalism in that area has badly frightened American capital.

Despite the discouraging failure, the United States goes ahead with its amicable aims in Latin America, and even the countries which have been least promising of results continue to receive our official good will, Mexico no less than the others.

Mexico continues to be our pampered "Peck's bad boy." One wonders how much it might obtain for us if only it reciprocated our pan-American impulse.

Of all the Latin lands, Mexico has been a very special beneficiary of American benevolence. For not only does it benefit from our good will toward Latin America in general but it is the chief foreign recipient of our foreign silver subsidy, being the leading silver-producing country of the world. Silver is one of Mexico's major exports and an important source of income for the nation and the Mexican Government.

#### MEXICO AND SILVER

No one can claim that the Silver Purchase Act of 1934 was passed for an unselfish motive. It is true that the Mexicans worked hard to get us to adopt the program, just as they are working now to get us to retain it. But, however unsound its economics, that silver program admittedly appealed to American export and agricultural interests in 1934, as well as to the silver bloc which fathered it.

Now, however, after more than 5 years of demonstrated economic folly, it is a matter of record that the foreign silver program depends for its continued existence only on the administration's desire to do something Mexico wants done. This is quite plainly set forth in the congressional debates for 1939. The Government is positively afraid of offending Mexico. This overcautious attitude is hard to understand.

Mexico's dependence on bullion and other business with the United States is indicated by such facts as these:

Of Mexico's total merchandise exports, amounting to \$186,000,000 in 1938, 67 percent went to the United States. Of its total imports, \$494,000,000, 58 percent were supplied by the United States.

Mexico in 1938 produced 924,000 ounces of gold, valued by Washington at \$32,240,000, and 81,000,000 ounces of silver, valued by Washington at \$34,830,000. For both of these metals the United States is virtually the only market at current prices, and for both of them it pays an artificially high price.

The American silver policy has enabled Mexico to get at least \$80,000,000 more for its silver production than would otherwise have been the case. Since the silver program started Mexico has received approximately \$220,000,000 for its output.

#### TOURISTS HELP, TOO

Nor are these the only items. In 1938 American tourists left \$44,000,000 in Mexico. This business with American tourists was almost one-fourth as large as Mexico's entire commodity exports that year. And the tourist trade is growing every year. The interference of the war with travel to Europe can only serve to increase Mexico's business with American pleasure travelers, whom Washington allows to bring home duty free \$100 of merchandise apiece. No such liberal policy is followed by Mexico.

Considering these facts, it is a matter for wonder that in the country's own self-interest Mexico's policies toward this country are not less unfriendly. It is like a case of the small boy kicking his big brother in apparent assurance that the big fellow won't dare to retaliate.

Mexico's seizure of the oil properties, for example, is admittedly within the country's recognized rights, but only, as our State Department has phrased it, if "prompt and just compensation" is made. Now the Mexican Supreme Court has ruled that these properties were legally seized; that no payment need be made for oil in the ground; and that payment for above-ground oil properties need not be made for 10 years. In view of Mexico's past record in meeting such claims, the outlook for the oil companies is very discouraging.

Mexico's broadcasting policy cannot be viewed as deliberately unfriendly to us, although the badly needed North American broadcasting agreement, designed to unscramble the confusion caused by conflicting transborder stations, has been ratified by all the other signatories. Our State Department has been unable to cajole Mexico into making the agreement effective. Not only do certain Mexican border stations fill our air with unwelcome advertising but, according to Broadcasting magazine, the Mexican Government plans now to assign to those stations wave lengths already in use by American stations, threatening even more serious interference with reception in the United States.

The good-neighbor policy has distinct merit where our initiative is reciprocated, but it needs to be modified where experience proves it ineffective. It needs to be individually tempered to the needs of each country.

To insist on Japanese respect for our rights in war-torn China and simultaneously to neglect our rights in next-door Mexico is sadly inconsistent. To Japan we have now talked "straight from the horse's mouth." In Mexico, then, we should not rely on "whispered prayers in a horse's ear."

### Farm Tenancy

#### EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

Mr. SPARKMAN. Mr. Speaker, I feel that the action of the House in refusing to include in the appropriations for the next fiscal year funds to provide for farm-tenant purchases under the Bankhead-Jones Farm Tenant Act was a great mistake. Such action is short-sighted and cannot be justified by the statement that no headway can be made against increasing farm tenancy. Only by a long-time program, carefully followed and patiently adhered to, can headway be made against this cancerous condition in American farm life. Such a program is contemplated by the Bankhead-Jones Farm Tenant Act, and to carry out that program funds should be provided each year.

An editorial in a recent issue of the Christian Science Monitor, I think, expresses well the proper attitude toward this problem. It is as follows:

[From the Christian Science Monitor]

#### TENANTS AND CONSUMERS

For several years the United States has been mildly stirred about the trend of farm tenancy. And well might it be. People have been losing their hold on the land at the rate of about 40,000 a

year and falling into the tenant and sharecropper relationship which too often means shiftlessness, discouragement, and drifting.

Under these conditions, while applauding the general sentiment in the House of Representatives which has blocked heavy proposed farm parity payments and made deep cuts in the Department of Agriculture appropriation bill, it may be asked whether the deletion of the \$25,000,000 for continuation of the farm-tenancy program is true economy. This is the provision under which loans for 40 years at 3 percent are made to selected tenants to help them establish themselves as small-farm owners.

Representative DIRKSEN, of Illinois, made the point against this program that it has reached only 13,328 borrowers in 3 years out of an enormous number of former landowners that have become dispossessed. The raising of farm prices, he implied, would enable the vastly larger number to hold their farms, and without a charge on the Treasury. But prices of the products grown in areas where ownership of farms has decreased—principally cotton, corn, and wheat—are determined ultimately by world markets, and if raising farm prices contemplates more tariffs, even an embargo would not aid them a nickel's worth.

There is a direction, however, in which tariff revision might help tenants and croppers to acquire or reacquire farms. This is the direction taken by the Hull reciprocal trade agreements program to reduce the costs of things that farmers and other people buy. This would benefit not only all farm tenants but all consumers. The point is well taken that it would be better to help all farm tenants than only a few, but it is better to do what can be done than to do nothing at all. And it may legitimately be asked what would be done about this serious national problem by those who proposed to repeal both the farm-ownership-aid program and the Trade Agreements Act.

### Continuance of Soil-Conservation Program

#### EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

#### RESOLUTION BY BOARD OF SUPERVISORS OF THE NORTH CROWLEY RIDGE SOIL CONSERVATION DISTRICT

Mr. GATHINGS. Mr. Speaker, in view of the all-important question of soil conservation, I ask unanimous consent of the House to include in the RECORD a resolution which I have received from the Board of Supervisors of the North Crowley Ridge Soil Conservation District, comprising 307,000 acres in Clay and Greene Counties, Ark.

The resolution is as follows:

Whereas the farm and grazing lands of the State of Arkansas are among the basic assets of the State and the preservation of these lands is necessary to protect and promote the health, safety, and general welfare of its people, and

Whereas improper land-use practices have caused and have contributed to a progressively more serious erosion of the farm and grazing land of the State, particularly in the Crowley's Ridge area of Clay and Greene Counties, and

Whereas the consequences of such soil erosion are the reduction in productivity and outright ruin of farm lands; the silting of reservoirs, streams, and drainage ditches; declining acre yields of crops; an increase in the frequency and intensity of floods; destruction of the tax base; and the impoverishment of families attempting to farm eroded and eroding lands, and

Whereas the work of the Soil Conservation Service has been of great and lasting benefit by assisting this soil conservation district and other such districts throughout the Nation to prevent the destruction of lands by soil erosion through the establishment of soil conserving practices such as terracing, strip cropping, planting of permanent pastures and meadows, rotation of crops, planting of forest trees, contour furrowing, construction of farm storage reservoirs, and the planting of badly gullied and highly erosive areas to soil-holding plants: Be it

Resolved, That the Board of Supervisors of the North Crowley Ridge Soil Conservation District, representing over 3,000 farmers, opposes any reduction in funds for the Soil Conservation Service, and that the appropriation of funds be not less than the appropriation for 1939; and be it further

Resolved, That this board emphatically supports the principle that the wealth of this Nation and the welfare of its people demand that soil conserving practices be installed on all eroding lands, and that it should be the policy of the National Congress to provide for the conservation of the soil and soil resources of this country.

## Should a President Run for a Third Term?

## EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

RADIO ADDRESS BY HON. THOMAS A. JENKINS, OF OHIO

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following, delivered yesterday over the radio by my colleague from Ohio, Hon. THOMAS A. JENKINS:

Ladies and gentlemen of the air, my subject is, Should a President run for a third term? While this has been a question of great interest from the days when the Constitution was being written, it never has been so much to the front as it is now. From the foundation of the Republic no President serving his second term ever considered contesting for a third consecutive term. That is the reason for the great interest manifested in the future actions of Franklin D. Roosevelt. The great Washington no doubt could have had a third consecutive term. Although Jefferson was popular, he could not have had a third term because he had on many previous occasions indicated his opposition to it and gave most convincing reasons for his position. Andrew Jackson also was popular, but he had recommended in each of his annual messages to Congress that the Constitution be amended to provide for "a single term of 4 or 6 years." I have seen it in print that Mr. Coolidge could have had a third term. I think this is doubtful. At any rate, Mr. Coolidge had not served two full consecutive terms. Theodore Roosevelt contested for what might be considered as a third term, although he had not served two full terms, but it was not for a third consecutive term. Grant reluctantly permitted himself to be considered for the nomination for a third full term, but it was not consecutive, and he was not nominated. The danger from a third term comes from its being consecutive. Three nonconsecutive terms would not be fraught with the danger from bureaucracy and dictatorship that would attend three consecutive terms. All our two-term Presidents have declined to consider three consecutive terms, and those who considered a third nonconsecutive term were emphatically denied it. What will Franklin D. Roosevelt do? Will he emulate his patron saint, Andrew Jackson? Will he follow the example of Jefferson, the founder of the Democratic Party? Will he laugh off the Democratic platform of 1912, which said: "No man should be eligible for a third term of the Presidential office"; and the platform upon which Woodrow Wilson was elected, which favored a constitutional amendment making a President ineligible for more than one term? Or will he order his New Deal forces to boldly assault the ramparts of custom and tradition and offer himself for election to a third consecutive term? This question engrosses the attention of more of our people at this time than any other public question. Should he decide to contest, his friends, no doubt, will argue that there is an emergency existing in national affairs and that the best interests of the Republic demand it.

Let's analyze this without any political partisanship:

- (1) Do his real friends favor his entrance into the contest?
- (2) Is there in reality an emergency?
- (3) Do the best interests of the Republic demand it?

I

Do his real friends favor his entrance into the contest? In a case of this kind one's real friends should mean not relatives or cabinet officers or persons one employs to boost his cause. The presidency is a political office. A candidate is elected because he has been chosen by his party to be its candidate and that candidate should at all times attempt to reflect the wishes and principles of his party. Under our system of government two parties are contemplated. Our Republic will not long endure if we find ourselves divided in our loyalty to cliques and blocs and a myriad of small political parties. Political parties are not economic parties. They are in fact political parties. It is not likely that the majority of the political leaders of the President's party favor him for a third term. Most of those who do are moved to that position by the fact that because of the President's popularity with certain groups by reason of his efforts along economic lines it is expedient to support him for his third term. A spontaneous ground swell that would carry one to a third term is a thing quite different than a highly geared publicity machine designed to move speedily and ruthlessly, if necessary, and to constantly manufacture and distribute favorable sentiment for the candidacy of some one individual. In spite of the popularity of the President, ostensibly for his efforts along economic lines, not one of the Gallup polls taken on the straight-out issue of electing the President for a third term has shown a majority for him.

These polls show the strength of the sentiment against a third term. There is a powerful sentiment in the Democratic Party against a third term for Presidents. In 1928 when it appeared that

Mr. Coolidge might aspire to a third term, the Senate of the United States adopted a resolution against a third term. This was supported by practically all of the Democrats in the Senate. The resolution is as follows:

"Resolved, That it is the sense of the Senate that the precedent established by Washington and other Presidents of the United States in retiring from the presidential office after their second term, has become, by a universal concurrence, a part of our republican system of government, and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions; and be it further

"Resolved, That the Senate commends observance of this precedent by the President."

This was only a few years ago. Many of the Democratic Senators who voted for this resolution then are yet Members of that great body. Among them are: Senators ASHBURST, (dear ALBEN) BARKLEY, GLASS, HARRISON, KING, MCKELLAR, NEELY, PITTMAN, SHEPPARD, SMITH, THOMAS of Oklahoma, TYDINGS, and WHEELER. No doubt each of these great men, all friends of the President, will find it difficult to square that vote with an open advocacy of his candidacy for a third term. Senator NORRIS also voted for that resolution, but somehow it seems he has changed his mind. I repeat, then, it is very doubtful that the President's real friends are encouraging him to seek a third term.

II

Now we come to our second proposition: Is there a real emergency such as would require the reelection of the present incumbent? That, of course, would depend upon the nature of the emergency and upon whether the Democratic Party has only one man in its membership that can meet the emergency. In 16 years as a Member of Congress I have met many highly qualified men who are now affiliated with the Democratic Party who could fill the office of the Presidency with credit and honor. To claim that there is only one man capable of leading does not do justice to the great Democratic Party.

As to the existence of a real emergency, I leave that with my audience. What one might think is an emergency is not such to another. If we are in the midst of an emergency, it most likely is the same emergency that has been offered as a reason for the passage of much legislation in the past 7 years; and it is no doubt the same emergency that has been used as a reason for the colossal governmental expenditures for the past 7 years. If this is the emergency that confronts us and makes the election of the present incumbent for a third term imperative, I might timidly suggest that this unsurmounted 7-year-old emergency might be a reason why the present incumbent should not offer himself for a third term. He should better let someone else try to remove this emergency.

III

Whether the best interests of the Republic demand the reelection of the present incumbent for his third consecutive term should not be decided upon the present-day economic conditions. This is a much larger question than personal interests or party success. It is beyond and outside of the personality or the personal welfare of the man. It is a matter that was given much consideration in the Constitutional Convention in 1787. Hamilton favored a strong national government with long tenure for the President. His position had practically no support. Jefferson, whose opposition to a monarchy was a passion with him, although he was in Europe when the Constitution was being written, through his followers was successful, early in the convention, in having the tenure fixed at one term of 7 years with no succession. This provision remained in the tentative draft of the Constitution until September 1, 2 days before the final agreement of the convention, when the term was reduced to 4 years with no mention of additional terms. Of this change Jefferson, years later, said:

"My wish therefore was that the President should be elected for 7 years and be ineligible afterward. This term I thought sufficient to enable him, with the concurrence of the legislature, to carry through and establish any system of improvement he should propose for the general good. But the practice adopted I think is better, allowing his continuance for 8 years, with a liability to be dropped at the halfway of the term, making a period of probation."

Jefferson further commenting on this question of whether the best interests of the Republic demand the retention of any one man in the Presidency for three terms, said:

"If some termination to the services of the Chief Magistrate be not fixed by the Constitution or supplied by practice, his office, nominally for 4 years, will, in fact, become for life; and history shows how easily that degenerates into an inheritance."

When Jefferson said, "His office, nominally for 4 years, will, in fact, become for life," he knew what we know, that if we ever break this third-term rule for a President he will be President for life if he desires it.

Some men may be strong enough to carry on the democratic processes of a government for life, but history does not name one. On the contrary, history shows where bureaucracy has throttled the strongest. When the executive usurps the other branches and the orderly processes of government fail, the Constitution is impotent. An impotent constitution in the hands of a senile, benevolent dictator is as impotent as in the hands of a despotic dictator. When a dictator, benevolent or despotic, comes in the Constitution goes out.

Philosophically Jefferson was sound, and practically he was sound when he said, "Should a President consent to be a candidate for a

third election, I trust he would be rejected on this demonstration of ambitious views."

My friends, the President's actions indicate that he might seek his third term but his words indicate the contrary. I know they say "actions speak louder than words," but let us see. On March 4, 1937, on the occasion of the President's victory dinner, and when he was starting on his second term, he said:

"I am by no means satisfied with having twice been elected President of the United States by very large majorities. I have an even greater ambition. My ambition relates to January 20, 1941. My great ambition on January 20, 1941, is to turn over this desk and chair in the White House to my successor."

It is hard to conceive that the President would fail to keep his promise. Although there is no constitutional provision prohibiting a third-term candidacy, yet there is no provision sanctioning it. We do know what a large majority of the members of the Constitutional Convention did not favor long tenure.

In view of the almost unanimous opposition to a third term of all classes of people from George Washington down to the present time, the President should not temporize further or keep the people agitated. With great unrest in the world we, of all nations, should not encourage internal unrest and discord. Dictatorships thrive on discord and unrest. They stalk across the world, recognizing neither right nor justice, disregarding all promises, however solemnly entered into, defying nature, and denying God. All this comes from a usurpation of executive power.

To break the time-honored custom of two terms for a President and to elect him for a third, a fourth, and a fifth term would launch us on a course that might irresistibly lead us to national destruction. Unlike the legislative and judicial branches of the Government, the executive branch is one man only. This one man is the Commander in Chief of the Army and the Navy. He names the Secretary of the Treasury, who might improperly take from the people the power to control the purse strings of the Nation. He names the Attorney General, who is the legal representative of the Government in all its activities. To give him the additional power that comes from the control of a million Federal employees, federated into bureaus, by controlling their action for a long and uncertain tenure is a danger which we should recognize before it is too late.

Totalitarianism inevitably displaces individual freedom of action in business, and chokes free speech, and stifles free worship. God forbid that the time may ever come in America when one man shall call himself "the state."

## Federal Employment Hits Peak

### EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

Mr. DWORSHAK. Mr. Speaker, there were 68,377 more civil employees in the executive branch of the Federal Government on December 31, 1939, than on December 31, 1938, according to the report just released by the United States Civil Service Commission.

At the end of 1938 the civil personnel totaled 919,161, while there were 987,538 employees listed at the end of 1939. Only during 2 months in that 12-month period was there any reduction in the number of employees, thus reflecting a persistent and definite upward trend in governmental employment.

The pay roll for the month of December 1938 was \$142,074,336, but for the same month 1 year later the amount was \$152,331,559, showing an increase of \$10,257,223. On the basis of 1 year this would amount to almost \$2,000,000,000 solely for salary payments in the executive departments.

The civil-service report also shows a steady upward trend in the District of Columbia, where 120,852 employees were listed on December 31, 1938, and 127,597 at the end of 1939. These figures for both the District and the entire country establish all-time peaks.

The Reorganization Act became effective July 1, 1939, when there were 925,982 civil employees, or 61,556 less than 6 months later. Therefore, it is obvious that despite the claims advanced in behalf of this program to effect efficiency and economy, and encourage consolidations in the executive departments, the results are in conflict with this trend. In reality, bureaucracy is still rampant, and the New Deal may soon be able to adopt the slogan: "One Million Employees by the End of 1940."

LXXXVI—App—43

The December report released by the United States Civil Service Commission contains the following:

TABLE 1.—Civil employment in the executive branch of the United States Government by funds and character of employment, November and December 1939

Item	December <sup>1</sup>	November	Net change	
			Increase or decrease	Percent
Entire service: All employees.....	987,538	932,641	54,897	5.9
Regular funds:				
Full-time permanent.....	728,339	746,725	18,386	2.5
Full-time temporary.....	81,655	92,439	10,784	13.2

Part time.....	26,452	36,003	9,551	36.1
Emergency Relief Administration funds:				
Full time.....	55,915	55,841	74	.1
Part time.....	2,003	1,633	370	18.5
In the District of Columbia: All employees.....	127,597	126,277	1,320	1.1
Regular funds:				
Full-time permanent.....	108,160	109,771	1,611	1.5
Full-time temporary.....	3,817	6,541	2,724	71.6
Force account.....	6,277	1,091	5,186	82.8
Part time.....	489	1,091	602	123.1
Emergency Relief Administration funds:				
Full time.....	8,842	8,858	16	.2
Part time.....	12	16	4	33.3
Outside the District of Columbia: All employees.....	850,941	806,364	53,577	6.3
Regular funds:				
Full-time permanent.....	620,170	636,954	16,784	2.7
Full-time temporary.....	77,838	85,898	8,060	10.3
Force account.....	86,897	34,912	51,985	60.0
Part time.....	25,963	34,912	8,949	34.5
Emergency Relief Administration funds:				
Full-time.....	47,073	46,983	90	.2
Part-time.....	1,991	1,617	374	18.8

<sup>1</sup> Preliminary.

<sup>2</sup> Data on full-time temporary employment is not available for November. The comparison, therefore, is made between the full-time employment in November and the combined permanent and temporary full-time employment in December.

## Americans of Polish Descent

### EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, February 9 (legislative day of Wednesday, February 7), 1940

ADDRESS BY HON. PRENTISS M. BROWN, OF MICHIGAN

Mr. MINTON. Mr. President, on February 4, 1940, on the occasion of General Haller's visit, the distinguished junior Senator from Michigan [Mr. Brown] delivered a stirring address to Americans of Polish descent. I ask unanimous consent that it may be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

I am here to aid and support you in your effort to help your unfortunate brothers in Poland. God knows they need help. I am glad that our great President Roosevelt, speaking through his Secretary of State on October 9 last, announced that the United States would continue to maintain relations with the Polish Government and would ignore the claims of Germany and Russia that Poland no longer existed. I agree with the new President of Poland when he said, a few days ago, "Poland has not perished as long as we live. Let us hurl at the enemy those proud words of the national anthem, 'Poland is immortal.' We shall deliver her from captivity and restore her from ruin." As far as this country is concerned, Poland lives. Its Ambassador, Jerzy Potocki, is in Washington and Poland remains in the family of nations, temporarily overrun by two armies, but certain to be restored to Poland's people. May a just God hasten the coming of that day.

The visit of General Haller comes at a time when the civilized world is astounded at the persecution of Poland's people by Hitler and Stalin. Many reports have reached us, but not until the facts given the Pope by Cardinal Hlond became known did we realize the enormity of the crime against Poland. The persecution of

priests and the destruction of religion seems to be the main aim. They know that while Poland's great church lives they cannot exterminate the old homeland.

I read you a few short paragraphs from Cardinal Hlond's report to the Vatican:

"The new year, with its frail but refreshing promise of peace, brings us almost daily from Warsaw and Cracow, from Pomerania, Posen, and Silesia, a tale of destitution, destruction, and infamy of every description \* \* \*. These are not confined to the sections of the country under Russian occupation, heart rending as news from that quarter has been. Even more violent and persistent is the assault upon elementary justice and decency in that part of prostrate Poland that has fallen to German administration."

"The richest part of western Poland is being unceremoniously stolen from the Poles and deeded over to the Germans as the real proprietors are packed off in foul-smelling trains to the war-torn region of Warsaw. \* \* \*"

"A system of interior deportations and zonings is being organized in the depths of one of Europe's severest winters on principles and by methods that can be described only as brutal. And stark hunger stares 70 percent of Poland's population in the face as their reserves of foodstuffs and tools are shipped to Germany. \* \* \*"

"The most Catholic diocese of Poland, with more than 7,000,000 Catholics, will soon become a land of infidels. \* \* \*. This extermination is continuing without interruption and takes the shape of perverse sadism. \* \* \*. It is a real extermination, conceived with diabolic evil and executed with unequaled cruelty. \* \* \*. We cannot help but refer to this as one of the most serious enormities of all history."

I think that if you will search deeply you will find that mankind in general will suffer almost any kind of enslavement other than enslavement of the mind. I think you will find also that from the days of the holy wars of the crusades down to the present struggle in Europe, that intolerance, the desire to impose the thoughts and beliefs of a more powerful and numerous people upon the less powerful, the minority, is still the deep, underlying cause of war.

I said a moment ago that man would accept almost any yoke of service. He will willingly obey the laws which impose restrictions upon his right to do business, such, for example, as tariffs, trade limitation, and regulation; on his mode of living, such as the type of house he may build in a certain locality, the speed at which he will drive his automobile, and even the number of hours that he will work, and the minimum rates of his pay. He will assent to the public demand that his children obtain a minimum of schooling in schools of his own choice. In short, he will accept the restraints that civilization requires. All of these restrictions on personal liberty we generally recognize as being necessary to our peaceful living together.

But, Mr. Chairman, the most important thing in our lives is our individual theory of morality, our ideas of the future, our religion, our worship, particularly the course that we should take in life to assure, as nearly as we each think we can, what will happen to us after we leave it. In this realm the God of us all has placed in us an unquenchable determination that we shall think our own thoughts, live our own life of worship, and attach ourselves to the religions of our choice. When men interfere with this phase of our natures, no matter what the cause, we humans rebel at restriction. There is also a desire on the part of mankind to impose, persuade others to their favored viewpoint; and that desire, carried to extremity, is, in my judgment, the chief cause of world unrest, of world war. The converse of this is the denial of the right to worship, to the exercise of religion, of the right to believe according to the natural processes of thought of each individual.

If wars were carried on today in the twentieth century as they were carried on in the nineteenth century and preceding centuries, there would not be the suffering that we have today. Then armies fought as representatives of nations. Today the entire populace is involved. The only civilian contacts with war in the old days were in those places through which the armies passed, and in the few and usually remote places where battles took place. Now the whole population of a nation is in fear of air raids. Where once men looked upward to the skies for peace, now it is filled with the hellions of destruction. Peaceful travelers are the targets of undersea assassins. Neutral ships and the property of citizens of neutral nations are destroyed without hesitation and without discrimination. In the eyes of the rulers of certain powers every babe in the land is a combatant. The Chinese philosopher Confucius is generally credited with the idea of the Golden Rule. Five thousand years of bloody history has not taught the peoples of the world the truth of the Golden Rule. At least we do not apply it. The excesses of the savage barbarian of the past came from an uncivilized, uneducated, untaught mind. He justified his savagery upon the ground of some strange belief, but the cold-blooded barbarian of today has been taught the tenets of religion. He knows of pity, tolerance, humanity, but he rejects them all. The savage of the past knew no better; the savage of today can plead no such immunity when he faces his Maker.

I cannot understand intolerance. I do not believe that I have an ounce in me. You know that the great Catholic Church has been the object of intolerance on the part of many. You know that attempts have been made to prevent her from educating her own children. My earliest political effort was my resistance to the so-called parochial-school amendment. My first national political

convention was one in which I, a Methodist, voted constantly and continually for a great Catholic, Alfred E. Smith, of New York.

Mr. Chairman, we are now in a State which was carved out of a Territory whose basic organic law, the Ordinance of 1787, stated the great principle that it was founded for the purpose of "extending the fundamental principles of civil and religious liberty, which form the basis whereon these republics, their laws, and constitutions are erected, to fix and establish those principles as the basis of all laws, constitutions, and governments which forever hereafter shall be formed in said Territory."

The substance of that ideal is the fundamental law of Michigan today. And, Mr. Chairman, we live in a Nation whose Constitution provided in its first amendment, yea, in the first sentence of its first amendment, the following:

"Congress shall make no law respecting the establishment of religion or prohibiting the free exercise thereof."

I am not among those who believe that the moral force of what I consider to be the prevailing public opinion of my country should not be expressed and used. I do not believe that neutrality implies that a citizen or a Member of Congress may not condemn aggression, cruelty, and modern barbarism when he finds it. And, Mr. Chairman, I have not hesitated to express my views concerning the actions of the present ruler of Germany. During the neutrality debate on the floor of the United States Senate, and subsequently over the radio, I said:

"American public sentiment is against Germany in this war because the ruler of the German people has seized and throttled democratic government in Germany and has reorganized a powerful nation apparently for the purpose of dominating Europe. Our sentiment has risen against him because he has cruelly persecuted a Jewish minority; because he has endeavored to break down religion, attempted to break down the great Christian Church in Germany, Catholic and Protestant alike; because he has mercilessly bombed Polish cities and slaughtered Polish citizens without just cause; because he has devoured the democratic countries to the south of Germany, such as Austria and Czechoslovakia, against their will. I think no military master or ruler in history has gone as far as he has. He aspires not only to one-man rule, but he names his successor. Even the absolute monarch claimed no such power; he was bound by the laws of legitimate inheritance and succession. But Hitler names his successor, his successor's successor. But we condemn him most because he has plunged an unwilling world into war, unleashed the most contagious passion known to man and menaced my sons and yours. This and much more is the reason for the dominant anti-Nazi sentiment today."

We view the nefarious doctrines of Russia in the same way. The present wave of sentiment for the heroic Finn in his defense of his homeland is due in part to our aversion for communistic Russia. My own bill, now pending in the Senate, proposes to give Finland such aid as we can within the bounds of neutrality in her battle for national life. Our Nation must be and will be neutral in act, but we cannot all be neutral in thought.

There still swells within our breasts the love of human freedom, sympathy for the oppressed. We cannot view the spectacle of a brutal foe, outnumbering his victim 50 to 1, in an unprovoked attack on a peaceful nation, without emotion. Those who love liberty need not be silent.

The views and the attitude of this mighty Nation of the western world are important to the peoples of Europe. No matter how much they may rail at us over our commercialism they know that in the last war we asked nothing and received nothing. That we expended tremendous amounts of money, of resources, or men. They know all this stands upon our ledgers in red as a great loss, that the prevalent opinion is that our effort was in vain; but the people of Germany, the people of Russia know that our great President, Woodrow Wilson, struggled for a just peace; that probably due to the suffering of the Belgians and the French, to the destruction caused by the German Army, vengeance rather than justice dictated the terms of the peace treaty, which was an unfortunate one for the world. The thinking people of the Central Powers know that the public opinion of this Nation, not only because of its morality but because of its tremendous power, can be, and is, a potent force in the world. I favor the use of that American public opinion in condemnation of the course that the German ruler has taken in his treatment of the civilian populations which he has subjugated and cruelly mistreated, and though that public opinion will not affect him nor the servile sycophants around him it will ultimately affect the people of Germany. And that public opinion will be a tremendous factor in shaping for the world a course which all men of good will hope will see the end of this half century of war.

In the task of the present hour—that of getting aid to the suffering of Poland—let me pledge you my complete support. Everything that can be done to support you will be done. I look for the complete and total defeat of Poland's foes. I foresee the rise of their own people against the cruel masters of the moment. As citizens we express our abhorrence of these atrocities against men, women, and children; against priest, church, and God. We urge the utmost we can in charity give, to aid them. But, Mr. Chairman, the greatest service we in America can give is to maintain this Nation, now and in the future as it has been in the past, an example to the world that a solid, substantial, and permanent government can exist with liberty of worship and individual freedom for all its people. This is our mission. To follow it is the hope of this war-weary world.

## Threats to America Become Realities

## EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, February 9 (legislative day of Wednesday, February 7), 1940

ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD an address that I delivered on January 18, 1940, at the University of North Carolina, which is located at Chapel Hill, N. C., under the auspices of the Carolina Political Union. The title of this address is "Threats to America Become Realities"; and I may add that it was broadcast over station WPTF from the capital of our State, Raleigh. As a result of this address, which was broadcast, I have received literally thousands of letters from North Carolina and adjoining States reached by the facilities of WPTF, all of which evidenced the interest of the authors thereof in my five-point all-American program which was discussed at that time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen, I am indebted to the program committee of the Carolina Political Union of the University of North Carolina and its members for providing me this opportunity to speak tonight. I also wish to thank the management of WPTF Radio Station at Raleigh, N. C., and WDNC, of Durham, N. C., for the opportunity provided me to reach the ears of its thousands of patrons throughout the Commonwealth of North Carolina.

The greatest challenge confronting our people today is the need to defend American life and traditions against the inroads of communism, fascism, nazi-ism, and all other isms or dictator doctrines—as well as defending ourselves against propagandists of nations at war at the present time in Europe and Asia who would have us take sides with, or show some partiality to one side or the other.

I wish to state in the outset that it is my humble opinion that we, as a nation, should maintain absolute neutrality, and in this respect, may I, at this time, remind you of the patriotic warning once delivered by the Father of his Country, George Washington, in his farewell address, at which time he said: "Excessive partiality for one foreign nation and excessive dislike for another causes those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other."

Frankly, in reference to propagandists, I am constrained to believe that we are flunking our national test. I hope not. We all, of course, are depending on our Neutrality Act, a dike of words against a sea of need and blood. Each of us are asking our fellow man to consult the national interest first at a time when the interests of their children are ringing in their ears. We are asking that the little man be big. That, in a sense, is a measure of the smallness of our approach.

It has been said that the stage of war, the stage for our participation, is being set. It is a bare stage, and on it are a few kitchen chairs, an empty table, a congealed stove; in one of the chairs sits a man who fears the morning and who will accept any hope that comes. So far we have been afraid to look at him.

From many sources we are warned to watch out for propaganda. That is fine, but frankly, in the larger source perhaps this is a false steer. Some say that the propaganda fight has already been fought and won by the Allies. They assert that the United States now hates Hitler more than it hated the Kaiser in 1916, and that the toothiest of British lecturers can add only a drop to the brimming bucket of our hate.

We have arrived at an hour when it is of the utmost importance for us to protect our phases of American life and traditions. The history of every nation is marked by periods of unusual stress. At this hour, when the ominous clouds of strife hang heavy over distant lands, the thunder of their wars awakens us to the possibility of threats to our own America. It may be truly said that there has never before been the need that now exists to seek the truth and to recognize the facts as they are. While other peoples of the world are regimenting and assembling to hear the pronouncements of government, and while others have been mobilized and are now mobilized for war in Europe and Asia, we of

America gather to seek the truth without the crushing hand of any dictatorship or imperialistic democracy directing our deliberations or determining in advance what shall or shall not be said or done.

Upon the American people of our present time has evolved the serious work of defending the cherished fundamental principles of Americanism. We cannot value this too highly; in fact, there is no price or cost too great to incur in the defense of our American heritage. Such a heritage continued merely means the preservation of life and liberty itself. Our national integrity and our internal security is today at stake.

Many of the mightiest nations on the face of the earth are engaged in the settlement of all their differences by the annihilation of millions of human beings. In America we are at peace with the world, and I trust to the Almighty that we may remain so in order that we may daily be the recipients of the smiles and inspiration provided by the youth of our land.

Let us for the moment reflect upon the past, and in so doing let us recall to memory the vanishing democracies in Europe and the autocracies that have risen in their stead. This is partly a picture of social chaos and economic security, but above all, it is a picture of the failure of governments to keep their institutions and processes of democracy clean and efficient. It might be said that it is a picture of democratic governments that failed not only to keep their people physically secure but also to maintain the faith of the people with the integrity and efficiency of their government.

Such must not happen in America. For more than a century and a half we have been successful in maintaining a system of human living—despite its weakness and imperfections—representing the goal of thoughtful men, great and humble alike, since the beginning of the history of our land. Real Americans who respect liberty on the one hand and justice on the other are expecting that we keep that system alive for Americans in a world gripped by war, and our real duty and obligation is to show that we are worthy of that sacred trust.

It is our duty to unite tonight, tomorrow night, and every night for the purpose of defending ourselves against the insidious propaganda having as its objective the fomenting of unrest and the bringing about of the destruction of our own American ideals. In the days gone by the United States was proudly known as the melting pot of the world, into which peoples living within the confines of our shores were assimilated into genuine American citizens whose thoughts and whose hearts were entirely concentrated upon the welfare of this country, and at the same time these citizens were provided all of the benefits, the opportunities, and the securities that the Revolutionary patriots suffered for and died for in winning our highly prized independence from the British at Yorktown in our sister State of Virginia.

In the past several years that melting pot has been consumed by the flames that provided the heat for assimilation. Unfortunately, but nevertheless true, there has come into being a subsurface element, dishonest, malicious, and shifty, which with wanton effrontery has sought to turn that once great melting pot into a catch-all for the things that could never fuse with our ideals. Despite the depths of our depression, we of this generation have had more advantages provided than were advantages ever known by those whose alien ways of living, whose foreign "isms" have slowly but gradually filtered into our land, as a result of our own stupidity and bigheartedness in permitting millions from foreign lands to swarm upon our fertile shores. Regardless of the opportunities guaranteed to all within our midst, the liberty and opportunities provided, there are those who have betrayed America by eternally boring from within in an effort to destroy the very foundations of our great American edifice of freedom. Yes, the enemies within our midst, like termites, have sought by every scheming means to inculcate their alien ideas into our social order, fouling our cradle of liberty and justice.

This is no place for the pinkish fellow-traveler, for those who would regiment our people. This is the hour when all of us must think straight and not be misled by those whose allegiance is pledged abroad, by those within our midst, and by those who come from foreign shores, for the purpose of leading us astray by honeyed words and brilliantly painted pictures.

In selecting a title for my message to you there ran through my mind the fact that through the events of the hour we are facing realities which many saw as threats only a comparatively few years ago. Thus, I shall speak to you on Threats to America Which Have Become Realities.

I am happy to come home to North Carolina and be with you here at a great institutional center, which I was privileged to attend, and proud to have had the honor of attending. I have been vitally interested in the maudlin sympathy which we have shown for undesirable aliens who unlawfully came to the United States, or who came here lawfully and remained unlawfully. Likewise, I have been vitally interested in maintaining America's neutrality so that we would not become involved in another worldwide war, which would sweep from the mothers of America their own flesh and blood in the form of their sons. In other words, I am vitally interested in maintaining American traditions, in maintaining America's high position in the world of nations, and in maintaining America's neutrality in the midst of chaos, war, and in maintaining America for Americans.

Since entering the United States Senate, and before, I have been interested in maintaining America for Americans; I have contended that we should close our gates to the elements of the

world, and that we should deport all alien criminals and undesirable. Naturally, I have been singled out for censure and condemnation by "ism" groups, who have not the slightest regard for American traditions. I have been censured as intolerant, anti-this and anti-that. This condition exists and this censure and condemnation continues despite the fact that I have no quarrel with any race, creed, or color so long as those involved act in the way of true Americans.

My chief enemies are the Communists, against whom I am waging an unrelenting war, and certain minority elements who are insisting that we open the floodgates to the refugees of the world who are trying to come into our country to take jobs away from our own American workers. Yes, they have accused me of being either Fascist or Nazi simply because I believe in our citizens and our country first. They have accused me of being more sympathetic with this or that warring faction in Europe or Asia because I want to keep the United States out of war. But these wholesale accusations are just part of the vindictive, malicious campaign against me by some of the enemies of America for the sole purpose of discrediting me with all you real Americans here in North Carolina.

One malicious lie is that the American Vindicator, which is edited by me and published monthly at Washington, D. C., is financed by secret funds. This deliberate falsehood is being spread by the vicious minorities representing communism, nazi-ism, and fascism alike. However, the noisiest of all groups attempting to smear me are those advocating that we open wide the gates of America so that the flood of refugees from Europe can be dumped on our shores. I refer to some of those who are demanding the passage of the Wagner-Rogers resolution which would admit 20,000 alien refugee children from Germany. I have consistently opposed the passage of that resolution because I do not believe that these 20,000 refugee children should be permitted to come to the United States to compete with our own American boys and girls. In this connection, I might state that last year 750,000 boys and girls were graduated from our high schools and colleges, and only one out of every three will be able to secure a job within the next 5 years.

Now, here's the real truth about the revenue of the American Vindicator. Its only source of income is derived from the sale of subscriptions. Our books are open to the public. We will not accept a donation from anyone at any time, in any amount, or under any circumstances. We will not accept an advertisement of any sort from any individual, firm, or corporation, and I defy any individual to prove to the contrary. I challenge my enemies to submit proof of their charges. They cannot do it. I am working night and day as your representative in the United States Senate in an earnest, honest endeavor to preserve my country for its own American citizens. I am working night and day to safeguard our beloved State. For these efforts I get some praise from real Americans, and a lot of criticism and abuse from alien and radical camp followers around the country.

Regardless of these attacks on me, I am going to continue to do my duty to my constituents of North Carolina and to my Nation as I see it, subject to their wishes.

The American Vindicator is published by the Vindicators' Association, which is a nonprofit corporation, chartered under the strict laws of the District of Columbia. I am the national president and editor. Under the charter I am specifically prohibited from receiving any salary or remuneration of any sort either directly or indirectly for services rendered. At my insistence, the charter was so drafted. I am happy indeed to be provided the opportunity to contribute my services because the objectives are to crystallize sentiment throughout the entire United States in behalf of bills which I have introduced in Congress pertaining to restricted immigration, deportation of alien criminals, etc.; in other words, for the purpose of preserving America for Americans.

The American Vindicator was launched for the initial purpose of sponsoring my immigration bills, but, in addition, the American Vindicator is equally enthusiastic in its support of legislation sponsored by any Member of Congress designed to keep America out of war, restrict immigration, rid the country of alien criminals, and wipe out every radical "ism" intended to destroy our form of government, such as nazi-ism, fascism, and communism.

These objectives are of vital importance to we North Carolinians. Fortunately we in North Carolina have but few aliens and Communists. Fortunately we have less aliens than any State in the entire Union. I, for one, want to keep it that way. However, unless we stop at once the influx of thousands upon thousands of aliens and refugees into America, North Carolina is bound to absorb some of this alien horde, some of these radicals and Communists, many saboteurs and spies. That is why we, as North Carolinians, should be interested in my proposed legislation and that of my colleagues.

Many other States, particularly the New England and extreme Western States have already been filled with aliens and refugees, who are taking jobs which belong to Americans. These States are also overrun with alien enemies of our Government. It is our duty to keep our State as it is. It is our duty to prevent any influx into the United States to curb "ism" activities throughout the Republic and to remain absolutely neutral in order that we may keep out of the wars raging in Asia and Europe, which are no affairs of ours.

I realize that the alien problem has never been a serious one in North Carolina. This, therefore, may explain some of the antagonism to the things I have advocated. Only a small portion of our total population is foreign born, and the great bulk of these people

have followed peaceful pursuits and enjoy fine standing in the communities in which they live.

My program of trying to help make America a place for Americans is not an outgrowth of an effort to find an issue upon which to work as a Member of the United States Senate. Long before North Carolina honored me by first electing me as one of its Senators I had been intensely interested in the laxity of our national immigration laws and policies. I had spoken of these conditions in all parts of the State and in our sister States. I believed, and believe now, that I was rendering a patriotic service to my country. I shall continue to do this to the limit of my ability. The Americanization program of the American Legion is virtually the same as the one I am advocating. The program of the Junior Order, United American Mechanics, for whom I have made many speeches in North Carolina, is in perfect harmony with mine. We are in thorough accord in reference to keeping out of war, stopping the influx of great hordes of aliens into this country, deporting alien criminals and undesirables, and maintaining our form of government. I take this opportunity to salute and to praise the American Legion, the Juniors and the Patriotic Order, Sons of America, and every other all-American organization that is fighting to preserve America for Americans, such as the Veterans of Foreign Wars and the Daughters of the American Revolution.

Hon. MARTIN DIES, chairman of the committee for the purpose of investigating un-American activities, stated in an interview provided to a representative of the press at Chicago that there are, roughly speaking, 7,000,000 aliens in the United States, foreign-born citizens who have entered our country unlawfully, or those who have entered lawfully and have remained here unlawfully, many of whom have been here for years and have failed to take out naturalization papers since their arrival. They come legally and illegally. They enjoy the same privileges and opportunities immediately upon arrival as you do. These opportunities were provided them as the result of the sacrifices, toll, and blood of the pioneers of America. Thousands of them are with us only physically and for their own gain, as their hearts are still in the lands from which they came. They earn millions here annually, and statistics reveal that many millions of their earnings in America each year are sent back to their relatives who remain abroad.

We are told that there are at least a million Communists here who seek to instill the false ideas of socialism. They want to raise here the banner of Stalin. The Dies committee has also exposed the activities of the German-American Bund, the members of which would substitute Hitlerism for Americanism. Stalin and Hitler are now bedfellows—we Americans cannot distinguish between the two. We want no part of Hitlerism and no part of Stalinism. I condemn now, as I have time and time again condemned, Hitlerism, communism, fascism, and every other foreign "ism" opposed to our true American principles.

Surely, at a time when we are seeking to maintain peace, when all of the hate of the war dogs is loosed with maddening fury, we should give attention to fundamental things which are necessary to keep peace, and continue on in building the finest civilization ever attained by man. In this connection, I am sponsoring a five-point program which is being advocated by the American Vindicator.

May I say to you who do me the honor to listen in tonight that I would personally appreciate your getting a pad and pencil and jotting down these five objectives as I discuss each and every one briefly. If you, as a constituent of mine and as an American citizen, can unearth one iota of evidence that my program—these five objectives—are not 100-percent American I want you to let me know about it. I will welcome your comments or your criticisms. If you approve of my five-point all-American program I would appreciate your writing me. Just address your communication to ROBERT R. REYNOLDS, United States Senator, Washington, D. C., and if you disapprove of the whole program, or any part thereof, I should appreciate your writing me. I want to hear from you. I want to know where you stand upon my proposals, designed for the purpose of saving America for Americans.

This five-point program is as follows:

Point No. 1: Keep America out of war. To date our part in the last World War has cost the American taxpayers approximately \$68,000,000,000 and more than 100,000 lives. Even now, 21 years later, our hospitals are insufficient to provide beds for our World War veterans requiring hospital care. Our veterans certainly should come first. Regardless of our personal opinions or sentiments, the United States should remain absolutely neutral. The age-old quarrels of Europe are no concern of ours, and we must not get mixed up in the present conflict. After all, this is only one of the many hundreds of wars, revolutions, and revolts in Europe within the past several centuries. We should devote our time, attention, and energies to the many problems here at home. Why should we waste effort in endeavoring to solve the problems of Europe? We must not let our sentimental attachments to the Old World lead us astray. We cannot be American and at the same time be "pro" anything else.

Point No. 2: Fingerprint and register all aliens: At the present time no one knows how many aliens there are in the United States. The Department of Labor, basing its estimate on the 1930 census, says there are only 3,628,103 aliens here. But that estimate was made upon a census taken 10 years ago. You know, of course, that any alien who entered the country illegally would not disclose himself to the census enumerators. In addition to that, no one knows how many aliens have illegally entered our country since 1930. However, admitting by way of comparison that there are 3,628,103 aliens here, this total represents more people than the

total population of North Carolina. Others declare there are 7,000,000 aliens in the United States. Of these millions now in our midst, some arrived legally, while others came illegally.

We should know how many aliens there are within our borders. We should know where they came from and when. We should know why they came and whether they arrived legally or illegally. But, more important, we should know where they are now and what they are doing. This information can only be obtained by a law requiring the registration and fingerprinting of all aliens. Stop and think for a moment. If we were to become involved in a war today, we would have millions of potential enemies and spies within our midst. There are now—even while we are at peace—thousands upon thousands of aliens in the United States who are accused of espionage and who are charged with committing sabotage. I have repeatedly stated that if we ever became involved in war there would be countless acts of espionage and sabotage. It would be difficult to lay hands on these enemy alien criminals, because we have no registration and fingerprinting law in this country. We know virtually nothing about the whereabouts or the activities of our aliens. My prophecies have been borne out 100 percent by the records of the Bureau of Investigation, Department of Justice, which is under the able direction of the Honorable J. Edgar Hoover. The American people owe Mr. Hoover a vote of thanks for having built up the finest law-enforcement organization in the world. He deserves the undivided support of all true Americans.

Information provided by the Bureau of Investigation reveals that in protecting our national defense this Bureau is now receiving daily more than 200 complaints of espionage, sabotage, and violations of our national-defense laws, or at the rate of 78,000 annually. Mark this: Prior to 1923 the Bureau received on an average of only 35 cases of espionage and sabotage yearly. In the year 1938, 250 cases were investigated. That is bad enough, but look at the record for 1939. From July 1, 1939, to January 1, 1940, a total of 5,799 new cases were received by the Bureau of investigation, while today complaints of sabotage and espionage are pouring into the Bureau at the rate of 214 daily, or 78,000 annually. These figures, provided by the Bureau of Investigation, will give you a true picture of how some of our aliens are directly loyal to their home countries. If we had a law providing for the mandatory registration and fingerprinting of all aliens, the work of this Department would be materially lessened. Agents of the Bureau could locate these alien criminals now engaged in espionage and sabotage with much less trouble and expense to the taxpayers.

Point No. 3: Stop all immigration for the next 10 years. Our own American workmen should first be given an opportunity to get a job. With more than 10,000,000 Americans unemployed and additional millions working only part time, 3,000,000 on W. P. A. rolls, 300,000 young men in C. C. C. camps, and 750,000 boys and girls graduating annually from schools and colleges who cannot find work, here is a problem we all must face. So why should we permit the thousands upon thousands of refugees and foreigners from all sections of the world to enter the United States and take the jobs which rightfully belong to our own people? Yes; it is high time that we became pro-American and looked after our own before we shed any tears about the unfortunates of other lands. American jobs should go first to American citizens.

Point No. 4. Deport all alien criminals and undesirable aliens. Our jails and penitentiaries are filled with alien criminals at the expense of American taxpayers. There are thousands of these aliens in our insane asylums and in our institutions for the treatment of those who have become habitual narcotic addicts. They are cared for, housed, clothed, and fed, and provided medical treatment with money taken from the pockets of the American people. We have too many law violators of our own without harboring those of other nations.

Crime costs the taxpayers of the United States more than \$15,000,000,000 a year, according to the estimation of the Department of Justice. This includes not only the direct costs, such as the maintenance of penal institutions, the losses occasioned by criminal acts, racketeering, and other unlawful activities, but the indirect costs, such as losses occasioned by the death of individuals through criminal activities. This is appalling. When will the American people awaken to this deplorable condition? No doubt, the total cost will exceed fifteen billion in 1940 when the toll includes the destruction wrought by alien saboteurs. We should empty our prisons and asylums by sending these aliens, dope fiends, and dope peddlers back home. They should be the burden of their own nations instead of being a useless and costly burden on the American people.

Point No. 5. Abolish all "isms" except Americanism. Wipe out Nazi-ism, fascism, and communism with equal enthusiasm. America should know only Americanism. Sweep from our shores every alien "ism" that would destroy the foundation of our form of government. Why should we permit these false doctrines to be spread in our midst? We are the only people upon the face of the earth who submit to these false doctrines which are being daily spread by outspoken enemies of the American Government.

I believe that the Dies committee has actually done more to uncover the poisonous groups engaged in un-American activities than any other movement. That committee has revealed the activities of the Nazis, Fascists, and Communists alike. That committee has rendered a great service to the people of America; and the people owe a debt of gratitude to Congressman MARTIN DIES and his associates. The committee should be continued, and the Congress

should see that it continues its excellent work by providing the committee at least \$100,000 more to pursue its investigation.

Harry Bridges, the west coast labor leader, has been whitewashed of the charge that he is a Communist. He came into this country illegally and has remained here for many years illegally. He is still with us and, no doubt, will be permitted to remain here to carry on the same way he has for years past.

Earl Browder, the Communist leader, who stated before the Dies committee that if the United States and Soviet Russia should become involved in a war, that he would do everything he possibly could to stop such a war—even to turn such a war into a civil war. Think of it! This Communist leader declares, without reservation, that in case of a war between the United States and Soviet Russia he would try to stop it, even if he had to create a civil war or revolution in the United States. Communist Browder is now under indictment by the Federal Government for falsifying passports. He went on trial in New York City yesterday. It will be interesting to note the outcome. Press reports reveal that he is about to become a candidate for a seat in the Congress of the United States.

How much longer will the American people continue to remain the laughingstock of the world? How much longer will they allow minority, un-American organizations, possessed of unlimited funds from Moscow, Berlin, and elsewhere, to work night and day like a lot of termites with the avowed objective, the destruction of the American Government.

Let's have more pro-Americans fighting for Americanism.

Let's have action.

Let's clean house.

Let's put our own affairs in order, attend to our own business, and look after our own people first.

Our citizens, our country, first.

## Tribute to the Late Senator Borah

### EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, February 9 (legislative day of Wednesday, February 7), 1940

ARTICLE BY RAY MCKAIG

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the Appendix an article entitled "The Human Side of Idaho's World Respected Spokesman," by Ray McKaig, published in the Boise (Idaho) Capital News of Thursday, January 25, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Boise (Idaho) Capital News of January 25, 1940]

THE HUMAN SIDE OF IDAHO'S WORLD-RESPECTED SPOKESMAN—CLOSE FRIEND WRITES REVEALING ARTICLE ON GREATNESS OF BORAH

(By Ray McKaig)

It was at a BORAH meeting in Emmett, Idaho, during the 1936 campaign. The trend at Washington had been away from constitutional safeguards. WILLIAM E. BORAH was staking his reelection on the plea for constitutional government. The meeting was tense. The Senator pled for the safeguards of free speech and free press, against the encroachments of bureaucracy. Up in the gallery rose a heckler, "Why are you for the Supreme Court, when that institution is a dictatorship, and would rob us of our political liberty?" The Senator's comeback was a classic, "My friend, that is where you and I part company immediately. The Supreme Court that you seem to hate so, makes it possible for you to now stand up there and criticize that same judicial body without fear of imprisonment. If Congress, under the lash of a dictator, should pass a law restricting the right of free speech, it would be that same Supreme Court which you so despise that would rule such a law unconstitutional, and preserve your present right of freedom to criticize in a free assembly." Nearly everybody cheered for the Senator.

Senator BORAH may be dead, but nevertheless he will live forever. The influences for good that one leaves behind, are necessarily a part of eternity, and Senator BORAH's heritage to America is the influences for good government so sorely needed. In Senator BORAH's political activities, and in all his political maneuvering, I never found a single unethical act.

Branded as a son of a wild jackass by Senator Moses of New Hampshire, WILLIAM E. BORAH's retort was, "Well—tame jackasses always wear collars." Whose collar Moses wore, Senator BORAH never said, but it silenced Moses, yet did not insult him.

Hailed as a radical, and out of step with the Republican Party, yet in one emergency the party leaders turned to Senator BORAH

for help, at last admitting that he was merely ahead of them a few years and had never advocated anything that was not good Republicanism.

The human side of Senator BORAH appealed to me. At a great dedicatory service of the Borah Peace Foundation in Moscow Senator BORAH was the guest of honor. In a reception at the university following the address the higher education tycoons were parading before each other in their Sunday best, regents, deans, professors, and matrons. In an unobtrusive suit of dark brown the Senator did not seem at all out of place in that well-dressed assembly.

Subdued and quiet, the conversation was being carried on in low tones. Suddenly heavy, harsh words boomed over and above the quiet of the room. Two big lumberjacks, heavily booted and in blue blouses and overalls, stood on a raised platform about 3 feet above the others, close to the doorway. Their unshaven faces and their woolly hair contrasted strangely with the polished appearance of the guests. "We have come 100 miles to hear BILL BORAH speak and a flat tire made us lose out. Now, by God, we are going to see him before he gets away." They pushed themselves past the embarrassed, pretty co-ed usher at the doorway, and looked over the astonished audience for their hero, Senator BORAH. Taking him to one side, they talked to him for fully 15 minutes, while the show went on without the guest of honor.

Dr. Hudson was the visiting professor from Harvard University. I happened to be standing near him when this scene took place. He was unable to keep his eyes from that large bay window where these three men were in a deep huddle. "Very unique," he commented to me. "Do you often have such experiences in this astounding West? Do you know, I rather like it."

We watched the Senator point out to the lumberjacks a small table covered with sandwiches. The taller of the two men, with a handful of rather thinly cut slices of bread, burst out again to the amused crowd, "Ladies and gentlemen, I hated to bust in on you. I like these sandwiches, even if they are a little skinny (he must have had a dozen in one hand!), but if you have any sense at all, you will vote for BILL BORAH for President." The lumberjacks went away happy. The Senator took his place back in the reception line; the professor from Harvard readjusted his glasses, and perhaps also his sense of values of political leadership; the co-ed usher smiled again to the newcomers. An educator from the East had learned that a lumberjack's welfare was just as dear to WILLIAM E. BORAH as the future of a so-called highbrow.

How did he react to young people? I watched him at the reception the school children gave him in Rexburg, Idaho. He was scheduled that evening to give an address in the Mormon tabernacle. As we drove into town, 2,000 clamorous children formed a line on each side of the road and cheered and cheered as we drove very slowly between them. Five hundred high-school students greeted us. At least 400 Ricks College young people joined the procession, all cheering or singing as we slowly followed the band into the heart of the town.

Time after time the youngsters would pile on the running board of my automobile as we crept along, eager to shake hands with their hero, Senator BORAH, calling to him personally and waving flags along the curb. Senator BORAH's face beamed as these children so warmly greeted him. That evening before we left for the tabernacle, a large crowd of women with torches came down to the hotel to escort the Senator. Even though that vast audience that night cheered him again and again, I know that Senator BORAH that day appreciated most the welcome he got from those children. At Buhl, Idaho, the granges combined to give him a large meeting. We went back to Twin Falls that evening, and as we left we could see two young girls walking along the country road. The Senator insisted that I stop and give them a ride. When we slowed down they recognized him immediately and the Senator said, "Aren't you young people rather far from home tonight?" "Oh, yes, Senator," replied one of them, "we walked in 2 1/2 miles tonight to hear you speak and now we are walking home, but your speech was well worth it."

They had no sooner got into the car when they brought up the subject of taxation. "Senator," said the same girl, "we certainly need help from you, and we need it badly." "What's wrong?" he asked. "The tax on lipstick is terribly high," she replied. Very seriously, this young lady plead for lower taxation on cosmetics. Without cracking a smile, Senator BORAH promised to investigate and help as much as he could.

As I started to chuckle, he gave me a punch, as he saw it was a serious matter with these two girls. He insisted on my driving them home, even though it took us a mile and a half off the highway.

I have seen old settlers, men and women, gather around Senator BORAH after a speech, all seeking just a moment's conversation with Idaho's great man. I have seen strong men cry after a thrilling outburst of oratory and denunciation of some wrong, and listened to them as they told the Senator how they had been his followers ever since he started in public life. Then how they would grab his hand and shake it as they thanked him for never failing them on a vote in Congress.

I have watched people go in and out of his office in a downtown building, where he always held open house. I have seen them come and go, the door of BORAH's office always open, and I knew the secret of BORAH's success. He lived with his people. It is because they knew him and he was in contact with them at all times.

Rich and poor, farmer and businessman, laborer, and of the profession—no one was barred from his door.

The Senator was not a wealthy man. He didn't seem to care for money. He liked folks and they liked him. I have been associated in four of his campaigns, and I know positively never did he spend as much as \$500 at any one time when he ran for the Senate, and he never accepted campaign contributions. His convictions were not for sale and he wouldn't buy the office either. "This has been the hardest summer I ever spent in Idaho," he told me on one trip several years ago. "Listening to the pitiful tales of many of my close friends who were once comfortably fixed, but are now in poverty, just about breaks my heart." No one will know until they have seen it with their eyes how much actual charity work Senator BORAH did.

Up in Blaine County he met an old friend one day who began to talk about his poverty. Senator BORAH took him off to one side away from me. I saw BORAH hand out some money. It slipped in the man's hands very quickly. The Senator got back in the car and he told me that man once owned considerable property. I protested about his giving away so much money. "You could not afford that \$25, Senator." "Yes, Ray, I could—he was an old friend of mine and he is going to California, where I will never see him again." That summer at every single place he spoke Senator BORAH personally handed out money to old friends, not that they asked for it but he knew they needed it.

Senator BORAH was so human that he could not be bitterly partisan. His political independence made him the idol of the independent voter of America. I have never heard him give a speech where he indulged in political personalities. He talked issues, and not partisanship. I think Luke Williams put it rightly when he said, "The reason Senator BORAH has such a grip on the independent vote of the State is they all think he votes and talks as they would if they were voting or making a speech."

One day in an automobile trip to the north I asked him a rather perplexing question. "Senator, again and again in the past years I have criticized you quite sharply in some of my letters because of some position you have taken on a public question. You have then very kindly answered my criticism and usually silenced me. Maybe it took a year, maybe it took longer, but with one exception subsequent events proved you were right and I was wrong. Your political foresight is so uncanny I have almost learned to accept your judgment even though it does seem wrong sometimes to me. Now, Senator, how do you get that prophetic vision? It is almost weird in its surety."

For a long time he didn't answer, and finally he said, "That may be so and may not be. You call it my straight thinking. Perhaps it dates back to my first term in the Senate. Near the house where Mary and I lived there dwelt an old man who was once a Cabinet officer under President Hayes. He knew Abraham Lincoln. He had worked as a clerk in the White House and had filed away the personal letters of the martyred President."

"One day I asked him how it happened that Lincoln, a country lawyer with no visible knowledge of statesmanship before he became President, was so wonderfully shrewd in judgment and right in his decisions and Executive orders. Sometimes Lincoln had to go against the judgment of his entire Cabinet, yet history has proved that Lincoln was invariably right."

"This brilliant old Cabinet officer of President Hayes told me Lincoln was right because Lincoln always insisted that the proper political move was to do the honorable, the ethical, and the right thing. Ray, that gave me my inspiration, and I have always earnestly tried to follow that plan of Lincoln."

Maybe that fact caused Senator BORAH to be considered irregular. I would like to remind people that Senator BORAH's irregularity of yesterday is regular doctrine of today.

Republican leaders occasionally would challenge the Senator's judgment and claim he was out of step. BORAH's party irregularity was simply thinking along ethical, honorable, and right ways ahead of his time. When the pressure was put a little too strong upon him and others thought that he ought to play ball with the party leaders more, he burst out, "I have never advocated anything in which I did not believe, and I never intend to do so. If the Republican Party does not think so, I am always prepared to make my campaign before the people upon my own responsibility and at my own expense. If I think my party is wrong, I have a perfect right to say so. Financially, I owe the party nothing. I have been in active politics for 27 years, and during that time I have never had one particle of support from the national committee, and I have never used one dollar of their money."

Senator BORAH opposed the League of Nations. President Harding favored it. He was out of step with his party leader, yet today America is with Senator BORAH on that question. Senator BORAH opposed the reciprocal tariff. President Hoover was friendly to it, and so was President Taft, yet today the farmers of the West and the businessmen believe that BORAH was right and these party leaders were wrong. He opposed the use of the marines in the collection of South American debts. If he believed he was right, no amount of pressure groups could get him to change his mind. He led the fight to clean up the Republican debacle of leadership in the President Harding administration. That political independence made Senator BORAH an Idaho institution.

He loved to talk at big Grange meetings where under the rules of the meeting, he naturally could not talk partisan politics but only principles. I really believe 90 percent of the Grangers of Idaho have always supported BORAH. His big majorities on election day, as for example in 1936, when he got more votes on the Republican ticket than President Roosevelt got on the Democratic ticket, shows that he had many friends among the Democrats.

Up in Lemhi County, a mountainous country near Salmon City, 15 years ago I was organizing the Progressive Party. Dressed in a sort of a khaki outfit, I was mistaken for a revenue officer, and a crowd of cattlemen and miners were quite excited. It looked a little bit squally for me for awhile. The leader wanted to know my business and know it quick.

I explained, and then he said, "Do you Progressives like BILL BORAH?" I said he was the apple of our eye, and then he stuck out his hand and said, "Put 'er there, pardner. I am a Democrat, but any friend of BILL BORAH's is a friend of mine." In spite of that assurance of friendship, I remained in Salmon City only long enough to buy some gasoline.

Everywhere I went men said they were for Senator BORAH, not because he was a Republican but because he was BILL BORAH, their spokesman. BORAH loved to draw up to the side of a road and quiz some farmer about economic conditions. It is almost startling how he could draw out a man's views. At first I thought it was a sort of morbid curiosity to get the other man's viewpoint, until I discovered it was done more to give courage to the Senator and make him stronger in his own fight, that he was voicing the views not only of himself but of his people. He was feeling around for reassurance to give him courage in his battles.

We were driving one day toward the town of St. Maries in the cut-over timber country of Benewah County. I naturally told him of an experience I had had in that city some years ago fighting for the right of free speech. A political gang controlled the town then, and when I was organizing the Progressive Party they had refused me the right of free speech in that town. I was arrested in a vain endeavor to break up the meeting. Even the hotel keeper refused me a room when he found out what I was doing.

We adjourned and held an indignation meeting in the open air just outside the city limits. Charley Leavett lost his job because he gave me room and shelter, and he said "Is Leavett still around town? I want to see him." We stopped at his place just outside the city limits. After a little preliminary conversation, the Senator said, "Leavett, I wanted to see you and your wife just to get a glimpse of people who are willing to die for their convictions. Ray has told me all about the fight you put up for him years ago when free speech was at stake. I wanted to breathe the same air you and your wife breathe here."

"Leavett, America has been built on just such folks as you are, and I wanted to see you, get in touch with you, to partake of that refreshing courage that you people must have."

Senator BORAH didn't have to spend that time with them. He had all the votes he needed in the State, but it gave him cheer to find people with enough political independence to stand by their own convictions.

Some time ago the Senator was campaigning for reelection. I was standing down in the hotel lobby about 7 o'clock waiting to take him down to Caldwell. Time was going by rapidly and I was getting nervous. Several men were detaining the Senator and holding him in earnest conversation. Knowing it was getting late, I gradually approached these men; they were in deep discussion. I overheard the Senator say, "No, no; so help me God, I will never do it." It seemed to me a declaration of war. Shaking his finger at the Senator, one of the men said, "Unless you come across with that statement endorsing our man, we will print an ad in Monday morning's paper denouncing you and demanding that all Republicans vote against you." The Senator seemed to grow 10 feet in 10 seconds.

"If you do, I will cancel my trip in north Idaho and I will hire a hall here in Boise and take your hide off by inches. I will tell the people my side and I will explain how promises have been made and not kept. I will tell the people exactly what happened. I'll never prostitute my intellect. You haven't the courage, you haven't the sand to put out any such advertisement. I challenge you to print that article."

He turned from them sharply and we left for the meeting. He had called their bluff, and bluff it was. I never heard him give a better speech in that campaign than he did that night in Caldwell.

When President Roosevelt attempted to pack the Supreme Court in one wholesale act, that was the move which aroused the ire of the Lion from Idaho. We all know the ultimate result, the hours of debate and preparation that must have had something to do with shortening the life of the Senator. He knew that he was burning up his energy, but nobody could persuade him to conserve his strength. Constitutional government, which gives us freedom in America, was at stake, and the champion of human rights would not spare himself in that fight. I had this story from one of the Senators who is a prominent Democrat from another State.

"We had been postponing the vote day after day and had kept the debate out of partisan lines. The Judiciary Committee met to vote on reporting out the bill. Should the bill be recommended out, or should it not? Before we went in the vote was 11 for recommendation and 5 against the President. Sixteen grim-faced men sat around that long table in the committee room. Popular government was at stake in the minds of some of them. To Senator BORAH the foundations of our Government were beginning to crumble. This was unspeakable. The peremptory invasion by the Chief Executive of the rights of the judiciary!"

"Senator BORAH never would consent. He gave the greatest speech in all his career. For 3 solid hours, without a single note, he poured out his soul to these Senators. He pleaded with them to place their political convictions above their party demands, and as he talked every man there was in tears. BORAH opened up his heart to those Senators. No stenographer was present; there was

no record of that appeal; but that was the most wonderful address that has ever been made in Congress."

The vote was taken. Senator BORAH had won. The committee decided against the President. Even though it might cost some of those Senators their jobs, they caught a vision of the America that BORAH had been preaching. In this dark age of fascism, nazism, of communism, one place in the world, America, must be kept sacred for democracy. It was this fight for constitutional government which actually cost BORAH his life.

I am human enough to state that, representing the Idaho Grange, of which BORAH was a member, we are proud to say to the world, we helped to do our bit in supporting this man who battled for our betterment. He was our friend and adviser. We would rather be a humble follower of this great humanitarian, Senator BORAH, and conscious today that we supported him, than to have belonged to any circle of unkind critics who took delight in throwing their poison barbs at this greatest American of this age.

## Revenue Collections and Grants to States

### EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a table which shows the revenue collections from each State for the fiscal year 1939 and also the total grants to and expenditures within these States by the Federal Government. It is especially interesting to note that the per capita contribution of the State of Delaware was \$275.34 and that the amount it received back from the Federal Government was approximately 9 cents on every dollar that it paid in. The other extreme is the State of North Dakota whose per capita contribution to the Federal Government was \$2.26 and whose per capita receipts from the Federal Government was \$64. For every dollar North Dakota paid into the Federal Treasury it received approximately \$32 in return.

	Population as of July 1, 1937	Total internal revenue collections	Total internal revenue collections per capita	Grants to and expenditures within States	Total grants and expenditures per capita	Amount received per dollar paid
Alabama.....	2,895,000	\$15,491,000	\$5.35	\$96,999,000	\$34	\$6.35
Alaska.....	62,000	950,000	15.61	2,450,000	39	2.60
Arizona.....	412,000	4,379,000	10.63	26,372,000	64	6.40
Arkansas.....	2,048,000	7,943,000	3.88	82,967,000	40	10.00
California.....	6,154,000	308,969,000	50.20	192,109,000	31	.60
Colorado.....	1,071,000	34,598,000	32.30	65,999,000	61	2.00
Connecticut.....	1,741,000	85,625,000	49.18	42,773,000	24	.50
Delaware.....	261,000	71,864,000	275.34	6,917,000	26	.69
Dist. Columbia.....	627,000	30,140,000	48.07	33,305,000	53	1.10
Florida.....	1,670,000	51,432,000	30.80	50,024,000	31	1.00
Georgia.....	3,085,000	33,837,000	10.97	94,335,000	30	3.00
Hawaii.....	426,000	11,894,000	27.92	19,771,000	46	1.70
Idaho.....	493,000	4,230,000	8.58	34,335,000	69	8.50
Illinois.....	7,878,000	436,320,000	55.38	268,140,000	34	.60
Indiana.....	3,474,000	114,874,000	33.07	119,477,000	34	1.00
Iowa.....	2,552,000	23,553,000	9.23	83,343,000	32	3.60
Kansas.....	1,864,000	21,191,000	11.37	70,062,000	37	3.40

### Purchases of Foreign Silver

### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, February 9 (legislative day of Wednesday, February 7), 1940

### EDITORIALS FROM VARIOUS NEWSPAPERS

Mr. TOWNSEND. Mr. President, the Senate vote last June to repeal the provisions of the Silver Purchase Act of 1934, calling for the purchase of foreign silver by the Treasury, has recently been made the subject of editorial comment. I ask permission to have published in the RECORD the editorial on this subject, entitled "Congress and Mexico," which appeared in the Journal of Commerce, of New York, on January 27, 1940, and which I now send to the desk.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Journal of Commerce of January 27, 1940]

### CONGRESS AND MEXICO

Last June, when the extension of existing monetary legislation was being debated in Congress, the Senate voted overwhelmingly to repeal the provisions of the Silver Purchase Act of 1934, calling for the purchase of foreign silver by the Treasury. It was indicated by administration spokesmen at the time, however, that conversations looking toward a settlement of the controversy over the confiscation of American oil properties in Mexico were then going on, and that the time was inopportune to halt the silver-buying program. Accordingly, the monetary legislation as finally passed left unchanged the provisions covering foreign silver purchases.

The negotiations for a settlement of the silver controversy have since failed completely, owing to the refusal of Mexico either to return the properties seized or to offer reasonable compensation. Donald R. Richberg, who represented the American oil companies in the conversations in Mexico City with the authorities there, has published a full account of his efforts, concluding that "it has been found impossible even to obtain an agreement upon the basic principles of a fair solution."

Accordingly, the situation is back where it was at the time that the Senate voted to halt foreign silver purchases. In addition, it is known now that the Mexican Government has no intention of doing anything but holding on to the seized petroleum properties, while ignoring the rights of the owners not only under international law but also under the Mexican Constitution as it has been interpreted by the Government there before the Cardenas regime took office.

There are added reasons now why Congress should halt, without delay, the folly of buying foreign silver. For one thing, sales of silver to this country by China have dwindled very sharply in recent months, so that it can no longer be asserted that silver buying represents a means of favoring that country. In the second place, it is no longer true that the Mexican Supreme Court might possibly void the expropriation of American-owned oil properties, for that court fully upheld the confiscation last month.

The action of the United States Government in giving Mexico a heavy subsidy, through the purchase from her of large amounts of silver for which this country has no earthly use, is giving Mexico the impression that she has a vested interest in the sale of the white metal to us. Mexico's Foreign Minister, at the recent Panama Inter-American Conference, seriously called upon the United States to commit itself to the purchase of silver on a fixed basis over a period of time. To cap the climax, Eduardo Suarez, the Mexican Finance Minister, on a recent visit to this country similarly called upon us to "adopt a definitive attitude" toward silver, including "maintenance of a reasonable price."

No possible excuse can now be advanced for continuing the purchase of foreign silver by the United States Treasury. On the other hand, as long as such purchases are continued, notice is in effect served upon Mexico and other countries that the confiscation of American property by a foreign government is not sufficient reason for us to cease granting a heavy subsidy to that government by buying from it, at a price far above what would prevail otherwise, a commodity for which we can never find a useful function.

Mr. TOWNSEND. Mr. President, in connection with my various efforts to bring to the attention of Congress the necessity of changing our present bullion policies, I ask consent that the editorial in the Washington Post of January 29, 1940, which I now send to the desk, be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of January 29, 1940]

### A "SCREWY" POLICY

About all that can be done about our gold policy at the moment is to arouse public interest in the subject and, as Senator TOWNSEND said in a speech last week, to "indicate its dimensions."

The Senator touched upon some aspects of the policy which he accurately characterized as "definitely screwy." He points out, for instance, that there is a "queer inconsistency" between our expressed desire to help Finland and the very substantial aid actually given Russia by steady purchase of her gold at inflated prices. Similarly, the aid furnished Japan by taking her gold and silver is not in harmony with a foreign policy seemingly designed to strengthen Chinese resistance to Japanese aggression.

These incidental consequences of the gold-buying policy are, however, only one of the "many facets" of a most complicated problem. Senator TOWNSEND also tried to give his hearers an idea of the magnitude of our gold takings by indicating how much wealth could be obtained in exchange for the more than \$3,000,000,000 of gold and silver which we acquired last year. "In 1939 we sent abroad \$3,100,000,000 worth of merchandise," he said. "It required more than 32,000 vessels and 1,615,000 freight cars to carry it away. If all this mountain of merchandise had been used to pay for bullion imports, it would not have paid for all the bullion we bought from foreigners during the 12 months of 1939."

Of course there is danger of oversimplifying a very complicated situation by ignoring other factors involved in the movement of gold. Most of our exports, in fact, are paid for by imported goods. Only the excess of exports over imports can be said to be paid for in gold. Much the greater part of the gold that has come here represents a capital inflow and not all of it has affected our domestic economy. Unused deposits in our banks resulting from gold acquisitions are, as Dr. Goldenweiser says, "of no particular consequence" so long as they remain unused.

However, unused balances constitute a potential claim upon goods, while investment transactions paid for by gold imports involve a transfer of wealth to foreigners in exchange for more of a metal that we do not need. The danger of ultimate loss from this kind of exchange is obvious. And added thereto, as Senator TOWNSEND says, are various internal complications due to the piling up of excess bank reserves created by the gold inflow.

It is none too soon—in fact, it is decidedly late—to begin thinking about the possibility that other countries may eventually demonetize gold permanently, even to the point of refusing to accept it in payment of international debts. If so, as Senator TOWNSEND asks, what is to become of the "value of our colossal gold hoard." Like most other critics, he is not ready with an answer, but he properly suggests that Congress undertake a study of the subject at once.

Mr. TOWNSEND. Mr. President, Mr. John T. Flynn, in a recent article, calls this country's silver policy "goofy." I ask consent that this article, as published in the Washington Daily News of January 30, 1940, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of January 30, 1940]

### PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, January 30.—Sometimes it is necessary to pause, pinch oneself and wonder if one is dreaming as the facts of our squirming with our business problems dance before us.

Take this one, for instance. Something over 5 years ago the President decided to "do something for silver." He decided to buy silver until the Government's silver stocks or reserves were equal to one-fourth of gold reserves. That, of course, was in itself an unbelievably queer thing to do. But in the light of what has happened it becomes, to put it mildly, a trifle "goofy." Here is what has happened.

In the last 5½ years the Government has bought more than 2,000,000,000 ounces of silver. Yet we are further away from having a silver reserve one-fourth the size of the gold reserve than when we started.

Last year American silver mines produced roughly 70,000,000 ounces of silver. But our Government bought 341,000,000 ounces.

Whatever reasons may be offered for this policy, the real reason is to help American silver producers. But the Government bought at high prices not only all that American producers turned out, but five times as much besides.

The reason why, as things go now, we can literally never come to an end of our plan to have one-fourth as much silver as gold in our monetary reserves is quite interesting. We have been buying silver in huge quantities, but all the time we were also buying gold. We were buying gold faster than we were buying silver. It has been like pouring water into a gallon jug until the jug is one-fourth full, but all the time, by some magic, increasing the size of the jug, so that it never can be one-fourth full.

Of course that is the real objective—not to get silver up to one-fourth the amount of gold in the reserves, but to keep on forever trying. If we ever got it up to one-fourth, then some other excuse would have to be invented.

We actually have the United States paying for new silver—and plenty of old silver—around 35 cents more than you and I can buy it for in any silversmith's in the country. Why?

There are a number of persons who believed that some kind of international agreement should be reached by which the price of silver would be increased in the world markets to aid China's buying power. Even that was a sufficiently questionable policy. But no one in his senses advocated the United States buying silver at a highly inflated price, as it has been buying gold, and thus having the silver of the world dumped on our hands.

It is all a piece of the general policy of yielding to every pressure group. We have gotten up to our ears in the subsidy bog. There are a group of silver States and this is their cut in the general passing around of subsidies. But it would be much cheaper to give them an outright subsidy than to disguise it behind this fantastic program.

Mr. TOWNSEND. If any demonstration is needed to illustrate how Russia benefits from the sale of gold at \$35 an ounce, one is provided in a Baltimore Sun news report from Los Angeles dated February 8 and credited to the New York Times.

On the very day following the revelation that the Russian ship *Kim* had arrived in San Francisco carrying only a cargo of gold valued at \$5,600,000 this news report tells of the sailing of a Soviet motorship with a \$2,000,000 cargo of strategic metals and minerals consigned to Leningrad.

I ask to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of February 9, 1940]

MEXICO CLEARS UNITED STATES COPPER FOR RUSSIA—MANZANILLO BECOMES VITAL PORT FOR METALS SUSPECTED BOUND FOR GERMANY—REASON FOR TRANSHIPMENTS PUZZLES EXPERTS—LEAD ALSO SENT TO VLADIVOSTOK

(By Arnaldo Cortesi)

[Copyright by New York Times]

MEXICO CITY, February 8.—The port of Manzanillo, in the State of Colima, has become a clearing house in an important traffic of copper between New York and Vladivostok, whence it is suspected it will eventually go via the Trans-Siberian Railroad to Germany, which suffers a scarcity of this essential war material.

In the last 2 weeks three American freighters have unloaded notable quantities of copper at Manzanillo, where smaller quantities of lead produced in Mexico also arrived or are about to arrive.

#### FREIGHTER TAKES PART

The Russian freighter *Vladimir Mayakovsky* already has left for Vladivostok with part of this cargo, while the remainder will be put aboard the Russian vessels *Engels*, which is expected almost hourly, and *Kim*, which should have left San Francisco today for Manzanillo.

What puzzles experts is why copper from New York should be taken as far as Manzanillo in American bottoms and there transhipped to Russian vessels. Transshipment and storage charges in Manzanillo obviously increase the cost of the entire operation to an appreciable extent.

Perhaps the Russians cannot spare enough ships to go all the way to New York for their copper and prefer to content themselves with the shorter haul across the Pacific, leaving to American vessels the task of taking the metal from New York to Manzanillo.

#### FIRST LOAD JANUARY 24

The first load of copper from New York arrived at Manzanillo aboard the *Guayaquil*, belonging to the Stockard Line, on January 24. A further 2,000 tons of copper were unloaded at Manzanillo on January 27 by the *Buenaventura*, formerly belonging to the Panama Line, now under lease to an American firm.

Last Friday the Russian freighter *Vladimir Mayakovsky* left Manzanillo for Vladivostok with 5,200 tons of copper unloaded by two American vessels. The *Harpoon*, belonging to the Shepard Steamship Co., of Boston, arrived Tuesday and unloaded 8,000 tons of copper, while yesterday 22 carloads of lead arrived by rail, this being the first consignment of 2,000 tons ordered.

These metals will be taken to Vladivostok by the *Engels* and the *Kim*, along with any further quantities that may have reached Manzanillo in the meanwhile.

#### SOVIET SHIP TAKES LOAD OF MOLYBDENITE ON COAST

LOS ANGELES, February 8.—A \$2,000,000 cargo of strategic metals and minerals in her holds, the Soviet motorship *Vladimir Mayakovsky* cleared San Pedro today for Vladivostok, after loading here a much-discussed 200-ton consignment of molybdenite.

She called first at Manzanillo to take from a United States freighter some 5,000 tons of copper bullion and other prepared metals from the east coast.

This shipment was said to inaugurate a regular plan to so transship at Manzanillo and San Pedro other war materials bound for Russia.

#### SHIPMENT WATCHED CLOSELY

The British and French intelligence services have watched closely this particular shipment of molybdenite, used for hardening steel, apparently in the belief its ultimate destination may be Germany.

It is consigned to Leningrad and had been lying in a transit shed here for many weeks while the Russian interests made fruitless efforts to dispatch it to Vladivostok aboard neutral vessels running to the Orient.

These vessels apparently refused the shipment in the belief it might be adjudged contraband by the several British men-of-war known to be patrolling both the eastern Pacific and the coast of Asia. Experts in international law here at this naval base expressed the view, however, that Britain would hesitate to confiscate the cargo, even though its ultimate destination is Germany, because of the risk of further straining relations with the U. S. S. R.

#### W. P. A. in Pennsylvania

#### EXTENSION OF REMARKS

OF

#### HON. FRANCIS J. MYERS

OF PENNSYLVANIA

#### IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

#### LETTER TO THE MAYOR OF PHILADELPHIA

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by me to the mayor of the city of Philadelphia, under date of February 8.

FEBRUARY 8, 1940.

HON. ROBERT E. LAMBERTON,  
Mayor of the City of Philadelphia,  
City Hall, Philadelphia, Pa.

DEAR MAYOR LAMBERTON: You undoubtedly are aware of the controversy which has recently taken place between the Governor of Pennsylvania and the officials of the Work Projects Administration, the Governor having made the charge that the people of Pennsylvania have been treated unfairly by the Work Projects Administration.

The controversy has extended to the floor of Congress, and today I am reliably informed that Representative John McDowell, of the Thirty-first Pennsylvania District, has recommended a conference on the subject, to be attended by the two United States Senators, the entire Pennsylvania congressional delegation, Governor Arthur James, and representatives from the office of the State administrator and the National Administrator of the Work Projects Administration.

It is my personal belief that Pennsylvania's failure to receive the full benefit from W. P. A. is due to the fact that Pennsylvania has not sponsored sufficient projects to fill the quota which has been allotted to it, and this in turn is primarily the fault of the administration of the city of Philadelphia, where W. P. A. is authorized to employ 39,000 persons. However, lack of projects in Philadelphia has made it possible to employ only slightly more than half of this number, or approximately 20,000. But even more surprising is the fact that only 4,500 of those currently employed are working on projects sponsored by the city, and the remaining 15,500 employed have been assigned to projects in Philadelphia sponsored by Federal and State agencies because of the failure of the city to furnish the sponsors contributions as required by law.

If Philadelphia had done its share, Governor James would have no occasion to make the charge of political persecution, now that the necessity of an extraordinary session of the Pennsylvania Legislature is at hand for further relief appropriations.

Therefore it seems to me that the conference can accomplish nothing unless you, Mr. Mayor, also attend and explain to those assembled the reasons for Philadelphia's failure to take full advantage of W. P. A.

The charge has been made on the floor of the House of Representatives that members of city council and other responsible city officials have publicly stated at various times that it would be

foolish for them to utilize W. P. A. to any extent because they might thereby make votes for the Democratic Party.

I do not believe that you desire such a challenge to go unanswered, and consequently I respectfully invite you to attend the conference so that the people of Philadelphia, and of the entire State, may at last understand the position of the city administration with respect to W. P. A. and whether it proposes to utilize the services of the full quota of 39,000 persons which has been allotted to it.

Very truly yours,

FRANCIS J. MYERS.

## President Roosevelt Defies Political Foes To Prove "the Country Is Going Bust"

### EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

ARTICLE FROM THE NEW YORK TIMES OF FEBRUARY 6, 1940

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of February 6, 1940:

[From the New York Times of February 6, 1940]

ROOSEVELT CITES GAINS IN NEW DEAL; UPHOLDS SPENDING—SAYS DEBT IS LESS—FEDERAL RISE IS OFFSET BY CUT IN STATE AND LOCAL OBLIGATIONS, HE SAYS—WAGES AND DIVIDENDS UP—BUDGET CAN BE BALANCED BY A YEAR OF NATIONAL INCOME OF \$80,000,000,000, HE ADDS

(By Felix Belair, Jr.)

HYDE PARK, N. Y., February 5.—In his first answer to pre-campaign criticism of his administration, President Roosevelt today recited substantial gains in various segments of the national economy since he entered the White House in 1933. He defied political foes to prove that "the country is going bust."

With his remarks on gains in the income of farm and factory workers since the low point in 1932, Mr. Roosevelt coupled substantial increases in employment, dividends paid by corporations, commodity exports, and a reduction in interest rates. He then asserted that the total indebtedness of the Federal, State, and local governments had not increased during the 7-year period and predicted that after a year of an \$80,000,000,000 national income the Federal Budget would be brought into balance.

Before producing his statistics on New Deal gains, gleaned from various Government departments, the President told his press conference that the country probably had become very tired of talk and speculation about the question of a third term. Efforts to draw him out on the subject were all very silly, he said, because the time of disposing of the issue would be of his own choosing rather than that of the curious.

After pointing out a 71-percent increase in the national income from \$40,089,000,000 in 1932 to \$68,500,000,000 last year, the President said it was still the administration's hope to bring national income to the \$90,000,000,000 level. He conceded, however, that for the present he was talking of \$80,000,000,000.

#### AS TO BALANCING BUDGET NOW

Implicit in Mr. Roosevelt's remarks was the idea that no attempt should be made to balance the Federal Budget through a horizontal reduction of expenditures, and that it would be time enough to think about balancing when the national income had been raised to the neighborhood of \$80,000,000,000.

Any sudden and drastic curtailment of Federal spending at this time would certainly be followed by unfortunate results, the President stated. He recalled the economic recession in the latter half of 1937, attributing it directly to a sharp and sudden reduction in Government spending a few months before.

Although the President told reporters that no particular implication was to be drawn from his long statistical review, it was the conclusion of all present that it was intended as a reply to recent criticism of his administration's policies by Thomas E. Dewey, Senator Robert A. Taft, and Frank E. Gannett, Republican Presidential aspirants.

In addition to the sharp increase in national income from the 1932 low, the following statistical gains in the 7 years were recited, with the conclusion that everybody in business had not been doing so badly as had been pictured:

An increase of 62 percent in salaries and wages paid, or from \$2,403,000,000 in December 1932 to \$3,888,000,000 in December 1939.

A gain of 145 percent in weekly pay rolls of factory workers, or from \$80,384,000 in December 1932 to \$197,089,000 in the corresponding month last year.

#### RISE IN FARM INCOME NOTED

An 82-percent increase in cash farm income, or from \$4,682,000,000 in 1932 to \$8,519,000,000 in 1939, including \$807,000,000 of benefit payments in the latter year that were not being paid to farmers during the earlier period.

A reduction in "interest received by individuals" from \$5,277,000,000 in 1932 to \$4,828,000,000 in 1939, a decrease of 9 percent.

A 55-percent increase in "dividends received by individuals," or from \$5,277,000,000 in 1932 to \$8,253,000,000 last year.

An increase of \$7,695,000, or 28 percent, in total nonagricultural employment during the 7 years. The President's figures were 27,245,000 employed in December 1932 and 34,940,000 in December 1939, not including 2,727,000 persons who had work on W. P. A., N. Y. A., and C. C. C. projects.

A 97-percent increase in commodity exports, or from \$1,611,000,000 in 1932 to \$3,179,000,000 in 1939.

A gain of 64 percent for the calendar year 1939 in the Federal Reserve System index of industrial production, to a total of 105 in December 1939.

These gains, the President said, have been attained during a period when the total governmental debt had remained substantially unchanged. Whereas the Federal debt had increased somewhat during his administration, he said, there had been a corresponding falling off of the debt of States, cities, and political subdivisions.

In this explanation Mr. Roosevelt called on his experience as Governor of New York. The State, he said, had to bear the entire relief burden during 1931, 1932, and 1933. Nothing was granted from Washington during that period, he stated with some emphasis. Since that time, however, a very large percentage of the relief burden had been borne by the Federal Government.

#### IN HIS "FIGHTING MOOD"

Although cordial throughout the press conference, the President was in his "fighting mood" when he received reporters in the little study of his Hyde Park home. It was with obvious relish that he read the record of New Deal gains during the 7 years of his stewardship. Occasionally he remarked that his critics would have a hard time getting around the statistical argument he has just presented.

Mr. Roosevelt chuckled frequently, and more than once remarked that various changes in the position of the national balance sheet since 1932 would come as quite a shock to some people. At one point he apologized for burdening his audience with so many figures.

This remark was followed up with the observation that while those present probably would chronicle all he had said, there was no such probability that their respective newspapers would publish all his remarks. He was confident, however, that editors would be startled by the revelation that corporation dividends were higher last year than 7 years before.

It was in answer to a question that the President said that only 1 year would be necessary to balance the Budget when the national income reached the \$80,000,000,000 mark. He hastened to state that there would be a lag of about a year, because taxes for any year were not collected in full until the fourth installment came due in December of the following year.

#### TAKES CURRENT YEAR AS EXAMPLE

By way of explanation the President chose the current year as that in which the Budget might be balanced. Even should the administration's goal of an \$80,000,000,000 national income be realized this year, he remarked, internal-revenue collections needed for balancing the Budget would not be in hand until the end of 1941. Once that income mark was reached, however, there would be no need for increasing tax rates to balance the Budget, Mr. Roosevelt added.

Present tax rates would be more than enough to balance the Budget in a single year, once the \$80,000,000,000 national-income goal was attained, according to the President. He agreed with a questioner who reminded him that a national income of \$90,000,000,000 had once been given as the administration's objective. It was necessary first, the President said, to reach \$80,000,000,000.

The reference to 1940 as a hypothetical year of Budget balancing prompted one reporter to inquire whether he had inspected forecasts of business and industrial activity and revenue collections for the coming 12 months. He replied that exigencies growing out of the complicated international picture were too many to permit a safe prediction, and added that in times like these it was hazardous to forecast when the \$80,000,000,000 national-income figure might be reached.

#### RECALLS DEPOSIT-INSURANCE RECORD

Leading up to his discussion of the statistical defense of his administration, the President called attention to a Washington dispatch to the New York Times on a report from the Federal Deposit Insurance Corporation.

After pointing out that \$294,000,000 had been saved to 877,000 depositors in insured banks through the operation of the Federal Deposit Insurance Corporation, Mr. Roosevelt let it be known that he had long been opposed to increasing from \$5,000 to \$10,000 the amount of individual deposits insurable through the Federal agency.

People having that much money deposited in banks should be able to look out for themselves, Mr. Roosevelt contended. He had laid stress on the fact that depositors in the 315 closed banks insured by the Federal Deposit Insurance Corporation had \$5,000 or less on deposit constituted 97.9 percent of the total number of depositors in such institutions.

Not only had these 877,000 depositors been reimbursed, Mr. Roosevelt reminded the press conference, but they had been paid off quickly, without having to wait for several years while the banks went through the usual process of liquidation.

#### REMARKS ON INTEREST PAYMENT

HYDE PARK, N. Y., February 5.—Interest received by individuals stood at \$5,277,000,000 in 1932, Mr. Roosevelt said at his press conference today, and in 1939 it was \$4,828,000,000, a drop of 9 percent. That decrease, he said, requires analysis.

Supplying the explanation himself, he asserted that two things were responsible—interest rates had gone down and so had the total debt burden of the country.

Debts owed by individuals and corporations are a great deal smaller, the President declared, and the total owed by government is no greater today than it was in 1932.

In other words, he said, local debt, State debt, county debt, and city debt had gone down the full extent that Federal debt had gone up. Since private debt has decreased, he said, the total debt, therefore, is lower.

### Agricultural Appropriation Bill

#### EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

Mr. NORRELL. Mr. Speaker, the bill under discussion, making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1941, is most important, and directly affects approximately 32,000,000 people in the United States engaged in farming, and is important and indirectly affects all of the inhabitants of this great Nation.

The President of the United States realized these facts when, in his Budget message of January 3, he used the following language:

Under the broad head of agricultural programs I have included agricultural adjustment benefits, the surplus-removal program, and parity payments arising from 1940 appropriations. Despite a gratifying general increase in farm income, agriculture is still not receiving its proper share of the national income. I am therefore proposing to continue substantially undiminished the various agricultural programs. I have not, however, included estimates for new appropriations for parity payments in 1941. I am influenced by the hope that next year's crops can be sold by their producers for at least 75 percent of parity. I do not suggest in any way the abandonment of the policy of parity payments heretofore adopted, and further events may call for some appropriations to this end.

Also in the Budget message of the President we find that the total Budget of the United States Government for the fiscal year ending June 30, 1940, was estimated at \$8,424,000,000, which is down \$675,000,000 from the fiscal year 1940.

It cannot be said, therefore, that the President is responsible for the unfair cuts proposed in this bill. The House Appropriations Committee has cut the total appropriations for the benefit of the farmers of this Nation to the tune of \$404,190,796. This, indirectly at least, means that of the \$675,000,000 cut suggested by the President over last year's Budget, all but approximately \$270,000,000 has been taken from the pockets of the farmers of this Nation.

We have in this country some 6,812,000 farms, according to the agricultural census of 1935. In excess of 513,000,000 acres of such farms are devoted to various crops such as cotton, corn, wheat, and so forth. There are 32,000,000 people residing on or in some direct way identified with these farms and it is this portion of our population which is having to sustain this unfair and unreasonable loss in revenues, amounting to 51 percent over appropriations for them in 1939, on the theory that the Budget of the United States should be balanced.

It is unfortunate that when Congress thinks of balancing the Budget the ax falls first on those who are in need and to some extent prostrate and unable to protect themselves. The Agricultural Adjustment Act under which we are now

operating was passed by this Congress in 1938 and, among other things, it provided for the reduction of crops in order that the farmers would not continue to grow unsalable crops. Ten million acres have been taken out of cultivation. The farmers agreed to make these reductions upon the specific promise and contract, if you please, that they would receive certain monetary benefits from the United States Government. This Congress must provide those benefits and comply with that part of these solemn contracts which the Government assumed.

It is said by those who are not necessarily interested in the direct welfare of the farmers that the administration's farm program has been a failure. I do not agree with the program in its entirety, not that my opinion is correct or even important, but I do not believe that the program has operated fairly among all of the farmers. The small farmer has sustained such enormous reduction in acreage and production that it is impossible for such farmers to make a living. I have appeared before the Agricultural Committees of the House and the Senate in regard to this phase of the program but notwithstanding we may not entirely agree with the entire program, it must be admitted that it has been successful to some extent at least. The cash income of the farmers has increased, under this administration, from \$4,358,000,000 to approximately \$10,000,000,000 and so it must be admitted that the farmers are better off today, under the present farm program as a whole, than they were back in 1932.

It would serve no useful purpose to describe the plight of the American farmer. This has already been discussed too much, but no one has offered a solution. We hear magnificent addresses constantly by friend and foe alike of the farmers to the effect that something is wrong and that this plan and that plan has not worked. But none of these self-constituted wizards or philosophers offer any solution whatever of the problem. They have sympathized with the farmers, but sympathy is not all that the farmers want and need. They have offered them plenty of oratory, but they cannot live upon this, although they have been fed with a very liberal supply. They have offered promises; even back in the dark days of the Hoover administration something was said about "a chicken in every pot, two cars in every garage, and prosperity is just around the corner," but prices continued to go down. It is true that they have given crop reductions and this has not solved the problem. They have been told to destroy their crops and slaughter their pigs, and they willingly agreed to do this in the hope that their income would be increased. Suggestions of curtailment of acreage and production, and the withholding of agricultural products from the market, whether or not this has inured to the benefit of the farmers is at least debatable. Many other schemes have been suggested and in each instance the farmers have rallied to the cause and have done their part, but still their income is not up to parity.

We all admit that, if the people of the United States had sufficient purchasing power, the farmers could not produce sufficient agricultural commodities for their consumption. Under those circumstances we would need no acreage reduction and the farmers would be able to plant all of the crops they desired and as much as they desired and still there would not be a surplus. However, the critics of the present farm program have not offered anything that would bring about this paradise for the farmers and even last year, with parity and other agricultural benefits, their income was 26½ percent below parity.

The critics of the present agricultural program in action say that because the farmers' income has not reached parity through the various benefits received the Government should therefore withdraw all benefit payments and cut out every direct monetary relief to them. If this is the farm program suggested by the Republican Party and a minority of Democrats, I do not see how they may expect to receive any enthusiastic support from the farmers.

The present administration has said to the farmers, not only through the solemn acts of this Congress, but through

contractual obligations as well, that the farmers are entitled to parity, and that parity is defined as being a condition under which there is such a relationship between what the farmer has to spend and the price he must pay for the things he must buy, and the price which he receives for his products so that he will buy on the level which was attained in the base period from 1909 to 1914. Yet a large majority of the Republican Members of the House voted to reduce the total appropriations for the benefit of farmers to the tune of 51 percent over last year because the farm program has not yielded full parity. What substitute remedy do they suggest? Nothing except sympathy and oratory and that the Budget of the United States Government should be balanced. I am in favor of the balancing of the Budget of the United States Government, but not solely and exclusively at the expense of the American farmer. Their budget should be balanced also, and you cannot balance the farmers' budget by reducing their benefits to the tune of 51 percent and failing to provide a better substitute agricultural program.

I am for national defense, but if we must build battleships at the sole and exclusive cost of the American farmer, then I am inclined to believe that we should reduce the national-defense appropriation, eliminating the construction of a few battleships, and continuing appropriations for soil conservation and parity payments to the farmers until a better and more successful agricultural program can be inaugurated.

It is said that farm tenancy is increasing at the rate of about 50,000 per year and that there are now some 2,800,000 tenants, or approximately 40 percent of the farmers are tenants. If this Congress adjourns without keeping faith with the farmers by making the necessary appropriations, unless, of course, a better plan is inaugurated, farm tenancy will increase more through the years to come. We all realize that there is only one cure for tenancy or for the relief of the farmers in general, and that is to raise farm prices to such an extent that they will make enough to support themselves and their families and to purchase and maintain homes. In other words, to enjoy a wage for his labor and a fair price for his produce.

Industry has always been protected, agriculture has not been. Parity therefore is logical and reasonable so that agricultural commodities will be protected the same as industrial commodities. History records that both Hamilton and Jefferson agreed that this statement was true.

The gentleman from Mississippi, Congressman WHITTINGTON, has suggested an amendment to the Agricultural Act which will provide that the customs receipts of the United States Government be turned over to the Commodity Credit Corporation to be used to protect agricultural commodities and bring about parity insofar as the money will provide. I do not know whether this is a sound suggestion, but it is certainly worth serious consideration. It would certainly eliminate the wide spread between the income of industrial workers on the one hand and the income of agricultural workers on the other hand.

I have supported several amendments either to provide or increase appropriations to carry out the farm program as presently established in an effort to see that the appropriations for the benefit of the farmers are not decreased any more than other appropriations are decreased. The farmers are willing to sustain their proportionate cut. The House Appropriations Committee apparently has discovered that it has large, and probably excessive, authority because it has hold of the purse strings of the American Government. The power of the purse is deadly when improperly used. It is in this power of the purse that the House Committee on Appropriations, to some extent at least, holds a whip hand over the legislative and executive branches of the Government. This power is absolute. It was used by the House of Commons in the seventeenth century, but heretofore, owing to the fact that the power was so broad and so effective, its use by the Parliament or the Congress was seldom arbitrary.

In conclusion may I state that I trust the power of the Appropriations Committee will be exercised in a way that will

mete out justice to all of the citizens of the United States, and that before this Congress shall have adjourned, unless a better agricultural program can be inaugurated, the necessary funds will be provided to carry out the contractual relationships between the Government and the farmers to the extent of continuing the present percentage of parity and in providing for the disposition of surplus commodities, and to improve further the soil by continuing the splendid work of the Soil Conservation Service and various other benefits for farmers.

## Address of the Postmaster General

### EXTENSION OF REMARKS

OF

### HON. BUTLER B. HARE

OF SOUTH CAROLINA

### IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. HARE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, Postmaster General of the United States, at the dedication of the new Federal building, Clemson College, South Carolina, on Monday January, 22, 1940:

I am grateful for the opportunity of being here today to take part in the dedication of your new post office.

The occasion is one of special significance because the ground upon which we now stand has been hallowed by the finest American tradition. I doubt if there is anyone among us today who, in a measure, cannot sense the living presence of those hardy pioneers and patriots, the Clemsons and the immortal John C. Calhoun.

It is eminently fitting that we consecrate this new building to the public service. Those who are taking part in the ceremony include distinguished State and Federal officials, postmasters and postal employees, the faculty and students of Clemson Agricultural College, and representative citizens of the city and of this section.

The presence of such a representative assembly is a tribute to the American ideals of the founders of this community and of Clemson College. It is also an evidence of your interest in the maintenance of their principles and ideals as a part of the fabric of our national life.

The building erected here is in harmony with the type of architecture prevailing in this pleasant community. Those present may observe its attractive colonial design of one story with granite base, brick exterior walls, the stone and wood trim, and the wood cornices and windows. The ground area is more than 4,000 feet square and the content of the building, including the basement, is more than 115,000 cubic feet. It is of fireproof construction and is provided with every facility of a modern post office with well-lighted and well-ventilated workrooms for the postal employees.

The building was erected under the authority of the Federal emergency construction program of 1936 which was enacted by Congress for the purpose of stimulating economic recovery and to provide work for the needy unemployed.

An allotment of \$82,000 was made to include the cost of the site, the building, and the administration. In keeping with the patriotic spirit of its founders, however, Clemson College very generously donated the site to the Federal Government.

The records of the Department in Washington disclose that the post office at Clemson was established on August 11, 1893, under the name of Clemson College, with John F. Calhoun as the first postmaster. On March 1, 1935, the name of the office was changed to Clemson, under which it is operated at the present time.

The revenues from the office at the beginning, like the great majority of new offices, were comparatively modest. In 1910 they amounted to approximately \$5,000 and for the last fiscal year to more than \$20,000.

Since the middle of October 1931 the office has been conducted with splendid success by the present incumbent postmaster, Mrs. Carrie R. Goodman. In the 47 years of its existence there have been but five postmasters at Clemson—John F. Calhoun, Rebecca C., and Ida A. Calhoun and Lewis J. Goodman preceding Mrs. Goodman.

This post office is one of a network of more than 40,000 post offices established throughout the country, the combined receipts of which in the past fiscal year amounted to approximately \$750,000,000. The United States Postal Service is the largest individual business enterprise in the world. It is an outstanding example of the ability of a democracy to conduct its affairs upon a businesslike and successful basis.

The postal system has become such an accepted fact in the daily lives of most citizens that few pause to reflect upon the important part which it plays in the life of contemporary America. Yet without the postal system a vital link would be missing in the chain of communication which binds your community to other communities throughout the Nation and throughout the civilized world.

By means of the daily mail you are able to learn about the health and well-being of friends and kinsfolk in far-distant places. The magazines and newspapers left at your door by the postman give you a keener insight into the events and forces that are shaping the existence of your fellow human beings in less fortunate areas of the earth.

It has been well said that the history of civilization is bound up in the development of new and better means of communication. The Post Office Department, regardless of the political party in power, has always shown a deep interest in keeping abreast of the times in the matter of mail delivery and transit. Less than a century ago the establishment of the Pony Express excited the wonder and the admiration of the American people.

The daring riders who carried the mail pouch across desert and mountain to the far-off Pacific-coast regions became legendary heroes. People marveled at the fact that letters leaving St. Joseph, Mo., were carried more than half way across the continent and delivered at their destination in less than 8 days. Today, thanks to the air mail, a letter may be posted in New York City this evening and delivered tomorrow morning in Los Angeles. Or it may be borne across the ocean and left at its destination in a foreign land in less time than it formerly took to transmit a letter from Charleston to New York.

Down through the years, especially in smaller communities, the post office has become something more than a mere Government building where routine business is transacted. It has become a civic center where the townsfolk gather to greet and chat with friendly neighbors and to look with eager anticipation for the expected letter from someone far away. The pleasure of the daily visit to the post office is so keen that folks in rural areas very often protest to the Department against the introduction of the more efficient carrier service.

We all know people who say they hate to write letters, but I never yet found a person who could honestly say that he or she hated to receive letters.

The life span of Clemson College is short compared to that of some institutions of learning which date their founding back in colonial days. Yet in its period of existence of about half a century, Clemson has moved forward rapidly to take its place among those schools which are doing so much to provide a better and finer way of life for the people of America.

In coming here for this ceremony I took occasion to learn something more about the history and traditions of Clemson College. Without resorting to flattery, I can say that I was truly amazed to discover the depth and extent of Clemson's influence in molding the life and progress of South Carolina.

I was particularly interested in a paragraph in one of the annual reports, which summed up the facts in striking fashion. The report said:

"Nearly 3,500 men have graduated from Clemson College besides some 9,000 additional individuals who have received some training at the institution. The vast majority of these men are still in South Carolina, though Clemson graduates can be found in almost any part of the United States and in foreign countries.

"With such a number of technically trained individuals, the State of South Carolina does not have to go beyond its own borders to find men who can build or rebuild any of its railroads, who can bridge any of its rivers, who can handle any of its textile plants, who can erect any of its buildings, who can equal any in the growth of quality cotton, and who lead all the States in the 'live at home' policy on the farms."

There is reason for just pride in this record of accomplishment in promoting the fruitful ways of peace and progress, and I am happy to congratulate President Sikes, the members of the faculty, and all those past and present who have made their contribution to the solid worth of Clemson. You have given life and purpose to the vision of those who first conceived this splendid institution.

Every citizen is grateful for the fact that the United States is able to live in peace and domestic tranquillity in the midst of a world torn by strife and turmoil. There are many reasons for this fortunate circumstance, and one of them is the fact that education in the proper sense has come to play a large part in the upbringing of the Nation's youth. Every year hundreds of colleges and universities, like Clemson, are sending forth graduates who are trained to think, trained to make use of the arts and sciences, trained to distinguish between truth and error, and, above all, trained to have a decent respect for the opinions of their fellow men.

Education is not enough. But education founded upon the bedrock of American principles—founded upon a sincere belief in the rules of fair play and right social conduct—is a powerful weapon in the preservation of national ideals. This is the kind of education which Clemson gives to those who come here for knowledge and guidance, and in this fact lies the true measure of its greatness.

A postal system in some form exists in virtually every country on the globe and many of these systems have existed for several centuries. In fact, communication by mail is carried on almost universally and, except in time of war, the nations are glad to provide

safe and efficient transport for letters originating outside of their own boundaries. The international postal system is a symbol of what men may accomplish when they employ the peaceful methods of cooperation rather than the hateful methods of war and bloodshed. Unfortunately for the world, this has become an age of tragedy and despair because men and nations have rejected this simple truth.

The United States has not escaped entirely from the wave of political discontent, caused by economic dislocation, which has brought about havoc and destruction in other lands. Everyone realizes that vast changes have taken place here in the past few years—that the Nation has come face to face with political problems and issues which were unknown a generation ago.

As patriotic citizens, we naturally ask ourselves if the country is emerging from this crucial period in better or worse shape than when it entered. My own opinion is that the United States is definitely emerging from the ordeal a stronger and a better nation.

Despite the first controversies that raged over various enactments by the Federal Government, it is now almost generally accepted that most of them were needed and should be continued in force. A responsible person, who has an understanding of the conditions that exist in a highly industrialized country, would hardly contend that the Federal Government should give up the policy of providing aid for agriculture, or work for the needy unemployed, or the humane policy of providing a means of social security for the aged and dependent. These are now basic policies, the need for which is recognized by public leaders regardless of political party.

The Nation has taken important steps forward in solving fundamental problems. If conditions were ideal, of course, it would be far better to handle these problems with a minimum of legislation. But does any sane person think that the country would be better off if the Federal Government ignored realities and did nothing about them?

In his message to Congress on the state of the Union President Roosevelt made an eloquent plea for national unity founded on the age-old principles of mutual tolerance and good will. He warned against the dangers that arise from setting section against section, group against group, or class against class. The United States, he said, cannot afford to face the world as a disunited nation. To this wholesome truth every citizen who cares for the welfare of his country should be able to subscribe.

The deepest sympathy of the American people has gone out to those unhappy nations across the oceans who have become the unwilling victims of violent aggression and heartless persecution. The gloomiest prophet of a few years back could hardly foresee the extent of the horror which has been visited upon small nations whose only desire was to live in peace with their neighbors.

While deploring the consequences of this calamity, it is a consolation to know that the voice of President Roosevelt has been the mightiest voice for peace in all the world. Without sacrificing the national interest in any way he has pleaded the cause of justice and sanity with all the emphasis at his command.

Before hostilities actually got under way he did everything in his power to bring about a peaceful solution of the troubles that plagued Europe. When his plea fell upon unheeding ears he did not lose heart. Rather, he has persisted with rare courage to search for the path that will lead to the reestablishment of justice, honesty, and fair dealing between nations. In this great work he has lighted the way by practicing the doctrine of the good neighbor in dealing with our sister republics of the Western Hemisphere.

The foreign affairs of the United States have been conducted with wise insight and understanding in this perilous era. There has been no hint of threat or coercion against weaker countries and no disregard of the fundamental rights of others. An eager desire for peace and good will has been the underlying motive in every action taken by a great President and a far-seeing Secretary of State, Cordell Hull. In their handling of delicate international problems they have lived up to the finest traditions of American public life.

The one bright beam in the present state of world-wide chaos and disorder is the triumph of the democratic process here in our own native land. There were pessimists on every hand a few years ago when the country was staggering under the impact of harsh social and economic forces. These individuals had lost faith in the efficacy of popular government; they feared that rule by majority opinion was unable to bring either stability or security. In whispered tones they told of the progress being made in other lands where the sway of an all-powerful ruler had supplanted popular government.

The outlook is different today. The events abroad have disclosed with tragic consequences that a government which takes away the basic liberties of its own people is preparing the way for its own destruction. Here in the United States a vast program of reform has been instituted without impairing in the slightest degree the fundamental liberties without which life is not worth the living. We have set our own house in order without destroying freedom of the press, freedom of speech, freedom of conscience, or freedom of worship. Democracy has been vindicated as the finest form of government yet devised by man.

By holding fast to these ideals the United States will continue to move forward as it has in the past, seeking happiness and prosperity for its own citizens, and peace for all mankind.

## Parity Payments and Farm Tenantry

## EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

MR. HARE. Mr. Speaker, I regret that on account of illness I was not able to participate in the debate when the appropriation bill for the Department of Agriculture was up for consideration last week. I am fully aware that under our parliamentary procedure legislation cannot be enacted on an appropriation bill, but I had some suggestions to offer relative to the parity-payments program and the farm-tenantry problem with the hope that the appropriate committee may take appropriate action before the close of this session of Congress. I am sorry, of course, the Budget Bureau did not see fit to include an amount for parity payments in the Budget submitted to Congress, and I am sorry the item for farm tenantry was eliminated.

I have had quite a number of farmers to make inquiry as to the real purpose of parity payments, asking that it be explained to them. I am therefore taking time to repeat my explanation.

## PARITY PAYMENTS

The farmer pays his proportionate share of tariff duties when he buys and consumes imported goods. He also pays the increase in price of goods manufactured in the United States to the extent of the tariff, provided such duties are fully effective. That is, he pays the equivalent of the tariff duty whether he buys goods manufactured abroad or at home. There can be no effective tariff on raw materials produced by the farmer; parity payments therefore have been made with the idea that such payments will increase the price of his products as much in proportion as the tariff increases the price of goods he buys whether imported or manufactured in our domestic market, the idea being to place the price of what he sells on a parity with what he buys.

Heretofore, it is claimed that the money for parity payments had to be borrowed by the Government and paid out of the United States Treasury. We are now told that recommendation for parity payments was not included in the Budget submitted to Congress at the beginning of this session because there are not sufficient funds in the Treasury to make these payments and that the public debt has increased to such a point it was not considered wise or advisable to borrow more money for this purpose. It is not my purpose to deny or argue the reasons assigned for the failure to include parity payments in the Budget, but I would like to insist that parity payments could have been included if the Budget makers had not decided to spend all the available money for other purposes. There is only one conclusion to draw and that is the Budget makers thought less of parity payments to farmers than they did in spending the money in some other way.

What I have just said may seem to be critical of the Budget makers, but my statements are not in the spirit of criticism but only for the purpose of emphasizing some suggestions I have to make that will take care of parity payments in the future without having a wrangling logrolling time every year.

My suggestion is that provision be made by statute fixing a definite amount for parity payments annually or so much thereof as may be required, and that this amount be set aside as a special fund from tariff or custom duties as collected. Or such a fund may be provided by setting aside all custom duties so that parity payments may be made from this fund.

I am convinced that the soil-improvement benefit payments paid the farmer are doing more good to aid agriculture than all the other features of the farm program put together; and my further suggestion is that in order to get away from the idea of a Government subsidy for agriculture, the parity-payment fund be transferred to the soil-conservation benefit fund, which should, in effect, make no change in the relative amount paid the farmer. For example, if a farmer has heretofore been entitled to \$100 per annum under the soil-conservation benefit plan and \$50 from the parity-payment plan, the latter should be transferred to the former, whereby the same farmer might be able to obtain \$150 soil-conservation benefit and parity payments combined.

A number of reasons may be given for this suggestion, but it is sufficient to say in the first place that very large farmers, with their tenants, would then be more inclined to follow the soil-conservation plan, and smaller farmers would be inclined to enlarge or increase their farm-improvement activities, and the result would be increased fertility of the soil on the part of all and an increase in yield per acre, which would, in turn, mean a decrease in the cost of production per unit. With such a policy we can easily vision the time when the cost of production may be reduced to a minimum and there will be surplus enough over and above such cost whereby investments may be made by farmers in better education for their children, an increase in more modern home conveniences, as well as increased farm ownership. Such a policy will support and dovetail in with my next suggestion relative to farm tenantry.

## FARM TENANCY

There seems to be some controversy about the existing farm-tenantry program. I supported the amendment for a continuation of this appropriation but have to admit that I am not very enthusiastic over the program as it now exists, and I am taking a little time to suggest some changes in this program also. The evidence before the subcommittees will show that out of more than 140,000 applications only about 6,000 have been approved, the estimated number for South Carolina in 1940 being about 1 for each county. We cannot solve the tenant problem at this rate. In other words, the number of people benefited seems to be too limited to warrant the amount of money being expended. It was further shown that the average cost per tenant farm in the United States is something like \$6,000, and, unless I am badly mistaken, I am venturing the guess there is not one tenant farmer out of a hundred under existing conditions who can ever hope to pay for such a farm. It is unreasonable to expect the tenant farmer to make a living and clear enough money to pay for a farm when we all know that his next-door neighbor, who may be a farm owner, is unable to make ends meet, educate his children, or pay off a small mortgage, although he may have a good equity in such farm. In other words, simply putting a man on a farm does not increase his ability or efficiency to the extent that he will be able to make a greater success than his neighbor.

My idea is that better results can be obtained by taking the same amount of money heretofore appropriated and make small loans to the same type of tenants, because there are many of them, let them choose their farm and improve it in such a way as to meet their standard of living, so that they can reasonably expect to refund the money. There are hundreds, and possibly thousands of men, who can buy small farms for \$500, \$1,000, or in some instances as much as \$2,000, who can improve their buildings, not according to the way someone else might suggest, but in keeping with their own plans and in such a way and only to such an extent they can hope to refund the money furnished and eventually be a home owner. In this way you will be able to decrease the number of tenants, particularly if they avail themselves of the benefits provided by the soil-improvement plan I have just suggested. That is, the farm-tenancy plan should be modified, as I have indicated, so that it will dovetail into the soil-improvement and combined parity-payment plan as outlined.

## Lincoln—Living Legend

## EXTENSION OF REMARKS

OF

HON. T. V. SMITH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

ADDRESS BY HON. T. V. SMITH, OF ILLINOIS

Mr. SMITH of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the first annual Abraham Lincoln lecture instituted this year by Cooper Union. I gave this address last evening at Cooper Union in celebration of the eightieth anniversary of Lincoln's Cooper Union address there in 1860.

The address is as follows:

"Abraham Lincoln is so interfused with the idea of America that he may be said to have extended himself backward and forward in time and made himself a perfectly adequate expression of the idea in any year for any anniversary."—Topics of the Times.

## LINCOLN: LIVING LEGEND

Men and women of Cooper Union, fellow citizens everywhere, Abraham Lincoln, of Illinois, has been dead for, lo, these 75 years. The Lincoln of legend still lives today, lives an expanding life: the clarity of mind lives: the charity of purpose lives: the good humor lives and chuckles throughout the roominess of our national character. Lincoln, the human person, walked in boots that creaked and pinched; Lincoln, the personage, strides silently, yea, he stalks majestically through all the highways of our overburdened world. How and why that humble man of seasonal mirth and unseasonal sadness grew to be a national legend of light, the great white companion of every twilight through which the Nation gropes—that is our theme on this the eve of his birthday. It is not a theme which we shall exhaust. If the poet, surgeon as he is of the human soul, cannot pluck out the heart of the Lincoln mystery in six large volumes, we shall hardly estimate too modestly what the politician can do in a single speech. There is room here, however, for every honest analysis and pay in kind for each sincere gesture of deference. We honor ourselves in all aspiration to understand his character and in every endeavor to survey our scene in the light of his living legend.

## HOW AND WHY LINCOLN CAME TO COOPER INSTITUTE

We are met at this historic spot to renew acquaintance with both the man and the myth. It is altogether fitting that we are come to Cooper Union where he stood and spoke on a memorable occasion. Exactly fourscore years have passed since Lincoln journeyed from the pioneer West to New York City, then, as now, the Nation's financial center. With the mantle of his own integrity about him, he brought to the older East the homely wisdom and dogged convictions of the West, brought both at a time when the Nation, divided in counsel, was on the lookout for a leader.

From the prairies of Illinois, Abraham Lincoln came here in 1860 to discuss the Constitution, to reaffirm the conscience of the fathers as touching slavery, and to recommend a strategy, designed under the Constitution, to save the Union through the career line of its own growth. He came, a plain westerner, to be gaped at by men who admitted that they were more civilized than he. He was unsure of himself, so unsure, indeed, that he wore new boots, adding visible discomfort to a countenance already chronically sad. Of his cause, however, he was sure—so sure, indeed, as to mince no words to either North or South. He came; he spoke; he conquered.

Better to have galls on the foot than callouses on the conscience. Lincoln proved once more, from Cooper Union forward, that the niceties of life count for less than does stamina in the clinches of history.

Like another gawk named Saul—a gawk who went to look for asses and found a kingdom—Lincoln, of Illinois, came to New York to make a speech, and he made himself President of the United States. He and who else? Well, he and the fate which he trusted. Accident plays so large a part in all things human, especially in politics, that we must always stand ready to do deference to its overtures. It is not the part of man, however, to be overawed by this fact any more than Lincoln was overawed by his faith in Fate. We do well to discover, if possible, what Lincoln had discovered to fit himself rather than another to become our national emissary of Fate.

## LINCOLN DISCOVERS FOR HIMSELF A PRINCIPLE

Lincoln had discovered, along with deep reliance upon humor, a principle—a principle, indeed, which he came to New York to illustrate. The philosophers have a name for it, but we shall presently prefer a name more politic than erudite. It was a principle that not only gave him guidance on slavery but also constituted then,

as now, a proper directive for the political enterprise in general. It was a principle that explains to us, as it seems to have justified to Lincoln himself, his changing of parties—"parties," I say, not convictions—in midlife. He deserted the Whigs when they deserted his principle; he espoused the Republican cause when the Republicans espoused his principle.

What Lincoln discovered was, and is, the "federal principle," as we shall now call it. Born of his deepest social experience, this principle challenged Lincoln's loftiest intellectual loyalty. We shall look at this pole star of Lincoln's philosophy of life from as many angles as possible—preparing ourselves gradually for a full view of it eventually. We may begin by saying that Lincoln had discovered for himself that where two or three are gathered together in any name there a new power emerges as a presence not to be put by. He had found, too, that discovery holds of a nation no less than of simpler groups. In the cant of our time Lincoln had laid hold of the nation that "mass gains" must not be monopolized for "class privileges." In its moral aspect his discovery meant that union produces power in excess of the number united, and in its political aspect we may present the principle as belief that the surplus power resulting may be used, sometimes must be used, to succor any portion of the people.

The business of government, said Lincoln under the dominance of this insight, is "to do for the people what needs to be done, but which they cannot by individual effort do at all, or do so well, for themselves." That was, and is, the general principle popularly formulated. The practical problem was, and ever is, however, to know when and where to apply through instruments of power the surplus value created in union. Lincoln grew great through an opportune determination of this "when and where," this "how and why." Lessons of history always prevail, when prevail they do, by the offering of a principle to a case or by the generalizing of a crucial case into a principle. Lincoln dared the one; he offered a principle to the case of slavery. We must risk the other for ourselves, risk the generalization of his principle to our cases. This risk I shall ask you presently to assume with me, lessening our joint hazard, however, by appealing to the Lincoln legend which we know, rather than to the martyr whom nobody knows well enough to say what he would have done with our problems.

Lincoln of Illinois, for all his commerce with fate, was not wizard enough to "look into the seeds of time and say which grain would grow, and which would not." Not Lincoln, the humble man. But with a legend all things are possible. The natural history indeed of the legendary in general does, for a fact, illustrate the way in which logic weaves its pattern through the tangled web of a nation's life. The loftiest principle must have a carrier, and across the gap of the centuries the carrier must be somewhat more than merely human. Reason in society prospers under the guardianship of secular saints—folk-heroes, I mean, like the legendary Lincoln.

## THE FEDERAL PRINCIPLE APPLIED TO SLAVERY

Lincoln's Cooper Union address—if we may descend now to details—proposed a governmental policy with reference to a given problem in a limited area. The problem was slavery. The limited area was the then territories. The governmental policy was strategic intervention. In the historic words of Lincoln, here delivered 80 years ago, the policy was authorized by the fact that "no line dividing local from Federal authority, nor anything in the Constitution, forbade the Federal Government, to control as to slavery in Federal territory." The strategic intent of his policy was to intervene at the point of growth, saving the new for the right while tolerating the old with its evils. The speech itself consisted largely in showing that the fathers understood this policy of strategic intervention while Douglas misunderstood it. But the principle, the Federal principle, was assumed. This principle ran through Lincoln's speech, as it ran through his biography, buttressing every policy with the common sense, if radical, understanding that what needs to be done and is not rightly forbidden to be done, should be done by whatever power is competent to do it. Lincoln habitually followed the logic of events rather than succumb to the easier lure of dogma.

But there was a question in connection with slavery, as always there is with every evil, whether the power which alone could intervene should intervene. It was not a question for the States separately. The States that had slaves wouldn't abolish slavery, and the States that didn't have slaves couldn't abolish slavery. Where one group couldn't and the other group wouldn't, a new power had to be found that both could and would circumvent slavery, or the Nation would surrender to fate as to an agency of evil. It was not for the States separately. Was it for them collectively?

The Federal Government that is, and the Federal Government alone, physically could abolish slavery. Why wouldn't it? That was the simple and clear prod of the northern abolitionists, to Lincoln's left. Let it dare try. That was the ominous rejoinder of southern fanatics, to Lincoln's right. Reasonable men in the center—like Lincoln, like Douglas—debated whether the Federal Government should do all that it could even if it dared. And that's no simple quandary. "Should" for civilized men always comes between could and would. Morality, that is, must mediate politics.

The close of Lincoln's address at Cooper Union makes clear that his proposed public policy as touching slavery arose precisely as his compromise between what could be done (which alone dictators ask) and what should be done (which alone sentimentalists ask). The Federal Government could, perhaps, as a matter of fact, but

could not as a matter of right, abolish slavery in States already organized; but it could, both as of fact and of right, prevent slavery in the States-to-be, that is, in the territories. This was the wisdom of the fathers, to provide a way whereby their sons could improve upon their earlier compromise. Faith in the fathers involved belief that the fathers had faith in their sons. In that faith dared Lincoln ask others to facilitate the national accommodation which he recommended at Cooper Union as constitutional. This prescribed path of duty was a delicate union marked by forbearance of the dead past and of control for the growing future. So scrupulous was Lincoln's notion of how to combine might and right that he lost interest in the Constitution, and even in the fathers, when either were interpreted as being indifferent to the formula dictated to him by conscience.

#### THE POLITICAL BEST IS A PERSONAL SECOND BEST

On what his faith in this formula, this moral mixture, was founded we have adequate reason and every right to inquire. But let the inquiry proceed through certain honest admissions as touching Lincoln, the political moralist from Illinois. There is, after all, a slave morality, which creeps down the crevices of custom; and there is a creative morality, which breaks new paths for human growth.

Our first admission is that Lincoln was not a chronic perfectionist. Perfectionist he was indeed, as touching matrimony, for instance; and dearly did he part with his coin of happiness to pay in marriage for a temperament on his part that once declared: "I can never be satisfied with anyone who would be blockhead enough to have me." But he was not chronically perfectionistic. In things public he did not insist upon the perfect best. He couldn't find it. He admitted that he was not God. That slavery was wrong, wrong in principle and bad in practice, Lincoln knew. Thus far he went with the fanatical abolitionists. But that it was right forcibly to abolish that wrong, the peacetime Lincoln could not convince himself. Thus stood he as protector of southern slaveholders.

This ambivalence seemed to leave Lincoln, the moralist, in the curious predicament of being unwilling to right what he himself admitted to be wrong. Indeed, one of his present-day disparagers has given Lincoln's slavery position this invidious slant: "If the wind come my way, I have set my sail for it; and if it does not come my way, it is not much of a sail that I have flung forth, and not dangerously noticeable." And the abolitionists of his own time officially described him as a "middleman, between a very modest right and the most arrogant and exacting wrong." We ourselves must admit of Lincoln that the best right he could find as touching slavery, was to tolerate admitted wrong in the faith, whose foundation is yet to be examined, that the toleration might at last lead to termination.

The second admission is that the South was right in defending what Lincoln felt required to tolerate. He went so far as to indicate that if he were a southerner, he would probably do what the southerners were doing. They were but the honest victims of history. Lincoln saw how easily and often history becomes the enemy of aspiration. It fights against hope; for the course of events makes a vested interest of so many an evil that hope is subverted by what its own past has produced. The frequent influence of history, as Lincoln saw with Calhoun, "is but to make the error of yesterday the law of today."

The third admission is that Lincoln was prepared to risk a war to stop the spread of slavery, hoping thus to set the evil on the road to extinction. Of course, he did not wish war. Indeed, for long he did not expect war. For a fact, he, like Douglas, fought against war by proposing a compromise, by courting delay, by counseling forbearance. He well knew the moral inconclusiveness of war. "Suppose you go to war," as his first inaugural had it, "you cannot fight always; and when, after much loss on both sides and no gain on either, you cease fighting, the identical old questions as to terms of intercourse are again upon you." But he also knew the moral odium of inaction when action will help. He was not willing to call wrong right, and he did not fear to defend the right against the wrong. He wanted peace, but he was not for peace at any price. The price of peace at which he balked was what by the time of the Cooper Union address he feared the South would exact, the admission that slavery was right. That was to degrade the principle of the Union; it was to render irresponsible to the weakest the strength of the united. It was, therefore, martial as well as moral courage with which he here closed his famous address: "Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it."

In our day it is worth remarking that Lincoln joined the fathers in a view of war that was candidly realistic. They did not sentimentalize over what loss of life was necessary to preserve liberty. If peace can be kept, it will be kept not by fear of offending the morally offensive but by fearless use of whatever strength we have in behalf of what is clearly right.

The fourth admission is, to generalize the others, the admission that politics normally involves a choice between evils, tolerating the evil unchosen in the hope that the evil chosen will help to abolish the one tolerated. If not this, then that it will help produce might to enforce right, as Lincoln phrased it. Such realism constitutes a hard dose to take, a dose so hard, indeed, that only practical politicians like Lincoln can ordinarily stomach it. The trouble is that such an attitude involves a compromise, which compromises tender consciences, leaving them with an oppressive sense of guilt.

Such consciences as hate evil but are ignorant of the world argue that given a wrong and given the power to right it the

wrong must be righted forthwith. Thus reasoned insipient tyrants before Lincoln. Thus reason insipient tyrants after Lincoln. Not so Lincoln. This plainsman knew from experience that life is mostly endurance of wrongs that cannot be righted unless through strategy, patience, forbearance, ingenuity. At the time of the Cooper Union address Lincoln was bent on effecting a compromise between those who held that because slavery was wrong it ought to be abolished and those who believed that because it should not be outright abolished slavery was right. Lincoln believed with the North that slavery was wrong, but admitted with the South that it should not be abolished by Federal action.

#### HOW LINCOLN ACCEPTED THE INEVITABLE

"But that," says the moral philosopher, confusing what's possible to a mere man with what's possible for an ideal legend, "that means that he tolerated, indeed that he believed in tolerating, evil." "Yes," we reply sadly, "that's exactly what our living man did believe, did the sad Lincoln. He believed it because he had found that that's what life is mostly about." Lincoln, you see, Mr. Philosopher, was not one to shut life out of his philosophy of life. He had found it necessary to tolerate the evil of poverty in childhood. He had renewed his sad covenant with cosmic wrong at the grave of Ann Rutledge. Terror-stricken had he fled from evil in marriage only to return and accept the face of maladjustment at the altar of love. He had to learn to accept the death of beloved children. He had long accepted evil in successive failures of his own ambition.

Lincoln had learned to accept evil, I repeat, to tolerate it. This is the sum of our admissions. But beyond all admission shines this one affirmation: Lincoln had never learned to call evil good. Lincoln could never learn why he should make tolerable evil utterly intolerable by perpetrating the very greatest evil, the evil of calling it good. This was, in all conscience, the real reason he did not enroll himself with those who were formally religious. The technique whereby Lincoln saved both his modesty, in admitting moral ambiguity in the universe, and his integrity, in refusing to call either terrestrial or celestial evil good, constitutes a story all its own. It was the technique of detachment, mainly through humor, wherefrom hangs many a tale. But we must for this occasion concentrate upon the harder way of conscience. My best single guess as to why we have promoted Lincoln from life, through death, to secular sainthood was that he had this scrupulous mind as touching good and evil. Lincoln achieved the immortality of legend because he deserved it. Let us now broaden from politics to philosophy this suggested ground of his deserts.

#### HOW HE MADE THE BETTER OF THE ACCEPTED WORSE

It was right, argued Lincoln—argues it even in the Cooper Union address—right to protect slavery, but it was wrong to extend it. Human responsibility stops at the farther edge of human power, but human responsibility begins where human power begins, begins without vengeance wherever it can be exercised without remorse. Nobody at the time saw how to get rid of slavery in the South. Lincoln admitted freely that he did not see how. Voluntary emancipation was out of the question. Forcible abolition meant war, which was worse than slavery because it was impotent to free the slaves even if it should emancipate them. Compensated emancipation with or without colonization, both of which had Lincoln's sympathy, proved impossible to bring about politically. Clairvoyant of all this, Lincoln was for accepting existing slavery—as we have said—out of deference to history.

After all, slavery, too, was the legacy of ancestors from whom Lincoln had already inherited life and liberty; a legacy not only from southern slaveholders but of northern slave traders as well. Men must accept the issue of their ancestors' conduct, whether they like these issues or not. They must accept whatever cannot be disposed of at less social expense than is required to maintain it. Moralist though he was, Lincoln was no prude; he fully accepted the people's maxim that "no matter how strong the stomach, you should eat as few cockroaches as possible." And so the famous Cooper Union declaration: "Wrong as we think slavery is, we can yet afford to let it alone where it is, because that much is due to the necessity arising from its actual presence in the Nation \* \* \*." Impotent to cure slavery outright, the Nation had through the Federal principle collective power enough to arrest its spread. Lincoln was in favor of using this power energetically. His sensitiveness to wrongs that must be tolerated made him double quick to pick on wrongs like this which could be arrested even if not cured. He was not one to argue that because he could do so little, he'd do nothing—not Lincoln. He argued rather that because men could do so little, they must do all they could do, wisely and effectively.

The line here indicated is a nice one, a line between the effrontery of compulsive action and the efficacy of strategic effort. The line becomes fully clear only when we leave the open country of overt conduct and push further into the underbrush of reflective thought. Lincoln was for preventing the growth of evil while accepting the evil already grown, and doing both with a humor marked at the fringes by wonder as to the ways of the overworld. Where such wonder fertilizes, there philosophy sprouts.

Lincoln had a philosophy, a sort of metaphysical faith, if you will; but it was a philosophy that rested on, even though it transcended, the utmost possible through human perseverance. He could not join minds less scrupulous in asking men less fortunate than he to pay the freight for his faith. Such indeed had been the faith that produced the compromises at which he inveighed. Such would have been the fruits, thought he, of the faith of Calhoun, the faith of Clay, the faith of Webster, yea, of the faith of Lincoln's

friendly enemy, Douglas. They were at one in the faith that slavery would somehow be automatically arrested in the Federal Territories north of some artificial line. No laws were needed, according to this conviction, because climate and soil and God would keep slavery where it was. Local sovereignty could only propose; it was Providence that was to dispose. Well, Lincoln's Illinois is well above the proposed line, and it today is one of the great Negro States, without cotton.

Theirs was a common faith, however, we may repeat; and too easy a one. Let the southerners feel that they were free to expand slavery without let or hindrance and let the northerners rest assured that there was no need for them to use their freedom of action to counteract its spread. And if this faith should fail of fulfillment, who would pay for the failure? It would be paid for by the weak; and when paid for, would weaken the country by mingling with its wheat of growth the tares of decay. To have this option of creation offered by growth is a fearful responsibility, linking men with the gods. Not to take up that option to stop the spread of evil and to open the future to the better alone—that is to become a sluggard or a devil. Faith in lethargy is pernicious when action can budge a nation toward the ideal. Lincoln was not lacking, as we have seen, in natural piety to accept the covenants of the past, even when he did not like their complexion. He could not share with the morally easy going, however, the confidence that if we work with the forces of nature they will do all the work. Rather he had the courage to join the forces of his life to the forces of nature in a sterner union of effort and trust. Not a revolutionary, he still was a resourceful pioneer.

#### THE METAPHYSICS OF LINCOLN'S ATTITUDE

Such balance implies a philosophy of life that may in the pinches become a major force of history. The power of science is a function of motion controlled and of growth directed. The power of politics is no different. To make neutral or morally mediocre processes support the growing good—that is creative statesmanship. Lincoln had insight to locate the points of growth and stamina to stand advance ground chosen through this insight. He, too, had faith. It was the faith of a will rendered inflexible through clairvoyance of consequences.

His friends called him a fatalist. So Herndon. So his wife. "His wife, after his death," says Herndon, "told me what I already knew, that 'his only philosophy was, what is to be will be, and no prayers of ours can reverse the decree.'" Fatalist, indeed, Lincoln was in a way. But fatalism is usually conceived as a doctrine of pessimism. Personally pessimistic, Lincoln was not socially so. He allied personal fatalism with social optimism, and a new confidence arose, the trust in a credence not blind but informed of the future.

His good friend, Leonard Swett, says that Lincoln succeeded in politics "by ignoring men and \* \* \* all small causes, but by closely calculating the tendencies of events and the great forces which were producing logical results."

"The whole world to him," says Swett again, "was a question of cause and effect. He believed the results to which certain causes tended; he did not believe that those results could be materially hastened or impeded."

Those are weighty words from one close to Lincoln's habits of thought. They reveal an attitude of mind rare outside the field of technical science. This attitude and Lincoln's practice are finally summarized by Swett in a sentence that may pass as the veritable creed for constructive fatalism: "His tactics were to get himself in the right place and remain there still, until events would find him in that place." That creed reveals for Lincoln a metaphysics that saved his morality from sentimentalism, and guaranteed action under his leadership a career short of fanaticism.

Here was, indeed, a man in tune with the universe, or one who thought that he was. The universe seems to have agreed. Lincoln differed from most men in this feeling that he was attuned to fate, and he was distinguished from nearly all the rest in having fate not let him down in the feeling. The moral of Lincoln's fatalism is, however, that fruitful resignation begins only where human power ends. The morally blind will accept responsibility for the universe as such. Then they will prove their blindness by fanaticism when the hour of action calls their bluff. Wise men show their wisdom, first, by discovering what is within their power; and second, by discharging responsibility for that without aimless fury or useless repining.

Such accommodation of effort and trust as climaxed Lincoln's preparation for legendhood need be only slightly miscued to render men ridiculous. Popular fatalism is mostly the stuff of which exhibitionists manufacture bravado. To Lincoln, men who resigned themselves to either the preventable or the reparable were comic figures when events, alas, did not turn their negligence into tragedy. They were to him like the old lady of his famous runaway-horse story. She trusted Providence, he said, until the "britchin broke," and then didn't know what on "airth to do." To Lincoln, the seer, Providence spelled, first of all, the groundwork of prevention; second, all possibility of reparation; and, last of all, justification for hopeful resignation to the genuinely inevitable.

This clairvoyance of social motion and this sense of responsibility for its direction constituted Lincoln one of the natural aristocrats whom Jefferson had described as the saving salt of democracy. Though he was "Honest Abe" in popular parlance, it is remarked that only one man, and perhaps no woman, did he himself habitually call by the given name. He had the bearing of an aristocrat. He was, as the French diplomat phrased it, "one grand gentilhomme in disguise." Though loquacious of story and ready with fable, he is universally admitted to have been reserved to a fault, not to say secretive to a point almost justifying suspicion of his candor. As

humor gave him detachment, so story telling preserved his social distance even in crowds to which he was accustomed. Many a friend has corroborated Swett in the doubt whether "from the commencement of his life to its close \* \* \* he ever asked anybody's advice about anything." Men mostly ask advice who cannot take it, and those able to take it hardly ever need ask it; they discern in advance what sort it is to be.

This power of discernment appears usually to be the fruit of solitude, but of solitude only when one is properly seized in his inner life of the very essence of sociality. Rapport with both social and natural processes is best born of "the lonely debate." Out of the pregnant silences of reflection there arose in this son of the prairies a superior wisdom for life. "The truth about Mr. Lincoln is," observed Herndon, "that he read less and thought more than any man in his sphere in America." I have spoken already of the scrupulous mind as his badge of credit for immortality. And so it is. But he created of himself through habits of solitary reflection a proper person to mediate the principle of value which he discovered in the crowd. It is a high moment of history when the magnanimous person and the right principle meet and embrace. The person without the principle is pusillanimous, and the principle without the person is but a puff of breath.

Let us now return to the principle through which Lincoln fore-shortened time and put himself in the way of events. Then let us seek to discern how the person he was saved the principle he found from both oblivion and ignominy.

#### THE FEDERAL PRINCIPLE AS MYSTIC FAITH IN UNION

The principle in question is that to which we have referred as "the Federal principle." Lincoln's faith in the Union was indeed his faith in social increment created by human accord. To see this is to discover in his life the dynamics of value. And to appreciate this dynamics is to discern both why and how he consecrated power to the uses of perfection.

It is remembered with what reluctance Lincoln undertook to do anything about slavery in slave States. He early admitted that he did not know what to do about that, and to his latest hour he hesitated to let action bespeak a knowledge which he knew he lacked. Let us not promise what we ought not, as Lincoln put it, lest we be called upon to perform what we cannot. Make him sovereign of the growing future, however, and he would permit the dead past to bury its own dead. History had given slavery, let history take it away. That was God's responsibility—not Abraham Lincoln's. So from first to last the humane Lincoln was for having and for enforcing fugitive slave laws. He was not for emancipation save with compensation impossible to provide—not for it until the greater evils of war rendered lesser evils tolerable.

It is true that Lincoln believed a house divided against itself could not stand. It is true that he dimly hoped that the Nation, half slave, would become all free. But the faith against slavery that took up where his policy of regulating the growth of slavery left off—and there was much slack to be taken up—was faith in the dynamics created by and sustained in union. To his mind the Union preceded and created the Constitution, not otherwise. To his mind there was power in union to save the value of unity. In praising Lincoln, and appraising Lincoln's character, Alexander H. Stephens once truly said that "the Union with him in sentiment rose to the sublimity of a religious mysticism." Lincoln himself, in the depth of war wrote Greeley, "My paramount object in this struggle is to save the Union, and is not either to save or to destroy slavery. If I could save the Union without freeing any slave, I would do it; and if I could save it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone; I would also do that. What I do, \* \* \* I do because I believe it helps to save the Union; and what I forbear, I forbear because I do not believe it would help to save the Union."

But whatever he did do, or did not do, he foresaw, or at least forefelt the salvation of the Union. He could not bring himself to believe that the sacred values that arise from human association on so great a scale can come to naught. Thus trusted he the universe. It was this trust, this profound metaphysical credence, which satisfied Lincoln that if he only did his part, the inevitable could be awaited with confidence. "I know not how," said he to a Christian Mission that waited upon him during the war, "but I have a firm, unshaken faith that in the end success will crown our arms, and the union of these States will be restored and maintained." "Stand still," Lincoln upon a crucial occasion echoed the Bible, "and see the salvation of the Lord."

This imagery of Biblical piety was accidental to the times and external to the issues of Lincoln's life. But deeply internal to him and of the essence of his preparation for immortality was Lincoln's reliance upon the future. He treasured the fruits that arose in America from our exemplification of the Federal principle of value. Had not he himself grown great upon the affluence of the crowd? Had he not himself lived social life richly where groups smaller than crowds sat alighting raptly to his stories? Had he not, conversely too, felt the frustrative effect of his own failures at and in mating? Hardly could Lincoln be fooled, then, affirmatively or negatively, about the nature and law of social value. He had witnessed from the most intimate of experiences the mystery of morale; namely, that where two or three are gathered together new power is produced out of the very process of association. Lincoln knew as leader of crowds what other men experience as followers.

Whatever we call this precious unearned increment of value that arises when men—be they leaders or led—pool their potencies while retaining their privacies, it is very clear that there are worse religions than Lincoln's profound faith that the increment which

fraternizing creates is itself creative of the power to keep it embodied in human institutions. "Let us have faith that right creates might . . ." As Whitman, who turned out to be an uncrowned laureate of Lincoln's immortality, said:

"We consider Bibles and religions divine—I do not say they are not divine—

I say they have all grown out of you, and may grow out of you still.

It is not they who give the life; it is you who give the life. Leaves are not more shed from trees, or trees from the earth, than they are shed out of you."

It was this dynamic value of unity which had created the Constitution, and to it the Constitution stood always subordinate in Lincoln's thought and action. "I felt," confessed he, on the unconstitutionality of the famous proclamation, "that measures otherwise unconstitutional might become lawful by becoming indispensable." Service of this principle was Lincoln's "higher law"—higher than institutional religions; higher than written constitutions; higher than all else save the integrity of spirit found in serving it.

Such faith in principle has point against more than the politicians of mere expedience, which Lincoln believed Douglas to represent. It needs constant assertion against the timorously religious; and Lincoln had braved askances directed at him for asserting it against them. It needs constant assertion against such moralists as declare, with Nicolai Hartmann in our day, that the higher the ideal the weaker, the lower the ideal the stronger. It needs constant assertion against the sophisticated who in one way or another amuse themselves with cynical nursery rhymes befitting the second childhood of their faith:

Might and Right are always fightin',  
When we're young it seems excitin',  
Right is always nearly winnin',  
Might can hardly keep from grinnin'."

Yes; there are few, professional idealists or otherwise, who do not have reason for standing in awe of Lincoln's faith in the Federal principle. For against all pessimism and short-circuiting all cynicism, Lincoln had discovered, or thought he had discovered, this dependable principle of value to be operative in the world of events through the instrumentality of honest effort. Such a principle could be added to most religions with profit, and could substitute for many religions without loss. Such a principle may be reaffirmed in Lincoln's already quoted words as the very creed of liberal government: "To do for the people what needs to be done, but which they cannot by individual effort do at all, or do so well, for themselves." This Federal principle we must now finally formulate in all its width and depth.

#### THE FEDERAL PRINCIPLE DIVERSELY FORMULATED

In ethics, the principle of which we have been speaking means that conscience can in the long run more than hold its own with coercion. In sociology, it means that the unearned increment of value can be furthered by taking thought. In politics, it means that the power of union should be used circumspectly to distribute the power created cooperatively. Constitutionally, the meaning of all this together was, and is, that no dead dogma about the nature of the Federal Union can be allowed to frustrate the Federal principle in action.

Lincoln's whole Cooper Union address was dedicated to clearing the Founding Fathers of the slander that collective inaction is or can be the right response to the growth of wrong. Against lethargy as touching the advance of slavery, Lincoln set the dynamic conviction that, while power must be patient in temper and strategic in application, might which is also right must be used in the pinch to purge national growth of the seeds of poison embodied in every institution at the prime. Thus do we advance in goodness despite the toleration of institutional badness.

#### THE FEDERAL PRINCIPLE IN OPERATION TODAY

As we work from the live Lincoln through his accommodating legend to the solution of our problems today, we pluck at the hem of biographical virtue. We shall not, however, tear Lincoln's mortal raiment in haste to commit the historic man to partisan ends. That sacrilege we leave to the Scribes and Pharisees of politics. On only two problems do we seek even legendary guidance tonight. Such virtue as we claim to derive from his gracious legend will not be detached, however, from Lincoln's own impressive words. He himself defined democracy so as to safeguard it against both presumption of spirit and condescension of spirit. "As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this, to the extent of the difference is no democracy." This is the magnanimous attitude which makes principle safe for the world. Little wonder that the perceptive poet of our democracy, Walt Whitman, wrote of Lincoln, "I more and more rely upon his idiomatic western genius, careless of court dress or court decorum." Since our democratic way of life is defined by Lincoln as respect for persons as such, monopolistic excess of personality and deprecatory defect of personality come alike under the frown of Father Abraham, the legendary symbol of our national integrity.

Our Federal principle itself assumes an equality of persons as persons, and then capitalizes upon the value increment that arises, unearned, through free association of equals. The political increment of such national power Lincoln used to help the helpless, even at last to the freeing of those to whom all legal personality had been denied. The moral idiom of this western man, to which Whitman so happily referred, was to be safeguarded for future reference by appropriate constitutional changes, over which Lincoln's legend presides yet and ever with grace and pathos.

Yes, with pathos as well as grace. For these very amendments were intended to cure the black man's defect of personality, and to do it in the name of a democracy which abhors alike the presumption of excess and the condescension of defect. While haltingly at the long job of curing that lack of personality, the constitutional changes caused, or consecrated, a new surplage of power created by knightly soulless corporations as persons before the law. A new presumption then arose, the presumption of the profit motive, omniscient in its claims; and it has spread a new condescension to blacks and whites alike who cannot produce profits, whatever else they may be able to produce. The instinct of craftsmanship has become poisoned by injection of craftiness. "Getting by" substitutes for getting ahead, and the bitch-goddess success exacts adoration rightly reserved for the creators of a better culture.

In the din of such confusion the Lincoln legend hovers above us, like some holy ghost of the western way, to remind us of the Federal principle of value. It is a principle wider, as we have seen, than the issue of slavery. It is wide enough to settle once for all that first and longest-lasting fruit of slavery, the lynching barbarity. Lynching is a horrible symbol of the defect of personality which the thirteenth amendment meant to abolish and the fourteenth amendment to cure. It symbolizes the spread, indeed, of that original defect, for lynching may now overtake the impotent without regard to color or previous servitude. Apply to States resulting from Territories the principle that Lincoln applied to the Territories of his time and we have Lincoln's dictum at Cooper Union reading now like this: "No line dividing local from Federal authority, nor anything in the Constitution, forbids the Federal Government to control as to the fruits of slavery in the Federal domain." Let that be put down as the authentic prompting of the Lincoln legend on lynching, however the legend may have been of late misread in the Congress of the United States by living miniatures of Stephen A. Douglas, Henry Clay, and John C. Calhoun.

This Federal principle is wide enough not only to cure the severest defect of personality by setting the Federal Government to protect the weakest among us, but wide enough also to cancel the major excess of personality created by treating corporations as persons. The presumption which belonged to the plantation master of Lincoln's definition belongs to the financially masterful today. Their's is a corporate presumption which can kill all that the Lincoln legend seeks to save. Let us not be deceived through superficial changes of name and date, or through any fanatic invocation of constitutionalism. For nowhere will we find better put down the irony of the historic process—yea, of the judicial process—than just here; for these fictitious entities, more powerful than natural persons, have been given their presumptuous surplage of power by a judicial misreading of the very amendment meant to save the weakest among us from the curse of condescension.

I do not mean to suggest that this corporate problem, the converse of Lincoln's is easy of solution, or that the presence of the Lincoln legend can do more than illumine for us the way we ought to go. But it is a problem that we must continue to tackle, and to tackle in the light of the Lincoln legend, even in the spirit of Lincoln's own words that "labor is the superior of capital and deserves much the higher consideration."

That we do not outtalk our information about this corporate problem but do continue to work at the problem and to work at it in Lincoln's spirit, is imperative. For the corporation in modern life has become the major line of social growth. It is the great Northwest Territory of our industrial democracy, a state of mind which constitutes a sort of forty-ninth State. As such it is a logical competitor of the older federalism; it must be controlled by, or it will control, the Federal power. It is a true competitor, for it invokes the Federal principle itself, though it applies it abortively. It has created new social power through association for profit. With all its abuse and danger, it has, like slavery, brought tangible gains. How shall we deal with its evils so as to conserve its goods? As in the case of slavery, there is no way of dealing with it which itself is free from evil. Enthronement of the corporate spirit is fascism. Abolition of corporations is communism. Toleration of its existence with control of its influence upon the growing generations requires more knowledge and more power than we effectively possess. Modesty to admit this ignorance and impotence is a virtue so long as it does not substitute for efforts to become both wise and effective. We dare not fail to keep alive scientific efforts to determine which corporate monopolies are natural, which necessary, which democratically intolerable. Thus shall we turn our acknowledged ignorance to remedial account. But knowledge is not enough. Courage is required to utilize the Federal power for moral ends. Courage is required to have the Federal Government assume the power that is truly Federal. Courage is required to keep in private hands what poisons power in political hands. But we must have more wisdom in order to have more courage. If we can master for democracy this corporate power, but only so, shall we in our day have done what Lincoln did in his, "So saved the Union as to make and keep it forever worthy of saving."

As the Republican Party was organized by Lincoln's friends, and at last embraced by him, to cure the evil of slavery by applying the Federal power to save the Federal principle from death in the Territories, so now both great parties meet their present test of worth in applying the Federal principle to the cause and cure of that corporate mastery which does democracy to the death in the no man's land marked by State boundaries. Either party scores against itself in this present competition of merit when in the presence of pressing requirements for curative power, it flees for refuge to a State sovereignty that is fully impotent to save, impotent to save even itself. Sovereignty exists for citizens,

not citizens for sovereignty. Such is our final formulation of the Federal principle.

#### THE PRINCIPLE HAS POWER AS WELL AS SCOPE

Such formulation of our Federal principle shows it not only wide enough to cover problems of too much and too little, but powerful enough to motivate present solutions of them.

It was a principle powerful enough to budge Lincoln himself out of the Whig Party, which he loved, when it ceased itself to love the Federal principle.

It was a principle powerful enough to fulfill Lincoln's prayer at Cooper Union, that "right makes might"; it built a winning Army, broke the rebellion, unloosed the slaves, restored the Union.

It was a principle strong enough to cause the Constitution overtly to empower the Federal Government with the right to make effective the Federal principle throughout its domain. "No State," so runs the constitutional charter of the new federalism, "shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

"The Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

It was a principle strong enough to change the meaning of property, excluding human beings from every possible interpretation, thus emancipating constitutionalism from mere legalism and setting it on its dynamic way for an expanding America.

It was a principle strong enough to raise Lincoln from the dead and to invest his living legend with the guardianship of his own principle, unto our day and beyond.

#### THE PRINCIPLES SAVED FROM HARSHNESS ONLY BY MAGNANIMITY

But the power of this principle, not to say also its scope, requires safeguarding from such magnanimity as the Lincoln legend symbolizes. "With malice toward none; with charity for all"—those are the words of a mortal man who prepared himself for legendhood. When he spoke them, he had bested his political enemies and was in sight of a military triumph such as conquerors have often gloated over. But he did not gloat, not the man Lincoln. "I shall do nothing through malice," said he; "what I deal with is too vast for malice." "I have not willingly planted a thorn in any man's bosom." That attitude it is which renders principles safe for mankind.

Any principle, be it even so great as the Federal principle of value, drips blood when held by fanatics.

In our time, for instance, Adolf Hitler has himself, in deference to a principle not wholly dissimilar, resorted to such a frenzy of folkiness as to choke friends and drown out the cries of all save sycophants. Unity is a foreboding ideal if a sadist invoke it. And sadism may be of the conscience as well as of the spleen. Nor is comradeship, any more than Germanic folk folly, a lure to the knowing when the spirit of it be brandished like a sword by a cruel peasant raised to all power. As increment of such inverted value, Stalin's Comrade Trotsky "slinks now in his tenets"; and "comrades" without number lie even more still in premature graves.

A union created by such men yields also, by our Federal principle, its increment of value and of power. But it is power malevolent; it is value mostly in reverse. Leaders who in private are not magnanimous create as they lead forth a social power for infinite ill. Find us a recipe for generosity, therefore, and you give us protection against the power of our own principle of value. It is not easy to find, for no principle is proof against perverse carriers. I would myself, in an oversocialized generation, set great stead upon Lincoln's love of solitude as one secret of his generosity. Jefferson's preaching against urban aggregation and Lincoln's practice of the lonely life unite to suggest to us that genuine individualism arises out of benign individuality. Individuality, as counterpart of sociality, is a function of replenishment. Little men descend to meet, and the sociality that arises from the meeting is of the value of mob meanness. Big men meet to ascend, and from such meeting arises the finest value of life.

Broadway—we might also apply it to Main Street—has been defined as a place "where people spend money they haven't earned to buy things they don't need to impress people they don't like." And nice as company is for those who need company to counterbalance previous solitude, unseasonal "neighboritis" can raise a raging temperature in the gentlest soul. As the Negro poet, Paul Laurence Dunbar, has it:

"There is a heaven, forever, day by day,  
The upward longing of my soul doth tell me so.  
There is a hell, I'm quite as sure; for pray,  
If there were not, where would my neighbors go?"

The aggressions of too much gregariousness are often purged away through strategic withdrawal; and then the soul, strong with the strength of hunger, rises to meet other souls and to make with them in gladness the mightiest value we know, mighty for weal or for woe. Solitude may or may not be a specific for generosity, but it is certainly essential in preparation for the lonely life of the legendary; but from it create Fate—

\* \* \* can  
Forms more real than living man,  
Nurslings of immortality.

#### THE LINCOLN LEGEND AS PERMANENT GUARDIAN OF THE FEDERAL PRINCIPLE

Majestic in its lonely grandeur, the Lincoln legend unites power enough and perfection enough to insure perpetuity of the years

for the American dream. We cannot wholly agree, therefore, with a recent reviewer of Sandburg's Lincoln in the remarks that what America most needs today is "Abe Lincoln as he was, not as a folk hero." Let us say rather that America needs both the Lincoln person and the Lincoln personage, but the personage the more. Wiser than our sophisticated critic were the grateful Negroes of Lincoln's own time who identified him with "de great Messiah," with "Uncle Sam." Product of our collective aspiration, the martyred Lincoln has indeed become our best "Uncle Sam." "Massa Linkum," as the glad Negroes conceived it, "he be ebrywhere. He knows ebrything. He walk de earf like de Lord."

That spiritual John Henry of our joint imagination is the Lincoln we most need. Every generation can, and in large measure does, produce its living Lincolns. So much is this so that no genuine Democrat has to wonder with Lincoln's law partner, Herndon, "that from such restricted and unpromising opportunities in early life, Mr. Lincoln grew into the great man he was." Lincolns continue to arise, like the Illinoisan, from the common people; and they are nurtured into power and perfected in wisdom by every maturing crisis. But it takes the sustained travail of the generations, of black and white, of rich and poor, of learned and unlearned—the sustained travail of the generations; to bring to birth a folk hero like this living legend of our historic Lincoln. Men hardly dare to disrespect the deities which their own creative imaginations have cooperated in calling from the vasty deeps of chacs.

Such supermortal heroes have been nurtured upon the pathos of a people. Grown great upon the vitamins of moral hope, they make great a people who have given to them their own greatness, leading the people bravely forward to each successive rendezvous with destiny. Such as these, and these such alone, harmonize democracy's insistence upon rude equality with its need for invidious but exemplary perfection. "Let us believe as in the days of our youth," said the early Lincoln, "that Washington was spotless; it makes human nature better to believe that \* \* \* human perfection is possible."

Human perfection is possible, indeed, but only through the purging discipline of death. Promoted to the purity of legend, with hardly a speck of mortality left to dull his radiance, Lincoln's life is now the embodiment of, and his career the irradiation of, pure principle. And of all social principles, the Federal is the highest and best, for it turns the unearned increment of our national unity back to enrich the lives of humblest citizens through the lowly means of politics. Such a principle adds so nearly up to enlightened religion at its best that it did not seem inappropriate, nor does it now, for the greatest preacher in Lincoln's America to preside while Lincoln, our martyred brother of common dust, put off this mortal veil to take upon himself the shining raiment of living legend.

Let the words of his investment come from Henry Ward Beecher. This is but poetic justice. It was Beecher's sermon that Lincoln heard that Sunday 80 years ago. It was Beecher's pulpit that was originally intended to be the forum for the Cooper Union lecture. It was Beecher's church that was actually the financial beneficiary of the address which we celebrate tonight. It was Beecher's sister, Harriet Beecher Stowe, who made Uncle Tom, the slave, immortal. Let her brother speak the sacred words that raise the Great Emancipator to the like immortality of all that's nobly imaginative.

"And now," rises Beecher's prophetic and priestly voice at the canonization of "Honest Abe" into Father Abraham of the ages, "and now the martyr is moving in triumphal march, mightier than when alive. The Nation rises up at every stage of his coming. Cities and States are his pallbearers, and the cannon speaks the hours with solemn progression. Dead, dead, dead, he yet speaketh. Is Washington dead? \* \* \* Is any man that was ever fit to live dead? Disenthralled of flesh, risen to the unobstructed sphere where passion never comes, he begins his illimitable work. His life is now grafted upon the infinite and will be fruitful as no earthly life can be."

Men and women of Cooper Union and of the Nation, shall we, too, not have faith that right makes might, and in that faith shall we, too, not dare to do our duty as we understand it?

That would be to relive in our lives the life of Lincoln and to pass on untarnished this Nation's most magnificent legend.

#### Veterans' Statistics

#### EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

STATISTICS COMPILED BY MILLARD W. RICE, NATIONAL LEGISLATIVE REPRESENTATIVE OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES

Mr. VAN ZANDT. Mr. Speaker, for the information of the Members of this House, I wish to place in the CONGRESSIONAL RECORD some very interesting and illuminating statistics

which were taken from the records of the Veterans' Administration and compiled by Millard W. Rice, national legislative representative of the Veterans of Foreign Wars of the United States.

These cold figures, which show the cost of war in human lives and dollars and cents, constitute an eloquent argument for peace, as well as much valuable information on many phases of veterans' affairs.

I wish to call especial attention to the fact that veterans of the World War are dying at the rate of 88 per average day. That is an appalling death rate for men whose average age is now only 47 years. It also should be remembered that these veterans were pronounced physically perfect when they were inducted into the armed service in 1917-18.

The compilation by Mr. Rice follows:

VETERAN STATISTICS AS OF JUNE 30, 1939

4,791,172 served in United States armed forces during World War.  
4,185,220 served in Army, 2,059,629 overseas.  
531,258 served in Navy, 68,289 in United States Marine Corps, and 6,405 in Coast Guard, about 50 percent overseas.  
23,908,576 registered for the selective draft.  
2,810,296 were inducted after draft selection.  
250,240 were discharged from the draft after being called.  
10,250 Army men dishonorably discharged.  
130,103 total deaths.  
39,347 were killed: 37,541 Army, 1,450 Marines, and 356 Navy.  
13,999 died of wounds: 12,934 Army, 1,007 Marines, and 58 Navy.  
53,346 were combat deaths: 50,475 Army, 2,457 Marines, and 414 Navy.  
75,460 died of diseases: 62,670 Army, 304 Marines, and 12,486 Navy.  
1,297 died of other causes.  
116 deaths now occur each average day among war veterans: 88 World War, 22 Spanish American War, 5 Civil War veterans, and 1 Indian wars.  
201,325 wounded, not mortally: 193,611 Army, 7,714 Marines.  
342,072 World War veterans—less than 9 percent of all—receive compensation for service-connected disabilities: 44,213 on temporary partial ratings; 1,813 on temporary total ratings; 263,955 on permanent partial ratings; and 32,091 (or 9.38 percent of all) on permanent total ratings.  
25 percent of all service-connected disabled World War veterans receive less than \$20; 55 percent less than \$30; 65 percent less than \$40; 75 percent less than \$50; and 80 percent less than \$60 per month compensation; 90 percent less than total compensation; and only 9.91 percent receive compensation for total disabilities; an average as to all of \$40.24 per month.  
52,936 World War veterans receive pensions of \$6 or \$30 per month for permanent total non-service-connected disabilities.  
34,185 disabled Regulars receive pensions averaging \$21.91 per month.  
3,516 Civil War veterans were receiving pensions.  
2,525 Indian war veterans were receiving pensions.  
165,710 Spanish-American War, Philippine Insurrection, and Boxer Rebellion veterans were receiving pensions averaging \$52.48 per month.  
1,832 emergency World War officers were receiving retirement benefits.  
154,512 service-connected death claims have been allowed; 99,822 are now active.  
99,822 deceased World War veterans, who died by reason of service-connected disabilities, provide pensions for 29,070 widows, 35,521 children, and 82,398 parents.  
12,220 deceased service-connected World War veterans, who died by reason of some other disability, provide pensions for 10,356 widows and 19,500 children, at average monthly payment of \$29.21 per case.  
55,882 deceased Spanish-American War veterans provide pensions for 53,352 widows, 8,378 children, and 456 parents.  
4,251 deceased Indian war veterans provide pensions for 4,207 widows, 76 children, and 7 others.  
57,915 deceased Civil War veterans provide pensions for 55,665 widows and 2,449 children.  
166 widows of Mexican War (1848) veterans receiving pensions.  
1 deceased War of 1812 veteran provides pension for one daughter.  
218,621 veterans received hospital treatment last fiscal year; 53,861 on June 30, 1939.  
28,585 veterans were admitted for domiciliary care last fiscal year; 15,426 remaining on June 30, 1939, of whom 14,058 were World War veterans (13,195 non service connected).  
48,527 were World War veterans; 10,443 service connected and 37,016 nonservice connected and 1,068 others.  
2,848 were other war veterans; 12,486 disabled Regulars; 37 Allied veterans; 106 were C. C. C. and W. P. A. employees; and 113 miscellaneous.  
31,216 were N. P. patients, 17,922 general medical and surgical patients, and 4,979 were TB patients.  
71,124 beds: 54,779 hospital and 16,345 domiciliary, in 84 V. A. facilities.  
2,748 beds in other Government hospitals (Army, 1,100; Navy, 1,063; Public Health Service, 499; and Interior Department, 86).

38,169 veterans were under guardianship.

4,113,041 applications for adjusted compensation, involving \$3,764,118,824.96.

4,500,000 World War veterans applied for War Risk Insurance, involving \$39,000,000,000.

604,666 Government life-insurance policies in force with face value of \$2,567,173,628.

\$62,325,101.74 received in premiums during year.

\$8,391,682.64 paid out in dividends during year to 409,760 policy holders.

1,315,737 World War veterans are now less than 45 years of age; 1,823,976 between 45 and 50; 840,282 between 50 and 60; 2,725,283 more than 45; 901,307 more than 50; 61,025 more than 60; and 21,729 more than 65.

4,041,020 living World War veterans now constitute about 3.2 percent of the total population; about 5.54 percent of total adult population; about 43 percent of adult population between 40 and 50 years of age.

\$557,078,000 appropriation to Veterans' Administration for year ending June 30, 1940, is only about 6.05 percent of all Federal appropriations for year.

\$23,466,000,000 has been expended because of relief to veterans and their dependents since Nation was founded, which, however, is only about 13 percent of the grand total of all Federal expenditures of about \$176,000,000,000.

## Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

LETTER FROM WILL CLAYTON, OF HOUSTON, TEX.

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter that I have this day received from Mr. Will Clayton, of Houston, advocating the continuance of the Reciprocal Trade Agreements Act.

Mr. Clayton's intimate knowledge of international trade, based upon many years of active experience, places him as one of the outstanding authorities on the subject. Therefore, it strikes me that his thoughts are worthy of our consideration.

The letter is as follows:

HOUSTON, TEX., February 9, 1940.

HON. ALBERT THOMAS,  
House Office Building, Washington, D. C.

DEAR ALBERT: Practically all our cotton exports go to the Eastern Hemisphere.

With three-fourths of that hemisphere at war and the other one-fourth preparing for war, the future of the American cotton export trade looks bad.

The first few months of war brought a great rush of buying of American cotton but for a month now such buying has practically ceased.

Does it not stand to reason that our export cotton trade will, to a considerable extent, go the way of our export tobacco business?

Every foreign country, whether at war or preparing for war, needs its precious dollars for the purchase of things more essential to them than our cotton. They can buy cotton from 50 other countries—countries that will take manufactured goods in payment, thus effecting an exchange of goods and at the same time furnishing cargo for ships both ways.

Most of the ships that come to our Gulf ports for cotton these days come in ballast—ships worth \$1,000 a day at charter.

Countries at war or preparing for war live on their capital.

They are sending us their gold and liquidating their balances and securities.

What will they do for dollars when these things are all gone? Is it not clear that we must take more of their goods if we expect them to buy our cotton, lard, tobacco, automobiles, and other surplus commodities?

This is not the time to throw the tariff back into politics. We have had over a century's experience with political tariff making and we know what it means.

May I ask that you ponder these matters carefully and vote and work for the extension of the Reciprocal Trade Agreements Act?

Sincerely yours,  
WILL CLAYTON.

WILL CLAYTON.

## Faith In America

## EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. STYLES BRIDGES, of New Hampshire, at Lincoln Day dinner under auspices of the Republicans of eastern Indiana, in the Masonic Temple at Muncie, Ind., Friday evening, February 9, 1940:

We are approaching a day dear to the hearts of Americans because the man whose birth it marks symbolizes so much of the American ideal. If there was one outstanding characteristic of Lincoln, it was his love of humanity and his faith in mankind, without which the democratic ideal loses its justification. If there was one source of his strength and courage in those dark days when the Nation, torn by civil war, threatened to be rent asunder, it was his faith in the American people and in the great Nation that, united as one, they would build. Today, when the democratic faith has faltered and its ideals have crumbled all about us, when Americans themselves are disheartened and divided, more than at any time since the Civil War do we in these United States need a reaffirmation of that faith, and the courage and unity it brings.

Lincoln loved man because he believed in him, in his fundamental goodness and in his untold possibilities. He believed in freedom not only as the right of man but as essential to his dignity. But what has become of that faith in recent years? Today we are told that man has reached the peak of achievement through individual initiative, energy, talent, and hard work, and that henceforth progress must be measured not by what the individual can attain under the Government but what the Government does for the individual. We are told that many millions of our citizens will never again be able to find gainful employment and rise through their own abilities. Where is the faith of Americans in themselves and in their possibilities? What has become of the undaunted courage that led those who have gone before us on to new conquests? Today vast groups of our citizens regard one another with suspicion and distrust; yes, even as enemies. What has become of the mutual respect and tolerance which made America the most classless country in the world and the unity without which there can be no progress?

One of the reasons for this lack of faith has been that it was lacking in men in high public office, for the doctrines they have preached have tended to destroy it in others. That is a terrible indictment. But what else can be said when a President of the United States brands entire classes of our citizens as "Tories" and "copperheads" when he boasts that they met their "match" in his first administration and warns that they will meet their "master" during his second term of office?

Thus we have an administration which apparently regards businessmen as a group as criminals unless they can prove themselves innocent. Thus the rigid restrictions and consistent discrimination against them by the countless agencies of the Government. Thus we heard the theory of a Presidential "mandate" under which the people in their blind faith were supposed to have surrendered to him the power to do as he wished.

Without this faith in the citizen, there can be no faith in our form of representative government as provided by our Constitution. Lincoln believed in democracy, as did the founders of our Government, because he believed that men were capable of self-government. He believed, as did they, in the system of checks and balances of our constitutional system as a healthy check to guard against the encroachment of government upon the lives of the people.

Lincoln once enumerated the various ways in which a Chief Executive might seek to influence legislation. But he declared himself against the "use of any of these means by the Executive to control the legislation of the country," adding that "Congress should originate as well as perfect its measures free from external bias."

Lincoln believed in "obedience and respect for the judicial department of government. Its decisions on constitutional questions, when fully settled, should control not only the particular case decided but the general policy of the country, subject to be disturbed only by amendments of the Constitution as provided in that instrument itself. More than this would be revolution."

Lincoln referred in his first inaugural address to "my rightful masters, the American people."

The present President of the United States is most eloquent in proclaiming his devotion to democracy. But when a Chief Executive seeks to bend the judiciary to his will by packing the Supreme Court and to ram "must" legislation down the throat of a sub-

servient Congress, who demands for himself in the name of emergency vast powers which he is never willing to surrender, what has become of the faith in the balance of powers upon which our constitutional system rests? When attempts are made to "purge" representatives of the people; when it is argued that Congress cannot be trusted to exercise its constitutional control over our currency because it will surrender this power to Wall Street; when it is charged that the Senate of the United States must not be permitted to ratify treaties since it would turn this constitutional duty into a logrolling contest; when a President talks of the possibility of the United States being "bought" by the telegrams of their constituents, what confidence is shown in either the representatives or the people by whom they were elected? Actions such as these speak louder than volumes of protestations.

With so little faith in the American citizen, with so little faith in our constitutional processes of government, no administration could be expected to demonstrate any great confidence in a system of private economy. A free economy, like representative government, is based on faith in men to rise through their own abilities and to cooperate with others for the welfare and advancement of all. The purpose of government under such a system is to prevent the abuse of the freedom which it affords. Lincoln believed in a system of private economy as the only system which, by permitting private property, afforded men a reward for their labors and the opportunity to rise. American progress during the less than 2 centuries of our life as a nation has demonstrated its success far beyond the expectations or dreams of men.

One of the manifestations of the present lack of faith in the ability of men to continue to go forward under a free economy, to conquer the problems of the vast industrial civilization they have created, is the argument that the very progress which men have in labor-saving devices has put them out of work. The President himself voiced this theory in his annual message on the state of the Union to the Congress when he declared, "We have not yet found a way to employ the surplus of our labor which the efficiency of our industrial processes have created." He added, "To face the task of finding jobs faster than invention can take them away is not defeatism."

It was the same belief that men by their creative genius throw themselves out of work that led a Member of Congress to introduce a joint resolution calling upon the Secretary of the Treasury to "investigate the desirability and practicability of taxing the use of labor-saving and labor-displacing machinery."

The theory is not new; indeed, it may be ancient. We know that in England, during the 1850's, irate British workers threw their wooden shoes into weaving machines which they believed had cost them their jobs. Yet within a few years this invention made possible not only the employment of a larger number of workers but actually the employment of a greater proportion of the growing population by the weaving industry than ever before.

The same story has been repeated in industry after industry. And still there are those who fail to see that labor-saving machinery, by lowering the cost of production, lowers the cost to the buyer, and that this, by resulting in greater consumption and thus greater demand, increases the number of men needed to produce and distribute these goods.

In the 50 years preceding 1930 our American population increased 218 percent, but the number of people gainfully employed rose 291 percent. In 1900 many people began to worry because of our rapid industrialization and mechanization. That year a little over 38 percent of our total population was gainfully employed. In 1930, 40.7 percent of our people were engaged in gainful employment. The United States census figures demonstrate that the number of those gainfully employed has steadily increased with the introduction of labor-saving machinery. During those 30 years our population increased 47,000,000, but 20,000,000 new jobs were created.

It might reasonably be supposed, for instance, that the introduction of electric refrigerators threw men out of work in the ice business. Yet 14 years ago there were some 200,000 electric refrigerators, selling at around \$400 apiece. Today there are over 2,000,000 in use, selling at an average of \$163. Today the new industry employs twice as many as the old, but—believe it or not—United States census figures show that, between 1920 and 1930, the number of ice dealers increased from 8,000 to over 19,000. And, moreover, the latest figures prove that more ice boxes are being manufactured today than before the electric refrigerator was introduced.

Another surprising example is the case of the dial telephone. In 1921, 2.7 percent of the phones of the Bell system were of the dial type. By 1930 this had risen to 30 percent. Yet the number of telephone calls doubled and the number of telephone operators increased from 190,000 to 249,000, according to the 1930 census. The number of telegraph and telephone linemen almost doubled. Bell Co. officials declare that the census this year will show that the number of employees has increased by the same ratio in the last 10 years.

I have gone into this matter at some length, not with any purpose of advocating labor-saving machinery but simply because the new dealers from the outset have used it to frighten the American people, to give them a sense of utter futility about life.

Fellow Republicans, labor-saving devices are not the cause of our unemployment. The basic cause is political.

Yet today reforms have been aimed not at the revival of our system of private economy but at the gradual substitution of an economy planned and directed from Washington. Today the Government supports millions of the unemployed and does nothing to make possible their return to private industry. Today Government spending takes the place of private spending, while vast stores of idle capital are discouraged rather than aided in investment in productive

enterprises which would reemploy those out of work and create a higher standard of living for all of our people. Today Government employment and Government credit—raised by oppressive taxation of the citizens of today and reckless borrowing from the citizens of tomorrow—are used in direct competition with the businesses and industries by which the vast majority of the American people live. As this competition has spread ever further, the Government has gained an ever-increasing control over banking, investment, and credit, either taking the place of private enterprise or forcing it out of business through competition in field after field.

This has not happened by accident, nor was it the inevitable consequence of Government aid to the needy in time of depression. Rather it was the deliberate plan of left-wing new dealers from the beginning. Years ago Mr. Rexford G. Tugwell, one of the guiding spirits of the first brain trust, declared:

"Business will logically be required to disappear. This is not an overstatement for the sake of emphasis; it is literally meant. \* \* \* National planning implies guidance of capital uses. \* \* \* New industries will not just happen as the automobile industry did; they will have to be foreseen, to be argued for, \* \* \* or seem probably desirable features of the whole economy before they can be entered upon. \* \* \* It would be comparatively easy to dynamite the industrial system."

Here is not only a repudiation of the American way of progress but a proposal of deliberate sabotage.

More recently the Assistant Secretary of State, A. A. Berle, Jr., testified last year before the Temporary National Economics Committee:

"Briefly the Government will have to enter into the direct financing of activities now supposed to be private; and a continuance of that direct financing must be inevitably that the Government ultimately will control and own these activities. \* \* \* Over a period of years the Government will gradually come to own most of the productive plants of the United States. \* \* \* The country will probably be deciding in the next few years whether the Government ought not to own, directly or indirectly, part of the national plants, such as railroads, electric-power and mineral resources; and the Temporary National Economics Committee may give us a final answer. \* \* \*"

In fairness to him, Mr. Berle was not advocating. He was simply giving a frank statement of what is going on.

The issue is clearly defined—whether America is to be transformed into some form of state capitalism or socialism, call it what you will, controlled and owned body and soul by the Federal Government, or whether our system of private economy is to be revived. It is a part of the technique of left-wing new dealers to use the Temporary National Economic Committee as a means of building up their case against business and in favor of Government ownership and control.

In the investigations made by the Committee, complete control of the hearings rest with one of the six departments and commissions represented on the Committee, among them the Securities and Exchange Commission. The selection of witnesses and the conduct of their examination rests with them. The witness may not submit any prepared statement of facts, except with the express permission of the agency conducting the hearing—which in many cases seems to regard itself as the prosecutor in the case—or of the Committee itself. He may not be examined or cross-examined by his own lawyer, but must confine himself to answering questions of the counsel of the Government agency in charge or of the Committee. The one-sidedness of such a procedure is clearly evident.

The Committee's chief aversion is the insurance business. During the hearings, no opportunity has been lost to cast aspersions upon the life-insurance business and to insinuate—as the New Deal has done in so many other instances—that it must be evil because of its size.

Now, I do not want to be understood as being opposed to a serious study of our economic structure or any major phase of it.

But I am convinced, and in view of what I have seen and experienced in Washington, I don't see how I could have any other attitude, that the purpose of the new dealers is to destroy confidence in our private insurance system, the ramifications of which affect practically every man, woman, and child in this country.

This is not the purpose, of course, of men like Senator O'MAHONEY, chairman of the Committee. In fact, I think it is due to his close supervision and to that of the splendid statesman, Senator Borah, who has just died, and of Congressman SUMNERS of Texas, that the New Deal influences on the Committee are not blasting our whole economic structure in the newspaper headlines from day to day. And their supervision has been sorely tested.

On one occasion, before these men had become aware of what was happening, the new dealers presented an array of C. I. O. members to testify that as insurance salesmen they had forged the names of policyholders in the annual election of insurance officials. Then C. I. O. affiliation was concealed.

With 42 lending agencies in Washington, the Federal Government is now doing a large part of the banking business.

First on the list of Karl Marx's 10 points of technique to bring about communism is the "centralization of credit in the hands of the state."

It is my conviction that this attack upon the insurance companies is in line with that technique.

The pseudo intellectuals of the New Deal school of philosophy have reason indeed to envy the insurance business and all that it has represented in American life. First of all, it represents the way in which millions of Americans have sought to make their

own future secure with the savings their toil and their talents have won for them independent of the Government; and this is contrary to the New Deal conception of security, which it believes should be provided by the Government. Then there is the indisputable fact that this private institution has contributed more to the welfare of the people as a whole than have grandiose schemes of the New Deal. From January 1, 1933, to December 31, 1938, the Federal Government spent nearly \$13,000,000,000 for various types of relief and aid to the needy. But during the same period private life-insurance companies distributed nearly fifteen and three-quarter billions of dollars to policyholders and their beneficiaries. Another \$5,000,000,000 was distributed to holders of other forms of insurance. Secondly, there is the amazing growth of the insurance business within the lifetime of our older citizens. For example, from 1890 to 1937 our population increased 100 percent, but the life insurance in force rose 2,500 percent, until today Americans own 65 percent of all the life insurance in the world. The vast sums poured into insurance policies have contributed incalculably to the development of industry and agriculture; indeed, to American progress as a whole.

But already the insurance companies have felt the pinch of Government domination of credit. Such is the control which the Federal Government exerts over the outlets for investment, so many are the fields in which Government spending has taken the place of private financing that insurance companies, obliged to keep their money working, have been forced to invest more and more heavily in Government bonds. In 1930, for example, 49 of the leading life-insurance companies had invested less than one and one-half billion dollars, or 7.7 percent, in Government securities, Federal, State, and local. In 1938 these same companies had invested over six and one-half billion, or almost 18 percent, was in United States Government bonds alone. Thus these billions have been diverted into nonproductive pump-priming projects of the Government.

The resulting effect of Government spending and financing is revealed in the fact that insurance interest rates dropped more than 25 percent from 1929 to 1938. This has spelled a loss of \$400,000,000 to some 60,000,000 policyholders.

Several plans have been evolved for putting the Government into the insurance business. Late last summer the Securities and Exchange Commission called upon Mr. D. C. Bronson, of the Social Security Board, who laid five possible plans for a so-called "burial insurance," which was to be compulsory, and would require contributions ranging from \$3.03 to \$7.55 from every man, woman, and child. However, Mr. Bronson did not include estimates of the cost of operating any one of these plans, but said that he guessed it would cost somewhere between 20 and 40 percent.

Last November Senator WAGNER of New York announced that he would propose a bill by which the social-security program would be extended to provide the establishment of a Federal annuity system under the direction of the Social Security Board, by which anyone could purchase a Government-guaranteed annuity through a bank or post office, just as he may now buy a baby bond. These annuities, the Senator claims, could be bought up to \$100 a month, at a reduction of 30 percent of the cost charged by private insurance companies.

As Mr. Raymond Moley declared in a recent editorial in his magazine *News Week*:

"The sponsors of the Federal annuity scheme speak of selling annuities 'at cost.' How is the Government going to find out what an annuity costs?"

"The claim is made that the Government can sell annuities 30 percent cheaper than private companies. It is true that the Government can eliminate costs of solicitation and taxes. But, at present, such items in the cost of an annuity and, in addition, all overhead, do not exceed 12 percent—an extreme figure—and are generally considerably lower. How, then can the elimination of such costs reduce the cost of an annuity by 30 percent?"

"The talk of annuities paying as high as \$100 a month, coupled with the further talk of annuities purchased by payments of \$1 a month, is a subtle way of suggesting to the gullible, the ignorant, and the uninformed that there is some magic by which small payments during the years of earning can be made to yield fat incomes later in life. A few figures are sufficient to blow that decoy to smithereens.

"It's a scheme misleading to the taxpayer, or the prospective annuitant, or the voter, or all three together."

Whatever the plan finally sponsored by the left-wing new dealers, the general outline of the steps to be followed is now clear. The first would be Federal supervision of insurance investments by the Securities and Exchange Commission. Second would be the substitution of Federal control over insurance for the system of State control which has worked so successfully. Meanwhile, voluntary insurance would be sold under the direction of the Social Security Board in competition with private life-insurance companies. To make this compulsory, to gain control over all life insurance, and finally to achieve full ownership of all types of insurance and their assets—these are the successive steps along which they would apparently take us.

My contention, of course, is that this attack upon insurance is but a piece of the pattern, the pattern that was so graphically outlined by Professor Tugwell early in the New Deal.

Lincoln foresaw that from time to time men would arise whose temperament "disdains a beaten path. It seeks regions heretofore unexplored. It sees no distinction in adding story to story upon the monuments of fame erected to the memory of others. It denies that it is glory enough to serve under any chief. It scorns to

tread in the footsteps of any predecessor however illustrious. It thirsts and burns for distinction and, if possible, it will have it whether at the expense of emancipating slaves or enslaving free men." "Such a time," he declared, "will require the people to be united with each other, attached to the Government and laws, and generally intelligent."

It will require a renewal of our faith in ourselves and in our fellow citizens, and in our ability to solve our problems by mutual tolerance, respect, and cooperation for the common good. It will require a united determination to surge forward together to the conquest of new frontiers and the building of a better world, not only for ourselves but for future generations.

The country has known many days before. In the midst of the depression of 1837, even so great a statesman as Daniel Webster declared, "It is inconceivable that conditions can ever right themselves. Trade and industry are disorganized. Securities have fallen to one-half and even one-fourth of their value. Unemployment has become general."

And yet we know what happened. Who shall dare to predict the heights which we shall achieve if we have but the courage, the will, and the vision to seek and pursue the path of progress, as our forefathers did before us?

Upon the Republicans of today there rests a tremendous responsibility. Our party was founded in a dark hour when the Nation was threatened with dissolution to preserve and to carry forward the ideals upon which it was founded. The faith by which and the ideals for which Lincoln held the Nation together must live as long as America is to remain America. We of today must make ourselves the instrument by which that faith is carried forward and those ideals are brought closer to realization. Humbly dedicated to a crusade for the right as we see it, seeking victory as the opportunity for service, we shall not fail in this mission.

Let us, in the words of Lincoln, "Rise up to the height of a generation of men worthy of a free government, and we will carry out the great work we have commenced."

### Russian Relations

#### EXTENSION OF REMARKS

OF

HON. THOMAS R. BALL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

EDITORIAL FROM THE NEW LONDON (CONN.) EVENING DAY  
OF FEBRUARY 10, 1940

Mr. BALL. Mr. Speaker, under leave to extend my remarks, I beg to include in the RECORD the following editorial from the New London Evening Day of February 10, 1940:

[From the New London (Conn.) Evening Day of February 10, 1940]  
RUSSIAN RELATIONS

The admission of Secretary of State Cordell Hull that Soviet Russia has, in several instances, failed to live up to the terms of the 1933 treaty through which the United States extended recognition to the nation, need occasion no surprise. In fact, it has been pointed out, repeatedly, that Russia has paid scant heed to the provisions of the treaty during the last few years. This fact has been stated in these columns on several occasions since the adoption of the treaty. Specifically, the Soviets have broken their promise not to engage in the spread of communistic propaganda in this country and have repeatedly ignored their promise to give our nationals arrested in Russia a fair and open trial and to supply information concerning any such arrest to American diplomatic representatives at their request.

The Secretary of State submitted these views to a Senate committee holding hearings on a resolution introduced by Senator ARTHUR H. VANDENBERG, which calls for the breaking off of diplomatic relations with Russia. Hull declared at this hearing that, despite the violations of the provisions of this treaty there are reasons why we should continue to be represented in Russia and why it would be unwise to end our diplomatic relations there. What the Secretary of State does not say is that, in such a situation, it is far more vital to continue diplomatic relations than to end them, and for very obvious reasons. Without diplomats in Russia to inform this Nation of what is going on—as well as they can, granted that they will be operating under a handicap—our sources of information in Russia would be very sketchy indeed.

There seems to be excellent reason, therefore, for holding with the Secretary of State in this issue. It is one thing, as a gesture of pique and indignation, to sever our relations with Russia; it is something else again to cut off our nose to spite our face in so doing. At the same time it is true enough that the opposition to the recognition of Russia, in the first place, was based for the most part upon the belief that recognition meant, in some roundabout way, approval of the Russian form of government and methods.

Now it appears that some, at least, who advocate the ending of relations believe that this gesture will, in some similar, mysterious way, indicate disapproval of the course taken by Russia in Finland. If either act imposed any real penalty upon Russia it might be justifiable; since it doesn't, however, we might as well be realistic rather than sentimental in coming to a decision.

### Sugar Problem in the United States

#### EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

ARTICLE BY HON. FRED L. CRAWFORD, OF MICHIGAN

Mr. CRAWFORD. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, as contained in an article by me in the National Republic magazine, current issue, I submit the following, which deals with our sugar problem:

[From the National Republic]

SUGAR PROBLEM IN THE UNITED STATES

(By Hon. Fred L. Crawford, Representative in Congress from Michigan)

Why so much controversy over sugar?

The United States public reads that a new sugar bill is to be considered. This naturally gives rise to the question, "Why should sugar legislation be constantly coming up for enactment?" The reasons for this continual occurrence of sugar legislation are: That the sugar acts are enacted for a short period of years and because the sugar program is still in the stage of experimentation, which necessarily calls for frequent adjustments in the program, therefore, sugar legislation is considered almost every 3 or 4 years by Congress in order to iron out difficulties that have appeared during the interim.

The domestic sugar industry, as such, has been in existence over 200 years, and for more than 100 years of its life has been the subject of controversy. It has constantly been the subject of tariff protection, and for this reason is referred to as a "political football." Under the various tariff acts enacted by the Congress of the United States, the domestic islands, namely, Puerto Rico, Hawaii, and the Philippines, were within the tariff wall, that is, they could send all of the sugars they produced into the United States market free of duty; therefore, their off-share production, stimulated by free entry into the United States, greatly increased to the detriment of continental producers, and to some extent nullified the tariff.

The present administration has adopted a method of controlling the sugar industry. It has abolished the old system of protection by tariffs and instituted the system of quotas. This system divides the sugar market of the United States among continental sugar producers, our insular sugar producers, and foreign producers, such as Cuba, Latin American countries, and others.

Under this new system quotas are established on the basis of varying records of past performance. Due to the fact that the continental American sugar producers have been handicapped by competition with foreign and insular sugar, which curtailed continental production and meant heavier production for insular areas, it is not difficult for anyone to understand why the American sugar producer continues restricted in his productive ability by Government regulation as long as quotas continue to be based on past performance.

The wording of the Philippine Independence Act has often been misconstrued in that it is often said the Philippine Independence Act established a marketing quota for the Philippine Islands. This is wrong because the Philippine Independence Act merely established a limit on the amount of sugar that can be imported by the Philippines free of duty. The language of the law reads as follows (subsection (d) of Public, 300, approved August 7, 1939):

"The United States duty shall be levied, collected, and paid, in the United States, upon all Philippine sugars, which are entered or withdrawn from warehouse, for consumption in any calendar year after 1939, in excess of 850,000 long tons, of which not more than 50,000 long tons may be refined sugars: *Provided, however*, That for the period January 1, 1946, through July 3, 1946, the quota of Philippine sugars, not subject to the United States duty, shall be 425,000 long tons, of which not more than 25,000 long tons may be refined sugars. Any export tax imposed and collected on Philippine sugars entered or withdrawn from warehouse for consumption in excess of the quotas established by this subsection shall be refunded by the Philippine Government."

As is shown by the language there is no sugar-marketing quota in the Philippine Independence Act but merely a limitation upon the amount of sugar that can be imported free of tariff. Members

of Congress and of the House Insular Affairs Committee made it very clear in the record, before the Committee on Insular Affairs, that the language in the Philippine Independence Act does not control the provisions of the Sugar Marketing Quota Act. Sugar is definitely a necessity to our national defense and without question is one of the most important foods to the normal American diet, if not the most important. This fact is substantiated by the conditions existing during the last World War. Numerous nations, those involved in the conflict as well as those not involved, suffered untold hardships because of their lack of sugar, and for this reason it has been their policy for the past 20 years to strive to become self-sufficient as far as sugar is concerned. Incidentally, some of the major countries of Europe have succeeded in this objective. This is confirmed by a recent announcement of the English and French Allies to the effect that there is a sufficient supply of sugar on hand to last for more than 1 year. Confirming this announcement is the fact that England and France have imported very little sugar since the declaration of war, and further substantiating this announcement is the truth that England did not begin rationing sugar until January of this year. It is pertinent to point out that England since the World War has protected and developed a great beet-sugar industry in the British Isles.

Perhaps the basic reason for this constant controversy over sugar is due to the foreign and insular policies of the United States. Ever since the Spanish-American War the United States Government has looked upon Cuba as being a protectorate, and our policy toward Cuba has been one of protection, for the most part to the Cuban sugar producer, and consequently a constant restraint upon the continental American sugar producer.

Let us investigate this pretended policy of assistance to the Cuban people. Are the native Cubans the beneficiaries of our sugar policy, or are the benefits largely passed on to American and other capitalists? A sufficient answer to these questions is the fact that in 1939 American capitalists had invested in the island of Cuba a total of \$1,500,000,000, of which \$750,000,000 was invested in Cuban sugar centrals.

It has often been stated by numerous authorities in the field of foreign trade that our policy toward Cuba is harmful not only to continental sugar producers but is also harmful to the Cubans.

At this time I would like to quote a few passages from some of these authorities.

The Commission on Cuban Affairs of the Foreign Policy Association of New York, reporting in 1934 on the economic conditions of Cuba, said:

"The major evil of this foreign investment has not been, as some of the more radical Cubans have stated, that the country is being drained of its wealth by foreign exploiters, but that excessive foreign investment, particularly in sugar, has stimulated an economic growth injurious to Cuban and foreigner alike."

Mr. Carleton Beals, recently writing on the Coming Struggle for Latin America, said:

"The crying need of Cuba right along has been, not artificial strengthening of its dominant one-crop system, but new industries, crop diversification, a bit of intensive economic nationalism to free it for economic slavery to American banks and sugar interests. With only 4,000,000 population, Cuba, one of the richest little lands in the world, is able to produce almost every supply of food needed, in abundance. Nevertheless a majority of its people live on a level close to the Chinese coolie level. Hull's treaty and the Jones-Costigan Act in their present forms promote in Cuba a system that tends to recurrent disaster. New economic collapse is even now impending."

Less than one-third of the consumptive requirements of the United States is produced on the continent, although it has been stated that continental sugar producers could supply, at the very least, one-half of the consumptive requirements of the United States.

This fact can be partly substantiated by examining certain statistics. In 1939 the Louisiana production of sugar was approximately 7 percent of the sugar requirements of the United States, even though in 1935 an independent survey was made by the Louisiana State University which reported that Louisiana could efficiently and economically increase its present production of sugar until it reaches a point at which it would be supplying at least 12 percent of the consumptive requirements of the United States. Likewise, an efficient and economical increase could be effected in the beet-sugar area of the United States as well as in Florida, the other cane-sugar-producing State.

These sugar growers receiving benefit payments from the Government, these funds flowing from a processing tax levied on the production of sugar. For example, in 1938 the tax on the production of sugar amounted to approximately \$68,000,000, while the expenditures to growers were only about \$50,000,000. Although the Government makes the payment, it merely acts as a clearing house, and does so at a profit which is clearly exemplified by the statistics for 1938, which show that the Government had an excess income from the sugar tax of about \$18,000,000. Therefore the industry is not, as is often stated, a burden to the Government. In fact, the figures for 1938—and they are representative—show that the in-

dustry is definitely an asset in that it contributes an excess to the general fund.

Perhaps the most important question for the American people is whether or not the domestic sugar industry can produce sugar at a retail price which is fair and reasonable to the consumer.

Here it would be appropriate to insert figures showing the retail prices of refined sugar in selected major countries as of May 1, 1938. (These figures are taken from a report of the Department of Commerce.)

Italy, 15.73 cents per pound; Yugoslavia, 14.23; Germany, 13.67; Venezuela, 10.67; Rumania, 10.62; Hungary, 9.47; Turkey, 9.44; France, 9.41; Australia, 8.49; Finland, 8.39; Japan, 7.52; Philippine Islands, 6.62; Peru, 6.00; Canada, 5.90; Argentina, 5.71; Sweden, 5.60; United States, 5.40; United Kingdom, 4.67.

The preliminary charts on display at the Department of Commerce show as of May 1, 1939, the retail price of sugar in all European countries, including Great Britain, was higher than the retail price in the United States, with the sole exception of Switzerland.

Naturally, since the war the prices have risen greatly in Europe, although the retail price of sugar in the United States has been restored to normal levels, after a temporary hysteria, for which there was no reason, in the market immediately following the declaration of war last September.

It is interesting to note that despite the tax of one-half cent per pound levied on the production of sugar, which in all other industries is passed on to the consumer, the price the consumer paid for sugar in 1938 (5.3 cents per pound) was less than the price paid by the consumer in the past 25 years, excepting the low depression year of 1932, at which time the price was 5 cents per pound, or only three-tenths of a cent less than the price paid in 1938.

In the past 12 years the retail price of sugar has averaged lower than the index of the average retail price of all foods. During the World War the price of sugar was very much higher than the price paid for all foods, but in 1931 this price had fallen below the all-foods average. Again in 1923 and 1924 the retail price of sugar went above the retail price of all foods temporarily, the reason for this being the fact that during this period the United States market was dominated by Cuban sugars, which furnished about 70 percent of our consumptive requirements. Since that period the domestic-sugar producers, including our island possessions, have improved their productive power and have been supplying an increasing amount of our sugar supplies, until now the domestic producers supply about 70 percent of our consumptive requirements and they have kept the price of sugar well below the average of all foods.

Comparing the retail price of sugar during the past 12 years with the retail price of important individual items of food on the American diet, it is revealed that, with the exception of bacon, lard, eggs, and butter, the retail price of sugar has been below that of all other important foods.

Under the reciprocal-trade program the sugar industry has become involved in certain trade agreements. For instance, sugar is the basis of the agreement with Cuba. All of the preferentials accorded the United States under this agreement are based upon preferentials granted to Cuba on sugar.

Before concluding this article it is necessary to make a few statements on the living conditions of labor in the sugar-producing area of the United States. Under the present Sugar Act the domestic-sugar industry has been the subject of wage determinations which are very thoroughly enforced through controls over a considerable proportion of the total price received by the producer. In addition, child labor is very properly banned under the program of the Department of Agriculture. Finally, domestic-sugar producers are required to provide houses for their laborers and to see that they receive medical attention when it is needed.

These restrictions are not applied in foreign areas like Cuba and other countries over which we have no control and that compete with our domestic sugar producers. Accordingly, the American producers must compete with the low-paid and poorly housed peon one finds in the Tropics. It has been the history of the domestic industry that when given a reasonable protection, and by this I mean the imposition of tariff duties sufficiently high to encourage an expansion of home production, there has been ample competition in the American market to provide sugar to the ultimate consumer at a price far below that which he would have to pay if entirely dependent upon foreign production for our sugar supply. In addition to a reasonable supply of sugar being produced under our own flag and control, we are greatly adding to the employed, and in that manner contributing to our own self-support, as sugar is a non-surplus crop. We have thoroughly demonstrated to ourselves that if our form of government is to survive we must have private industry in sufficient volume to engage our growing population, furnish the necessary tax revenue with which to finance the agencies of Government and the services they render to our people. With surplus crop acreage being retired on such a grand scale, we can well afford to encourage the production of any basic foodstuff of which there is no surplus, and especially so if its cost to the ultimate consumer ranges on a price level as low as that paid by any major consuming class in the world.

## Tribute to the Late Dr. John Clement Fitzpatrick

## EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to the life and work of the late Dr. John Clement Fitzpatrick:

JOHN CLEMENT FITZPATRICK, 1876-1940

Dr. John Clement Fitzpatrick, archivist and historian, died on Saturday, February 3, in his 64th year, and in his passing our country has lost its greatest authority upon the life of its greatest character, George Washington. Born in Washington and educated in the schools here, Dr. Fitzpatrick looked at first to an artistic career, but instead entered the employ of the Library of Congress while it was being moved to the new building in 1897. His whole professional life was spent within its walls, and when soon after his connection with the Library began he entered the division of manuscripts, it was evident to his superiors as well as to himself that archival work was his real forte. He rose to the position of assistant director of the division, but in 1928 he resigned in order to devote his time to his specialty. He continued to keep his office within its rooms, where he was, day by day, accessible to the many who sought from him information concerning the Father of our Country and the period during which he glorified America. For Dr. Fitzpatrick was, perhaps more than any other man among those who have shed light upon the history of their own country, preeminently the authority upon a limited period of that history, the men who were responsible for it, and particularly the man who stood head and shoulders above all the rest in that influence and responsibility. Except for an editorial excursion which made available the autobiography of Martin Van Buren, Dr. Fitzpatrick devoted himself to the era of the American Revolution and to the career of George Washington, especially to the general's career down through the war.

This concentration had notable results not only in the intimate and penetrating knowledge which Dr. Fitzpatrick gained but also in the scholarly way in which he gave out the results of his research to other students. He mined his material chiefly from the great treasure of manuscripts in the Library of Congress, refined it in the glowing retort of his archival skill, and sent it forth stamped with accuracy. Those whose interests lie in the formative period of our national history have to thank him for several volumes of the complete journal of the Continental Congress, for the series of volumes in which he calendared the correspondence of General Washington with the Continental Congress and his officers during his years as Commander in Chief, and for a volume on Washington's movements during the colonial period. There was also a four-volume final edition of Washington's Diaries, in which were brought together and published under the authority of the Mount Vernon Ladies' Association of the Union all the remaining portions of the revealing daily record which Washington kept during most of his life. Occasionally Dr. Fitzpatrick wrote short articles on sidelights of his main theme, and he also published a short biography of Washington. This was, however, primarily a study of the character of the man rather than of the period which he adorned; for Dr. Fitzpatrick well knew that all secondary books lose their importance but that a man who devotes himself to making available the primary materials from which all such books must be written confers a lasting benefit upon all students in American history, and wisely chose the less spectacular but more enduring reputation that comes from such specialization. That reputation gained for this self-taught scholar honorary degrees from various colleges, which were proud to enroll his name among their alumni.

When the George Washington Bicentennial Commission decided that the great feature of the celebration should be a definitive edition of the writings of Washington, there was no question as to the editor. Dr. Fitzpatrick had no rival in knowledge of the literary remains of the general, or in ability to make these available. Accordingly, the last 10 years and more of his life were devoted to this great task. Originally it was thought that all of Washington's writings, except the diaries, could be printed within 25 volumes; but so much greater a mass was collected through Dr. Fitzpatrick's persistent delving and correspondence concerning both public and private collections in many places throughout the world, that, in spite of the relegation of much strictly minor material to casual mention in footnotes, it required 37 volumes of text to put before the public a complete set of Washington's writings. Throughout the monumental work the sterling quality of archival and editorial ability is thoroughly, though modestly, made evident; for Dr. Fitzpatrick's knowledge of the history of the material he used was as great as that of the value of it.

Twenty-six of the volumes had been issued at the time of his death, and his work on the other 11 was practically finished, as they are all in final page proof, merely awaiting the necessary further appropriation for their printing and binding. The ultimate issue of these volumes will not only complete the great task of giving to America such a wealth of information on the career and character of one of its greatest men as has not been made available concerning any other of the world's heroes but it will also be a fitting memorial to the illustrious editor who accomplished this task.

Thomas A. Edison

## EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

RADIO ADDRESS BY HON. ALBERT L. VREELAND, OF NEW JERSEY

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on February 10:

I consider it a singular honor to stand before this microphone and talk to the people of the Nation in tribute to one of the greatest Americans, benefactors, and humanitarians the world has ever seen. This man, of whom I am to talk, is rapidly taking his place beside Washington and Lincoln as the third great son of February. He is Thomas Alva Edison, inventive genius and immortal force for good and social advancement throughout the entire world.

Perhaps I can best get my message to you by asking you to employ your imaginations as the condition I am about to describe is, I am glad to say, an imaginary one.

Suppose, if you will, what the good men do dies with them, and that it is nearly half past three in the morning on October 18, 1931. Suddenly, as we lose the physical genius of Thomas Alva Edison, the entire world is robbed of its electric power. Whole cities are plunged into darkness. Transit lines are at a complete standstill. Radios, telephones, and the telegraph are unable to function. Communication has received a tremendous set-back.

The 18th of October dawns on a different world. Men in cities either walk to work or go by horse and buggy, for storage batteries have failed completely and countless thousands of automobiles, subways, and airplanes are electrical cripples. In the tall city buildings elevators are no longer running. Factories lack the power to operate. Electric appliances in the home are reduced to the status of ornaments. In the rural districts men on modern, electrically equipped farms are forced to return to the harvesting methods of their grandfathers. By nightfall panic has seized the world. Every division of industry has been victimized. The United States and all the world about us are paralyzed. People seeking solace in entertainment find the phonograph silent and motion pictures nothing but a memory. In hundreds of ways the progress of civilization has been robbed of the accomplishments of half a century.

I employed the story of a crippled, paralyzed world because that is exactly the way it would have been if, on that quiet October morning, 9 years ago, the things created and made possible by Thomas Edison had been taken from this world.

The story of Thomas Edison unfolds like a fairy tale and is amazing in its revelation of what one man can accomplish in the span of a single lifetime. Here today, time will permit me to mention only a few of the outstanding events in the life of America's greatest genius, but, perhaps, after hearing these we will all come to realize some of the greatness of Mr. Edison and the unpayable debt of gratitude which we, as Americans, owe to him. Ninety-three years ago, on the 11th of February 1847, Thomas Edison was born in the little town of Milan, Ohio.

At the age of 12 Edison had his own laboratory rigged up in the cellar of his home. While still 12 years of age the boy began to sell newspapers on a local train running between Port Huron and Detroit, Mich. Later he set up a second-hand printing press and printed his own Weekly Herald, the first newspaper ever printed on a moving train. The fame of his little journal spread to England, where it received the enthusiastic approval of the London Times.

Soon, the youthful Edison became interested in the telegraph, and before long he became an expert. While following this occupation, he perceived many difficulties in the crude telegraph equipment. Young Edison began to experiment with improvements for the telegraph systems, both sending and receiving. Even then, he was working under difficulties, when we consider it was not many years after his birth that Edison was left almost totally

deaf, due to an accident which occurred while he was editing his *Weekly Herald* on the Grand Trunk Railway.

He secured the patent for his first invention, the electrical vote recorder, when he was only 21 years of age. This, however, was only the beginning. After obtaining his first patent, Edison really went to work. The resulting inventions were amazing in their number and variety. All told, they reached the staggering sum of more than 1,150 products of Edison genius.

When we consider that it took the "Wizard of Menlo Park" 10 whole years and that he experienced some 50,000 disappointments before he completed his most difficult invention, the nickel-iron-alkaline storage battery; and when we consider that the scope of his inventions encompassed everything from gigantic electric dynamos to our simple, every-day waxpaper, we begin to get a faint idea of the greatness of the man.

It would take hours to mention those 1,150 inventions, so I will merely mention a few of them in order that we may get a small idea of the debt we owe to this great American genius.

He ushered in the era of electricity, inventing the first practical electric light, the dynamos to supply power on a commercial basis, and the first electric lighting system. He gave the world the duplex and quadruplex telegraph; the first thermionic tube, forerunner of our modern radio tube; the telephone carbon transmitter which contributed much to the development of both Bell's telephone and the radio; the phonograph and its modern descendant, the Ediphone business dictation machine now so indispensable in our great business concerns; the magnetic ore separator; the moving-picture camera; giant cement kilns for the mass production of portland cement; the electric pen, which led to our modern mimeograph machines; the safety lamp for miner's caps; the Universal stock ticker; a fluoroscope now used in modern X-ray machines; and even the gummed paper we find in nearly all our up-to-date stores and shops. If, by any chance, you begin to grow tired of this parade of inventions, please remember that there are more than 1,100 more, which I am not taking the time to mention.

The favorite inventions of the electrical wizard were the phonograph and the motion-picture camera. We do not know why, but I would like to venture the opinion that Mr. Edison preferred those two because they added so much to the gaiety and entertainment of the world, for Edison was always the humanitarian, thinking not of what he could do for Edison, but rather of what Edison could do to make life easier and bring more comfort and happiness to his fellowmen—and more prosperity and prestige to his country.

One invention alone, such as the electric light, would have given Thomas Edison a permanent place on the pages of history, but the tremendous Edison energy kept new ideas, new mental conquests tumbling forth from his inexhaustible imagination. Today, Edison's inventions mean employment. A recent survey has shown that 1 out of every 9 people gainfully employed in the United States in all the transportation, communication, and mechanical industries owes his employment directly to the inventions of Thomas Edison.

They mean higher standards of living. We can be sure that the fantastic situation I described in the beginning of this talk would not be at all fantastic if the multitude of Thomas A. Edison inventions was suddenly subtracted from our everyday lives.

The inventions of Edison means the development of industries. As far back as 1931 the industries arising directly from the inventions and discoveries of Thomas Alva Edison represented a total of over \$25,000,000,000. A conservative estimate today would be well over \$30,000,000,000. The inventions of this one man have made the United States the greatest industrial nation on the face of the earth.

When Edison erected his laboratories in New Jersey and surrounded himself with a group of master scientists, technicians, and students of physics and chemistry, he pioneered a system of organized research. This system, after steady development, is today responsible for the marvels of science and industry continually being born in our great scientific and industrial research laboratories. In this way and through his own research and manufacturing companies in New Jersey the great work of Thomas Edison is being carried on.

The inventions of Edison mean democracy. Take Mr. Edison's very first invention, the electrical vote recorder. There, right at the start, was an instrument of democracy. "The Wizard of Menlo Park" loved and labored for his country and the principles of stanch democracy for which it stands. During the World War he devoted all his time and his genius to the United States Government, making a complete, first-hand study of conditions and needs, and then suggesting 42 defense and life-saving measures, rather than instruments of war and death.

Finally, the inventions of Edison mean an inspiration to youth. With the advantages and inspirations supplied by Thomas A. Edison, the youth of America has an example of inventive accomplishment that the youth of no other land in the world can boast. Young America can look upon the life of Thomas Alva Edison as a life of conquest and achievement—a life of conquest over the things worth conquering and of achieving the things worth the work of achievement, a life that embodies all the finest ideals of America today and the America we hope for tomorrow, a life that

is the very essence of peace and progress, because it has made possible, and will continue to make possible, the peace and progress which we, as a nation, are enjoying today.

To forget a man like Edison is not characteristic of the American people. He merits exceedingly high ranking among the great men of our young and glorious history. His name should be honored and his birthday celebrated by America and by Americans everywhere. Thank you.

## The American Youth

### EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

Mr. WOODRUM of Virginia. Mr. Speaker, there is about to convene in Washington a National Youth Congress. During the course of this meeting there will be much oratory and no doubt appeals in behalf of the youth of America. This being election year, there may be attempts at flattery and appeals to vanity—and undoubtedly there will be many rosy promises.

The youth of America has had a hard time these past few years. Opportunities have been scarce and the going has been pretty rough. In the emergency the National Youth Administration program and the Civilian Conservation Corps played an important part in meeting an acute situation. I heartily approve of this effort and have supported it. In Virginia we have been particularly fortunate in having both the N. Y. A. and the C. C. C. under splendid administration. I expect to support in this session of Congress adequate appropriations to carry these programs through the ensuing year. I do not agree, however, with those who advocate a vastly expanded N. Y. A. and that it be accepted as a permanent social and economic policy of our Government.

Mr. Speaker, I hope during these meetings that some of the speakers will be very frank with the assembled youths. There are some things that should be made very clear.

In the first place, there is no governmental short cut to the success that can only come through hard, patient, self-sacrificing toil.

In the second place, it would be unfortunate to hold out the promise that the legislative branch of the Government will at this time favor any greatly expanded program of Government assistance such as has been suggested in certain quarters.

It should not be forgotten that American youths have always had a hard time. The patriots who founded this Republic worked hard under adverse conditions. They walked through rain and plowed through mud to get to the one-room schoolhouse, and were thankful for the opportunity. After finishing school, then as now, only the most alert and the most industrious were able to get on. There are many who feel that the overcoming of such handicaps and obstacles is the crucible out of which has come the character, the stamina, and the great spirit which is America.

No land under God's shining sun offers to youth as much opportunity as does America. Youth only needs a four-point program:

First. A fair amount of intelligence.

Second. Fundamental honesty.

Third. A willingness to work hard.

Fourth. A determination to make a go of it alone.

Mr. Speaker, it is all well and good to lend a helping hand, but in the last analysis, real success comes only through one's own consecrated effort.

## Federal Legislation

## EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

ADDRESS BY HON. ROBERT RAMSPECK, OF GEORGIA

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on January 23:

The first session of the Seventy-sixth Congress ended last August. Its sessions were carried on in an atmosphere of strife. There was discord within the Democratic Party and some bitter feeling between the President and the Congress.

The second or special session, devoted exclusively to a consideration of neutrality, was surprisingly harmonious.

This session has been marked by an unusually sober spirit on the part of the Members—no doubt due to the critical conditions existing throughout the world today.

It is my purpose today to briefly refer to some of the legislation pending in the Congress, devoting most of my time to those measures affecting the relations between employers and their employees.

You probably will not agree with some of the things I will say, but I am thankful for the fact that we, in the United States, still have freedom of speech. I hope that we can disagree without either of us questioning the motives of the other.

## APPROPRIATIONS

Definite indications exist in Washington today showing a desire for less spending. This is true of both the legislative and the executive departments. The House has passed the first two appropriation bills. The Budget estimates have been reduced by approximately \$100,000,000.

## TAXES

It appears now that no additional taxes will be levied during this session, although there is a bare possibility of a small special tax to cover national-defense expenditures.

## NATIONAL DEFENSE

The cost of national defense in the current and two prior fiscal years has totaled four and one-half billion dollars. Further expenditures for the fiscal year 1941 are contemplated. Most of us will gladly pay this cost if it will keep us out of war. We must face the possibility that the democracies of Europe might lose the present contest. If they do, we must be prepared to meet any eventuality.

## TRADE AGREEMENTS

What promises to be one of the bitter contests of this session arises from the resolution to extend the authority of the State Department to make trade agreements with other nations. Under this plan, which has been in operation for the past several years, our sales to other countries have gradually increased. In December 1939 our exports reached \$358,000,000, the highest since March 1930, which was prior to the enactment of the Hawley-Smoot Tariff Act, under which duties were hiked to the highest point in our history. Many people blame that act for the depression. It should be remembered that it was initiated early in 1929, although its consideration was not completed until about 18 months later.

Secretary of State Cordell Hull, who has steadily grown in the esteem of the people of our country, is effectively defending the trade-agreement program. He not only advocates its extension as a means of expanding our sales of industrial and agricultural products, but he sees in it the only means of restoring world-wide peace. He argues that nations not self-sufficient must trade with other nations, or they must go to war to satisfy their needs for resources not found within their borders.

## TRANSPORTATION ACT

The Transportation Act, passed by the House and Senate last year, is now in the hands of a conference committee. This bill is of great importance to the South. It contains an amendment to the Interstate Commerce Act making it unlawful to discriminate between "districts, regions, and territories" in rates charged for transporting freight. It also contains a section directing the Interstate Commerce Commission to investigate interterritorial freight rates and to adjust any found to be unlawful. Under the rule laid down in the southeastern Governors' case, I believe that this will result in many changes in rates from the South and the West on shipments into the North.

Those of us who have led the fight for an adjustment of these rates from the West and South to the North have no desire to hurt the railroads. For myself, I believe that the salvation of the railroad lies in selling more transportation at lower unit costs. That is the trend of modern business.

## ANTILYNCHING

The antilynching bill is nothing new. It was first proposed in 1922 by a Republican Congressman. A new version of it has recently passed the House. It has never passed the Senate and I hope it will not. Of course, it is a political move directed toward securing the Negro vote for its supporters. None of us condones lynching. Public sentiment is rapidly wiping it out. Last year only three such incidents occurred, yet the sponsors of this bill would apply the power of the Federal Government only to these three murders. They totally ignore the gang murders of the large eastern and middle western cities, the approximately 12,000 other murders committed each year, and the more than 35,000 deaths from automobile accidents annually.

## DIES COMMITTEE

The Dies committee will probably be given a new lease of power to continue its investigation of un-American activities. Its methods have at times been unwise, causing embarrassment to some innocent people, but it has centered the attention of our people upon the groups seeking to bring alien influences into our country.

## ALIENS

The House last year passed and sent to the Senate five bills dealing with the conduct of aliens within our borders. The Senate has just passed one permitting the deportation of aliens who engage in sabotage. I hope the others will be passed. We have delayed too long giving power to adequately deal with those who come here from other lands and fail to appreciate the liberties enjoyed in the United States. Many of them have taken advantage of the freedom of our form of government to preach doctrines destructive of freedom itself. They should be sent back from whence they came.

## CIVIL SERVICE

Legislation is pending, of which I am the author, designed to bring under the civil-service law the more than 250,000 Federal employees now selected upon a political basis. More than 900,000 persons are now engaged by the Federal Government in civil positions. The pay roll totals approximately one and a half billion dollars.

In my opinion, no greater problem of government exists today than how to properly select and direct this army of civil servants. They no longer perform merely routine duties. Many of them tell you how to run your business; they make administrative rulings having the force of law. The best law Congress can draft may be forged into shackles for the people unless these employees are expert, honest, and actuated by a sense of fairness. They should be selected only because of demonstrated ability and retained for faithful execution of the public trust placed in their hands.

What I have said of Federal employees is likewise true of the larger army of State, county, and local employees. The public service today—National, State, and local—numbers three and one-half million persons, and they cost the people about \$5,000,000,000 annually in pay rolls.

During the past 6 years the number of public employees in the United States has increased over 16 percent and the total pay roll by almost 25 percent. In State and local governments the appropriations for personnel services make up from 30 to 50 percent of the annual budgets. Yet only 16 of the 48 States operate under a civil-service law, while in some of these having civil-service laws on paper the merit system takes on more of form than of substance.

It is estimated by persons familiar with the results of selecting employees on a merit basis that the people of the United States could save a billion dollars per year by universal application of this system.

## SUGAR

The present law permitting the fixing of sugar quotas expires on March 1. It is expected that the legislation will be renewed, but a determined fight will be made to increase the quotas for domestic producers.

## LOGAN-WALTER BILL

There is pending legislation, known as the Logan-Walter bill, designed to provide uniform procedure for administrative bodies such as the Securities and Exchange Commission and the Federal Trade Commission. This is an important question due to the growth of the practice of delegating to such boards and commissions a measure of legislative as well as judicial power. The influence such agencies exercise upon business, commerce, industry, and labor is vast and directly or indirectly touches the everyday life of most of our citizens.

## LABOR MEDIATION

While no proposal has yet been made in definite form, discussion of plans is heard in Washington for an expansion of the conciliation service of the Department of Labor. It has even been suggested that compulsory mediation be required before a strike may be called, similar to the plan now existing in the transportation field.

## WAGES AND HOURS

In May 1937 the President sent a message to Congress suggesting legislation to put a floor under wages and a ceiling on hours, and the elimination of child labor. Bills were introduced in each branch of Congress to carry out this suggestion. Joint hearings were had, and the Senate soon passed a bill creating a board of five to fix minimum wages, not to exceed 40 cents per hour, and to limit hours, but not below 40 per week.

The Senate bill was drafted largely by southern Senators. It required that in fixing the wage the board must consider the value of the services rendered, transportation costs, the cost of living, and other factors.

When this bill came to the House it was amended by adding to the factors to be considered in fixing the wage, the unit cost of production. It was reported to the House and a rule applied for.

The Rules Committee refused to grant a rule, and the progress of the bill was ended for that session. The next year—1938—northern Congressmen joined with other forces opposed to any consideration of the conditions existing in the South, and a new bill was drafted, brought to the floor by a petition signed by a majority of the membership, and passed. It was a rigid bill. It proposed to start the wage at 25 cents per hour and increased it 5 cents each year until 40 cents was reached. The hours were to be 44 the first year, 42 the second, and 40 thereafter. No board was provided, and no consideration of varying conditions could vary the wage or the hours required.

The conference committee spent 2 weeks adjusting the varying provisions of the bill as it passed the two Houses of Congress. Some of the conferees, of which I was one, vainly tried to go back to the flexible form of bill as passed by the Senate. We had very little success, because to the other sections of the country the 40-cent minimum wage was not objectionable. Some of them saw in it a chance to stop the migration of industry to the South.

While I do not question the sincerity of those who prevented consideration of the bill as passed by the Senate in the House session of 1937, they must bear the responsibility for the more objectionable bill which finally became law.

I supported the Senate form of the bill. I felt, at the time, that it was the best we could get. It would have predicated the wage upon a finding of fact, upon facts in a given location, no matter whether that location was north or south, east, or west. It would have tested the proposed wage by the value of the service rendered.

The present law is too inflexible. It will have a tendency to speed up installation of labor-saving machinery and will work a hardship upon many. Its provisions as to hours should be amended so as to permit averaging hours over a monthly period. The Administrator should have power to make rulings, which, if complied with, would protect those affected until the courts say the ruling is not correct. At present the rulings of the Administrator do not afford protection even to those complying therewith.

Last year efforts to amend this act failed. A group largely composed of persons interested in processing farm produce sponsored one bill. It would grant exemption from the law to most processors of agricultural commodities. It may pass the House, but I doubt the possibility of such amendments being finally enacted into law.

I would suggest to those interested in amendments that a more moderate approach to the problem will have a better chance of achieving practical results.

The purpose of this proposal was to prevent what we generally call sweatshop conditions. With that purpose I am in hearty accord. However, I would like to see the act amended so as to make it more flexible and more practical.

The present law is not what the President asked for. In his message occurs the following passage:

"\* \* \* Even in the treatment of national problems there are geographical and industrial diversities which practical statesmanship cannot wholly ignore. Backward labor conditions and relatively progressive labor conditions cannot be completely assimilated and made uniform at one fell swoop without creating economic dislocations."

If the suggestion of the President had been followed by the Congress this law would not, in its application, have been so burdensome. It would have contained power to apply the changes more gradually and with due regard for existing diversities.

The South cannot win a sectional fight in Congress. Its membership in the House is less than 30 percent of the whole. It was a mistake of judgment when some of our people made this issue a sectional one. We should work for proper amendments, but we must approach them upon a factual basis.

#### NATIONAL LABOR RELATIONS ACT

The spotlight of the daily press has almost constantly played upon the National Labor Relations Act, often called the Wagner Act, from its inception in 1935.

It was denounced as not constitutional by 57 leading lawyers. It was bitterly opposed by many employers in every section of the country. Many untrue statements about it have been passed on to the public as facts.

I supported this proposal and helped in its passage in the House. My reason for that support was simple. I believed that working people should be protected in their fundamental right to join such organizations but no remedy existed for them if, because of such action, they were discriminated against.

In 1921 Chief Justice Taft in a Supreme Court decision had not only affirmed the right of workers to organize but he went further to say: "Union was essential to give laborers opportunity to deal on equality with their employers."

In 1930, in a case growing out of the Railway Labor Act of 1926, Chief Justice Hughes said:

"The legality of collective action on the part of employees in order to safeguard their proper interests is not to be disputed. It has long been recognized that employees are entitled to organize for the purpose of securing the redress of grievances and to promote agreements with employers concerning rates of pay and conditions of work."

Again in the Jones & Laughlin case, upholding the constitutionality of the act, Chief Justice Hughes restated the above quotations, referring to the right of workers to organize, as a fundamental right.

The purpose of Congress in passing the Wagner Act was a simple one. It proposed only to furnish a vehicle through which workers could have their remedy when their fundamental right of organization was violated.

Congress did not intend to force organization upon workers. It did not intend that the Board it created, or the staff of the Board, should assist labor organizers. It did not intend that the Board or its staff should be biased or prejudiced for or toward anyone.

It is not generally understood, I fear, that in drafting the Wagner Act, Congress provided a procedure similar to that contained in the Interstate Commerce Act, and one almost word for word like that of the Federal Trade Commission Act.

In the Jones & Laughlin case, Chief Justice Hughes, referring to the procedural parts of the act, said:

"But these provisions, as we construe them, do not offend against the constitutional requirements governing the creation and action of administrative bodies. \* \* \* We construe the procedural provisions as affording adequate opportunity to secure judicial protection against arbitrary action in accordance with the well-settled rules applicable to administrative agencies set up by Congress to aid in the enforcement of valid legislation."

In the same opinion, after having recited that the act did not compel the making of any agreement, Mr. Hughes said:

"The theory of the act is that free opportunity for negotiation with accredited representatives of employees is likely to promote industrial peace and may bring about the adjustments and agreements which the act itself does not attempt to compel. \* \* \* It would seem that when employers freely recognize the right of their employees to their own organizations and their unrestricted right of representation there will be much less occasion for controversy in respect to the free and appropriate exercise of the right of selection and discharge."

I have recited these statements from the judges of the Supreme Court, one of whom was a former Republican President, and the other a Republican who came very close to being President, to show that the Wagner Act simply provides a remedy to make effective a fundamental right long ago recognized by the highest court in the United States.

If this act had been impartially administered by the Board and its staff, keeping within the bounds of the purpose Congress intended, it is my opinion that little opposition to it would now remain.

Frankness compels the opinion, I believe, that the law has not been impartially applied, nor has its application been held within the purpose laid down by the Congress.

The evidence I have found leads me to believe that the majority members of the present Board, and the staff of the Board in many cases, have construed the act as a mandate to assist and induce the organization of workers, rather than to protect the legal right of workers to make their free choice in matters of organization.

It leads me to believe that they have unnecessarily contributed to the strife in the ranks of labor by many of their decisions as to the unit appropriate for collective bargaining.

It is my conviction that these officials have not given due consideration to the right of workers to freely choose the organization to which they would belong, including the right to have an independent union, provided it is not dominated or controlled by the employer. Under this act Congress intended to make the workers free to choose (a) whether or not they would join any union, (2) what union they preferred, and (3) the person or persons to represent them in collective bargaining. In some cases this free choice has not been possible due to decisions as to the unit.

It is therefore my opinion that the present Board should be removed and replaced with a board of five, regionally selected, so that confidence may be restored in the impartial administration of the act and to provide representation to the various sections of the country.

Employers should have the right to an election when there is doubt as to what union a majority of the employees belong. This right should be written into the law.

I would amend the section of the act dealing with the unit appropriate for collective bargaining so as to deprive the Board of any power to disestablish a bona fide existing union without the consent of a majority of its members, provided such union was not one dominated by the employer. Such an amendment would put a stop to many of the current disputes between contending labor factions.

No unit should be permitted which contains the employees of more than one employer. If a group of unions and a group of employers wish to bargain on a group basis, they could do so, but the employees of each employer would have to vote separately in choosing their union and their representative.

With the changes I have suggested, I believe that most of the controversy about this law would end and that peace could be largely achieved in industry. This all of us should devoutly desire.

No one profits from industrial strife. Strikes mean loss of wages for workers and loss of profits for owners. We must find a way to stop them. It can only be done by mutual desire and co-operation between management and labor. Public opinion will not sustain unfair tactics by either party. It stopped the sit-down strike, which was not only illegal but was very hurtful to the cause of the workers.

In conclusion, may I say to you that most Members of Congress want to do what is best for the country. They must take the con-

flicting opinions of various groups and try to reconcile them. It cannot always be done, but we are glad to have the views of all groups in the citizenship, and we do try to reach a common ground.

I realize fully that we cannot solve our problems without cooperation. Business must have reasonable profits or it will die. It can pay wages only from the production of its workers; therefore wages and hours must bear a proper relationship to the value of the articles produced.

In the present period we are faced with many difficult problems, made more acute by disturbed and dangerous conditions existing in other parts of the world. Commerce, trade, and industry are improving in all sections of the United States. We are at peace with other nations, and we should strive to retain that condition.

If we are to succeed, each of us must do our part toward the attainment of national unity. Today, as never before, people of all groups should strive to do what is best for the maintenance of the freedom and the liberties we enjoy as a result of the wisdom and foresight of the founders of this Nation. In unity there is strength. If we maintain domestic unity, I have no fears as to the future of our beloved country.

## California and the Trade Agreements Act

### EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

#### STATEMENTS AND RESOLUTIONS FROM VARIOUS AGRICULTURAL ORGANIZATIONS

Mr. GEARHART. Mr. Speaker, because no farm organizations could reflect more accurately the opinions and views of western agriculturalists in respect to the proposal to extend for an additional 3-year period the Trade Agreements Act of June 12 1940, than do the California Farm Bureau Federation, the California State Grange, the California Cattlemen's Association, the California Wool Growers' Association, the California Olive Growers' Protective League, and the California Fig Institute, I now present for inclusion in the CONGRESSIONAL RECORD a number of official statements and resolutions from each of these groups, as well as from their respective national affiliates.

##### CALIFORNIA FARM BUREAU FEDERATION

On the 9th day of January 1940 the board of directors of the California Farm Bureau Federation met in special session for the purpose of considering the issue which now pends before the Congress. At this meeting a resolution was adopted which will be, I am sure, of special interest to the whole membership in this legislative body.

In accordance with instructions received from his board, Mr. Alex Johnson, able secretary of this highly influential organization of western agriculturists, dispatched to the Members of the United States Congress from California a letter in which the conclusions of the California Farm Bureau Federation are most convincingly set forth. The letter follows:

January 24, 1940.

To the Members of the United States Congress from California.

GENTLEMEN: I wish to advise you that at the meeting of the board of directors of California Farm Bureau Federation on January 9, 1940, the following resolution was adopted:

"Resolved, That we believe the reciprocal trade agreement legislation should be permitted to die on June 30 next, and that we urge California Senators and Representatives to support this procedure."

This position of our organization has been consistent since March 31, 1934, when a resolution was adopted reading as follows:

"Resolved, That we oppose the proposed legislation now before Congress authorizing reciprocal-trade agreements."

During this period of almost 6 years, the matter of reciprocal-trade treaties has been under discussion in local and State-wide meetings and the position of our members has consistently been one of fear as to the effect on them of negotiations under this act, and I am sure that we represent the wishes of almost all of our members in asking you to oppose the continuation of the authority under the act.

As we view the agricultural situation today, we find nothing in which to encourage us in the hope that the reciprocal-trade treaties will be of benefit to agriculture. The following comparison may be of interest to you.

Taking the year 1935 as the first year when the effect of reciprocal-trade treaties might be felt, and comparing it with the last official figures for December 1939, we find the agricultural position has become much more serious during this period:

Index of prices received by farmers  
[August 1909, to July 1914, equals 100]

	1935	1939
Grains.....	103	87
Cotton and cottonseed.....	181	82
Fruits.....	91	65
Truck crops.....	125	96
Meat animals.....	118	101
Dairy products.....	108	118
Chicken and eggs.....	117	97
All groups.....	108	96

The country has been advised that if the Reciprocal Trade Treaty Act was passed its machinery would be used to reduce industrial tariffs so as to allow imports of industrial goods, with an implied reduction in the price of such goods, and thus create opportunity for greater export of agricultural products.

If we try to read the effect on prices of machinery we find that the prices paid by farmers for commodities used in production in 1935 was 126, while the latest official figure is for September 1939, 123. It appears then that under the operation of the Reciprocal Trade Treaty Act the prices received by farmers have not increased, but have materially declined, while the price paid by farmers for industrial goods has been reduced only 3 points, from 126 to 123. The same official figures show us that the ratio of prices received by farmers to prices paid was, in 1935, 86; in December 1939, 79.

While farmers looked with distrust upon the operations of the Reciprocal Trade Treaty Act from the beginning as being likely to be more detrimental than beneficial, this distrust amounted to nothing short of amazement when negotiations began to be undertaken with Latin American countries, most of whom were producers of agricultural products to the exclusion of almost everything else, and the proposals were made, as in the case of the proposed agreement with Chile, to consider reductions almost exclusively on agricultural products.

It would be eminently unfair to ascribe all the difficulties of agriculture to the operations under the Reciprocal Trade Treaty Act, and in quoting the figures given above I am not inferring that the distressed prices now being suffered by farmers are to be blamed in any great measure on these treaties, but am merely using the figures to show that after more than 5 years of operation under this act the position of agriculture has not improved, but, on the contrary, has in most cases steadily grown worse.

May we therefore ask that in accordance with the position of our organization you allow the Reciprocal Trade Treaty Act to die.

Yours very truly,

CALIFORNIA FARM BUREAU FEDERATION.  
By ALEX JOHNSON, Secretary.

##### AMERICAN FARM BUREAU

It is interesting to note that the American Farm Bureau, parent organization of the California Farm Bureau, while not disapproving the principle of reciprocal trading, in a long resolution adopted at the annual meeting of the American Farm Bureau at Chicago in December 1939 insisted that:

In giving our support to the continuance of reciprocal-trade agreements, we renew, with increased emphasis, our demand that no agreement be consummated the effect of which might be to force or hold domestic prices for any farm commodity below parity level. Any other course would justify the condemnation of and opposition to such agreement by all agricultural groups.

And further demanded that the Reciprocal Trade Agreements Act be—

Amended so as to provide that no agreement be consummated unless unanimously approved by the Secretary of State, the Secretary of Commerce, and the Secretary of Agriculture.

##### CALIFORNIA STATE GRANGE

At the State convention of the California State Grange which was convened in October of 1939, two very important resolutions relating to the subject under discussion were adopted with the unanimous approval of the delegates then assembled. The first resolution was as follows:

Whereas the policy of the present administration of the United States Government, in negotiating reciprocal-trade agreements with other nations, is working such injustice and discrimination against the agricultural interests of the Nation; and

Whereas protests from affected groups of farmers, from time to time, as the policy is being developed, have had little or no effect in obtaining justice or consideration for agriculture; and

Whereas we believe that we could obtain, through the Congress of this Nation, some relief from the intolerable discrimination against agriculture, as practiced by the Department of State in negotiating these agreements, if the Grange organization, throughout the United States, would employ its resources and influence, actively to that end: Therefore be it

*Resolved*, That the Grange make it a major objective of the organization to check this practice of selling the farmer out, and instead of standing for the principle of "The American market for the American farmer" let us move for it, work for it, and use every resource and influence of the organization to make it a reality.

The second of these resolutions was as follows:

Whereas we believe that all agricultural products used by the American people should be raised here as far as possible, and a sufficient tariff placed on these products to make it profitable; and

Whereas the reciprocal-trade agreements negotiated with foreign countries by the President of the United States without the consent of Congress has reduced the tariff on many agricultural products, causing many to be imported which our own farmers should be raising, thus increasing employment; and

Whereas the favored-nation clause in these treaties has further aggravated the situation: Therefore be it

*Resolved*, That the California State Grange oppose any move by the President of the United States to reduce agricultural tariffs in his reciprocal-trade agreements even to the abolishment of the whole plan of reciprocal-trade agreements.

#### THE NATIONAL GRANGE

The National Grange, parent organization of the California State Grange, is the oldest and one of the most influential of all farm organizations. The National Grange met in national convention at Peoria, Ill., on November 15, 1939, at which convention the following emphatic resolution was adopted, in which the attitude of this great organization toward the reciprocal trade agreements program, as now administered, was made known:

The reciprocal trade agreements program has caused serious damage to American agriculture. It has depressed farm prices by encouraging imports of competitive products from countries where substandard labor conditions prevail. It is wrong in principle and violates the Constitution. It should not be renewed when it expires by its own limitation on June 12, 1940.

#### CALIFORNIA CATTLEMEN'S ASSOCIATION

During the fall of 1939 the California Cattlemen's Association met in a State-wide convention at the Palace Hotel in San Francisco, Calif., and after a 2-day discussion of the reciprocal trade agreements program adopted, unanimously, the following resolution:

*Resolved*, That we urge the amendment of the present Reciprocal Trade Agreements Act so that it will provide that all future agreements must be ratified by the United States Senate, to the end that the public may be informed and protected against secret negotiations and one-man power in the final determination.

In a separate resolution relating specifically to the trade agreement recently negotiated with Canada, the following declaration was made:

*Resolved*, That we thoroughly disapprove of the newly signed Canadian trade agreement.

#### AMERICAN NATIONAL LIVESTOCK ASSOCIATION

At the Forty-third Annual Convention of the American National Livestock Association, which convened at Denver, Colo., on January 13, 1940, the following resolution was adopted relative to the Reciprocal Trade Agreements Act:

Whereas a large majority of our people, and particularly of our agriculturists, are unalterably opposed to reciprocal-trade agreements: Therefore be it

*Resolved*, (a) That we are definitely opposed to the Reciprocal Trade Agreements Act; and

(b) That if said act is extended, it be only on the condition that all new agreements thereunder and extensions of existing agreements be ratified by the Senate in the manner provided by the Constitution.

#### CALIFORNIA WOOL GROWERS' ASSOCIATION

The Seventy-ninth Annual Convention of the California Wool Growers' Association met at the Palace Hotel in San Francisco, Calif., on September 21-22, 1938, at which convention several resolutions were adopted, which declared in no uncertain terms the attitude of this highly influential organization toward the reciprocal trade agreements program.

The first of these resolutions is as follows:

We are opposed to reciprocal-trade agreements:

(a) Because they are undemocratic in principle and practice, being negotiated in secret and decided by the power of one man;

(b) Because they sacrifice agriculture to a hoped-for industrial gain which has not materialized;

(c) Because they are not reciprocal but extend to all favored nations the benefit of their terms with no corresponding benefits to the United States: Therefore be it

*Resolved*, That we earnestly request our Senators and Representatives in Congress to see that the law authorizing them is repealed or at least not extended beyond June 12, 1940.

And it was further resolved at that State convention that in the event the so-called Reciprocal Trade Agreements Act was extended beyond June 12, 1940, that the act be amended so as "to bring back to the Senate its treaty-making powers" and that provision be made in such legislation that may be adopted extending the program, to make certain "that tariffs on wool are not directly or indirectly lowered."

A second resolution adopted by the California Wool Growers at their seventy-ninth annual convention of September 1939, was as follows:

*Resolved*, That we oppose all trade treaties or agreements which allow the admission of livestock or meat or meat products into our country at reduced tariff rates, and that all Government meat purchases be confined to the products produced by American producers of cattle, hogs, and lambs.

At the Seventy-eighth Annual Convention of the California Wool Growers' Association, which convened in San Francisco in the fall of 1938, the following most interesting resolution was adopted:

We insist that the American producer is entitled to the American market. \* \* \* Any tariff laws, treaties, trade agreements, or other devices, by whatsoever name, which deprive him of the market, will bring hardship, suffering, and national economic disaster to producers and consumers alike. \* \* \* And we further insist that all such agreements be ratified by the Senate of the United States.

#### NATIONAL WOOL GROWERS' ASSOCIATION

The parent organization of the California Wool Growers' Association, the National Wool Growers' Association, held its seventy-fifth annual convention at Casper, Wyo., on January 23, 24, 25, 1940, and adopted the following resolution:

Trade treaties: During the past year we have observed the detrimental effect on the wool-growing industry by reason of the trade agreements negotiated with Great Britain and Canada, and the proposed trade agreement with Argentina. They have deprived the citizens and taxpayers of this country of their own markets to the advantage of Great Britain, and the anticipated trade agreement with Argentina has adversely affected the demand for the coarser wools and mohair.

We again place ourselves on record as opposing the Reciprocal Trade Agreements Act and demand that it be permitted to lapse on June 12, 1940; that the terms of the Constitution of the United States be complied with wherein it is provided that all acts pertaining to revenue originate in the House of Representatives, and that all treaties be approved by the Senate of the United States before becoming effective.

#### CALIFORNIA FIG INSTITUTE

On the 5th day of January 1940 the executive and advisory committees of the California Fig Institute were called into special session for the purpose of considering and determining its attitude in respect to the legislation now pending in the Congress for the extension of the Reciprocal Trade Agreements Act of June 12, 1934. At this meeting the following resolution was adopted:

Whereas the Seventy-third Congress of the United States in 1934 enacted the Trade Agreements Act granting certain authority to the executive branch of the Government for the purpose of entering into reciprocal-trade agreements with foreign countries, which authority as reenacted in the Seventy-fifth Congress of 1937 expires on June 12, 1940; and

Whereas notwithstanding the California fig industry's protest against any reduction in the import duty on figs, fresh, dried, or in brine, the administration entered into a reciprocal-trade agreement with the Government of Turkey, effective May 5, 1939, which provides for a reduction in the duty from 5 cents to 3 cents per pound on such figs valued at 7 cents or more per pound; and

Whereas it has been declared to be the express desire of the administration to obtain from the Seventy-sixth Congress, now in session, an extension of the authority granted in the Trade Agreements Act; and

Whereas it is considered to be to the best interest of agriculture and industry that the powers granted in such act be modified: Now, therefore, be it

*Resolved*, That the executive and advisory committees of the California Fig Institute, acting jointly for and in behalf of all dried-fig growers in the State of California, do hereby request the Seventy-sixth Congress to grant no further extension of the trade-agreement authority, except upon the condition that such agreements shall become effective only upon approval of the same by the legislative branch of the Government; and be it further

*Resolved*, That a copy of this resolution be sent to every Member of the United States Senate and the House of Representatives.

EXECUTIVE AND ADVISORY COMMITTEES  
OF THE CALIFORNIA FIG INSTITUTE,  
Fresno, Calif.

#### CALIFORNIA OLIVE GROWERS PROTECTIVE LEAGUE

On the 15th day of March 1938 the California Olive Growers Protective League met in convention at Oroville, Calif., and adopted a resolution in condemnation of the trade-agreements program, a portion of which is as follows:

*Resolved*, To request every Member of Congress from California to introduce suitable legislation to repeal the Reciprocal Trade Treaty Act or to subject the terms of such treaties to congressional review.

#### FARMERS' UNION

Though the Farmers' Union, a farmers' organization with a widespread membership in the Middle West, is not extensively represented within the State of California as an important farm organization, its views in reference to the reciprocal trade agreements program will be of interest, I am sure. I am, therefore, setting forth a portion of the resolution which was adopted by this organization at its convention, which was held at St. Paul on December 15, 1939:

Therefore be it

*Resolved*, That we are in favor of the philosophy of the reciprocal-trade agreement as the most likely assurance to bring international cooperation and peace; and further

*Resolved*, That we are opposed to the consummation of any Federal trade agreements which have in their provision agreements admitting livestock or livestock products, grain or grain products, or poultry products, or dairy products, or any other agricultural products which can be efficiently produced in this country, and which may, directly or indirectly, have a bearing on the supply of said products, or which may have a tendency to depress farm prices; and further

*Resolved*, That we believe it against the public interest to repose in a single authority the responsibility for effectuating reciprocal-trade agreements, and that the public interest will be best served by a requirement that all proposed reciprocal-trade treaties be subject to the review and approval of the United States Senate.

#### THE REASONS WHY

To one familiar with farming conditions in the Rocky Mountain and Pacific Coast States it is obvious why the West is solidly against the trade-agreements program. According to figures furnished by the United States Tariff Commission, of the 13 most important items on which reductions of duty have been granted, 6 are agriculture products, 3 are mining products, 1 is northwestern lumber, 2 petroleum, and only 1 textile. In other words, 11 of the 13 important items on which concessions have been granted by way of reductions of duty are western products and only 1 of the 13 is an eastern industrial product and only 1 is an eastern and southern agriculture product.

Is it any wonder that the people of the Pacific Coast and Rocky Mountain States, the petroleum-producing States, and the tobacco growers are opposed to the proposed extension of the Trade Agreements Act?

Has agriculture in the West been singled out for sacrifice upon the altar of industrial greed?

### Reciprocal-Trade Treaties

### EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

ARTICLE BY ROGER W. BABSON

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

Roger W. Babson which was published in today's edition of the Washington Post:

[From the Washington Post of February 12, 1940]

BABSON DECLARES TRADE PACTS THE BRIGHT SPOT OF NEW DEAL—THREATENED G. O. P. ATTACK ON AGREEMENTS CALLED POOR STRATEGY; CITES 60-PERCENT INCREASE IN UNITED STATES EXPORTS TO FAVORED NATIONS

(By Roger W. Babson)

A major offensive is being prepared here against the Hull trade pacts. For months the G. O. P. has been collecting its verbal ammunition, marshaling its oratorical supplies. The zero hour is approaching because Secretary Hull's power to make trade agreements must be renewed before June 12, 1940. If the attack on these trade pacts is not repulsed, it will be a sorry day, not only for the United States but for the world. The backwash of the defeat would be felt in industrial towns of the East, mining camps of the Rockies, farming communities of the Great Plains.

The Hull trade pacts were started in 1934. Realizing that Congress could never be expected to lower our tariff walls sanely, President Roosevelt asked and received authority from Congress for the State Department to make reciprocal-trade agreements without Senate ratification. The principle of the pacts was to lower our tariffs on certain foreign products gradually and slowly in exchange for corresponding concessions from other nations on our products. By short-circuiting Congress, the usual logrolling tactics for high protection on "home industry" were to be eliminated. The agreements, therefore, would be negotiated on a business rather than a political basis.

#### SHIP LANES DESERTED

When the New Deal first stumped for this policy world trade had dried up to a mere trickle. Commerce among nations had shrunk to 35 percent of the 1929 level. Depreciated currencies, high tariffs, stiff quotas, barter methods, big subsidies, and similar barriers were rapidly clearing the world trade routes of their picturesque tankers, freighters, and other cargo boats. Most able economists agreed that the choking off of foreign commerce was a prime cause of joblessness, hunger, and suffering in all nations.

The importance of world trade has never been fully realized by most people. Foreign commerce is the keystone of world prosperity and peace. Our overseas markets in good times absorbed only 10 percent of our total output; but that 10 percent was a vital 10 percent. Half of our cotton crop, for instance, was sold abroad. Think of the importance of cotton to United States prosperity. Southern banks, land values, jobs, wages, warehouses, railroads, and shippers are all tied up with the price of cotton. And the price of cotton depends on our foreign markets.

#### TOUGH ASSIGNMENT

It seems impossible, however, to get the importance of foreign trade across to the public. The high-tariff opposition has a far easier job. Inevitably, in any tariff-lowering program some localities or some producers feel they will be hurt. They protest violently to their Congressmen. Therefore it is almost impossible to wangle any real tariff reductions through Congress. Secretary Hull (a former Senator) knew that the only way to lower tariffs and increase employment as a whole would be a reduction program which excused constituent-conscious Congressmen from voting to ratify it. Hence the State Department's trade program came into being.

Over 20 reciprocal-trade agreements have been negotiated since 1934. Secretary Hull and his experts have done a painstaking, conscientious job. They have started to do the job which practical God-fearing people admit must be done—a slow and gradual, rather than a sharp and sudden, decrease of tariff walls. They have held hundreds of hearings, have listened patiently to thousands of protests. For every concession they have made to foreign nations they have wrung from them an equally good one for Uncle Sam. Moreover, due to the so-called most-favored-nation rule, these pacts have lowered tariffs, helped business, given jobs all over the world.

#### BRIGHT SPOT OF NEW DEAL

The reciprocal-trade program has been a truly bright spot of the New Deal. In his quiet but firm way Secretary Hull has fought harder for peace in this decade than any other man alive. He is a tower of strength, vision, and unselfishness. His program has increased our exports to countries with whom we have completed agreements by 60 percent, while our exports to those countries with which we have not bargained have expanded less than 40 percent. Moreover, our imports from treaty nations have not increased any faster than with nontreaty nations. This, in a nutshell, tells the effectiveness of the program, its aid to jobs and industry.

America, however, is a high-price, high-wage, high-tax Nation. Needless to say, high-tariff people do not like Secretary Hull's program. Buy American has plenty of political "oomph." The G. O. P. needs campaign ammunition and they will make the most of decrying these trade pacts. They claim, for instance, that the program permits an excessive influx of farm products—\$800,000,000 worth in 1939. But Secretary Hull points out that \$530,000,000 of this was coffee, rubber, silk, cocoa, bananas, which have always been admitted duty free.

#### IMPREGNABLE POSITION

The State Department is prepared to defend its policies at all costs. The Republican heavy artillery is laying down the battle's

opening barrage. What the outcome will be, no one knows. The New Deal's record is full of broken promises and failures. For this reason it seems like mighty poor strategy for the Republican shock troops to assault the one position on which the New Deal is economically impregnable—its foreign-trade policy. As a statistician, I believe that the Hull trade pacts should be backed to the limit by every straight-thinking, unselfish, and honest American.

## New England Waves a Yardstick

### EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR OF  
FEBRUARY 3, 1940

Mr. SHANLEY. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following article from the Christian Science Monitor of February 3, 1940, entitled "New England Waves a Yardstick":

[From the Christian Science Monitor of February 3, 1940]

NEW ENGLAND WAVES A YARDSTICK—THE LAST STRONGHOLD OF RUGGED INDIVIDUALISM GIVES IN BY COOPERATING WITH THE FEDERAL GOVERNMENT TO GET CHEAP AND ABUNDANT ELECTRICITY ON ITS FARMS

(By Harlan Trott)

Folk in rural New England are thinking a good deal these days about having electricity on the farm to milk the cows, cut the ensilage, saw the firewood, turn the cream separator, work the horsefork, hatch the chickens, pump the water, run the radio, sewing machine, water heater, cook range, and do other chores in house and barn—cheap electricity such as the people themselves can have through the help of the Rural Electrification Administration.

Thanks to R. E. A., the miracle by which farm folk do their work merely by turning a switch is no new thing—except in New England. Every State but Massachusetts, Connecticut, and Rhode Island gets R. E. A. loans that help people in rural areas to help themselves to the natural abundance of low-cost electric power running to waste in their streams. And it is only within the last few months that Vermont and New Hampshire, two of the richest natural water-power States, have called on this Federal agency for help.

One may well wonder why New England should have to call on the Federal Government at all to get electric power when the source of all they need is foaming under their bridges and over their dams day and night—down the Connecticut, the Merrimac, the Androscoggin, the Saco, the Penobscot, the Kennebec, the Winoski, the Passumpsic, the Ammonoosuc and lesser tributaries to the sea. New Englanders are proud of their rugged individualism. Maine and Vermont made that plain in the 1936 Presidential election.

Today many believe that private power companies in New England have helped to keep this feeling alive by propaganda designed to egg the people into asserting their rugged individualism in order to resist Federal encroachments upon the resources of the States. At the time the Federal Government tried to start flood-control projects in Vermont, the State blocked the program because it meant yielding water-power rights on the streams to Federal control. The Vermont Legislature rallied around the slogan, "The State's resources belong to the people," and held up flood-control work.

Some think this slogan was planted by private-power interests who do not wish to have their monopoly threatened by competition from enterprises the farmers may be encouraged to undertake through the R. E. A. program. If so, the slogan became a boomerang, because New Englanders began to mull it over, and the more they thought about the State's water-power resources belonging to the people, the more they realized that they didn't belong to them at all. The water-power resources belonged to private companies who control practically all the electric output in New England.

Being rugged individuals at heart, the people in rural areas decided to do something about getting more of the benefits of their resources. The experience gained in buying grain and selling milk showed them the way to do it was through cooperatives.

Without electricity, farming is almost as primitive and laborious as it was when the first settlers burned the stumps and laid up the stone walls around the clearings. The State farm bureaus and the local granges showed the New Englanders what the rest of the United States was accomplishing through rural electrification. The farmers got busy. In 1937, farm-bureau members in western Massachusetts started the Tri-County Electric Co-operative. They got subscribers to pledge the amount of money which the Federal Government requires before it lends R. E. A. funds to carry out a project.

This must have made the private-power companies very angry, because soon men from the electric companies in the Tri-County area began to do mean things to stop the R. E. A. undertaking.

They told farmers the cooperative couldn't afford to do what it was trying to do, that it would go broke and then every subscriber might lose his farm to liquidate the enterprise. This scared the subscribers and many of them withdrew from the cooperative.

In one valley the cooperative had signed up many subscribers who sometime before had asked the electric company to install electricity. The company said it wouldn't pay them to serve this particular area. But as soon as the Tri-County cooperative signed up the people in the valley, the power company official came back and offered to string the wires. The terms were about \$100 a year per subscriber less than those under which the power company had installed service in a nearby community. This made it seem that the latter had been grossly overcharged for installation of their service, or else the line in the valley where the cooperative was working was being subsidized by the power company to keep the cooperative from going in there. These tactics caused bad feeling. This and many similar cases are on file in the R. E. A. office in Washington.

The Tri-County went right ahead, but just when the R. E. A. was all set to grant a construction loan, the Massachusetts Department of Public Utilities refused to permit the Tri-County to start the undertaking. This brought a letter from the R. E. A. Administrator taking exception to the ruling. This is the way he summed up the private utilities' stand in his letter to the department: "We haven't served this rural area; we do not propose to serve it, but we want the department to prevent the farmers from serving themselves."

That was the end of the R. E. A. in Massachusetts, where nearly 50 percent of the farmers are condemned to needless drudgery within the sound of rushing streams and the hum of high-tension lines. But it was really only the beginning of R. E. A. in New England.

In New Hampshire, Leon M. Huntress, project supervisor for the New Hampshire Electric Co-operative, Inc., tells of similar obstacles placed in his way by power companies determined to resist this threat to their system of restricted output and price control. But this R. E. A. sponsored group went ahead and outsmarted the opposition by an exciting display of strategy.

Word came to the project superintendent on a Sunday morning that workers for the private company were setting poles in the area where the cooperative had started to install service. Why Sunday? Mr. Huntress couldn't say exactly, unless it was because legal injunctions cannot be granted on that day. The power company's linemen had clear sailing—until the cooperative's agent arrived on the battlefield.

First off, he cited the law forbidding the setting of poles or the stringing of wires on a Sunday except in an emergency. But to a power company enjoying a monopoly in a State where 70 percent of the farmers have electricity—for which they are saddled with the second highest rate scale of any State in the country (nearly 100 percent higher than, for example, the composite rate average of Washington, D. C., Cincinnati, Montreal, and Tacoma)—this was a real emergency. The cooperative supervisor was quick on the answer. He retorted the law doesn't consider setting poles and stringing wires on a new project an emergency.

What really floored the emergency crew was that they had failed to comply with the State law requiring the petitioning of town officials for authority to carry an electric line across the highway. The board of selectmen (two of them are members of the cooperative) did not feel that they could grant the required permission on a Sunday. In fact, their attitude was that they were not disposed to grant it anyway. There was nothing for the power company to do but come down off the pole.

Today they are about ready to throw the switch on the Lempster line, the first R. E. A. project in New Hampshire. Farm folk united under a militantly led State grange and the more moderate State farm bureau are eager to see what the Lempster project can accomplish under the system whereby it buys power from the private utilities and supplies it to people who can't get electricity any other way—a system designed to pay for itself in 20 years and which promises at the end of that time to reduce its charges even more.

Those who wonder what R. E. A. agents in New Hampshire would have done had the private utilities refused to sell electricity to the R. E. A. will find in Vermont's first R. E. A. undertaking the answer to a refusal of this kind. The farmers in Vermont's Washington County did what the Tri-County cooperative failed to achieve. They formed a cooperative, and then when private companies refused to supply electricity at reasonable wholesale rates, the Washington cooperative installed two Diesel engines and is supplying farm subscribers with electricity they could not otherwise get—in a State where the resources belong to the people.

Generating electricity by an oil-burning engine must aggravate a good many farmers, because natural water power is so plentiful in Vermont that the private companies are exporting 80 percent of all hydroelectric energy produced in Vermont.

In pronouncing the benediction at the Washington County cooperative's switch-throwing, Gov. George D. Aiken said: "These lines have been built into territories which private corporations have consistently refused to serve at prices within reach of the people. It is probably true that extension of lines into these farming areas would not immediately pay substantial dividends on inflated valuations. But the cooperative, working under the R. E. A. program, does not inflate its capital structure, does not pay high official salaries, does not hire high-priced attorneys, does not maintain expensive legislative lobbies, does not pay tribute to holding companies, and does not employ high-pressure and expensive publicity methods to expound its virtues."

These views may help to explain why New England has held out so long against "Federal encroachments," and why rugged individualism has finally turned. These R. E. A. developments in Vermont and New Hampshire point to a reawakening that promises to bring the whole of New England benefits which the rest of rural America has gained in lighter labor and larger income.

### Who Is the Present Boss?

#### EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1940

Mr. HOFFMAN. Mr. Speaker, even a "rubber stamp" Congress finds difficulty in following the boss, this for the reason that, picking up the paper in the morning, you discover that the President has expressed his views and given his orders. Turning the page, you learn that Mrs. Roosevelt, the President's wife, has been investigating something and decreed that a change must be made; and, over on the third page, from John L. Lewis you learn that both the President and his wife are wrong and that Lewis has a different plan, which, unless we want a revolution, we had better adopt, so he says.

Only last week the First Lady, as she so often does, went on one of her expeditions and discovered that matters in the District of Columbia were all wrong and that a reformation must take place. No doubt she has found many a place in this country of ours—for she has visited every State in the Union, it is said, except one of the Dakotas—where things are not as they should be, where conditions may be made better; and it is a praiseworthy thing to seek to make them better. But all too often she and the President, too, have suggestions for betterment but no money to carry them out, and the net result is the stirring up of discontent without the opportunity for an improvement.

One thing that it is difficult for the average citizen to understand is how any person who seems to feel so strongly for the now forgotten man has so highly developed what might be termed "the commercial instinct." On these missionary expeditions of hers the First Lady, at times at least, is not averse to charging and collecting a very handsome honorarium, which, in more simple language, means a price or fee.

No one in the history of our country has ever been more vociferous in depicting the needs and the suffering of the unfortunate than have the Roosevelts, and in no group which ever occupied the White House has the policy of acquiring material wealth been so highly developed and so consistently adhered to.

Some of the high-sounding and self-evident truths uttered by the President and his consort would be more widely received were the financial rewards for their utterance smaller in amount.

While the President preaches economy he is not averse to the spending of thousands of dollars on vacations for himself and cronies.

This week, to town came the American Youth Congress. That organization so far has refused to purge itself of the Communists within its ranks or of an organization dominated and controlled by Communists.

True, the President "scolded" it because of some of its more radical members and tendencies. For that rebuke he was booed. On the other hand, Mrs. Roosevelt attended its sessions, praised it, and seemed at least to give it her whole-hearted support.

Then along came John Lewis, speaking at the convention of the A. Y. C., and criticized the President because he had said that some of the demands of the Youth Congress were "twaddle." Patriotic Americans can well accept the President's view, but they are somewhat confused when they recall that he and his candidate, Frank Murphy, long accepted the support of Fellow Comrade Browder, one-time Communist candidate for President, and his cohorts.

LXXXVI—App—45

Not so long ago Mrs. Roosevelt was over before the Dies committee with some of those who had been listed by that committee as having Communist leanings. The Chief Executive's wife on that occasion sought, as the President has so often sought, by her mere companionship, to express her disapproval of the Dies committee. That did not go over so big. Then she expressed the opinion through the press that it was nobody's business if she entertained Communists at tea at Hyde Park.

Some people are happy to know of her associates and guests. The President seems to think the Communists within the American Youth Congress are not "so hot," but the First Lady appears to be all for them.

Note this article from the Washington Post of February 11, and then the one which follows it, taken from the Washington Times-Herald of today:

[From the Washington Post of February 11, 1940]

MRS. ROOSEVELT FINDS LODGINGS FOR DELEGATES—PERSUADES PRESIDENT TO OPEN FORT MYER TO YOUTH CONGRESS

Mrs. Franklin D. Roosevelt perched herself on a table in the Labor Department yesterday, took a telephone, and brought the full power of the Federal Government into play to provide shelter for 500 American Youth Congress delegates who had no place to spend the night.

Then she personally arranged with a film company to provide the movie *Grapes of Wrath* for two showings—free—to the Youth Congress delegates in the departmental auditorium. The film now is in its Broadway premiere.

Mrs. Roosevelt began her efforts to provide lodgings for the delegates when she called the White House and addressed the President as "Governor." She appealed to him as Commander in Chief of the Army to arrange for accommodations at Fort Myer, Va., barracks. Then she telephoned W. P. A. Administrator F. C. Harrington, the Army headquarters, and finally District Commissioner George E. Allen.

All of this took 2 hours, but she got everything she started out to get, which was:

Accommodations for 150 male delegates free of charge in the riding ring at Fort Myer.

Fifty girls to sleep free of charge at the Industrial Home.

Three hundred additional hotel rooms provided for \$1 a night, including 40 rooms at the Shoreham.

Army trucks to transport 150 delegates to and from Fort Myer.

It took a lot of calls, but Mrs. Roosevelt had a grand time, laughing and joking with delegates as she dialed the telephone. Commissioner Allen had a good time, too. He amazed those he called by telling them that the person who dialed their phones was not his secretary but the First Lady.

[From the Washington Times-Herald of February 12, 1940]

"YOUTH BETRAYED BY ROOSEVELTS," SAYS "RED" FOE—SUPPORT OF CONGRESS SCORED BY OFFICIAL

By their support of the American Youth Congress President and Mrs. Roosevelt have betrayed millions of American youth, it was charged last night by Alfred M. Lillenthal, who has fought the congress since it defeated his anti-Communist resolution last July.

Lillenthal declared the Youth Congress "is the greatest political hoax ever perpetrated in the name of American youth, and actually represents only a small handful of fellow travelers, 'pinks,' and 'reds.'"

#### "CLOAK" FOR COMMUNISTS

In his statement Lillenthal, vice chairman of the Provisional Committee for American Youth, charged the congress with using organizations such as the Y. W. C. A. and Y. W. H. A. to "serve as a cloak to hide the communistic elements which dominate the congress."

Lillenthal presented letters from these organizations, and from the Christian Endeavor, American Baptist Publication Society, Young Men's Hebrew Association, American Jewish Congress, Student Volunteer Movement, and the Church of Disciples of Christ disclaiming any connection with the Youth Congress.

Membership of all these organizations is claimed by the congress, Lillenthal said, and declared their organization has no connection with the congress.

#### GROUPS BRANDED AS "RED"

The Youth Congress in reality, Lillenthal charged, draws most of its membership from "groups branded as 'red' by the Dies committee, such as the American League for Peace and Democracy, Workers Alliance, and American Student Union."

Others included in the charge are "paper organizations with high-sounding names and letterheads and small memberships reputed to represent large numbers."

All of this leaves you, if you have not seen the youth congress in session or on the streets of Washington, somewhat confused. That confusion is quickly dispelled when you meet representatives of the Congress and listen to their talk and their demands. No one who comes from outside of a great city would, for one moment, be deceived or misled by their

resolutions or speeches. They are not representative of the youth of America. It is regrettable that many of them who come from the cities cannot live for 6 months or a year or more in some of the smaller towns or in the country districts.

It would be interesting to know if some of the delegates to the American Youth Congress had their transportation to Washington paid with the aid of Federal funds; also how many of them were entertained at Federal expense and who passed them into Mount Vernon. Will the same privilege be extended to others who come here, or is this group under the special protection of Mrs. Roosevelt?

Both Mrs. Roosevelt and her husband are extremely active and diligent in finding new ways to spend other people's money. They are, too, as canny in driving a good bargain, in a financial way, for the Roosevelts as any Yankee who ever made a horse trade.

In fact, John L. Lewis insists the President got the best of him when he contributed \$470,000 to the New Deal campaign fund.

Be that as it may, one thing is certain. If there is any Federal money around loose, or if Federal money can be borrowed, the New Deal administration and some of its supporters, if they run true to form, will see to it that it is so invested as to bring returns in votes at the coming election.

You may remember that CARTER GLASS said in the Senate on June 24, 1937, page 6284, of the CONGRESSIONAL RECORD, that:

The last election was carried by people who were getting favors from the Government; people who were subsidized by the Government; people who were on relief rolls, and people who were sanctioning the invasion of private property and its occupation, as is being done now.

Some of us are wondering whether the President and the Mrs. are out trying to buy another election.

### American Youth Congress

### EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday, February 7), 1940

### ADDRESS BY THE PRESIDENT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address of the President of the United States delivered from the south portico of the White House to the delegates of the National Citizenship Institute of the American Youth Congress on February 10, 1940.

Mr. LEE. Mr. President, will the Senator yield to me to allow me to quote one sentence from that reassuring, patriotic address?

Mr. BARKLEY. I yield.

Mr. LEE. I desire to quote, for emphasis, part of one sentence in that speech:

Nor am I precluding the right of any Americans, old people or young people, to advocate improvements and change in the operations of the Government of the United States on one very simple condition: That all of you conform to the constitutional processes of change and improvement provided in the Constitution itself.

I thank the Senator.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, you who are attending this institute, whose primary aim is to obtain further knowledge of the democratic processes of American government, are very welcome at the White House today. The same welcome is open to all citizens, or prospective citizens, or junior citizens who believe in the form of government under which the United States has been living with reasonable success for more than a century and a half.

In saying this I am not denying to you in any way the rights of free assemblage, of free petition, and of free speech; nor am I

precluding the right of any Americans, old people or young people, to advocate improvements and change in the operations of the Government of the United States on one very simple condition: That all of you conform to the constitutional processes of change and improvement provided in the Constitution itself.

It is a good thing that you young people are interested enough in government to come to Washington for a Youth Citizenship Institute, because one of the hardest problems today is the indifference of so many people to the details and the facts of the functioning of their own government.

I have said on many occasions that the greatest achievement of the past 7 years in the United States has been, not the saving of the Nation from economic chaos, not the great series of laws to avert destitution and improve our social standards, but that it has been the awakening of many millions of American men and women to an understanding of the processes of their own governments—local, State, and Federal. It is a fact that in every community, large and small, people are taking a greater interest in decent government, in forward-looking government, than ever before, and that the words of Lincoln in regard to fooling people are infinitely more true today than they were in the sixties.

The past 10 years have proved certain obvious facts—some negative, some positive.

We know that the prosperity of the twenties can properly be compared to the prosperity of the Mississippi Bubble days before the bubble burst—when everybody was money-mad, when the money changers owned the temple, when the Nation as a whole forgot the restraint of decent ethics and simple morals, and when the Government in Washington gave completely free reign to what they called individual liberty and the virtual ownership of government itself by the so-called best minds, which wholly controlled our finances and our economics. During those 10 years you cannot find a single statute enacted for the restraint of excesses nor for the betterment of the permanent security of the individual. That is a straight-from-the-shoulder fact which the American public fortunately has not forgotten.

It is also a simple straight fact that 1930, 1931, and 1932 saw the collapse and disintegration of the philosophy of the twenties, followed in February and the first 3 days of March 1933 by an acknowledgment on the part of those who had been the leaders that they could no longer carry on.

Last Monday at a press conference I repeated certain comparisons between 1932 and 1939. These facts were misstated and twisted by many newspapers and by some politicians seeking office. Because of this, and because I am on a national hook-up, I repeat the figures.

The national income has increased from \$40,000,000,000 in 1932 to sixty-eight and one-half billion dollars in 1939—plus 71 percent.

Wages and salaries have increased from \$2,400,000,000 in December 1932 to \$3,888,000,000 in December 1939—plus 62 percent.

Weekly pay rolls increased from \$80,000,000 in December 1932 to \$197,000,000 in 1939—plus 145 percent.

Cash farm income increased from \$4,700,000,000 in the year 1932 to \$7,700,000,000 in the year 1939; and with the addition of farm-benefit payments of over \$800,000,000 to a total of eight and a half billion dollars—plus 82 percent.

Dividends of corporations that were received by individuals increased from \$2,750,000,000 to \$4,250,000,000—plus 55 percent.

It is true that our population has gone up 6 or 7 percent since 1932; but where 27,000,000 people were employed in nonagricultural pursuits in December 1932, 35,000,000 people were similarly employed in 1939—a gain of 28 percent.

You have heard of certain local or special opposition to our foreign-trade policy. Listen to this: Our exports for the calendar year 1932 were worth a billion six hundred million. In 1939 they were worth nearly three billion two hundred million—an increase of 97 percent.

I am repeating these figures on the air because not one citizen in a hundred read them in the papers last Tuesday morning.

Furthermore, I remarked last Monday that interest received by individuals in 1939 was 9 percent less than it had been in 1932. I am proud of that, because it means that the exorbitant interest rates on mortgages and on loans of all kinds in 1932 have, because of Federal action, been reduced to a lower and more humane rate to people who had to borrow money for themselves individually or for themselves as participants in many varieties of business.

Finally, I said last Monday—and this was the part that was most seriously mangled and garbled by certain types of papers and certain types of politicians—that the total debt of all of the people of the United States, private debt, State and local government debts, and the debt of the Federal Government was less in 1939 than it was in 1932. That is a simple fact—somewhere around \$2,000,000,000 less—in a nation which has six or seven million people more in it than 8 years ago.

Why am I giving you all these figures? First, to remove fears, fears which are subtly instilled in your minds by a propaganda of which you are well aware. The other day I saw an old friend, born, if you like, with a silver spoon in his mouth; moving, if you like, in so-called social circles; a decent citizen who, while he has never held public office, has tried to understand the tendencies of the times. He said to me, "I have come to the conclusion that there is no use in my trying to argue with certain types of the older generation, because all they do is to hope that some miracle will restore the period of 30 years ago when they did not have to think about social problems; when taxes on the rich were comparatively low; when nobody was worrying about social security, or organized labor, or wages and hours, or the supervision of security offerings,

or the regulation of the management of banks." He said, "I am past 50, but I recognize full well that those days, thank God, will never come again; and, furthermore, that a great majority of the people today who want to see a liberal administration of government turned out and replaced by a conservative administration of government are really wishing down in their hearts for a return of the social and economic philosophy of 1910."

And now a word of warning to you who are voters and you who will soon be voters—several words of warning.

Don't seek or expect utopia overnight. Don't seek or expect a panacea, a grand new law that will give you a hand-out, a guaranty of permanent remunerative occupation of your own choosing. I told one of your members a couple of weeks ago, somewhat to his surprise, that ever since I became Governor of New York in 1929 I have been receiving in every mail a sincere, honest proposal of some panacea, one of them, two of them, three of them every day. These plans have not been put in the wastebasket; they have been subjected to the closest scrutiny by honest liberals who have hoped that somebody would hit on something that would save us all a lot of time and a lot of worry. It is clear that no such plan exists.

Take, for example, the question of the employment of old people and the employment of young people. You young people must remember that the problem of the older workers is just as difficult as yours—that when people slow up, when they have reached the age when one can reasonably expect no great improvement or imagination in their work, they find it very difficult to get a job. We have not solved the problem of older people and the solution of that problem is evolutionary. We have made beginnings with the Old Age Pension Act, but we know that it is only a beginning and that through the next 10 or 20 years the system must be extended and improved. Ham and eggs, and other plans will not do it because they are all open to the simple objection that they either print so much paper money that the money would soon be worthless or that the whole burden would be placed on the shoulders of the younger workers.

In the case of jobs for you young people, let me make it very clear in the beginning that it is not at all certain that your opportunities for employment are any worse today than they were for young people 10 years or 20 years or 30 years ago. The problem of jobs for young people is vastly more difficult than it was 100 years ago because in 1840 the great open spaces of the West were crying aloud for willing hands—but today the physical frontiers are gone.

Yes, you and I have a very distinct problem. You and I know that industrial production calls for fewer hands per unit because of the improvement of machinery. I have given you the figure showing that weekly pay rolls are 145 percent bigger than in December 1932. That does not mean that 145 percent more people are employed. Obviously not. Fewer people are needed to produce the same volume of goods. And one of the things that disturbs me greatly is that in the present pick-up of industry, it is cheaper for most factory managers to work people overtime, even at double pay, than it is to put on an extra shift.

This means, in effect, that we have not yet found the method of spreading employment to more people when good times come.

It means, too, that we have not yet eliminated the terrific peaks and valleys of production and consumption. We have made definite gains. We hope and believe that we have found the way to prevent a recurrence of the collapse from the high point of 1929 to the low point of February 1933. We have not stopped the swing of the pendulum but we believe we have greatly circumscribed the width of that swing from one extreme to the other.

Therefore I suggest again that on social and economic matters you and I are substantially in agreement as to the objective but that there are some of you who think that objective can be gained overnight. I don't. I do believe, however, that all of us can make definite strides toward that objective if we retain a government which believes in the objectives wholeheartedly and which is bent on working toward it as fast as the people of this country as a whole will let us. That, in the long run, is a reaffirmation of our faith in democracy.

One final word of warning: Do not as a group pass resolutions on subjects which you have not thought through and on which you cannot possibly have complete knowledge. This business of passing resolutions at conventions of patriotic societies, of chambers of commerce, of manufacturers' associations, of peace societies, of youth congresses, is a perfectly legitimate American habit, just as it is a fact that there are many thousands of organizations for almost every conceivable objective which are kept going, unwittingly, in order that executive secretaries, legislative agents, and other officers may find so-called useful employment. Hence the flood of lobbyists in Washington, of special counsel, of hired writers, which literally infests the halls of the Congress and the anterooms of all the agencies of the executive branch of the Government today. And I am not forgetting some of the visitors who come to see the President himself.

I have in mind the type of organization which passes resolutions on some matter of the utmost complexity—in the field, for example, of national defense or international economics—some situation on which there may be not two opinions but a dozen, some situation on which the policy of the moment must be formed by those who have given deep study to every phase of the problem. Such a decision ought not to be influenced by any gathering of old or young, local or national, which gets a smattering of the subject from two or three speakers who themselves have but a smattering of the necessary knowledge.

One of the big local American Youth Congress Councils, I am told, took a decisive stand against the granting of American loans to Finland—not on the ground that we ought to spend the money here among our own needy unemployed, but on the ground that such action was "an attempt to force America into the imperialistic war." That reasoning was unadulterated twaddle, based perhaps on sincerity, but at the same time on 90-percent ignorance of what they were talking about.

I can say this to you with a smile because many of you will recognize the inherent wisdom and truth of what I am saying. Here is a small republic in northern Europe which, without any question whatsoever, wishes solely to maintain its own territorial and governmental integrity. Nobody with any pretense at common sense believes that Finland had any ulterior designs on the integrity of the Soviet Union.

That American sympathy is 98 percent with the Finns in their effort to stave off invasion of their own soil is by now axiomatic. That America wants to help them by lending or giving money to them to save their own lives is also axiomatic by now. That the Soviet Union would, because of this, declare war on the United States is about the most absurd thought that I have ever heard advanced in the 58 years of my life. That we are going to war with the Soviet Union is an equally silly thought; and, therefore, while I have not the slightest objection in the world to the passing of futile resolutions by conventions, I do think that there is room for improvement in common-sense thinking, and definite room for improvement in the art of not passing resolutions concerning things one knows very little about.

And so I suggest that all of you smile and don't do it again.

More than 20 years ago, while most of you were very young children, I had the utmost sympathy for the Russian people. In the early days of communism I recognized that many leaders in Russia were bringing education and better health and better opportunity to millions who had been kept in ignorance and serfdom under the imperial regime. I disliked the regimentation under communism. I abhorred the indiscriminate killings of thousands of innocent victims. I heartily deprecated the banishment of religion, though I knew that before long Russia would return to religion for the simple reason that four or five thousand years of recorded history have proved that mankind has always believed in God, in spite of dozens of abortive attempts to exile God.

I hoped that Russia would work out its own problems and that their government would eventually become a peace-loving, popular government which would not interfere with the integrity of its neighbors.

That hope is today either shattered or put away in storage against a better day. The Soviet Union, as a matter of practical fact, known to you and known to all the world, is a dictatorship as absolute as any other dictatorship in the world. It has allied itself with another dictatorship and it has invaded a neighbor so infinitesimally small that it could do no injury to the Soviet Union, and seeks only to live at peace as a democracy; and a liberal, forward-looking democracy at that.

It has been said that some of you are Communists. That is an unpopular term these days. As Americans you have a right to call yourselves Communists. You have a right peacefully and openly to advocate certain ideals of theoretical communism; but as Americans you have not only a right but a sacred duty to confine your advocacy of changes in law to the methods prescribed by the Constitution of the United States—and you have no American right, by act or deed of any kind, to subvert the Government and the Constitution of this Nation.

That, I am confident, receives the overwhelming support of the great majority of your organization and of every other large organization of American youth. The things you and I represent are essentially the same and it will be your task, when I am gone from the scene, to carry on the fight for a continuance of liberal government, an improvement of its methods, the effectiveness of its work. Above all, we must help those who have proved that they will try everlastingly to make things a little better with each succeeding year. Keep your ideals high, keep both feet on the ground, and keep everlastingly at it.

## Government Expenditures and the Budget

### EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday, February 7), 1940

RADIO ADDRESS BY HON. JAMES F. BYRNES, OF SOUTH CAROLINA

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered

over the radio by the junior Senator from South Carolina [Mr. BYRNES] on February 11, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A few weeks ago Senator TAFT undertook to qualify for a prize by specifying how he would balance the Budget. He stated he was opposed to increasing taxes and would balance the Budget by reducing expenditures. He was boldly specific on a few small items and magnificently vague on the larger items.

Starting to reduce the Budget from \$9,000,000,000 to \$7,000,000,000, he marked for destruction a number of highly useful agencies. The list sounded as if it would save big money. It included agencies like the Disaster Loan Corporation, which made relief loans to the flood sufferers in the Ohio Valley and the tornado sufferers in New England. It is maintained as a part of the R. F. C. to collect the money due on those loans. I have examined the Budget submitted by the President for the next year. If you eliminate the amounts asked for all of the agencies marked for abolishment by Senator TAFT, you would save out of next year's Budget \$5,328,000. That would make it necessary for the Senator to cut out of the Budget an additional \$1,995,000,000.

He suggested that public works be ended. Well, there is no request for P. W. A. for the next fiscal year. He said he would make some cuts in agricultural appropriations, but he did not say what appropriations. He would take it out of the hides of the farmers, but he would not specify what part of the hide. He came out flat-footedly in favor of eliminating waste. We are all in favor of eliminating waste, just as we are all in favor of "America for Americans," and in favor of "the women, God bless them!"

As to national defense, constituting almost one-fourth of the total Budget, Senator TAFT said it should be "subjected to critical analysis." Of course, it should. And so should every request for any purpose. But you cannot balance the Budget merely by analyzing requests. The only other specific suggestion the Senator made was as to the appropriation for work relief. The President asked for \$1,000,000,000 for next year. Senator TAFT said he would cut it to \$750,000,000. That means a saving of \$250,000,000. It leaves the Senator's budget unbalanced by the sum of \$1,745,000,000.

Now, let us subject to "critical analysis" his suggested cut in relief appropriations. For this fiscal year ending June 30 the Federal Government will spend \$1,400,000,000 for work relief. Senator TAFT would cut this in half for the next fiscal year beginning July 1. That means he would dismiss from the rolls one-half of the people who are now working.

The day after Senator TAFT made his proposal, the Republican Governor James, of Pennsylvania, complained about the cutting of the W. P. A. staff and work in Pennsylvania. Then Mr. Thomas Dewey, another Republican who has talked a great deal about balancing the Budget, became envious of Mr. TAFT talking about economy. He declared he believed in reducing expenditures in the "hard way," and cited figures to show that as district attorney he spent a couple of hundred thousand dollars less a year of the taxpayers' money than his predecessor. But he forgot to tell us that in order to bring about that reduction of expenses in his office he had gotten \$90,000 from W. P. A. He forgot to tell us that he had complained to W. P. A. that the discontinuance of this W. P. A. project in his office would be "nothing short of a calamity in the administration of criminal justice in New York County." That certainly was one W. P. A. project that the Republicans will not call "boondoggling."

Harry Hopkins could not cause a calamity in the administration of justice in New York, so he let Dewey keep the W. P. A. workers—and Jimmy Hines was convicted. If because Hines goes to jail Dewey goes to the White House, Harry Hopkins should be Vice President.

Now, I do not know when Senator TAFT reached the conclusion that the unemployment situation was such that we could safely cut to \$750,000,000 the appropriation for work relief. On June 28, 1939, just 7 months ago, there was introduced in the Senate a bill, S. 2721, which provides that for relief and work relief "there is hereby authorized to be appropriated for the fiscal year ending June 30, 1941, the sum of \$1,250,000,000." That is the same year for which the Senator now says the appropriation should be \$750,000,000. That bill was introduced by three Senators. One was Senator BARBOUR, of New Jersey, who, I understand, is a supporter of District Attorney Dewey. The second Senator was the Senator from Michigan, Mr. VANDENBERG. The third was the distinguished Senator from Ohio, Mr. TAFT. That bill is pending before the committee of which I am chairman. Because it represented, as I thought, the collective wisdom of the Republican Presidential candidates, I studied it. I looked forward to the day when they would ask for a hearing. They have not asked, and now Brother TAFT has run out on them.

When this bill was introduced last June, the amount appropriated for work relief for the current year was \$1,500,000,000. Some suspicious persons might think that these candidates fixed their figure at \$1,250,000,000 just to show they were more economy-minded than the President. And they might suspect that when the President in his Budget estimate for the year beginning next July 1 asked only \$1,000,000,000 for relief work, Candidate TAFT had to have an issue, and therefore quit Candidate VANDENBERG and fixed the relief figure at \$750,000,000.

But I do not believe that. I believe Candidate TAFT was sincere. He is a wonderful fellow. He just changed his mind. I believe that Candidate VANDENBERG was sincere. He, too, is a wonderful fellow. I am confident that when the relief bill is considered he will move to increase the amount from \$1,000,000,000 to \$1,250,000,000. I am

going to rely upon Senator TAFT to help me defeat the Vandenberg amendment. But I warn him now that if Dewey still has those W. P. A. workers in his office he will be found working against us.

The Budget should be balanced. It requires, however, the services of a surgeon and not a blacksmith. We cannot balance the Budget in 1 year. We can profit by experience. In 1937 we made a too drastic reduction of Government expenditures in a short period, and by doing so delayed recovery. There must be a gradual reduction. Republican businessmen now realize that until private industry furnishes more employment there must be some public works. They would be the first to cry for aid if we followed the advice of Senator TAFT and overnight reduced the Budget from \$9,000,000,000 to \$7,000,000,000.

We cannot balance the Budget by indulging in generalities about lack of confidence. If there is lack of confidence, how did we during last December produce more goods than ever before? Lack of confidence exists principally among the Republican politicians. The figures published by the Federal Reserve Board last week show that for the last quarter of 1939 industry produced more than it did in the last quarter of 1929, the boom year of all times. We produced more than ever before with 1,000,000 fewer persons employed. That was due to machines displacing workers. You will appreciate the unemployment problem when you consider that we had 1,000,000 less people at work than in 1929, and at the same time we had 5,750,000 more people of working age. Should we cut \$2,000,000,000 out of the Government's Budget today we would increase unemployment. We would impair the purchasing power of the people, retard recovery, and reduce the amount of taxes to be collected next year. But with business daily improving and the national income increasing we will have increased revenues and can balance the Budget without destroying activities of the Government that are demanded by the people and are essential to the welfare of the people.

Under the Democratic administration remarkable progress has been made in increasing the national income. In the fiscal year 1939 the national income was up 71 percent compared with the last Republican fiscal year of 1932. Cash farm income was up 82 percent. You will find on the business page of your newspaper a statement of increased sales and increased net profits by every well-managed corporation in America reporting.

If the newspapers would publish on the first page the reports of the net earnings of the industries of the Nation instead of the pessimistic prophecies of politicians, there would be a further increase in confidence and a further increase in employment.

The Government has spent money, but this money has gone to build up our national resources, to conserve the health and the morale of our citizens. It has made possible the reduction of the debts of local governments. It has built courthouses, hospitals, roads, airports, sewerage systems, and paving projects which were formerly constructed by local governments with taxes levied upon the homes of the people.

If you ask Senator TAFT about the part of the national debt represented by loans to business enterprises, he would have little complaint. He would object to that part of the debt which was incurred by the appropriation of \$5,000,000,000 for public works in March 1935. Well, just remember that when that bill was voted upon in the Senate, had every Democrat left the Chamber, the bill would have been passed, 13 Republicans having voted for it and only 10 against it. On the \$3,000,000,000 public-works bill of June 1938, 7 Republican Senators voted for and 7 against it. I think it was justified. You may think differently. But even if you do, I think you will agree with me that it comes with poor grace for the Republican Party to complain of a debt they themselves helped to create.

The President in his Budget message recommended a reduction of expenditures for the next fiscal year of \$675,000,000. This is a conservative Budget. He wisely gave warning that the Budget was based upon the assumption that current levels of business would be maintained and that, if conditions changed, the appropriations for work relief and agriculture might have to be modified. The Democratic Congress has reduced some appropriations below the estimate of the President. I am confident the total of all appropriations will not exceed the estimate of the President. We are going to balance the Budget. Balance it by the increased revenue resulting from economic improvement. Balance it by reducing expenditures. But we are not going to make the entire reduction at the expense of the farmers and the unfortunate unemployed of the Nation.

### Lincoln's Birthday Address

### EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (Legislative day of Wednesday, February 7), 1940

ADDRESS BY HON. ARTHUR H. VANDENBERG, OF MICHIGAN

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an impressive address delivered by the senior Senator from Michigan [Mr.

VANDENBERG] at St. Paul, Minn., on February 10, 1940, before a Republican rally celebrating the anniversary of Lincoln's birth.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to be in Minnesota to present my warmest compliments to your brilliant young Governor Stassen who spectacularly captured his home State 1 year ago and who subsequently captured Washington with his irresistible Gridiron Club address last December. He seems to have a capturing capacity. It is a good thing for divers and sundry Republican Presidential candidates that there is a constitutional age limit at 35.

I am glad to be here on this particular occasion—to join with you in celebrating this annual Lincoln anniversary. So long as memory survives, this man of God, this son of destiny, will be enshrined in the American heart—not only as the savior of the Union, not only as the emancipator of a race, not only as the highest embodiment of self-made genius, but always and forever as the supreme personification of the spirit of democracy in its finest faith and truest form.

One cannot speak of Lincoln without thinking of Gettysburg, and the speech that still stands as the greatest utterance in the English language. But one cannot speak of Lincoln and Gettysburg without thinking of that regiment of patriotic youth—the First Minnesota—the first to answer Lincoln's call for volunteers in 1861—the first in the annals of modern warfare in the percentage of its casualty loss—600 youthful martyrs ordered into the valley of the shadow to stop 15,000 troops in Pickett's charge, 600 Minnesota high-school lads who laid their lives upon the altars of their patriotism and made it possible for Union reserves to reach this vital spot and stem the tide—600, of whom but 57 lived to see their country's flag again. It was the turning point of Civil War. On Lincoln's night—and it would be with his benediction—I bring to you the Nation's respect and love for the rich memory of the loyal sons of Minnesota.

Lincoln was the first Republican President of the United States. Put his character and his tradition long since burst these bounds. He belongs to every American who loves his native land and kneels to the Constitution of this imperishably reunited country.

Yet the fact remains that he was the first Republican President of the United States. Four years later, still running as a Republican, he was the first coalition President, uniting behind him all like thinkers, regardless of party affiliations, who put the welfare of their Nation ahead of every other hope.

And there, my fellow citizens, is the pattern for us in 1940. It is our Lincoln heritage. It is our Lincoln admonition. Once more America is at the crossroads. Once more a critical hour of tremendous decision impends. It is the responsibility of Lincoln's party to save the American system of free enterprise and free men under the renewed spirit of constitutional democracy and to recapture prosperity for our whole people under a Government restored to sanity and solvency. In my view it must strive to create common ground upon which all like thinkers may unite to produce an administration for all Americans in which a prepledged, one-term President is manifestly free of all incentive but the one and single job of saving America.

The founding fathers constitutionally decreed that the Federal Government should have strictly limited powers so that hard-won personal liberty might endure. They knew the dangers of concentrated autocracy. That is what they fought against. They knew the vital importance of State sovereignty and home rule so that control of government might remain close to the governed. They wanted no overlords.

The New Deal, on the other hand, decrees that the Federal Government shall have unlimited powers; that it shall reach for every possible control and dictation over the citizen's life and livelihood; and that when this unholy authority is dragged into Washington it shall be centered in an all-powerful Chief Executive who can do no wrong.

There lies the fundamental issue; and from it, in one form or another, flow most of our accumulated problems. When Roosevelt and the New Deal collide with Jefferson and the Constitution we stand with Jefferson, and so will a majority of the American people next November.

We are on the side of decentralized government, except where there is clearly no escape from centralized controls. We think this country is too big and too complex to be run under standardized discipline and compulsion from any one central point. We are on the side of "checks and balances," the greatest American contribution to the theory of democratic government, so that government shall be required to keep itself within freedom's bounds.

The New Deal is on the side of consolidated Federal authority, and then when it takes this pilfered power to Washington it is on the side of further dictatorial consolidation in the Chief Executive. It is on the side of subservient legislatures which shall be "purged" of any souls who resist the imperial will. It is on the side of subservient courts, which shall be "packed" if they resist the imperial goose-step. It is on the side of government by Executive decree. Its more fervid zealots are entirely logical when they speak up for a third Presidential term. It fits their dynastic picture perfectly. So would a fourth or fifth. Elections are but an annoying and needless interlude.

Next November the American people will umpire this dispute—this fundamental difference between two philosophies of government and life. There is no doubt in my mind what they will say.

They are tired of life on a flying trapeze. They are tired of experiments that never end and patent medicines that never cure. They are tired of bureaucrats, boondogglers, barnacles, "brain trusts," ballyhoo, and bankruptcy. An eloquent and decisive majority—composed of Republicans and brave Jeffersonian Democrats alike—will repudiate the repudiators of the American system. They will restore the spirit of the Constitution, the spirit of free enterprise, the spirit of free men; and in this congenial atmosphere of new independence and new confidence, they will launch America upon an era of unprecedented prosperity and joy.

Is there a realistic chance for this happy transition? Let us see. We have a frustrated economic impulse held back by a decade of depression and by the deadening hand of arbitrary New Deal interference and restraint. It strains at its needless leash and will leap to action at the first dependable sign of friendly interest and encouragement.

Since 1932 we have all but abandoned new investments, which spell new enterprise; and a vast accumulation of sterile bank accounts itch for profitable assignments which would spell new jobs, new wealth, new prosperity, and new opportunities for youth and age alike.

We have suffered 10 years of veritable stagnation in plant expansion and plant replacement until obsolescence is a well-nigh universal blight. A call for not less than twenty billions of capital goods awaits release to even bring us back to par.

Our vital consumer buying power is cruelly damaged by the poverty of 12,000,000 citizens who are still unemployed and who deserve real jobs at living wages, and by the shattered buying power of agriculture, which flounders in the morass of subsidized paternalism and deserves release to a living income. It is damaged, on the other hand, by the nonproductive diversion of national income to the heavy taxes that pay these bills and all the others incurred by a vampire bureaucracy which is the biggest and the costliest in history.

These corrections alone would turn the trick. We still have untouched frontiers.

Are these and kindred obstacles, which stand in the way of sound recovery, American style, insurmountable?

With all the emphasis and conviction at my command I answer "No." And I also answer that a majority of the American electorate, fed up with 8 years of synthetic socialism, will commission the party of Lincoln to this healing task.

In a word—and mind you, it is the word of the administration's own National Economic Council—"The American machine is stalled on dead center."

No one ought to know the reason any better than the New Deal President of the United States himself. From March to July of 1933 he saw the industrial production index of his country move from 59 to 100—the greatest volume of recovery ever recorded in a like space of time in human history. Why? Because for 100 days he was living up to his campaign promises to put the Federal Government on firm foundation; to protect the public credit; to balance the Budget; to encourage business. He was still remembering his own words—words which subsequently became his own epitaph—"Most liberal governments are wrecked on the rocks of loose fiscal policy." At the end of 100 days, he completely reversed himself. He went off on a pell-mell spending spree and in pursuit of economic dictatorship. The result was a bankrupt utopia which never arrived. He built confidence and then he destroyed it.

But that's not all. The President has another reason for knowing what it's all about. From May to December 1939, the industrial production index rose from 92 to 128. It probably will keep on rising. Why? Because of a war abroad? No; except in incidental degree. Chiefly because the war has so intrigued the Presidential imagination that he has temporarily quit his domestic vivisection (and he hopes that the country will forget them, too). Chiefly because he has once more turned economist. His eighth annual promise of "sound fiscal policy" bears more evidences of reality than any of its six sterile predecessors. Ordinarily election years scare business. But 1940 is a phenomenon. This election year scares the President. And the country benefits as a result.

I fervently hope and pray that the present timid recovery trends—born of the first hope in 7 years that the Corcorans and the Cohens and all the other Jupiter-minded bureaucrats who think the American people ought to be herded into kindergartens—will preserve. But that is beside the point. The point is that the experience of the New Deal itself shows the basic answer to our national problem. When it "lays off," we swim. When it "lays on," we sink.

The trouble is that "purges" and "appeasements" rotate in such breathless fashion that no sustained confidence is possible. The famous "off again, on again, gone again Finnegan" was positively static compared with Uncle Sam on his New Deal merry-go-round.

The same President who deliberately divided the country into bitter factions, calling some "economic royalists" and "Tories" if they happened to be able to continue to meet their own pay rolls, and inviting class to war on class, now blandly says that "bitterness and vituperation" are "hurtful in the domestic scene." Right; but how long will the conversion last?

The same President who machine-gunned our constitutional "checks and balances," who ruthlessly sought to bind an independent Supreme Court on his imperial chariot wheel, and who has gathered unto himself more executive authority than exists outside of completely totalitarian states; this same President now decries the destruction of "all the . . . political standards which mankind, after centuries of struggle, has come to cherish most." Nice; but how long will the conversion last? By the way,

it was followed significantly within 2 weeks by a typical proposal to let the Chief Executive nationalize our industries whenever he might proclaim a peacetime emergency. And yet they wonder why we can't sleep nights!

The same President who promised to reduce Federal expenditures 25 percent—and, instead, increased them 300 percent—now says he “marvels at the glib generalities” of our would-be Budget-balancers. Well that can mean but one thing: we must have elected a “glib generality” President of the United States in 1932.

The same President who angrily told all dissident Democrats in his speech at the Jackson Day dinner in 1939 to go join the Republican “tweedledees,” now gently beckons them all back again in his coy Jackson Day speech for 1940. He wants a “united party” this election year—but for what purpose is still a gleeful mystery in his own undisclosed ambitions.

All these contradictions—and many more—are utterly baffling and wholly destructive of the popular confidence which must precede general recovery. Partisan critics may sneer at this basic plea for confidence all they please. But the cold, hard fact remains that until the country knows that it is headed in one direction and the right direction for keeps, its economic recovery will be as spasmodic and as discouraging as the course of its haphazard, joy-riding Government.

Well, you ask me, what's the answer? Is it to scrap the New Deal, lock, stock, and barrel?

Let's be frank about that. Despite all that I have said and shall still say, the answer to that all-embracing question is “No”; and you couldn't, even if you would, because there is no way to retrieve the eggs after you have made an omelette—and heaven knows we confront an omelette, to put it mildly. Furthermore, whether you like it or not, some of these social-minded objectives are here to stay. New times produce new problems and new problems often present new needs. No; the answer is that we must wisely balance yesterday against tomorrow—experience against necessity. We do not weaken our indictment against the New Deal by finding spots of good in it. On the contrary, we strengthen our indictment by displaying a sense of discrimination and good faith. That is what the people are doing and it is what they expect of us. The answer is that we must scrap the bad; improve the good; live by the spirit of the Constitution; quit reckless innovation; make government solvent; give legitimate American free enterprise a sustained chance; restore a maximum of home rule in States and local communities; say what we mean; mean what we say; and go forward in one consistent and dependable direction all the time.

The President once correctly said that if we could raise the national income from sixty billions a year to eighty billions a year most of our problems would automatically disappear. But his trouble is that the New Deal tries to make an \$80,000,000,000 country out of a \$60,000,000,000 country by spending the difference. It has put appropriations higher and peacetime taxes higher and national debts higher than any administration in American history. Its own brilliant, sound-headed ex-Under Secretary of the Treasury, John Hanes (who like other brilliant, sound-headed Treasury assistants is no longer connected with the Treasury), put it this way: “We have developed a \$10,000,000,000 appetite with a \$5,000,000,000 pocket-book.” These gentlemen who rode into power in 1932 on a promise of retrenchment have stopped at no bonanza in attempting to fertilize prosperity with other people's money—and they have completely failed to answer anything. At their last Jackson Day dinner, after celebrating their affinity for common folk with terrapin and champagne at \$100 a plate, they toasted debt-paying “Old Hickory” in \$42,000,000,000 worth of red ink. What a cruel travesty. And what a grim imposition upon the hopes and needs of those who are still victimized by depression, on the one hand, and by the New Deal on the other. You cannot make a silk purse out of a sow's ear, and you cannot build a solvent prosperity around an insolvent public treasury. Balanced books, unfortunately, are more important than fraside chats.

We have tried spending and borrowing and pump priming. We have tried clamping down on private business with punitive taxes and with “planned economy”—usually planned by despotic bureaucrats who never met a pay roll in their lives. It hasn't worked. It never will. The way to make an \$80,000,000,000 country—yes, a \$100,000,000,000 country—is to let American business earn the difference and put it into new wealth. Wealth has to be created before it can be shared.

What to do? Do everything to legitimately encourage free enterprise and the honest profit motive in private business. Undo everything which needlessly discourages business and aggravates the uncertainties and the timidities which hamper success and prosperity. Do everything that puts Government itself on dependable foundations. Undo everything that makes Government wobble and needlessly puts it in the way of recovery and reemployment.

Here are a few specifications. Stop the hymns of hate which dynamite us into devastating factions. Quit Government competition with private business and reduce regulation to whatever real necessity requires in the obvious public interest. Demobilize the bureaucrats; scrape off the pay-roll barnacles. Repeal the floating Presidential money powers so that our currency is tied to something more substantial than the Presidential whim. Stop buying all the gold and silver in the world at swollen prices, when we already have twice as much as we can use. Yes; stop buying gold from Russia at \$35 an ounce which Russia produces for \$11 an ounce—and puts the profit into execrable war upon Scandinavia. Put our tariffs on a dependable cost-of-production basis, so industry and labor and agriculture may know what to expect. Remove all “tax deterrents,” as identified by the present Treasury itself, and substi-

tute “tax incentives” to the profits system. Amend the Securities and Exchange Act to remove needless obstacles to new financing while retaining all protections against piracy. Amend the Wagner Act to remove needless and costly and discouraging frictions in labor relationships, and separate the functions of the National Labor Relations Board so that judge and prosecutor are not in one tyrant, yet zealously protect every essential element of free collective bargaining. Quit all new social schemes and all new subsidies, no matter how worthy or persuasive, until we have found a way to pay for those already in existence. Eliminate costly overlapping duplications in Federal, State, and local service, and give home rule the preference wherever possible. Another brilliant, sound-headed ex-Under Secretary of the Treasury, T. Jefferson Coolidge, who, like a long line of other brilliant, sound-headed Treasury assistants, is no longer connected with the Treasury, put this latter thing this way: “We see today consolidated Federal powers destroying the foundation, while, under the spell of unsound reasoning, the people are surrendering their rights and liberties; only by a return to the principles of State sovereignty over its citizens can our democracy endure.”

But to continue the specifications. Pay as much attention to the man from whom we take a dollar as to the man to whom we give it. Stop the Houdini business of deliberate deficit spending and admit once more that thrift is more prudent than debt. Maintain reasonable relief for all deserving citizens who are still victimized by this needlessly prolonged depression, but unify it under State responsibility, with necessary lump-sum appropriations from the Federal Treasury, thus reducing costly overhead and waste and indefensible experiments and the political exploitation which plays politics with human misery. Balance the Budget as rapidly as sound business judgment will permit. Restore the spirit of the Constitution to complete authority so we may be sure this is going to continue to be a government of laws and not of men. Stay out of war. Quarantine the third termites. And then watch the country boom.

With just one question I would deal in greater detail. It is the question of agriculture, in which I know this heart of the farm belt is deeply concerned. But in reality you are no more concerned than the rest of us, because there can be no stabilized prosperity for America as a whole until stabilized prosperity for agriculture gives the American farmer his fair share of the national income. The family-sized farm, run by its solvent owner, is still the core of American institutions.

Let the country be warned that it finally hurts itself if agriculture is subordinated or ignored, or if it is not given its full share of the American prosperity. But equally let agriculture be warned that it finally hurts itself if it seeks any undue special favors which tend to defeat general recovery, because general prosperity for all consumers of farm commodities is the surest, natural guaranty of farm success.

The fact remains that agriculture requires particular attention because of its particular status. In seeking to serve it, it is all very well to look beyond the seas for export customers. We certainly need all the export trade, for both agriculture and industry, we can profitably get. But the richest market in all this earth is right here among our own 130,000,000 people. When their mass buying power is restored and expanded, when they all, including the farmer, can buy not only subsistence but reasonable comfort, the farm problem in most instances, like many other problems, will have solved itself. So, while the first agricultural necessity is the restoration of general economic health throughout this stupendous home market, its ultimate indispensable necessity is that this rich domestic prize should be dedicated exclusively to the American farmer and the products of his American farm. There should be no competitive agricultural imports when domestic farm prices are below domestic parity. Here is one monopoly that is indispensably good—the monopoly of the domestic market, against all destructive alien competitors, in behalf of the whole family of American agriculture.

Except as we start from this base, there will never be a successfully sustained farm formula. You can try all the patent schemes you please. They will all collapse unless they start from this text: American markets belong to American farmers. Not even Secretary of State Hull can produce compensatory alternatives in alien lands, no matter how plausible he makes his free-trade theme and no matter how persuasively he pleads his low-tariff cause. I may add, parenthetically, that Secretary Hull's reciprocal trade treaty law represents a wholly unconstitutional delegation of tremendous legislative power to the President, indeed, greatly more power than was contained in the “elastic tariff” which Mr. Hull himself once condemned, under different political auspices, as “too much power for a bad man to have or a good man to want.”

But back to the immediate farm problem. These farms, even after they are nourished with the blessings of the American market, will need practical conservation of their soil. Soil is their capital account. Its depletion is creeping bankruptcy. Therefore, soil-conservation payments are a logical national investment. But they should go to voluntary cooperators. I emphasize the word “voluntary.” There should be no compulsory regimentation of our farmers as though they were peasants. Farmers today are often plagued quite as much by swarms of dictatorial bureaucrats as by grasshoppers or any other pest. Soil-conservation payments should go to voluntary cooperators under general congressional formula to assure equitable division and under guidance and administration of State land-grant colleges or State agricultural departments, and not under the whip and spur of Washington. They should go to voluntary cooperators, not merely in five specially privileged crops

but in all crops. It is prejudicial discrimination to call cotton, wheat, corn, tobacco, and rice our only basic crops, when milk, eggs, cattle, hogs, fruit, and truck produce and others are often greater or as great. When any of them voluntarily join soil-conserving programs they should have reasonable Treasury rewards.

There is another type of Treasury reward which interests me quite as much, "incentive payments" for growing products of which the Nation has not enough, and there are many such. The incentive-payment idea, the exact opposite of the unpopular, unhealthy scarcity restrictions, may be applied to expanding the production of crops now imported and to developing the production of crops for industrial uses. This latter field of action is one of the most promising and fruitful. On a vastly expanding scale the farm is becoming the source of industrial raw materials. But the surface of these possibilities is only scratched. Our genius should be urged to this attack on every front. "Farm chemistry" is the vital phrase. It is a slow process, but it holds more promise than all the balance of the alphabet which bureaucratic "jitter-bugs" at Washington are still juggling in their anxiety to catch up with their own mistakes.

In principle, crop loans are sound—so long as they are within limits which make Uncle Sam the lender and not the owner of the pledged commodity. But in the final analysis the farmer wants more markets, more direct access to them, and better prices rather than more loans. He does not need more debts. He needs a chance to secure his cost of production and a fair profit so he can pay his debts. In the long run he needs the same "two-price" system which has permitted closely organized industry to thrive on an American price in the domestic market and a competitive price in the world market. He will get it one day under the original self-supporting theory of the old McNary-Haugen bill, modeled down to date. He will get it when he is protected in an American price for that portion of a surplus crop which is domestically consumed and when the export portion of the surplus crop is taken off the domestic market and diverted to the world market at the best price that can be secured through negotiation with foreign countries or otherwise.

There are other things that ought to be said upon this subject but time forbids. Practical and efficient farm cooperatives should be encouraged and cooperative marketing agreements should be sympathetically extended. Careful experiments in crop insurance, despite contemporary losses, should continue.

Speaking generally, no man who is honest with the American farmer can say: "I know this is the way." But no man who is honest with the facts can deny that the haphazard and often contradictory experiments of the last seven guinea-pig years have not created vastly more problems than they have solved, and—despite some landmarks of progress that must be preserved—have often done agriculture more harm than good. We must start anew upon the trail of this age-old problem; and we must find the program—what to do and, equally important, what not to do—which produces an American farmer who once again is both prosperous and free—an American farmer who once again is his own happy and successful master.

I would briefly touch one other, final point. This distraught world is riddled with bitter, horrifying wars which wrench our hearts, ravish our ideals, and consume us with hatreds for sanguinary despots who extinguish the very lamps of civilization. Deep and impulsive emotions might easily drive us once more to these battle lines 3,000 miles away. But we must ever take counsel of reality. Reality says we cannot hope to control the destiny of power politics in the Old World. We tried it 20 years ago and failed. Reality says we must avoid entangling contracts. One such is our recognition of bloody Moscow which, as a result, is able, with our official benediction, to attack us from within just as treacherously as it attacks others from without. We have no business in any kind of partnership with such an outlaw. Reality tells us that our own stupendous obligation to democracy is to keep its torch alight in this New World. Reality warns us that if we enter this appalling conflict we shall come from it in bankruptcy and with our liberties in chains. Reality demands that we must avoid these wars by every effort consistent with national security and honor. We can stay out if we will—and stay out we must. When we are attacked, we shall respond with every man and every dollar beneath the flag. Until we are attacked, we shall hold our peace. America must be our exclusive, dominating dedication. America must be our passion. And none but devoted, single-purposed Americans must be put on guard.

Our battles, my fellow countrymen, are here at home. Distant horizons must not blind our eyes nor dull our senses to the nearer fact we, too, are in crisis—though it be of different sort. Our immediate enemies are not without; they are within. I would not temporize one instant with internal nazism at the right or internal communism at the left. I would clear this track for keeps. But neither would I compromise with any other ideology, however sweetly named, which—in the President's own language, describing the New Deal—might "provide shackles for the liberties of our people."

We are entirely surrounded by desperately vital problems. They affect not only the material well-being of 130,000,000 people. They threaten the very character of American life and institutions. They often menace individual freedom. They often hazard representative democracy. We cannot meet them in a spirit of numb reaction—as though the world was finished yesterday. But we dare not meet them in a spirit of contempt for history, tradition, and experience—as if there were no wisdom prior to 1932. We must put human rights ahead of property rights. Yet we must not forget that property rights are among the most precious and the most significant of human rights. Our call is to the high

middle ground of realistic common sense where liberalism and conservatism shall strike a happy balance for the common good.

It is our assignment, in the national destiny, to restore the spirit of constitutional liberty to American institutions; to restore the genius of free enterprise to American commerce; to restore real jobs to American men and women and protect their maintenance; to restore hope and confidence to the American people who shall move forward in the American way of life.

It is a desperately vital assignment. It must be accepted in the consciousness, to borrow Emerson's vivid phrase, that America is God's last chance to make a world.

## Legislative Program of American Legion

### EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday, February 7), 1940

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on February 10, 1940, on the subject of the legislative program of the American Legion and the American Legion Auxiliary.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a deep pleasure for me to discuss with you in general terms the legislative program of the American Legion and of the American Legion Auxiliary.

In discussing these legislative proposals, I should like to make it clear at the outset that these measures are still in the process of refinement and consideration by the Congress and by committees of the Congress.

The five-point legislative program of the American Legion and its auxiliary includes measures calling for a universal service law, a strong program of national defense, protection for widows and children of deceased World War veterans, preference for veterans in Federal employment, and a refinement of immigration, naturalization, and deportation laws.

While these are the specific planks of the Legion's legislative program, of even greater importance are the basic fundamentals which govern and motivate this patriotic organization.

With shells again plowing the soil of Europe—with men again being maimed and killed—the men who served in the last war, and the women of their families naturally are thinking and are working to keep this war from reaching American shores.

Members of the American Legion know all about war. They know from intimate experience the horror of armed conflict. Their wives—and their children—and the widows of those men who sacrificed their lives in service to their country, know first hand the futility and the brutality of that legalized mass murder to which nations unfortunately still take recourse.

The American Legion is asking that the President and the Congress pursue a policy that, while preserving the sovereignty and dignity of this Nation, will help guarantee our noninvolvement in today's European conflagration.

Its membership insists, also, that the American armed forces be expanded at the earliest possible moment so that they may be adequate for any emergency which today's world conditions may produce.

Specifically, the Legion asks that our Navy be second to none and that it be organized to defend our interests in both the Atlantic and Pacific oceans against any possible grouping of aggressors.

It urges that the Regular Army reach a peacetime strength of 280,000, with a National Guard of 426,000. It urges that military and naval aviation forces be fully and competently developed. It urges that reserve supplies be maintained sufficient for a force of 1,000,000 men for 1 year. In short, it urges that we pursue an adequate program of national defense.

Such a program would assist in insuring our Nation against any possible attack, even though that may appear to many of us to be a remote possibility at this time.

Such a program would be another effective method of insulating ourselves against quarrels and wars abroad.

There is thoughtfulness and logic in the contention that if America is strongly prepared for defense it will be able to go through the present period of war in peace.

Insofar as legislation to provide for the widows and children of men who served in the defense of this Nation is concerned, this Government has always taken the position that such protection and such provision is an obligation incumbent upon it.

However, it should be pointed out that such a policy has been carried out for the veterans of all wars in which this country has been engaged, with the exception of the World War.

That this is an injustice will appeal to many. Particularly does it become a burden to those unfortunate widows and children of deceased World War veterans.

The American Legion is requesting that this session of Congress remove this discrimination against the families of deceased World War veterans, and that it extend to them the same protection given to the families of deceased veterans of other wars.

This legislation, embodied in the bill H. R. 7593, is now under active consideration by the House Committee on World War Veterans' Legislation. A great deal of interest is manifested in the measure and an effort is being made to present the proposal to the Congress at this session.

Another long-established policy of the Federal Government has been to give those who served the country in time of war, preference in Government employment in time of peace. The American Legion has taken the position that, while we have some laws at the present time which provide such preference for veterans, those laws are, in some instances, ineffective and inoperative.

H. R. 7313, now before the House Committee on the Civil Service, contains the provisions advocated by the Legion.

Having in mind the serious unemployment conditions which prevail among many veterans, there seems to be a justification for liberalizing statutes which would give a preferential status to those who are badly in need of employment and who, by virtue of their service in the cause of the Nation, commend themselves as meriting special attention.

The question of Universal Service has been discussed during many sessions of Congress. In fact, practically every Congress since the World War has heard the appeal of the American Legion for a law which would provide equal service for all, with special profit to none in the time of war.

This is an important item in the Legion program, and one which has already received intensive study by committees of Congress. There is, however, no specific bill on the subject pending before Congress at this time.

While the principle of Universal Service has steadily gained more and more sympathetic support, the difficulty of writing into specific law provisions of this nature present a perplexing problem to any legislator.

The question of revising our immigration and naturalization laws, along the lines suggested by the American Legion, present controversial problems. The fundamental idea, however, of providing employment for American citizens, and of discouraging the migration to this country of undesirable aliens, will receive the endorsement of the mass of our people.

I do not believe that we are ready to close our doors to the friendless, the oppressed, and the unfortunate of other lands, but we are prepared to make this country an unwelcome breeding place for the cultivation and dissemination of any "isms" alien to free and representative government.

At a time like this, there must be in this country a strong, united, intelligent, program for peace. There must be a regeneration of moral and spiritual forces. There must be a unanimity of thought and action. There must be confidence and trust in leadership dedicated to our military noninvolvement in war. There must be no room in this country for the war monger, the jingoist, or the advocate of the un-American institutions.

There must remain here, however, an unlimited space for the statesmen and the patriots who will constructively, and intelligently prepare for the tomorrows which lie ahead.

Let noninvolvement in war be our supreme effort. Let peace be our constant endeavor and objective. Let a sound program of national defense and of progressive planning be our realistic undertaking.

The American Legion and the American Legion Auxiliary have exerted themselves for over a long period of years as forces militantly defending and advocating the institutions of free government and the perpetuation of American ideals. No organization is better equipped to understand the necessity for united endeavor—for mutual cooperation—and for a far-sighted leadership during this time of national and international distress.

Therefore, it marshals its forces to promote the cause of better government—of economic stability—and of human security in our Nation.

The current legislative program of the Legion has been arrived at after careful study of the needs of the veterans and their families generally.

I do not presume, however, that anyone will insist that this program is the ultimate in perfection, or that it provides against all possible circumstances in the future. Nevertheless, it is a decisive, concrete, and thoroughly practical program. It deserves the attention and serious consideration of every Member of Congress, and I think that it will receive much sympathetic treatment.

I have been happy to make these few observations and to add my voice in general endorsement of the principles laid down by the Legion leadership.

Most important, I believe, is the necessity for formulating and progressing a program which will strike at the vitals of our economic woes. That is a war which we must wage in peace at home.

The great forces of veterans' organizations will join, I am sure in allying themselves in the strengthening of American institu-

tions through an active and unrelenting warfare against economic instability, and social maladjustment, which find themselves thriving within our shores.

A crusade for an improved, domestic economy and an unceasing determination to remain at peace are the greatest contributions that can be made at this period in our Nation's history.

That is the broad, basic program which all of us must advocate, and to which all of us must subscribe.

## Youth and Government

### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday, February 7), 1940

ADDRESS BY HON. ROBERT H. JACKSON BEFORE AMERICAN YOUTH CONGRESS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by our able Attorney General, Hon. Robert H. Jackson, at the Lincoln Memorial meeting of the American Youth Congress in Washington, D. C., February 9, 1940.

There being no objection, the address was ordered to be printed in the Record, as follows:

Perhaps it is hard for you to imagine how flattering it is to such a well-worn youth as I to be invited to share the platform at a youth congress. For more reasons than one it is appropriate that you open your institute tonight with a memorial meeting for Abraham Lincoln. He was one Republican who would not have been afraid of you. Speaking of his long fight for human freedom, Carl Sandburg says of Lincoln:

"He knew that his best hopes for listeners to such an appeal were the young people. The 15- and 16-year-old boys who had read Uncle Tom's Cabin when it was published 6 years before Lincoln's 'house divided' speech had grown into 21- and 22-year-old voters. In what he was doing and saying Lincoln kept in mind the young men. He knew that the challenging radical tone of what he was saying about the Declaration of Independence would interest not only the foreign-born voters but also the young people of all classes, those to whom the American Revolution still had a breath of smoke and a banner of sacred flame."

And, as Sandburg adds:

"Perhaps after all only the young people with dreams and wishes in their eyes would understand his language. When his talk was ended and his language had failed to measure off all he wanted to say, it might be the young who would best understand the desperation of his dreams, the unmeasured lengths of the adventure he was for."

I do not know what your dreams are, and it probably will not be for me to experience the unmeasured lengths of your adventures. In any case, I am quite certain that I believe in your right to have your dreams and your adventures.

Of course, to some people this spirit of social and political unconventionality is terrifying, and to some people such an assembly of young people is a symbol of dark and nightmarish plottings against government. Lincoln, too, experienced that. A book written at the time of Lincoln's campaigns so exaggerated his real aims as to anger him. It said:

"Men once fairly committed to Negro slavery agitation—once committed to the sweeping principle that 'man, being a moral agent, accountable to God for his actions, should not have those actions controlled and directed by the will of another' are in effect committed to socialism and communism and to the most ultra doctrines—to no private property, no church, no government—to free love, free lands, free women, and free churches."

Thus it was sought to blast the dreams and ideals of the early Republican Party by labeling its antislavery sentiment as dangerous radicalism. Seems a little far-fetched today, doesn't it? But what seems more surprising is that the political party which has been trying to wear Lincoln's garments now refuses to associate with any of you youths because some among you are now labeled radicals and Communists. Of course, I do not know how dangerous you really are, but I do hope you are not so bad as to warrant the suggestion that you must clean up and purify yourselves in order to be worthy of a message even from the party of Warren Harding, Albert Fall, and Joe Pew.

I may be wrong about it, but it always seemed to me that a parent or a citizen who thought a youth in danger of great error was under an equally great duty to give patient and understanding counsel. That was the spirit and practice of Abraham Lincoln.

Convinced that he was right and that it was a duty and a privilege to set others right, he went out and sought to present his views to those who differed with him. He set before us the classic example of revealing his own thoughts in debate, in the generous confidence that out of the free competition of ideas the American people can be trusted to choose the best ones.

My embarrassment in speaking to you tonight is not from a sense of being holier than thou but from a confused sense of inferiority. While I try to be unconscious of the passing years, I am still vaguely aware of the mortality tables. They tell men of my age that, on average, you will be here long after we are gone. That means that our work, our capital, our institutions, and even our reputations will be left in your hands. Some men like Lincoln have grown in fame with posterity; others shrivel. The best we of today can do is at the mercy of time, and more time remains to you than to us.

Then, too, I am not so cocksure that my own generation has done such a good job in its time that I feel qualified to tell you what you should do with your lives in your allotted time. It would be too devastating if you should, as you probably would, reply, "Well, if you are so wise, why are you leaving us such a mess of wars and rumors of wars, of social strife, economic stagnation, and political reaction, which has overwhelmed much of the world and bedevils all of it?" I freely acknowledge that the world of today lives in a glass house and is not privileged to throw stones at those who are to follow.

It is, I admit, a little difficult for one of my generation to talk to you in terms of your own dreams and visions, for we cannot share them fully. After all, we are a different generation, and we are a trifle afraid of you. That because, while you are tossed about by the same storms as we, you are riding free, while we older ones are mostly anchored. Some of us are anchored to a little accumulation of property; some anchored to a prospect of accumulating. Some are anchored to jobs, or to social position or political affiliations, or to some of those things which are tangible assurances that we will "stay put." No matter how free we try to be, we are all tangled up in the existing order of things, and it is woven into us. We are part of the status quo.

And, too, no honest man can expect a free and hopeful youth to accept a status quo in which involuntary unemployment, foreclosed opportunities for independence, dependent old age, and so many injustices play so large and disastrous a part. We know we are leaving you an indefensible legacy. We know you are going to do something to it, and we don't know what. We know that you don't know what. We only know that the pattern of the future is in your minds, not in ours.

Although you do inherit a good deal of difficulty and confusion, you here in America are also the inheritors of things which have cost blood and sacrifice to win, and which you will find still worth preserving. We have a system—an imperfect one, it is true—but one which aims to give us government by consent of the governed. And in order that such popular will may be enlightened and freely known, there was established the right of free speech, and of the press, and of petition, as well as other liberties from restraint. These limitations are to protect your freedom against the persons you elect to office.

Of course, they are not the only persons from whom you will need to guard your liberties. Under our economic system grave injustices and inequalities may be perpetuated by men never elected to office, but who through economic advantage control jobs, or credit, or monopolize commodities, or who can otherwise strike at your means to live or your standard of living. From these sources come the greatest modern threats to your pursuit of happiness.

This democratic Government of ours was so fashioned as to be a power for your protection against such private injustice and exploitation and, at the same time, not to become an oppressor itself. It was placed in the hands of the people that they might stop wrongdoing by irresponsible private power, without becoming subject to irresponsible public power.

Time will not permit me to trace the steps by which this virile and strong Government envisioned by John Marshall was stealthily deprived of its power to curb private exploitations and injustices of an economic nature. The slave power feared a government strong enough to check it, and its penetrating influence was long dedicated to the task of restricting, through judicial decision, the power of the National Government. After Lincoln struck down that menace there arose the great combinations of finance and industry which found strong government an obstacle to their imperial designs for exploitation. By 1936 the National Government was reduced by judicial decision to its lowest efficiency.

It has seemed to me that the biggest task of the New Deal was to restore to this people's Government its original powers, lost through judicial interpretation. That is the task in which I have been chiefly engaged, and we are prepared to hand on to you a more effective Government than the one Franklin D. Roosevelt has had to work with. Consider with me a list of the things that he was told he could never, never do, but which we now are told the Government always really had a right to do:

When President Roosevelt took office the people were powerless to enact, either through State or Nation, a minimum-wage law to protect women. Both the States and the Federal Government now have that power.

President Roosevelt took over a Nation without power to enact a law dealing with child labor. We now have such a law.

President Roosevelt found a Nation with its power to protect the right of labor collectively to bargain condemned as unconstitu-

tional by a junta of 52 of the lawyers of America. The Nation has now won recognition of that power.

It was only about a year ago that we won the final decision of the Supreme Court confirming the power of this Nation to enact a valid farm-adjustment program.

It was only about 3 years ago that I sat before the Supreme Court on decision day to learn for the first time that our argument had prevailed and that a system of unemployment compensation could legally be undertaken.

Less than 3 years ago I was standing before the Supreme Court as a representative of this administration, pleading for the power to deal with the urgent problem of decent care for our growing population of aged and infirm. We were opposed by the conservative argument that the Nation could not take any step whatever to deal with old-age pensions. Now we have that power.

President Roosevelt found this Nation without power to aid a distressed industry like the bituminous-coal industry. The Guffey Coal Act was thrown out as wholly illegal in 1936. This year the Coal Commission won its first contest in the Supreme Court.

President Roosevelt found the power of the Nation to enact a public utilities holding company act challenged. Its power to impose common honesty upon great interstate utility combinations which had always been the purse of reactionary politics was doubted. We have won the power to do that.

He found the country without power to enact a municipal bankruptcy act to permit its cities and villages to restore financial order and credit where there had been overobligation from years of political looting or improvidence. We have won the power to do that.

He found it without power to tax the public officeholder's salary as it did other citizens' salaries. We have won the power to do that.

He found it without power to tax the salary of a Federal judge, as it did other citizens' salaries. Today the Nation has the power to do that.

In short, Roosevelt has won for the Nation that which he found it without adequate power to do—either to govern the powerful or to protect the weak.

The reason I call your attention in such detail to this change of constitutional interpretation is that I think it may answer in your mind, as it has in mine, grave doubts as to whether our Government could be made equal to solving its problems. Four years ago, as measure after measure of recovery and of reform were crushed as unconstitutional, I, too, was pretty despondent about the future. I did not and do not feel that the New Deal measures were the perfect nor even the best solution of our problems. The loss of these particular measures was not so serious as the loss of the power to enact any measures dealing with those admitted evils.

Before you look wistfully at any other form of government, let's see what we can do with this American Government with its powers thus restored. Here are old frontiers reopened to statesmanship. Here are new possibilities for the redress of grievances, restoration of lost opportunities and equalities. Of course, it will not move as fast as some would like, but our Government can move as fast as our underlying society and economy will assimilate changes, and efforts to move faster always produce countermovements that undo much of what has been accomplished. If the people are really determined they can now utilize our Federal Government to knock out old privileges and unfair advantages, to open the closed doors to individual opportunity, and to turn out unprecedented national wealth to a source of individual security.

I know full well that many people who talk of preserving this American system really mean only that they want to preserve the status quo and their advantageous position in it. But I would urge you to preserve our American system for an exactly opposite reason. Our system is really a great system for the changing of the status quo by peaceful and orderly means. Except in nations that have the device of popular elections, there is no way to repudiate and change a governmental policy except by force. Elections are the civilized substitute for force to keep a government abreast of public opinion.

I know that in many places abroad and in a few at home it is the custom to scoff at free government, to call democracy the "cult of incompetence," to complain of it as slow and compromising and outmoded. But if we were to grant all of those charges—which we need not—it is still democracy alone which preserves that priceless thing for which youth in all ages has searched—the dignity and worth of the individual.

With all our groupings and uncertainties we have in America held to that ideal. If our practice does not measure up to the ideal, then that discredits not the ideal but only the weakness of our efforts. You live in a country where the individual may listen to his radio even if what he hears does him no good. The individual here may have grievances against his system, but he does not disappear unaccountably if he unites with others in denouncing them. The individual may read anything he can get hold of, write as he pleases, and speak his mind, even if what he says is distasteful to the rest of the country.

Among the great nations of the earth this is one of the few where plain, ordinary citizens are preparing to go to the polls and settle our national policy by a choice of leaders for the next 4 years. You are almost alone of the peoples in which the individual in humble station may register his influence on questions that settle the fate of the nation. You may truthfully say that we have not the complete democracy and the perfect justice that we dream of,

but you cannot deny that we are among the few who have in our own hands the possibilities of approaching those hopes. Is it any wonder that among us are people passionately attached to this system, in spite of its shortcomings, and intensely resentful of any movement which they think would overturn it?

You will soon take over from your elders unsolved problems as vexing as have fallen to any generation. But there is also handed to you a Government more responsive, more effective, and more useful than we have had. Your great opportunity is to make it work. Let that be your crusade. Drive out of power the incompetent, the corrupt, and the indifferent. Walk into this democratic process and master it. Make it serve your dreams and realize your visions. I, for one, welcome your active, unbossed, and unpurchasable enthusiasms in public affairs.

If your enthusiasms and visions at times conflict with the lessons of experience and our cautions, that is only what happens under every roof that is blessed by housing two generations. For my part, I am glad it is so.

### A Creed for Republicans

#### EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday, February 7), 1940

ADDRESS BY THE HONORABLE HENRY CABOT LODGE, JR., OF MASSACHUSETTS

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a profound address delivered by the Senator from Massachusetts [Mr. LODGE] before the Associated Republican Clubs of Kings County at the Hotel St. George, Brooklyn, N. Y., February 12, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The times call for a nonpartisan and constructive attitude toward government. It was Lincoln himself who said: "Teach hope to all; despair to none." This counsel is both virtuous and wise. You as practical citizens know the strength of the independent vote today. If we are to win elections, we, as Republicans, must appeal to the independents. In fact, the times are too serious, even for us as Republican workers to be narrowly partisan, or to go in for petty fault finding. We are not perfect either, and let us not be ashamed to admit it. Of course, it is only factual to say that the party that is in power has the greater opportunity to make mistakes—and you may forgive me for saying that they have taken full advantage of it.

In meeting on Lincoln's birthday we remind ourselves that the Republican Party—the party of Lincoln—was originally a party of new ideas. It was a party of the down-trodden, of revulsion against slavery, of America first. There is no use in blinking the fact that in the minds of many people we have strayed from these goals. We have acquired the reputation with some people of being the party of predatory wealth—which emphatically we are not. Unless we make it clear through our candidates and platform that we have indeed returned to Lincoln's philosophy, we cannot hope for popular endorsement.

It should not be hard for us to make that clear. In my State, for example, the structure of social legislation, touching hours, wages, working conditions, and industrial accidents—all of which is being rather gropingly imitated by the New Deal—was built by Republican Governors and legislatures. Nor is it any mere coincidence that those States which are most notorious for permitting the existence of sweatshop conditions today are those which struggle along under the perpetual domination of the Democratic Party. This is a real record based on fact. For some strange reason we never advertise it. With such a record, however, we should not—we must not—make it possible for anyone to say that we are not always eager for true social reform. You as active party workers will know what I mean when I say that we must keep men and women and ideas to the front at all times who are representative of this Republican attitude. I do not ask a change of soul, comparable to the renunciation of the League of Nations by Mr. Roosevelt when he was a candidate for President in the winter of 1932. I simply ask that we do not sail under false colors. We are a kind-hearted, generous party. We are both practical and progressive. Let us appear so.

Having looked at ourselves, let us now look at the New Deal, as tolerantly and as fairly as we can, recognizing that they, like us, are human and subject to error. In this charitable spirit I shall not cruelly discuss the promise of economy and the record of fiscal

disaster which has followed that promise. I shall not rehearse all of the pledges of prosperity—"We planned it that way"—and compare these promises with existing unemployment; nor shall I hark back to the speeches made in 1937 which told us that the Supreme Court of that year was the one obstacle standing in the way of flood control, assistance to agriculture, and improvement of the lot of the laboring man, and point out that we have an entirely different Supreme Court today and that these problems are still just as far from solution, if not farther, than they were then. In other words, I shall not tonight attempt to prove that the new dealers are breakers of their promises and men who do not keep their word.

I do submit that there exists a confusion of thought, or a lack of sustained intelligent thought, and that they are trying to do what no one can do: go in several diametrically different directions at once. Of course, they are not the only ones who want to eat their cake and have it, too. This is a common thing in politics, where so many people are trying to have it both ways. I remember when I was running for election to the Senate in 1936 hearing many direful warnings about the danger of having men in public office who were too young. I then came to Washington at the time that they were trying to "pack" the Supreme Court, and on every hand I heard nothing but direful warnings about the dangers of having men in public office who were too old. This reassured me and gave me a first taste of the contradictions which meet one at every turn in Washington today. I cite a few examples:

There is the contradiction which has puzzled us in Boston, as I suppose it must have puzzled you in Brooklyn, which springs from the policy of paying the farmers huge sums not to grow crops, and at the same time expending huge sums for irrigating new territory so that new crops can be grown. We can understand either of those two policies. It is a little hard to see how they can both be right at once.

There is the connected contradiction which springs from attempting to restrict the growth of American crops and American goods, and at the same time allowing the United States to be flooded with the produce of foreign countries; nor shall I try to explain the economic reasoning of importing vast quantities of agricultural products from abroad at the same time that we set up a Surplus Commodities Corporation to buy our own surplus agricultural products.

There is the contradiction or confusion of thought which arises from the fact that in 1937 we passed, almost unanimously, a so-called neutrality law, and last November moved heaven and earth to repeal it.

There is the contrast between the recognition of Russia by the administration, and the fervent wish today that they had not done so.

There is the tragic and repulsive consequence of this contradiction which confronts us when we read of the Russians using American materials against the Finns—a shocking development which would not have been possible if we had only extended our arms embargo to all the world—even if this had involved a loss of business to the munition maker.

We have the contradiction which springs from the fact that huge sums are spent for the relief of unemployment and yet so few jobs are created. This is a situation which I believe we could remedy by a reform of the whole Federal relief structure which would allocate funds to the States according to a formula based on need, and no longer permit huge sums to be allocated here and withdrawn there in accordance with political preference, or the personal whims of would-be king makers in Washington.

We have the contradiction which arises out of the fact that those in control pay lip service to economic recovery, although executive and administrative actions are constantly being taken which prevent recovery and prevent the creation of new jobs and new wealth.

I do not try to tell you that there is anything criminal in all this, although it is dreadfully clear that none of these policies have been successful, and that all the problems which confronted us 5 years ago are still with us, and a few new ones besides. I just say that there is something shallow and capricious and ineffective about this domestic record.

Yet, what a challenge confronts the Government today.

Take as one example the challenge which is presented to us by American youth, by our young boys and girls coming out of school, bright-eyed, eager, ambitious, desiring nothing but a chance to make an effort and make their contribution to the life of the time. You and I know many of these young men and women. Some of them, to be sure, will find a career in some form of governmental work. Some have been benefited by the C. C. C. Others will be attracted by the Army and Navy. But, my friends, year in and year out the career which will hold the greatest attraction for the average American boy and girl—which offers the greatest hope of security, stability, and reward—is some kind of career in some form of private business or profession. And without posing as soothsayers or magicians, we can honestly contend that whereas a Republican administration would not entirely eliminate unemployment; and while under a Republican administration we would continue Federal relief under a tremendously improved and reformed system; that under a Republican administration, there would be a big, real growth of business activity, with a real, big increase in jobs.

Yes, the challenge afforded by American youth is a stirring one. Contrast this challenge, I ask you, with the record of achieve-

ment—a record of headlines, sensations, 9-day wonders—of everything except real big results.

How can one explain this depressing failure? It is not due to any deficiency in the land. We have a combination of natural resources and of human resources which is not equaled by any country in the world. As I have said, I do not explain this failure on political grounds. I am not accusing those in power of not wanting to solve these problems. I do not accuse them of bad faith, and of simply wanting to play to the gallery and win elections, regardless of the consequences. No; I think the trouble is deeper. I believe the trouble reflects a weakness which, for want of a better word, I would call a lack of faith.

We need not only the ritual of patriotism; we require also that instinctive thing which makes us always think first of America. Instead of faith in aims and ends which are larger than ourselves—faith in our country, and faith in divine Providence—there is a tendency in Washington to worship the human intellect as such and to pin our faith on brain trusters and "bright boys." This pride of intellect is one of the things which has brought our Government to its current state in which it devotes all of its energies in the domestic field to devising governmental schemes for guaranteeing to everybody a more abundant life.

My friends, I humbly submit that if the phrase "abundant life" means anything, it means something which must come from the heart. Government can provide food and clothes and shelter. It cannot provide a more abundant life. This is something which can come only through the soul.

When I survey the failure to solve our present domestic problems, I am reminded of a bitter and cynical statement made by the English author Aldous Huxley, who said: "Without faith you shall know the truth, and the truth shall make you mad." With faith in these greater things, with belief in the true mission of America, which as the poet Whitman said was "to plow up in earnest the interminable average fallows of humanity," we can solve our problems and develop a stronger and more self-reliant America. Otherwise, this record of contradiction, of insincerity, of floundering, of intellectual bankruptcy and spiritual insecurity must continue.

This brings me to the last example which I shall give you of contradictory policies being followed by our Government. It is, in my view, the major contradiction, the most tragic and the most dangerous inconsistency of them all. It is the contradiction which springs from attempting to follow a policy of raising wages and lowering hours and improving working conditions on the one hand and of lowering tariff barriers on the other. I agree that both of these theories are respectable theories. I happen to belong to the school of thought which enthusiastically supports the great American trend of raising wages and lowering hours and improving working conditions. To me this is one of the most inspiring trends in our history. I want it to continue. I admit, however, that those who believe in international free trade and who want to keep American costs down low enough so that we can compete with foreign labor have a philosophy which is shared by many. It seems that no one can disagree with me, however, when I say that these two theories cannot go on together, and that if it is attempted to serve both theories at once, one of the two is going to suffer. I am much afraid that at the present time the free-trade theory, through so-called reciprocal-trade agreements with foreign countries, has the upper hand in Washington.

It is a vastly important matter. It touches the wages which you get for your labor. It affects the prices which you pay for everything that you buy in the stores. It is so important that for your own protection Congress should have something to say about the raising or the lowering of tariffs on these things which you make and these things which you buy. Then if Congress through its negligence permits foreign goods to enter so that you lose your job—or if Congress through its negligence shuts down all foreign importations so that the cost of your living goes up—you can hold Congress responsible. Congress is answerable to you. Under the present system, however, with these tariff arrangements made by appointed officers who never have to submit to the discipline of the ballot box, you have virtually no control.

I am not objecting primarily to the reciprocal-trade scheme on constitutional grounds, although there are plenty of reasons for thinking that in the language made famous by the late Justice Benjamin N. Cardozo, of New York, it is a case of "delegation run riot." I also believe a strong argument can be made that these trade agreements with foreign countries are really treaties, and, under the Constitution, all treaties should be ratified by the Senate. Without going into this constitutional question deeply, we can recall these words which were uttered by an eminent authority when a similar proposal was pending in Congress. I quote:

"The proposed enlargement and broad expansion of the provisions and functions of the flexible-tariff clause is astonishing, is undoubtedly unconstitutional, and is violative of the functions of the American Congress. Not since the Commons wrenched from an English King the power and authority to control taxation has there been a transfer of the taxing power back to the head of a government on a basis so broad and unlimited as is proposed in the pending bill. As has been said on a former occasion, 'This is too much power for a bad man to have, or for a good man to want.' We have recently witnessed the astounding spectacle of Congress in session engaged in the work of enacting tariff legislation, while the President, assuming equal and coordinate authority, has undertaken to anticipate Congress by legislating himself while the session of the legislative body is in progress.

"To give such additional authority to the President is," according to this same authority, "contrary to the plainest and most fundamental provisions of the Constitution—a vast and uncontrolled power, larger than had been surrendered by one great coordinate department of Government to another since the British House of Commons wrenched the taxing power from the autocratic King."

The eminent authority whose words I have been quoting is none other than Congressman Cordell Hull, of Tennessee, speaking in 1929 on the flexible-tariff provisions. Contradictions again! We now have Secretary of State Cordell Hull taking the opposite attitude.

As a matter of fact, I am not objecting tonight primarily on economic grounds. There appear to be no conclusive figures or statistics on either side of the case. Common sense indicates that if a man in Brooklyn buys a car from Michigan that it is better than if a man in Europe buys a car from Michigan. The Brooklyn man will be a customer for parts, for gasoline, for tires. He will patronize American wayside lunch rooms. The European car buyer will not.

Let me say, too, that those of us who resist the reciprocal-trade theory have no more love for logrolling than they have. We are not going to defend the Smoot-Hawley bill which, by the way, the administration has never repealed, although they have talked about it all the time, and have the votes to repeal it. I was not in politics when the Smoot-Hawley bill was alive. We can all agree that as a dead horse it has taken a terrific beating and has been an extremely convenient topic of conversation for those in control whenever their own policies were being too severely scrutinized.

No; we don't want to go back to the old logrolling methods. Our goal is the goal of William McKinley, who said in 1897: "The end in view is always to be the opening up of new markets for the products of our country by granting concessions to the products of other lands that we need and cannot produce ourselves, and which do not involve any loss of labor to our own people, but tend rather to increase their employment."

There is no question of our moving to complete self-containment. We favor a healthy foreign trade—which will not depress our own domestic standards, and which will not embroil us in friction and war. We know that under the Smoot-Hawley bill two-thirds of the goods coming into this country were on the free list. There is no question of complete isolation. There is a question of keeping our sense of proportion.

There is a legitimate wonder as to whether we, a vast continental nation with virtually limitless resources, should frame our trade policy as though we were a small island country which literally could not live without foreign trade. There is a question of the trend which we are following. What is that trend today?

It is a trend towards increasing our trade relations with the armed camps of the world.

It is a trend which regards international trade as an end in itself—as something for which risk should be taken—for which men may even be called upon to die—instead of merely viewing it for what it is—a useful economic tool.

It is a trend which assumes that nationalism is bad, which is a polite way of saying that patriotism is bad.

It is a trend which assumes that international trade promotes peace—an entirely unsupported and unsupportable assertion, against which every counsel of experience and history stands in contradiction. Indeed, wherever we turn we find that international trade is the cause of war rather than the preventer of it. It is certainly at the bottom of the friction between Japan and China; it was certainly a major factor in the rivalry between Germany and Great Britain in 1914; it is certainly at the bottom of much of the trouble in Europe today.

I therefore submit that this trend, embodied in the various policies which are now being followed at Washington, whatever its advantages toward maintaining peace in western Europe or the Balkans or the Far East may be—and these are not very apparent—is not conducive to peace for the United States. And that is the only kind of peace that matters to those Americans who stand to lose if war comes.

We are told that the logical consequences of a self-maintaining America is dictatorship. This is indeed far-fetched. Insofar as dictatorship springs from any one cause, it springs from a lack of the good things in life. In our country we have a surplus and not a lack. If logical consequences are to be discussed, is it not clear that the logical consequences of the internationalist theory is war?

We are told that there is no "peace party" in America. Maybe so. There are those, however, whose motto is, "Stay at peace by staying out of it," and those whose motto is, "Stay at peace by getting into it"; and I leave it to you which has the best chance of preserving peace. We may as well face the fact that while world peace is good, that peace for the United States is essential and is something which does lie measurably within our own control. There are some, however, to whom the ideal of a peaceful America is not sufficient. Their idealism can only be satisfied by the vision of an entire world at peace, in which American influence is brought to bear to maintain good relations from the Balkans to the Himalayas and from the Arctic Circle to the Equator. To them the picture of an America rising serene and peaceful above the stormy waters of international conflict is not enough.

I have spoken of faith. A real faith in America will support our conviction that we can keep our country at peace even if all the world is in flames. It is a military truth that no foreign country or combination of foreign countries can invade and occupy the

United States, and that however much our sentiments are affected by what is going on abroad our national safety is not involved. It was young Abraham Lincoln who said:

"All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth in their military chest, with a Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years."

"At what point, then," Lincoln inquired, "is the approach of danger to be expected? I answer, If it ever reach us it must spring up amongst us; it cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of free men we must live through all time or die by suicide."

Of course, our sentiments are engaged. We detest Hitlerism. We abhor communism. We like the British and the French and the people of other countries. We admire the Finns. Many of us in this country have their flesh and blood in Europe—I know that I have—living within sound of their guns. Our sentiments are engaged. But unless our national safety is at stake, have we a right to risk our country's whole future in the struggle? If you and I always determine American policy with reference to the situation confronting the land where our ancestors came from, we will have no country here. We have our likes and dislikes in this European war. Above all, we love America.

I say to you in conclusion, therefore, that if they want to make a political issue of peace for America, we will accept the challenge, secure in the knowledge that no amount of international trade is worth the sacrifice of a single American life. Let us remember our own people. Before we rescue the child across the street, let us feed our own sons and daughters who look at us with imploring eyes. In the domestic field, let us reform our relief system; let us bring expenditure and income together; let us encourage risk taking and the creation of new jobs; let us keep the American market for the American producer, and thereby keep the peace. Let us rededicate ourselves and our party to Abraham Lincoln. As he was prepared to make every sacrifice to maintain the Union, let us be prepared to make every effort to keep this Union out of another war.

This is you country, a land of racial tolerance, a land of religious freedom, a land where men and women can be recognized on their merits. It is humanity's best hope. Let us never fight for any cause that is not an American cause, and thus preserve and improve and develop and enrich our land—our Union—for ourselves, our children, and for future generations.

### Should the New Deal Policies Be Continued?

#### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday, February 7), 1940

ADDRESS BY HON. ROBERT H. JACKSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the able Attorney General of the United States, Robert H. Jackson, at Buffalo, N. Y., on February 10, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In establishing the town hall of Buffalo you are founding one of the basic institutions of democratic government, and I count it a privilege to help. The price of free government is that citizens must keep themselves informed and alert and critical of those in office. Our people need uncensored facts and undistorted information. But also they need the diversity of interpretation of events and the clash of opinion which helps to form individual judgments, the sum of which constitutes public opinion.

I am glad that Buffalo yields the platform tonight to one of her neighbors from the east and to one who lives somewhat to the west. Perhaps I ought to say to one from the right and one from the left. Regardless of party, we in western New York respect the forthright character of JAMES W. WADSWORTH, and we like him because we don't have to wait for a Gallup poll to find out where he stands. As one of the most consistent opponents of new dealism in both parties, he is an appropriate, as well as an altogether worthy, adversary.

If we were to use our short time in taking up detailed measures of the New Deal, I could select a half dozen that I think he would find little fault with, and he could select some that I would not care fully to endorse. In that way we might keep strictly to the topic but never really meet. It is necessary to deal, therefore, with the more general philosophy of the New Deal, which, I believe, should continue to guide our national policy.

The New Deal is the outgrowth of the economic collapse which hit this Nation with unprecedented severity in 1929. It came in the midst of a highly conservative administration which enjoyed the full confidence of business. It was not foreseen by those in power and was long and often denied to be really a depression. And remember this—the depression came after several years of the kind of administration, the kind of legislation, and the kind of business confidence that they now tell us we should go back to. And, moreover, they are unable to this day to tell us why it came when it did or what caused it, and the party under whose administration it occurred did not then produce, and has not since proposed, even a partial remedy.

In the midst of this collapse, so complete that it threatened the social order and the Nation's domestic tranquillity, the New Deal was born. Problems met with action that was often frankly experimental, because there was no previous American experience to guide it. Such was the securities and exchange regulation, the Social Security Act, the National Recovery Administration, the Labor Relations Act, and many others. Other problems were left over from experiments of the previous administration which had either failed or been too timidly tried to be helpful. Such were the Agricultural Adjustment Act, the Reconstruction Finance Corporation, the Home Owners' Loan Corporation, the Farm Credit Administration, and many others. Still others were urgent in the relief of distress which exhausted local taxing resources were no longer able to handle. These include the extensive Works Progress Administration program, the large Public Works Administration, the National Youth Administration, and the Civilian Conservation Corps camps.

I do not for one moment claim that so novel, so swift, and so extensive a program of action was free from error or conflict of policy, or faulty execution. Certainly it is our duty to reexamine these several policies and in the light of the lessons of experience reshape them in more permanent alignment with what we hope for the long future of America.

In this process, however, we must remember that today the New Deal, whatever its defects, represents the only body of political philosophy and the only coherent program of action to adjust our life to the new problems of this decade. No other political body has offered a constructive or affirmative alternative. Mr. WADSWORTH disagrees with the basic philosophy of the New Deal. But his party will not follow him in repudiating it. His party cannot make up its mind whether to be right or left of Roosevelt, so it will just straddle. One wing will tell you the New Deal must be ended, root and branch, while another wing poses as being bigger and better new dealers than Roosevelt. They tell you he is a "defeatist" and want you to think they will begin fighting where he left off. The Republican Party will wobble around between these two extremes, while the country comes to the conclusion that it prefers the authentic and original Roosevelt to the counterfeit Roosevelts.

In his last annual message the President put into a single sentence the problem he has faced and the cost if he had failed. He said:

"The social and economic forces which have been mismanaged abroad until they have resulted in revolution, dictatorship, and war are the same as those which we here are struggling to adjust peacefully at home."

It has been a basic doctrine of the New Deal that our economic system needed to be reformed in order to save it. Those whose privileges and profits were threatened by such a program have attempted to make it appear that the New Deal and this administration are antiprivate enterprise. Nothing is further from the truth. To try to rid American business of its parasites and speculators is no more hostile to private enterprise than it is hostile to a dog to try to rid him of his fleas. Every time an American workingman has followed the counsels of thrift and industry and temperance in order to save for his old age, and has then seen his savings swept away by a bank failure, or a foreclosure on his home, or by the fraud of a glib stock salesman, or by a period of unemployment, a blow has been dealt at our system of private enterprise.

The plain fact is that this system of private enterprise is not going to be safe for anybody if it isn't safe for small investors, for willing workmen, for thrifty home owners, and for small independent businessmen. An able historian, with the perspective of scholarship, has come close to my philosophy in saying:

"The real danger from the liberal point of view is not that Nazis and Communists will destroy liberal democracy by free speaking, but that liberal democracy, through its own failure to cure social ills, will destroy itself by breeding Nazis and Communists."

If I were to name today the most significant trend toward socialism in the United States, I would point to the growing concentration of the control of wealth and business in a few hands. I would point to the disappearance of the local utility, the independent merchant, and the small industry. It is this concentration of wealth which has produced a necessary concentration and centralization of government in order to deal with it. I am confident that over the years the greatest problem which this country faces is this growing control of the chance to work at productive machinery for a living, the growing control of the opportunities of youth, and the growing control of our economic resources by a few men who are free of effective social responsibility. That subject is now being studied by the Temporary National Economic Committee, and if you have followed its results day by day, you have been astonished at its story of the throttling of private enterprise by other private enterprise, of the big-business fish eating the small fish. One of the great services which the New Deal has performed

has been to hold this clinic over the sick body of business, and one of the tasks of the next administration will be to formulate its findings into a program. I favor following through on it. It will, of course, die a-borning if our Republican friends have their way.

Another point of doctrine in which the advocates of the New Deal generally are in disagreement with its predecessors is that the New Deal has believed in an efficient and effective government for the promotion of the general welfare and the protection of the people from exploitation and the solution of its economic problems. That is the kind of government that our forefathers thought they were founding. Our Constitution was organized in the midst and as the result of the serious economic collapse of the country which followed the American Revolution. Ships were rotting in the harbors, workmen were idle in the cities, property values had faded away, and the Government's promises were not, to use the expression of that day, "worth a continental." To bring order into our economic life and to establish a public credit with which to encourage the resumption of industry, the Constitution was established, and under John Marshall its powers were given a vigorous and broad interpretation to the end that the Government should be equal to the problems of its people. Then arose the slave power, fearfully jealous of the national power, from which it rightfully thought danger might come to it, and the energies of a generation of able judges were directed toward limiting and restricting Federal power through judicial interpretation. After Abraham Lincoln waged his fight against the court and the slave power and removed that menace, another interest arose. The great financial and industrial combinations were able to play one State against another and render State regulations pretty ineffective, but they rightly saw in Federal power a menace to their exploitations. So they, too, for further generations bent their efforts to restrictive judicial interpretation. This movement reached its climax and its end in 1936, when it had almost come to be held that the Government had no power except a shadow, and the restrictive interpretations were used to wreck substantially the whole of the first 4 years' work of the New Deal.

There is one part of the New Deal which will be continued. It has been my privilege to have a part in writing into the fundamental law of this Nation the conception of a government more widely useful to its citizens, better able to govern the powerful, and more competent to protect the weak. It is possible for a succeeding administration to sabotage particular measures for the exercise of these powers, to choke them off with inadequate appropriations, or to staff their agencies with unsympathetic personnel, but the people of the United States will not readily allow any administration to shed itself of the responsibilities in the future as they have in the past. I wonder if you have taken time to review the extent and importance of the restoration of the powers of popular government under the administration of President Roosevelt. The very first power given by the Constitution is to raise revenues and appropriate funds for the common defense and the general welfare. Almost every clause of the Constitution had been the subject of interpretations in the 150 years of our Government, but it was not until the administration of Franklin D. Roosevelt that the power of the Federal Government to serve the general welfare was sufficiently exercised to be challenged and sustained in the Social Security cases. The way is now open to our country, as it has always been open to most others, to relieve some of the individual cruelties and hardships of our system by resort to unemployment insurance, health insurance, and old-age benefits.

The power has been won to enact wage and hour laws, child-labor laws in interstate commerce, labor relations acts, an agricultural-adjustment program, to regulate a distressed industry—like the bituminous-coal industry, to regulate utility holding companies, to give municipalities the benefit of bankruptcy powers that private corporations have long enjoyed, to tax the salaries of public officers the same as other citizens, and even to tax the salaries of Federal judges.

Of course, to those persons who believe in the doctrine of *laissez faire*, who think that government has no function except to keep the domestic peace and conduct foreign affairs, these changes are unwelcome. Those of us, however, who believe that the people may use their greatest social organization to advance their welfare, just as private organizations advance private welfare, see this change as opening up new frontiers for statesmanship.

I am willing to grant that our system is so complex that its total operation is not yet fully understood and is influenced by forces and factors that are neither known nor measured. But certainly a country of such natural wealth as is our boast can, if our society is rightly organized and guided, insist on a decent subsistence income for its families, on adequate protection and security for the aged and unemployed, and on rewards for labor that will increase as its own productivity increases. I cannot believe that American ingenuity is unequal to the task of so utilizing our boundless resources that they will produce an income in goods and services that will sustain a general standard of living that we think of as American. I am not ready to accept long and disastrous depressions as a necessary evil, for I believe Government spending could be so planned and timed as certainly to shorten the duration and to lessen the depth of depressions, and that Government collections can be so increased in time of prosperity as to balance the budget, reduce debt, and offset the dangers of booms.

Governor Eccles has well said: "The cardinal principle of our national economic policy, I believe, must be to direct the flow of our national income so as to maintain an equilibrium between the

goods and services that we are able to produce and the purchasing power wherewith our people can command them." It is, of course, true that such an object requires adjustment of policy to meet such changes in conditions as the passing of the frontiers with their free lands, the retarding of the rate of growth of our population, the change from a debtor Nation to a creditor Nation, the collapse of foreign markets, and other economic shifts that characterize a changing world.

The major measures of the Roosevelt regime have been directed to strengthening the economic foundations of our democracy, by salvaging agriculture, by giving employment to the idle and security to the home owner, by protecting the collective-bargaining power of industrial workers, by establishing minimum wages, unemployment insurance, and old-age pensions, by recapitalizing impaired banking structures, railroads, and industrial corporations, by guaranteeing bank deposits, and by introducing a minimum of reform necessary to a decent business life.

And the administration, having made sure of the economic foundation of our democracy, has made equally sure of its political foundations. You, almost alone among the great nations of the earth, are preparing for a national election in which every citizen may freely vote to turn out of power those who govern him. You have only to pick up your Buffalo papers to know that your Government is not restraining freedom of the press. You may talk about Roosevelt with even aristocratic bitterness without disappearing or being prosecuted. These things attest the soundness of our freedom in a world where freedom abroad has all but disappeared.

The New Deal has been merely a shaking off of old traditions, a defiance of old lethargies, and a setting about with new energy to reshape our economic and social system to stand the shock of financial collapse, social confusion, and international brutality. These years of the New Deal have been rightly called by one of our most respected historians the "decade of a great rally." You can no more rip the philosophy of the New Deal out of future American life than you can rip out the philosophy of the Emancipation Proclamation or the strong doctrine of the Declaration of Independence. It is our best insurance against a return of grim and tragic years under those who would destroy it.

## National Automobile Dealers' Association

### EXTENSION OF REMARKS

OF

## HON. FREDERICK VAN NUYS

OF INDIANA

### IN THE SENATE OF THE UNITED STATES

Tuesday February 13 (legislative day of Wednesday, February 7), 1940

ADDRESS BY HON. PAUL V. McNUTT

Mr. VAN NUYS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an address delivered by Hon. Paul V. McNutt, Federal Security Administrator, before the annual banquet of the National Automobile Dealers' Association, at Washington, D. C., on January 24, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

#### I. BUSINESS' STAKE IN SECURITY

Today, businessmen everywhere find themselves engaged in a struggle which threatens the very foundations of civilized living. We in America have learned from cruel experience during the past quarter century that we are inescapably a part of the stream of world forces. We may, by constant vigilance, escape the maelstrom of political hatred and international distrust, but we cannot altogether avoid the undercurrents which emanate from the whirlpools of world disturbance.

Our problem is one of security. In all aspects of security business has a vital stake. Indeed, business security cuts horizontally across every phase of security—political, economic, individual, collective. Social security, in its broadest sense, encompasses each of these, with the security of business inextricably bound up in all.

#### II. THE FUNCTION OF BUSINESS

In considering the problem of security from the point of view of the businessman, I should like to point out briefly the function which I think business performs in a democratic society. Only in relation to that function can the question of business security be intelligently considered.

As I see it, the purpose of business in our society is the production of consumers' goods and the distribution of those goods among our 130,000,000 people. It is a tremendous enterprise—running upward now \$70,000,000,000 a year.

In a capitalistic society, this process must be carried on in such a way as to show a profit to the enterpriser, and afford employment to the potential consumers of the products of industry. In a capitalistic democracy, such as ours, the process must occur in such a manner as to extend as far as possible the advantages of production to the entire community. If business fails in any of these particulars—to make a profit, to afford employment, to extend its benefits widely—there results a serious disruption of our political and economic balance.

### III. RECORD OF AUTOMOBILE INDUSTRY

In the light of these criteria, the industry which you represent makes a showing that probably cannot be equaled in the entire history of capitalism. Born in the early years of the century, your industry has grown until it constitutes one-seventh of the Nation's business. In 1939 you dealers sold to the citizens of the United States almost 4,000,000 new motor vehicles. If we include used cars the total will run approximately to 10,000,000. You have supplied the people of the United States with almost 30,000,000 of the world's 43,000,000 automobiles. This is a magnificent achievement in democracy.

The Federal Trade Commission in its exhaustive study of your industry has paid high tribute to your accomplishment. "Consumer benefits from competition," said the Commission, "have probably been more substantial than in any other large industry studied by the Commission." Not often does an industry receive praise of this character from a Government investigating agency.

On the profit and employment side, the record is correspondingly high. More men are kept at work in the various parts of the automobile business than in any other industry in the world. Moreover, the wage record has been good. Throughout the checkered history of the struggle between labor and capital, there has been less trouble over wages here than in most fields of production.

Profits, too, there have been in abundance. One company alone has made a billion dollars in profits in the past 25 years. Another group, under single management, earned a billion dollars during the 7 worst years of the depression. One large concern, producing hundreds of thousands of vehicles annually, has shown a substantial profit for every single year of the depression. Nor are the profits confined to the production end of the industry. Dealers and distributors in 1937 showed an average return of 15 percent on investment, after deducting executive salaries.

It is not too much to say that the automobile industry provides the greatest demonstration in all times of what business can do in a democracy. You have furnished to 75 percent of the people in the land one of the greatest miracles of modern science for the improvement and enjoyment of life. You have done this at a consistent profit to all engaged in the production and distribution, and at a wage level which has made possible widespread consumption of the product. Your progress not only is phenomenal, but steady. Each year you offer a better product at lower cost to the consumer with the maintenance of a reasonable level of profit. This achievement deserves more than a headline; it deserves a banner head.

I would like to see this amazing record blazoned across the front pages of the world—in Europe, in the east, and wherever democracy is under attack. I would like to see it hammered into the minds and consciousness of hopeless and despairing peoples everywhere. It should be dinned in the ears of all whose faith in popular government is weakened. If they could come to know and appreciate these things, uneasy would lie the heads that wear the crowns in those unhappy lands.

So too should this performance be recalled by all those prophets of fear in America who talk of the end of the era of expanding industry and business. The old frontiers are gone, it is true, but the ingenuity and courage of American businessmen can discover—as you have discovered—new frontiers, the conquering of which will make possible a life on this continent never dreamed of in any era. For those Americans of little faith, the monument to economic democracy which you have erected during our own generation should be a source of renewed strength and courage.

### IV. CONDITIONS FOR SUCCESSFUL BUSINESS

But it is not by accident that you have attained this phenomenal success. Nor will your future successes be the result of chance. The security of American business rests upon certain thoroughly established principles and it is these principles that I now wish to discuss.

To insure continuous economic progress, there must be a constant flow of goods to a population capable of absorbing industry's production. The problems associated with this process will vary as the Nation develops. Once the heavy industries of the Nation have been built up, once the basic communication and transportation systems have been developed, and a series of mass-consumption-goods industries created, there are but two avenues of expansion. First, there may be an extension of existing basic industries. Second, we may discover and erect new and hitherto unknown industries.

The first source of progress requires a larger consumption by the entire population. There comes a time in the development of any country when the stimulation of greater consumption becomes the major source of business advance. In the long run, capital-goods industries can experience enduring prosperity only on the basis of enlarged consumer-goods industries. The larger the industrial structure becomes, of less relative importance is new industry for the prosperity of the country. Thus, as civilization matures, the development of new industries becomes a diminishing source of economic progress. I do not suggest that there

are not still, or that there will not always be, large opportunities for new products. Public economy can and must stimulate the development of new industries at all times. In the main, however, such progress cannot afford adequate security for business for several reasons.

In the first place, inventions and scientific development cannot be controlled precisely. They come at different times and at different rates, and the commercialization of these inventions always lags. The extent of this lag can never be accurately predicted. For example, for some years we have stood on the threshold of commercial utilization of television. Yet we are not able to predict exactly when television will be feasible on a large commercial scale. Always a considerable period elapses between the first beginnings and large-scale mass production. This was true with the automobile, the telephone, the radio, and other major innovations.

If the rate of technology remains substantially what it has been in the past, a large industrial economy such as ours must depend for progress upon the balanced expansion of all of its parts. The motive power, and the driving force in this process must necessarily be a constantly rising standard of living. Economists estimate that, during the period when we were constructing our industrial machine, the rate of increase of industrial wealth averaged about 1½ percent annually. In the absence of the introduction of new industries, substantial in number, such a rate of progress can be maintained only if the total of mass consumers' goods is increased year after year at a rate which approximates 1½ percent.

To those prophets of despair who think that this is impossible, I call attention again to the amazing record of the automobile industry. During the first 25 years of the present century, consumption of the products of this industry increased at an average annual rate of 37 percent. To those who might suggest that this is an example primarily of the progress of a new industry, let me cite the decade 1921-30, during which the average increase in consumption was 11 percent. And to those who are still unconvinced, we can offer the record of the past 5 years in which the rate of increase has averaged 4½ percent. These figures indicate how far above the necessary 1½-percent increase in consumption it is possible for an established American industry to go.

### V. GOVERNMENT'S FUNCTION—MONOPOLY

In the realization of this expansion of consumers' industry there are certain definite functions which the Government can and must perform to make possible the effective exercise of the powers of business. To one such aspect of the Government's role in our economy you will be keenly sensitive. It is the part which Government must play to prevent the fettering of business by monopoly.

By monopoly, I mean the use of combined economic power by one segment of business against another. It may take the form of the stifling of competition by combinations to control the consumer market, or it may take the form of coercion by manufacturers of those engaged in distribution. In either event the public suffers and the great mass of businessmen suffer. It must not be forgotten that government is not the only agency which deals with the lives and activities of our people. Government is not the only force which can regulate free enterprise. If inequalities exist between retailers, dealers, and other distributors on the one hand, and manufacturers on the other; if there is a lack of mutuality in their rights and obligations, then business, consumers, and, indeed, the entire country suffer quite as much as when the production of goods becomes the prerogative of any single combination of moneyed interests. Without a fair division both of profits and risk between producers and distributors, free enterprise to that extent is an illusion. Moreover, in direct proportion to these inequalities, there will be a mortality rate among retail distributors which will add to the restrictions upon private initiative in the business.

Monopoly in any form is abhorrent to a democratic society. Only in a few unique situations where a natural monopoly is inescapable is it compatible with the basic philosophy of our Government. Competition is the lifeblood of a capitalistic system. Free enterprise in commerce and industry is the essence of an economic democracy. Should entrenched financial power succeed in monopolizing the industrial output and distribution in this country, America will already be well along the road toward some form of totalitarian government.

One of two things would be inevitable. Either the concentrated moneyed powers would seize control of the machinery of government or a governmental oligarchy would seize control of the financial structure. In either case there would be the unnatural and corrupting union of big business and government. If government took over business and production, we would have something approaching communism; if business took over government, we should have fascism. In either case it would be totalitarianism. Freedom for business and the citizen would disappear. Every precept of democracy would be repudiated; every canon of decency denied. Our best insurance against either possibility is to wage ceaseless and bitter war against monopoly in any and every form.

### VI. OTHER GOVERNMENT FUNCTIONS

Government also has a positive function to perform in enabling the industrial workers of the country to protect the wage structure. The techniques which labor has developed during the past half century to insure its share of the profits of industry constitute a vital factor in securing the consumer power necessary to absorb the products of industry. Collective bargaining by labor is a logical

institution in our capitalistic system. Happily, we are coming to recognize it as such and to accept it, properly regulated and protected, as an integral part of our industrial economy.

Government must also follow a fiscal policy, particularly a tax policy, which will appropriately distribute the burden of supporting the government and which will encourage the investment of idle funds rather than impose an undue hardship upon consumer income, active capital, and invested income. The total weight of taxation is of less importance than the distribution of that burden. The power of taxation is capable of serving a much wider purpose than merely to raise sufficient revenues to maintain public services.

There are also important functions of assembling and distributing economic information which enable businessmen to act intelligently in seeking new outlets for the investment of their capital.

Finally, I should point out that in my judgment government must, as a permanent policy, make it possible for citizens generally to weather the worst risks of the modern economic system. If the Nation has adequate social insurance, covering the hazards of unemployment and the helplessness of old age, individual initiative and enterprise will be strengthened at every point. The morale of the citizen himself will be bolstered up in the knowledge that he has protection against the gravest of economic hardships. The steady flow of money to maintain a decent minimum standard of living insures a minimum of consumption power which will go far toward keeping our economy on an even keel.

#### VII. CONCLUSION—GOVERNMENT AND BUSINESS

This program is not regimentation. Government is and should be responsible for maintaining the fundamental conditions of economic progress and business security. It does not and should not attempt to take over and run business. The Government's functions are enlarged in this process because somebody has to prevent economic transition from becoming economic collapse. Centuries ago our people developed a body of law under which private business as it then existed could function effectively. The task today is similar—to develop a set of "rules of the game" under which private business as it now exists can function effectively. The modern rules of the game are somewhat different from the old ones. They may seem somewhat disturbing at first. But they will be perfected. Already they are recognized as necessary for the survival of our system of business and government.

The recovery we have already achieved has taken hard work—8 years of it. We must not jeopardize the gains we have won because the domestic battle is too tiring or too long in yielding complete victory. Democracy and free enterprise will perish not only from Europe but from the whole world unless at least one country shows that these institutions can deliver the goods and are worth working and fighting for. If we can unitedly carry forward this work, we will preserve a priceless heritage for others as well as for ourselves. It will be a historic achievement of a historic epoch.

### The Farmer's Contribution to the Nation's Welfare

#### EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday, February 7), 1940

ADDRESS BY EDWARD A. O'NEAL

Mr. HILL. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an address delivered by Hon. Edward A. O'Neal, president of the American Farm Bureau Federation, on the Farmer's Contribution to the Nation's Welfare.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is fitting indeed that today I should be talking to you from the greatest population center of this country. There are in the metropolitan area of New York City nearly 11,000,000 people, more people than there are in all of Canada.

I say it is fitting that I should be talking today from this swarming beehive of population, because I am going to discuss the service that farmers render to city people and to the Nation and the basic importance of agriculture to the national economy. I also will discuss the penalties that have been placed upon agriculture by the tremendous development of industry in this country and by the industrial philosophy that naturally began to dominate our national policies as we expanded our industrial economy. I'm so anxious for you to understand fully the place that agriculture fills in our Nation and that this position simply must be maintained in the interest of the country as a whole. I know of no more fitting place to do this than in the throbbing heart of consuming America, where the people are dependent for their very life on trainloads of

food coming nightly into the city—food produced by 32,000,000 farm people, some of them 3,000 miles away.

You naturally would expect me, a farmer, to believe in the fundamental importance of agriculture; therefore I am going to base my case on the statement of authorities in another field, that of business. I am going to quote from an article in the February issue of *Fortune* magazine, the outstanding magazine of business in this country:

"No nation, whether agricultural, mercantile, or industrial, has yet emancipated itself from the soil. Humanity belongs to the land and has not evolved—and may never evolve—to the point where it can live abundantly and virtuously in stone and macadam, clustered around elevator shafts, in the midst of a synthetic flora and fauna created by the captains of industry. Humanity cannot leave the land, and for this reason the men of the soil limit the level to which a civilization may rise.

"But while the man of the soil is thus the father of nations, the relationship of the United States farmer to his Nation is peculiar and unique. The entire course of American history has been influenced by the struggle between farm and city; yet this has not been a struggle, as in many countries, between two types of civilization. Uniquely in the United States the farmer is a part of the industrial system. Uniquely in the United States the farmer regards his soil, his house, and his barns as a business, from which he derives a cash profit. And uniquely in the United States there is a thing called a 'farm market'—the largest single market in the land, or, for that matter, in the world. In all other western countries the men of the soil have refused to accept the industrial civilization and look upon the money economy as hostile. But in the United States the farmer plays a dynamic role in the industrial civilization as both producer and consumer. With his tractors, gang plows, pumps, saws, and stationary engines; with his automobiles, refrigerators, canned shrimps, and silk stockings, the farmer has contributed to the one indispensable factor in mass production, a domestic volume of sales. He feels that actually in this country he has subsidized industry; whereas the tariff duties on farm products protect the American farmer only against foreign dumping, no major farm commodity except sugar sold higher on the domestic than on the world market before 1929; he has paid protected prices for his farm implements and fertilizers. Even today the farmer is not heavily subsidized; in terms of national income, total farm subsidies are probably not more than a third as big as those of other industrialized nations.

"Thus in the United States when we speak of an industrial nation we do not mean merely the cities. We mean the men in dirty jeans and the women wrapping men's overcoats around them in the rain, who tinker and toil through long, complicated days in a Herculean effort to make order out of the chaos of the elements. We think of young men and girls in high school, and of knotty agricultural reports avidly studied in the evening. This is an extraordinary way to think about the land. But it is in this sense that the stability of the economic system rests ultimately upon the farm.

"Now, the American farmer has fallen on bad times. The farm population has fallen from more than 33 percent of the total population in 1910 to less than 25 percent today. The farmer's share in the national income has declined even more rapidly than his share in the population—from 25 percent in 1910 to 22 percent in 1920, to a mere 15 percent today. His purchasing power relative to the city dweller's therefore has shrunk drastically. \* \* \* Since 1930 about 27 percent of all farms have been subject to foreclosure and forced sale. \* \* \*

"The depression has not been the sole cause of the farmer's plight but it has greatly intensified it. \* \* \* Only twice during the last 8 years has the farmer received more than the \$1 per bushel (for wheat) traditionally claimed to be the break-even point. Yet unsalable surpluses have piled up over the farmer's head. \* \* \*

"Thus the achievement of the farmer is precisely the achievement of the industrialist: he has succeeded in producing more with less. Whereas in 1787, when the Constitution was framed, the surplus food produced by 19 farm people went to feed 1 city person, today 19 people on farms produce enough food for 56 nonfarm people in the United States, plus 10 people abroad. Nothing like this has ever been achieved before. It is an achievement that enabled the United States to obtain and service the huge drafts of foreign capital necessary for the rapid building of railroads and industries during the second half of the nineteenth century. Indeed it is clear that the farmer historically has subsidized the manufacturer and the railroad builder, quite aside from any additional subsidy in the tariff. But the farmer's achievement, since it formed a part of the industrial system, has generated the typical industrial problems. The farmer has too much of everything: too much capacity, too much product, too much labor. Like the industrialist, he appears to have done his job too well. \* \* \*

"However much the American farmer changes under the impact of the forces of modern society, the never-changing soil continues to hold him in its grip. The machine and the radio, the automobile, and the scientific farming have not dethroned and will not dethrone the seasons, which in their measured rhythm rule the farmer's life. Good years or bad, drought or flood, the farmer tills his land. Under the burning midsummer sun of Kansas, in the vineyards of California, behind the levees of the Mississippi, and in the stony glades of Maine the harvest is brought in, and though combine and tractor have replaced the horse-drawn wagons of our

forefathers, harvest time is still a time of fulfillment and thanksgiving. The American farmer proudly claims his rights as an equal citizen in a free society; he can point out with equal pride that he never lost his roots in the soil. Servant of the soil, free member of a money economy; in this antithesis, pregnant with conflicts and victories, lie the achievements, the problems, and the promise of the American farmer."

There you have the farm problem as viewed by a magazine of business. No truer picture of American agriculture was ever drawn. It is encouraging indeed that a great magazine of business recognizes the fact that farming is a great industry, not just a mode of life. As it so well points out, agriculture's efficiency has kept pace, step by step, with the great increase in industrial efficiency.

In this country we have only 2 percent of the world's farm population, and 4 or 5 percent of the world's good farm land, yet, as *Fortune* magazine says, "this relative handful of people working a relatively small island of land, have made the United States the greatest agricultural Nation. It leads the entire world in three staples: corn (52 percent), cotton (42 percent), and dairy products. In some of the other major staples, such as meat, wheat, sugar, and tobacco the United States ranks either second or third. And these major products tell only part of the story; the gargantuan production of foodstuffs in the United States is unparalleled on earth."

Agriculture is, in fact, part and parcel of the United States industrial system; and, more important, the farm economy must be maintained in financial health if our industrial economy is to be supported, for, as *Fortune* says, the largest single market in the land is the farm market.

It is clearly shown that the tariff system offers very little protection to the farm commodity price structure, while it protects the industrialist and forces farmers to pay protected prices for his supplies and equipment. These facts show that the farmer's demand of a tariff equivalent is a just one, one that in all fairness should be granted by this Nation to the people who so efficiently and so abundantly supply the materials wherewith the entire population is fed and clothed.

The tariff amounts simply to a sales tax on every individual who buys manufactured goods. We pay it without thinking, and for generations most people have paid it ungrudgingly in the belief that it was protecting the American standard of living. Now it appears that it has been one of the main factors in putting agriculture out of balance with the rest of the country. Food prices are now 26 percent lower than they were in 1929. If food were as high, relatively, as nonfood items in the cost of living, the American people would be paying about \$2,000,000,000 more for their sustenance than they are paying now. Who can say that the farmers' demand for a tariff equivalent is not just?

The industrialization of this country, together with the growth of the large cities, has widened the spread between what the farmer receives and what the consumer pays. In 1913, when agriculture was in fair balance with other segments of our national economy, the farm value of 58 typical food products was 53 percent of the retail value. In other words, the farmer received 53 cents out of the consumer's food dollar. In 1929, it was 47 percent; and in 1919 it was only 40.5 percent. There are many reasons for this condition. Wages and other costs have tended to become static in the cities; they don't fluctuate with the rise and fall of farm prices, and therefore when all people who handle the food after it leaves the farm have taken their toll, there is little left for the farmer. Another great factor, and perhaps the most important one, is that whenever additional services are rendered to consumers in the process of distribution, there is a tendency to take the added cost out of the price the farmer receives. There have been tremendous increases in services rendered to consumers in the past 20 years because the people demanded them; and because the farmer was the most helpless of all the group who produced, processed, transported, and handled the product, much of the cost of the added services has been taken out of his share.

There are those who say, unkindly, that if the farmer were smart enough, he would see to it that he gets his proper share. It is not so simple as that. It is utterly impossible for nearly 32,000,000 farm people who produce under an infinite variety of conditions, to work together on such a fundamental problem. If the total food production of this country were under the control of half a dozen huge corporations, doubtless those corporations would be able to exact from consumers prices high enough to pay for the cost of production. But farmers cannot operate in that way. They believe in abundance, and they have practiced the philosophy of abundance from the beginning, in strong contrast to industry and labor, who adhere to the principle of producing only at a price. The farmer thus finds himself in an impossible position. He produces under the principles of a free and competitive economy, but he must buy supplies and equipment that are produced under the principles of a protected domestic economy.

And so arises the farmer's logical and just demand that the Government, which has created a protective economy for other groups, create for him some tariff-equivalent device which will raise him to an economic level which will permit him to trade on fair terms with other groups. As I see it, such a plan is of even greater importance to industry and labor than it is to farmers, for the simple reason that unless the farmer is restored to a fair-exchange position with other groups, which is parity, there will be no hope of this country achieving permanent prosperity, which can only mean abundant production and use of goods and services by all of our

population groups. And the farm market constitutes the base of the pyramid of prosperity. That market must be strong and vigorous, otherwise the entire superstructure will be endangered.

You have heard much in recent weeks about Congress reducing the farm appropriation. As all of you know, the present administration gave us a farm program in answer to our plea for a tariff equivalent. That program is all right. It is capable of doing the job of conserving the soil, stabilizing prices, guaranteeing abundant supplies to consumers at fair prices, getting our surpluses out of the country, restoring agriculture to parity. But the Congress has never, so far, appropriated enough money to make that mechanism fully effective. I have a firm conviction that if that had been done, our Federal Government would not now be confronted with the fiscal difficulties that beset it at the moment.

I firmly believe that if we had had our present farm program in action, powered by enough money to make it fully effective in 1938 and 1939, the increased farm buying power would have given a stimulus to business that would have required the return of millions of workers to productive jobs in order to supply the demand for goods; and the national income now would be so large that the Federal Budget would be in approximate balance.

Why should any consumer expect to buy his food at a 26-percent discount, a discount which must be borne by the farmer? I believe people are naturally fair in their judgments, once they have the facts. Surely the folks who produce the trainloads of food that come into this great city every night are as much entitled to an American standard of living as are the people who consume that food.

As I said a moment ago, we have a farm program designed to eliminate the disparity under which agriculture is struggling. Results of that program, considering the limited amount of money available to make it effective, have been good. A wise Congress would be considering not how to cut down on the farm appropriation but how to increase it to make it fully effective. Speaking for the vast majority of farm people, the American Farm Bureau Federation is demanding that Congress do this. It is my appeal to the city man as well as to the farmer to join with us in insisting that Congress make an adequate appropriation for this purpose which is of such tremendous consequence to both city and country and to our entire national economy. Sooner or later the people of this country are going to learn that there is no other way in which national prosperity can be restored. World history should teach us that the nations which have permitted their agriculture to be undermined have ended in disaster.

Our own Nation, richest and most powerful in the world, cannot afford to neglect its agriculture, because, as *Fortune* magazine points out, the stability of our entire economic system ultimately rests upon the farm. In view of the chaotic international situation that exists abroad, it is imperative that our own Nation put its domestic affairs in order without delay. The key to the domestic situation is, beyond doubt, the Nation's agriculture, and if Congress in this extremity, fails to redeem its pledge of parity for the farmer, it must take the responsibility for the weakening of the entire national economic structure which is certain to follow.

## The Heritage of a Free People

### EXTENSION OF REMARKS

OF

### HON. THEODORE F. GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13, (legislative day of Wednesday, February 7), 1940

ADDRESS BY HON. PAUL V. McNUTT

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Hon. Paul V. McNutt on February 5 last.

There being no objection, the address was ordered to be printed in the Record, as follows:

#### I. PERSECUTION OF THE JEWS

Mr. President and members of B'nai B'rith, it is with mingled pride and humility that I stand here this evening. Pride that we live in a land where a Christian is free to extend the hand of friendship and a Jew feels free to grasp it, humility in recognizing the inability of so much of the world to maintain a society in which such things come to pass as an accepted incident of its civilization.

There is, in the dim east, a city to which we may this evening point with pride; a city to which for centuries thousands of pilgrims have turned for spiritual strength and inspiration. In that city tonight there is no longer the fear and bitterness that once prevailed. Men of many tongues and many faiths pass there in the streets. But eyes no longer betray the dread that once lurked in their souls. The power of an ideal has once again prevailed in Jerusalem. The Jew lives there now at peace with his neighbor—

Greek, Syrian, Armenian, and Arab. There is no hatred nor distrust among them and a great and lofty experiment gives every promise of successful fruition.

But there are cities in unhappy Europe where hatred reigns supreme; where men stoop to deeds of foulness unequaled by beasts; where man's inhumanity to man is unsurpassed by fiends.

The Jewish people are oppressed today as they have been oppressed throughout the centuries. Long have they borne the badge of suffering. But never once has suffering stifled idealism. Israel is a dreamer. The greatest of their people are seers and the best believe in their vision. Jacob lay down at night with a stone for a pillow. "And he dreamed; and behold a ladder set up from the earth, and the top of it reached heaven; and behold the angels of God ascending and descending on it." When Jacob awoke the stone under his head was less real than that ladder.

Nor has suffering banished hope from the heart. Never once throughout your bitter history have you bowed your heads in despair. Yours has been a race of deathless hope, hope burning brightly throughout timeless wanderings in many lands. Across the centuries from an unnamed and homeless Jew standing by the waters of ancient Babylon comes that ceaseless cry of ecstatic hope that still rings throughout the world, "Comfort ye, comfort ye my people." And that cry tonight rings in the ears of Jew and Gentile, of Protestant and Catholic—in Warsaw, in Berlin—wherever fear holds sway and injustice reigns.

From America today is the voice of Israel's nameless prophet echoed. At every stage of the monstrous tragedy of our times the voice of America has been raised in stern protest.

As the cup of your people's suffering has overflowed, the voice of the American people has cried out in sympathy and encouragement. There was no despair in that cry from Babylon and there is none in the answering echo here. Nor will there be despair in the hearts of the victims of tyranny anywhere so long as one nation keeps alive the flame of hope to the oppressed of all lands.

## II. THE STRUGGLE FOR FREEDOM

For thousands of years have men sought the light of reason. Repeatedly, it has seemed, have they almost succeeded in constructing a scale of human values that held fair promise of a world of decency and sanity. Suddenly, then, as though some evil power possessed them, would the fires of hatred consume men's souls and savage furies be unleashed upon some hapless victim. At such times, the fragile flame of civilization fails. Darkness descends upon the earth and men return to the ways of unreasoning passion. Freedom, then, is gone. Men are put in chains and whole peoples live in a bondage as cruel as that suffered by the sons of Israel in ancient Egypt. Again and again as these cycles unfold are the tragedies of history repeated and the gains of centuries of struggle poised delicately in the balance.

Amidst the agony of what once more is a war-torn world, let me read the words of a great prophet of democracy. "In Europe," he said, "it is assumed by the stronger countries that the full development of one people necessarily involved its domination over another, and that only by such domination could civilization advance. Strong nationalities, assuming their own superiority came to believe that they possessed the divine right to subject other peoples to their sway; and the belief in the existence of such a right ripened into a conviction that there was a duty to exercise it. The Russianizing of Finland, the Prussianizing of Poland . . . the Magyarizing of Croatia, the persecution of the Jews in Russia and Rumania, are the fruits of this arrogant claim of superiority; and that claim is also the underlying cause of the present war."

These are the words of a noble apostle of the rights of man. They are the words of Louis D. Brandeis, uttered a quarter of a century ago. How pertinent they are today as a portrayal of the intolerance and arrogance from which gushes the bloodshed now besmearing Europe. How pertinent are they to the succession of similar tragedies running backward to the dawn of history.

It was in such an era that our own Nation was conceived as an asylum for those who loved freedom more than anything in life; who preferred death to lives of political and spiritual bondage. These were men devoted to a faith, the essence of which is the inviolability of the individual, his inherent worth and dignity. Men determined to establish a government, pledged to defend those rights which distinguish men from brutes, the right of conscience, of free expression, and of participation in the process of government.

These were the things for which my ancestors and your ancestors struggled valiantly; the principles which they wrote into the law of the land. These were the issues for which Washington led his ragged and shoeless patriots through the merciless winter at Valley Forge. These were principles which Jefferson reiterated again and again in the matchless philosophy of his pen; the rights which Jackson so nobly defended; which Lincoln, caricatured and reviled, gave his life to perpetuate. Throughout the history of this Nation runs the scarlet thread of sacrifice for the eternal ideals of truth, justice, and humanity.

## III. THE WASHINGTON CORRESPONDENCE

The plight of so many peoples today serves as a fearful reminder of the genesis of our America and its destiny in a troubled world. We are brought closer to the fathers of our country and the ideals which inspired them.

Those who laid the foundations of this Nation wrought well. Have you ever examined the reverse side of the great seal of the United States which now appears on the back of every one-dollar

bill? In the center of the seal is a pyramid with the capstone removed. This is said to be emblematic of the unfinished Republic.

In the zenith above the pyramid is the all-seeing eye, set in a triangle and surrounded by light. Over the eye are the Latin words "Annuit Cœptis"—"Heaven approves our undertaking"—and at the base of the pyramid are the prophetic words "Novus Ordo Seclorum"—"A new order of ages." The pyramid and the gleaming eye are old, old symbols, extending far back into those ancient days when the child Moses sat at the feet of his Egyptian teachers along the banks of the Nile. The triangle, symbol of Pythagoras and Euclid, rests in the very heart of King Solomon's Temple, and the blazing light—"God said, 'Let there be light,' and there was light."

Yes; the founding fathers built securely on the solid foundation of historic wisdom the democracy which the heavens approved—the democracy which was to usher in a new order of ages.

And let us remember how thoroughly were they fired by an idealism of which the world today stands in such great need—an idealism which stirred strong men and drove them on to heroic achievements against overwhelming odds.

Among the little-known papers of the first President of the United States is a letter addressed to Washington by the Hebrew Congregation of Newport, R. I. It was sent on August 17, 1790—a hundred and fifty years ago. It is a beautiful and moving letter and it brought forth from Washington a beautiful and moving reply. These letters deal with things which Americans have for 150 years regarded as indisputable first principles. They deal with matters that were vital to mankind in that century and with matters that are equally vital today. I am going to take the liberty of reading these letters to you because I am sure they will impress you as much as they have stirred me:

TO THE PRESIDENT OF THE UNITED STATES OF AMERICA.

SIR: Permit the children of the stock of Abraham to approach you with the most cordial affection and esteem for your person and merits, and to join with our fellow citizens in welcoming you to Newport.

With pleasure we reflect on those days—those days of difficulty and danger—when the God of Israel, who delivered David from the peril of the sword, shielded your head in the day of battle; and we rejoice to think that the same spirit who rested in the bosom of the greatly beloved Daniel, enabling him to preside over the Provinces of the Babylonish Empire, rests, and ever will rest, upon you, enabling you to discharge the arduous duties of Chief Magistrate in these States.

Deprived as we heretofore have been of the invaluable rights of free citizens, we now, with a deep sense of gratitude to the Almighty Dispenser of all events, behold a Government erected by the majesty of the people, a Government which gives to bigotry no sanction, to persecution no assistance; but generously affording to all liberty of conscience and immunities of citizenship, deeming everyone, of whatever nation, tongue, or language, equal parts of the great Government machine. This so ample and extensive and public virtue, we cannot but acknowledge to be the work of the great God who ruleth in the armies of heaven and among the inhabitants of the earth, doing whatever seemeth Him good.

For all these blessings of civil and religious liberty, which we enjoy under an equal benign administration, we desire to send up our thanks to the ancient of days, the great preserver of man, beseeching Him that the angel who conducted our forefathers through the wilderness into the promised land, may graciously conduct you through all the difficulties and dangers of this mortal life, and when, like Joshua, full of days and full of honor, you are gathered to your fathers may you be admitted into the heavenly paradise to partake of the water of life and the tree of immortality.

Done and signed by the order of the Hebrew congregation in Newport, R. I., August 17, 1790.

MOSES SEIXAS, Warden.

The President's response to these greetings is equally impressive: *To the Hebrew Congregation in Newport, R. I.*

GENTLEMEN: While I receive, with much satisfaction, your address replete with expressions of affection and esteem, I rejoice in the opportunity of assuring you that I shall always retain a grateful remembrance of the cordial welcome I experienced in my visit to Newport from all classes of citizens.

The reflection on the days of difficulty and danger which are past is rendered the more sweet from a consciousness that they are succeeded by days of uncommon prosperity and security.

If we have wisdom to make the best use of the advantages with which we are now favored, we cannot fail, under the just administration of a good government, to become a great and happy people.

The citizens of the United States of America have a right to applaud themselves for having given to mankind examples of an enlarged and liberal policy, a policy worthy of imitation. All possess alike liberty of conscience and immunities of citizenship. It is no more than toleration is spoken of as if it was by the indulgence of one class of people that another enjoy the exercise of their inherent natural rights. For happily the Government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that they who live under its protection should demean themselves as good citizens in giving it on all occasions their effectual support.

It would be inconsistent with the frankness of my character not to avow that I am pleased with your favorable opinion of my administration, and fervent wishes for my felicity. May the children of the stock of Abraham who dwell in this land continue to

merit and enjoy the good will of the other inhabitants, while every one shall sit in safety under his own vine and fig tree, and there shall be none to make him afraid. May the Father of all mercies scatter light and not darkness in our paths, and make us all in our vocations useful here, and in His own due time and way everlastingly happy.

GEORGE WASHINGTON.

#### IV. NEED FOR SPIRITUAL INSPIRATION

How strangely sweet and peaceful do these words fall in the jangle and din of the chaos about us. They were the words of men who had repudiated the bigotry and intolerance of the Old World; who believed above all else in the ultimate triumph of reason. For more than a century and a half this Nation has remained true to the teachings of its founders and has faltered not once in holding out to a bewildered world a living example of the power of political liberalism. True to that magnificent tradition, America will not fail in this present crisis.

Strength we must have to hold fast to the faith of our fathers and the ideals of our origin. Confidence we must have to maintain clearly before our vision the moral values which are the very fiber of our national character.

Spiritual guidance we must seek from the prophets of all the peoples whose cultures have been blended into the matchless synthesis of American civilization.

Throughout our heritage there has been always the liberal contribution of the mighty prophets of Israel. Upon them we have drawn freely and will draw more generously still. From Amos, the prophet of justice. From Hosea, the prophet of mercy. And from Isaiah, singing of glorious and heavenly majesty as the destiny of those who live uprightly with the love of humanity in their hearts. From the wisdom of all these, epitomized in the matchless poetry of Micah:

"What doth Jehovah require of thee  
Save to do justice, to love mercy, and to walk humbly with thy God."

#### V. THE HERITAGE OF A FREE PEOPLE

Let us in America, whatever our race, creed, or faith, dwell together in peace and maintain always the liberty of thought, action, and worship which has made us a great people. Let us strengthen our defenses in behalf of tolerance and freedom; protect and safeguard the covenant of democracy that has become the birthright of every American. One land there must be where freedom prevails; one government which gives to bigotry no sanction; to persecution no assistance. One nation in all this distraught and bitter world where "everyone shall sit in safety" \* \* \* and there shall be none to make him afraid." The heritage of a free people.

### Regulation of Transportation

#### EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday  
February 7), 1940

#### RESOLUTIONS REGARDING WHEELER-LEA BILL

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record excerpts from recent resolutions passed by various agricultural and other groups, State and National, who are concerned about the Wheeler-Lea transportation-regulation bill.

There being no objection, the resolutions were ordered to be printed in the Record, as follows:

[Twenty-first annual meeting, Kansas Farm Bureau, November 8-10, 1939, Manhattan, Kans.]

We are opposed to any legislation, State or National, that would have a tendency to increase transportation costs either directly or indirectly. We believe the best interests of agriculture will be served by a continuation of private ownership and operation of our railroads.

We believe that each form of transportation should stand on its own merit and that the rules, rates, and regulations for the various types of transportation should not be made arbitrarily uniform. The competitive features of the different forms of transportation should be preserved rather than destroyed. Rules and regulations that are not necessary for the safety of the public and the protection of property should be greatly modified or eliminated.

[Kansas Farmers' Union State meeting, October 24-27, 1939]

We condemn the determination of our railroads to monopolize our transportation facilities and their efforts to drive trucks and busses from our highways through the imposition of higher licenses and restrictions and the imposition of a dual control of contract carriers by State and Federal Governments, imposing prohibitive regulations by the I. C. C.

Our present-day needs require the unimpaired use of our highways by trucks as a farmers' convenience and the retention of our present water-travel systems by barge and steamboats as a means of rate-adjustment bases in the determination of through rates on grain and heavy-tonnage farm products to seaboard and export markets.

[National Cooperative Elevator Association (Iowa, Kansas, Nebraska, Oklahoma)]

Whereas the flow of commerce between producing and consuming areas of all products is essential to economic public interest; and Whereas transportation costs are a vital factor in the commercial exchange of products: Therefore be it

Resolved, That the National Cooperative Elevator Association representing the States of Iowa, Nebraska, Kansas, and Oklahoma in convention assembled, respectfully request that the Congress of the United States preserve for the Midwest agricultural area competitive low-cost systems of transportation and to that end urge that inland-waterways transportation be not placed under any governmental rate-regulatory body.

[Annual meeting of the Farmers Grain Dealers Association of Iowa, January 25, 1940]

We believe that each form of transportation should stand on its own merit and that the rules, rates, and regulations for the various types of transportation should not be made arbitrarily uniform. The competitive features of the different forms of transportation should be preserved rather than destroyed. Rules and regulations that are not necessary for the safety of the public and the protection of property should be greatly modified or eliminated.

In each House Congress has passed a transportation bill, both of which are now pending before a conference committee of the two Houses. Because of the widespread interest of citizens in this legislation and its Nation-wide effects, we urge that a period of 30 days or more be permitted for the interested public to study the bill when reported by the conference committee before its final consideration and enactment by Congress.

We are opposed to those provisions of the national legislation now pending before Congress, which place the control of rates on water-borne commerce under the control of a governmental rate-regulatory body.

[Iowa Farm Bureau Federation, January 19, 1940]

IX. Transportation: We believe there is a real need for the continued existence of each of the several major types of transportation. Each can, we believe, competitively render certain types of transportation services better than any of the others.

Under no circumstances should the wheels of progress be stopped by attempts to unduly restrict the competition through over-regulation of any particular mode of transportation.

[Missouri Farm Bureau Federation, November 13-15, 1939]

Whereas low-cost transportation is essential to the farmer, and Whereas the economical development of and operation on the rivers and canals affords the farmers of the mid-Continent area a primary low-cost method for movement of bulk commodities, and

Whereas the rate-making for transportation charges on the inland waterways is based on costs of operation and the services are competitive: Therefore be it

Resolved, That the Missouri Farm Bureau Federation does respectfully request of the Congress of the United States that the inland-waterways transportation be allowed to be continued on the present competitive basis and that no legislation be enacted by which this form of transportation will be allocated to or placed under any Government regulatory body.

[Nebraska Farm Bureau Federation, December 11-12, 1939]

We are unalterably opposed to those provisions of the Wheeler-Lea bills now pending before Congress which place the control of rates on water-borne commerce under the control of a governmental rate-regulatory body because we believe such a provision of law will be used to deprive the Mississippi and Missouri Valley agricultural interests of a competitive low-cost system of transportation so vital to the economic recovery of business and agricultural interests of the mid-West agricultural States.

[Texas Sheep and Goat Raisers' Association, December 8, 1939]

There is now pending in the United States Congress, Senate Resolution 146, bill S. 2009, which would affect very material changes in the Interstate Commerce Act. While some changes in the act may be advisable, this association is opposed to this bill,

which contemplates a rewriting of the entire act. We unqualifiedly oppose the enactment of this bill, particularly that portion of the bill which would place all water carriers under the jurisdiction of the Interstate Commerce Commission.

[Minnesota State Federation of Labor, September 13, 1939]

Whereas in the seventy-sixth session of Congress, 1939, bills were introduced into both the United States Senate and the United States House of Representatives, known as the Wheeler and Lea bills, which proposed many changes in the Interstate Commerce Act, to save the railroads, and prominent among the changes were proposals to put the inland water carriers under the jurisdiction of the Interstate Commerce Commission; and

Whereas if such a law was enacted forcing water carriers under the I. C. C. jurisdiction, it would cause the loss of thousands of tons of freight, which is now carried by boat, by diverting it to the all-rail route on one side and to the Canadian water route on the other, thereby causing the unnecessary loss of jobs to hundreds of longshoremen engaged in this large industry, and who are organized under the A. F. of L.

*Resolved*, That the Minnesota State Federation of Labor hereby go on record as opposed to all types of legislation which proposes to put inland water transportation under the I. C. C.; and be it further

*Resolved*, That the officers of the federation stand instructed to do all in their power to combat similar proposals which may arise in the future.

[Minnesota Farm Bureau Federation, January 17, 1940]

Congress has passed a transportation bill, which is now pending before a conference committee of the two Houses. Because of the widespread interest of citizens in this legislation and its Nation-wide effects, we urge that a reasonable time be permitted the interested public to study the bill when reported by the conference committee before its final consideration and enactment by Congress.

In the formulation of such bill we urge that the Interstate Commerce Commission be directed to give more attention to the rightful interests of shippers in the regulation of transportation systems, to investigate and remove any unjust discriminations against regions or commodities within any particular type of transportation, and we especially insist that no provision of law or regulation permitted thereunder, restrict any natural or inherent advantages of any type of transportation where such advantages in rates and services are reflected to the public.

[Illinois Agricultural Association, twenty-fifth annual convention, February 1, 1940]

Farmers believe that the interests of the general public and of agriculture in matters of transportation can best be served through the private ownership and operation of public carriers; such control, however, places upon management definite responsibilities to modernize facilities, improve services, and effect efficient operation under reasonable supervision, with rates that are equitable as between areas and among all users. This can be obtained through fairly administered regulation and through cooperation and coordination of all types of transportation. The natural advantages of rail, water, motor, and air in the respective fields of transportation must be served.

[At a meeting of citizens called by Governor Bailey, of Arkansas, November 2, 1939]

Whereas the omnibus transportation measure (Wheeler-Lea bill) is now in a conference committee of the National Congress; and

Whereas no such highly technical and complicated subject should be legislated on without every member of the legislative body having had an opportunity to study the proposals and their probable effect upon his constituents, as well as upon the Nation as a whole, \* \* \* : Therefore be it

*Resolved*, That this meeting of representative citizens, representing a true cross-section of sentiment from over the State of Arkansas, assembled in Little Rock, this November 2, 1939, upon invitation of his excellency, the Honorable Carl E. Bailey, Governor of Arkansas, hereby respectfully and earnestly urge our Senators and Representatives in Congress to exert their every influence and effort to the end that the said transportation bill, when reported out by the conference committee, shall lie on the table for a period of not less than 60 days.

[Louisiana State-wide conference, Baton Rouge, La., October 6, 1939]

Whereas under the provisions of Senate bill 2009 and the House Lea bill, both of which were passed at the last session of Congress and are now in conference, the Great Lakes carriers and all contract carriers on the high seas in coast-wide trade are relieved from regulation; and

Whereas only the common and contract carriers on the rivers, bays, sounds, and canals are held to the full regulation \* \* \* : Now, therefore, be it

*Resolved*, by this Louisiana State-wide conference assembled in Baton Rouge, La., on this 6th day of October 1939, That the economic welfare of the Mississippi Valley requires that the inland

waterways be left free of handicapping regulations and controls in order that competing boat lines may serve valley commerce, port to port, as an adjunct to the rail lines, to best advantage and at the lowest cost, and we oppose any legislation which does not contain an ironclad mandate to the regulating body which will insure to the shipping public the full economies of low-cost water services.

[Houma-Terrebonne Chamber of Commerce, Julius Dupont, president, October 18, 1939]

Whereas under the provisions of Senate bill 2009 and the House Lea bill, both of which were passed at the last session of Congress and are now in conference, the Great Lakes carriers and all contract carriers on the high seas in coast-wide trade are relieved from regulation \* \* \* : Now, therefore, be it

*Resolved*, by this Houma-Terrebonne Chamber of Commerce, assembled in Houma, La., on this 18th day of October 1939, That the economic welfare of the Mississippi Valley requires that the inland waterways be left free of handicapping regulation and controls in order that competing boat lines may serve valley commerce, port to port, as an adjunct to the rail lines, to best advantage and at the lowest cost, and we oppose any legislation which does not contain an ironclad mandate to the regulating body which will insure to the shipping public the full economies of low-cost water services \* \* \* ; and be it further

*Resolved*, That the Louisiana Senators and Congressmen, in the public interest, should vote against any bill which would place the inland waterways in a strait jacket of regulations, and especially against any bill which relieves the Great Lakes east and west routes of regulation while regulating the north and south inland waterway route.

[Tuscaloosa Chamber of Commerce, October 24, 1939]

Whereas a general transportation bill, known as the Wheeler-Lea bill, S. 2009, has passed both Houses of Congress and is now pending before a conference committee; and

Whereas this bill in its present form provides for the regulation of both common and contract water carriers by the Interstate Commerce Commission, and gives that body the power to fix their port-to-port rates; and

Whereas the passage of this act in its present form will cause an increase in all transportation costs and endanger the whole water-carrier industry: Therefore be it

*Resolved by the directors of the Tuscaloosa Chamber of Commerce*, That they go on record as opposing this legislation.

[Mobile Chamber of Commerce, January 24, 1940]

*To the Alabama Congressional Delegation:*

At a special meeting on January 23, 1940, of the board of directors of the Mobile Chamber of Commerce a resolution was adopted calling attention to the fact that the adoption of the regulatory measures of the Wheeler-Lea bill, now being considered by the joint congressional committee, would not be constructive and would do the commercial interests of the port of Mobile and the contiguous territory serious hurt without compensating advantages.

This organization, having seen the destructive effects of similar regulations tending to regulate and control labor, commerce, and transportation by the Federal Government, feels that the Wheeler-Lea bill should be opposed.

R. D. HAYS, General Manager.

[Mississippi Farm Bureau Federation, November 16-17, 1939]

Transportation: We recommend that all forms of transportation assisting the farmer in the marketing of his produce be developed and encouraged to preserve the inherent benefits of each, and we are unalterably opposed to any legislation attempting to eliminate competition by discriminating against any one form of transportation to the advantage of another.

We further recommend that transportation legislation, if and when adopted, specifically provide for the movement of agricultural commodities for domestic consumption and for export at rates comparable to those for industrial products for domestic consumption and for export, and that it also provide specifically that all transportation operations shall be allowed to reduce rates as long as those rates are compensatory with the cost of such service.

[Twenty-first annual convention, Indiana Farm Bureau, Inc., November 17, 1939]

Transportation: Reasonable freedom and flexibility should be left to railroad management in fixing rates, effecting economies, consolidating and elimination, improvement in service, and advancement in methods for the maintenance of an efficient and economical railroad system.

To accomplish this, a readjustment of governmental policies should be made providing for relative treatment of different types of transportation without limiting any natural advantages where these would be favorable to the public interest.

[American National Live Stock Association in national convention, Denver, Colo., January 15, 1940]

*Resolved*, That we are unalterably opposed to Senate bill 2009, and companion House bill of the same number, commonly known

as Wheeler-Lea bills, respectively, in the following particulars, to wit:

1. Senate bill in all respects.
2. Declaration of policy and the rate-making rule of the House bill.
3. Regulation of water carriers under either bill.

[International Longshoremen's Association]

Whereas the Congress of the United States, sitting in Washington, D. C., have under consideration the Wheeler and Lea bills, which make many changes in the Interstate Commerce Act intended to aid the railroads; and

Whereas the passage of the Wheeler and Lea bills would tend to divert from inland water routes millions of tons of cargo now carried on lighters, barges, and ships to the railroads; and

Whereas such diversion would cause thousands of longshoremen now organized and other thousands yet to be organized to become totally unemployed and would cause a very few, if any, members of the railroad brotherhoods to be given employment \* \* \* : Now, therefore, be it

Resolved, That the I. L. A., in convention assembled, go on record as being unalterably opposed to both the Wheeler and Lea bills; \* \* \* be it further

Resolved, That the international officers of the I. L. A. stand instructed to immediately notify proper committees in Congress of the action taken by this convention.

F. H. MASTERSON,

A. F. of L. Organizer, New Orleans, Local 1586.

R. A. WALTON,

International Vice President and General Organizer, Great Lakes, Chicago Local 1240.

SIMON P. O'BRIEN,

Great Lakes District President, Buffalo, N. Y.

L. LONG,

1556, St. Louis, Mo.

E. L. SLAUGHTER,

International Vice President, Duluth, Minn., Locals 1279, 1328, 1343, 1565.

[Seventy-third Annual Session of the National Grange Peoria, Ill., November 15-23, 1939]

8. Recognize that preservation of adequate transportation facilities is indispensable to the welfare of the Nation. Railroad regulation should be liberalized, but uniform regulation of all types of carriers would destroy competition and the economies afforded by each type.

[Annual meeting, National Farmers Union, Omaha, Nebr., November 20-22, 1939]

We also affirm our position relative to the following:

Opposition to regulation of truck and water transportation rates that tends to increase transportation costs. We also oppose repeal of section 4 of the Interstate Commerce Act, commonly known as the long- and short-haul clause.

[National Wool Growers Association, seventy-fifth annual convention, Casper, Wyo., January 23-25, 1940]

8. There has been introduced into the Congress of the United States a general transportation bill known as Senate bill 2009. The bill has passed the Senate and an entirely different bill carrying the same number has passed the House. These two bills are now in the conference committee.

We cannot endorse either of these bills, but livestock should have a hearing before any bill resulting from this conference is passed, and we make the following definite suggestions for enactment in a general transportation bill:

We favor the elimination of inhibitions in section 15 (4) of part I against the Interstate Commerce Commission's establishing through routes.

We do not favor the regulation of water carriers under the provisions of either the Senate or House bill.

We do favor the clause "inherent advantages of each medium of transportation based on the cost of each group" and ask that it be retained under the section defining rate-making purposes.

[Annual meeting, American Farm Bureau Federation, Chicago, Ill., December 4-7, 1939]

Each House of Congress has passed a transportation bill, both of which are now pending before a conference committee of the two Houses. Because of the widespread interest of citizens in this legislation and its Nation-wide effects, we urge that a reasonable time be permitted the interested public to study the bill when reported by the conference committee before its final consideration and enactment by Congress.

In the formulation of such bill we urge that the Interstate Commerce Commission be directed to give more attention to the rightful interests of shippers in the regulation of transportation systems, to investigate and remove any unjust discriminations against regions or commodities within any particular type of transportation, and we especially insist that no provision of law or regulation permitted thereunder restrict any natural or inherent advantages of any type of transportation where such advantages in rates and service are reflected to the shipping public.

## Lucky Comrade Browder!

### EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

EDITORIAL FROM THE PALISADIAN FOR FEBRUARY 2, 1940

MR. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Palisadian for February 2, 1940:

[From the Palisadian of February 2, 1940]

LUCKY COMRADE BROWDER!

Last week a couple of Communists got into trouble. One of them, Comrade Earl Browder, native-born American citizen, was convicted of passport fraud. At his trial, where he was permitted to harangue the jury for an hour, he said: "I am a Communist. I am secretary of the American Communist Party. I am proud of it." And he told of secret trips to Russia for revolutionary conferences. Browder was given a 4-year sentence, and turned loose on bail to address his fellow Communists as a martyr to the "cause."

The other comrade, Maxim Litvinov, a citizen of Soviet Russia, came under distrust of the Kremlin because, according to a cable dispatch from Copenhagen, he was "a friend of the western democracies and, therefore, dangerous." And, according to that dispatch, which has a strong ring of truth from reliable precedents, Comrade Litvinov had no public trial, addressed no jury, was not released on bail to speak to any crowds, got out with no light prison sentence. He was backed against a wall and shot.

Lucky Comrade Browder—to be under the laws of the American democracy he yearns to destroy. Unfortunate Comrade Litvinov—to be in Utopian Russia. Comrade Browder will have time for quiet reflection in a Federal prison cell. It might pay him, and many who embrace his views, to ponder that American tolerance for alien-dictated treachery is growing strained in these times. Such luck may not last forever.

## A Rural Editor Opines

### EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1940

EDITORIAL BY DAN MCGOVERN

MR. COFFEE of Washington. Mr. Speaker, I include herewith an editorial comment by Hon. Dan McGovern, publisher and editor of the Renton Chronicle, of Renton, Wash., on subjects of current moment, which, I think, shows a soundly progressive attitude, the reading of which will contribute to the enlightenment of those who study the columns of the CONGRESSIONAL RECORD. Mr. McGovern is an unusually gifted editor and commentator whose newspaper enjoys a wide circulation in rural King County, Wash. Mr. McGovern is a versatile writer, a poet, a thinker, a speaker, and a lifelong Democrat.

The editorial is as follows:

The McClure newspaper syndicate last week sent me a large envelope stuffed with notices favoring Frank Gannett, New York State publisher, for President of the United States. As principal owner of the McClure outfit Mr. Gannett naturally would not allow the syndicate to publish anything in which he himself did not have complete faith \* \* \* which proves that Gannett is wholeheartedly in favor of Gannett.

The president of the Pacific States Telephone Co. gets \$50,000 per year, or \$1,000 every Saturday night. After taking a couple of beers, buying a package of fine-cut, and assembling a shopping bag loaded with hamburger, rutabagas, canned milk, salt pork and beans, he would have, figuring roughly, in the neighborhood of \$998.40 to pay rent, fuel, clothing, etc., and to take in a show once in a while. You can't tell me a fellow like that can't get ahead if he really wants to.

"Do most of us realize what a magnificent job has been done by America?" thunders B. C. Forbes, the great economist. He then

goes right ahead and demands to know if "we feel the slightest sense of gratitude to those who have made this country envied by the people of all other nations?" Questions like these make us excessively red in the face. After all, what have we done to show our appreciation? I don't blame Mr. Forbes for being indignant.

What did we ever do to show Jay Gould how we appreciated his wrecking of the Erie Railroad or the masterful chicanery of himself, Dan Drew, and Jim Fisk for precipitating the country into the black Friday panic of 1873? What have we ever done in the way of applauding the lumber barons who left us all these nice stumps?

What homage did we ever do the shipping magnates who retired with several billions and left the country's commerce wrecked and desolate? How have we repaid the sacrifices of the noble Carnegie, who paid the hunkies a dollar a day in his steel mills while piling up a billion dollars to take back to Scotland?

What appreciation do we show to J. P. Morgan for his father's swindle of the Government with a sale of defective guns during the Civil War? Or the present head of the house for the nice foreign bonds he sold us during the war—bonds which aren't worth the ink that went into them? Where will you find gratitude to the great philanthropist, Andy Mellon, for keeping the price of aluminum at a dollar a pound for 20 years and making himself a billion? What manner of people are we that we don't applaud the Ford outfit for accumulating a billion through its speed-up processes? Why haven't we in America the decency to praise Rockefeller and his partners for keeping the price of gas up to 21 cents a gallon; and why do we hang back with our paeans of praise for the great public benefactors of Wall Street who sold us those \$300-a-share stocks back in 1928?

A nation of ingrates, that's what we are, B. C.—I can call you "B. C.," can't I, B. C.? Yes, sir. I see you mention iron and steel. I don't wonder that you shudder at our utter lack of reverence for the great benefactors of the Nation who stripped the iron ore out of the Minnesota iron range and left that region a second edition of hell. \* \* \* Those boys should be canonized.

And what have we done to perpetuate the memories of those giants who built our early railroads (and later ones) and looted the Government Treasury and the pockets of investors at one fell swoop? Why can't we vocalize our loving recollection of the meat packers who sold our Spanish-American War soldiers embalmed beef? Why are we silent when the names of the illustrious robbers of our oil lands are mentioned?

What's the matter with the emotions of a people who can't cheer for the accomplishments of the daring and generous pioneers who stole our water power? Why don't we cheer and clap when we hear mention of the food profiteers of the late war—the heroes who charged us 25 cents for a pound of sugar, \$25 a pair of shoes, \$15 for a barrel of flour, and 20 cents for a yard of calico?

Listen to the Forbes person—listen and break down:

"Credit for the greatness attained by the United States must, therefore, be generously accorded those wise, far-seeing, democratic patriots. (Until recent years no President, no administration seriously sought to tear down what they so carefully, so farsightedly created.)

"Following the noble work of American foundation-layers, what?

"Time revealed that this vast continent possessed an abundance of the essentials for national and international greatness: Iron, coal, fertile lands, oils, forests, copper, water power, varied and healthful climate, unique waterways, a whole string of et ceteras."

Mr. Forbes goes on, rather haltingly, it is true, to prove by inference that the patriotic masters of industry and finance in this country went out and developed these industries for the country's good and for the benefit of the country's people. Bull, Mr. Forbes, bull.

If America is still great it's because we had so much that we still have some left in spite of every conceivable sort of piracy upon our resources. Piracy, waste, exploitation, ravishment—these were the four horsemen of America's youth and adolescence; these the plagues that your great developers let loose upon the land.

And that's the kind of stuff your great public journal, your "family" newspaper dishes up to its presumably intelligent readers. The American today who can't recognize bull when he sees it ought to have his nose examined.

## Address of the Postmaster General

### EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mrs. O'DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable James A. Farley, Postmaster General of the United

States, at the first-day sale of the Washington Irving stamp at Tarrytown, N. Y., Monday, January 24:

It is very pleasing to me that I have the opportunity of returning today to your attractive city. As you know, I spent the early years of my life in Grassy Point, just across the river. I recall many pleasant memories of my boyhood, and played baseball here in Tarrytown many times.

If for no other reason the Legend of Sleepy Hollow would make this community famous to every American. This region, of course, is full of fantasies beautifully woven into realities by the facile pen of Washington Irving. I recall that I saw as many hobgoblins as the average young man of my age, and I have crossed many bridges, at times near midnight; but I have yet to actually meet the Headless Horseman. Fortunately for me, insofar as I know, he confined his activities to the east side of the river.

It is especially fitting that during the present period of international struggle our Nation should pay tribute to American heroes of peace. Other countries have recognized their prominent figures in literature, art, and science, but the United States has been somewhat tardy in this respect.

Today, however, we honor the first of 35 representative men and women whose lives have made our own more enjoyable. From American literature, art, and science a number of notable personalities are being given a place on our stamps. They will thus parallel the appearance in other issues of our statesmen and national leaders.

The selections have been made after many suggestions and polls for which the Post Office Department extends its thanks. These authors, artists, composers, educators, inventors, poets, and scientists represent America's finest product. National figures, such as Mark Twain, Stephen Foster, Booker T. Washington, and Walt Whitman may be characterized as symbols in opportunity of American democracy. Their achievements have influenced the present. Their example will build for the future.

It is especially fitting that the first name we honor in the authors' group of the issues of famous Americans should be that of Washington Irving, a native of your peaceful, enchanting region. A man who was at home here upon the Tappan Sea; an author whose characters and art came from his love for the Hudson, for the Catskill Mountains, and for the old town of Knickerbocker. Certainly this charming old village of Tarrytown is today a place of pilgrimage. Your Sunnyside, Christ Church, and Sleepy Hollow are all monuments to this man.

"I thank God I was born on the banks of the Hudson," said Washington Irving, and he pictured for us the unsurpassed beauties of the Hudson Valley. At this time our Nation, which he made aware of its own grandeur, joins his portrait to an already notable list. I am sure that this community where Washington Irving lived and was buried will enjoy keeping this stamp as a lasting memento of its illustrious citizen.

Washington Irving was the first distinctive voice of American spirit and legend. He was born in 1783, the year we gained our independence from England. New York then was not much larger than Tarrytown is now. Brooklyn at that time was a collection of Dutch farms. With Irving's maturity, America came of age. Irving served as spokesman for its ruggedness and good humor. As George Washington was the father of our Republic, so Washington Irving, the general's namesake, was the father of our republic of letters.

More than that, Irving was America's most needed envoy of friendship. He made Europe pause to realize the existence and importance of this thriving new land across the Atlantic. In 1842, when his name was already established, he became America's envoy to Spain. But our reason for remembering him is that in the troubled era of the previous quarter century, he was our ambassador of good will to an unfriendly and skeptical world. He was, I might say, a kind of post-war Ben Franklin. It is an interesting coincidence that, as with Franklin, his picture is engraved on the green 1-cent stamp.

Here was a writer who expressed healthy, vigorous American feeling. He was an artist who created living people out of folklore. Everyone has read and remembers Rip Van Winkle, Ichabod Crane, Katrina Van Tassel, and that mysterious gentleman, Diedrich Knickerbocker. These people live. Imbued with Washington Irving's genial spirit, his wit and humor, and his clear and forceful style, these stories will live on in the speech of man.

The subtle wit and satire of Knickerbocker's History of New York will always be of interest to the student of history. I was intrigued by the stories of the old Dutch burgomaster, the chief magistrate of the thriving little city then called New Amsterdam. In appearance he was about as wide as he was tall, had fully six meals a day, and smoked his pipe incessantly. In fact, both time and distance were measured then by the smoking of pipes—one pipeful representing 30 minutes of time or the equivalent distance that could be traveled within that period. It is further said that the old burgomaster was supplied with a very bounteous repast at midday, whereupon he enjoyed a siesta for a considerable period; that the attending bailiff warned all who came near that "His Excellency was thinking deeply for the good of the community." I wonder if some of these traits of the good old Dutch father could not well be emulated by many of us. Then nothing was done in a hurried manner and decisions were reached only after calm and deliberate, if somewhat lengthy, meditation.

There was a story that Irving loved to tell about a ragged little urchin who one day came to him at Sunnyside and whispered "Mister, do you love apples?" "Ay, that I do," said Irving. "Well,

come along," said the youngster, "but don't let the old man see us." So Irving went on tiptoe to steal his own apples.

Another tale reveals that some time after writing *Rip Van Winkle*, Irving for the first time visited the scene of his story. He listened with great patience to a guide retelling his own legend and was amazed to find his own imagination had stuck so close to physical fact. Finally, Irving left quietly. The guide had just claimed direct descent from the venerable *Rip* himself.

These are but bits out of a life that was full of experience. Irving was a prankish youth. In the introduction to *Salmagundi*, his first book, he wrote: "Our intention is simply to instruct the young, reform the old, correct the town, and castigate the age; this is an arduous task and, therefore, we undertake it with confidence."

"Irving," said Longfellow, "is one of those men who put you at ease with them in a moment." His stories are friendly. They read as though Irving had put his arm around your shoulder. Looking now at his portrait on this new stamp we can glimpse some of this friendly sincerity and ease. We can understand this man who, the year of his death, wished for 20 years more so that he could write his books over again.

There are critics who toss aside Washington Irving's work as lacking in solidity and depth. That's like blaming a collector of United States issues of stamps for not specializing in European issues. Irving himself would be the first to admit that he was a romantic. He wanted to present not actual life but a picture of life as we should like to have it.

Let me quote Mr. Irving: "If I can by a lucky chance, in these days of evil, rub out one wrinkle from the brow of care, or beguile the heavy heart of one moment of sadness; if I can, now and then, penetrate the gathering film of misanthropy, prompt a benevolent view of human nature, and make my reader more in good humor with his fellow beings and himself, surely I shall not then have written in vain."

That the first stamp of this series is being issued today is proof that Washington Irving did not write in vain.

We have, from the nature of things, grown overly tense. Too often we have little time or inclination to relax beside our albums. Too often we forget to turn to those who write, as did Irving, for some assurance that there is permanence and rest in this world. Those who use force will always have trouble in banishing truth and beauty from the world, and we should be glad to know that the words of Irving which delighted our grandfathers and have delighted us will be read and reread with equal enjoyment by those who come after us.

It is a real pleasure for me to dedicate this stamp today to those who love American literature in its truest form—the writings of Washington Irving. Wherever the mails of the United States may go, there the spirit of *Rip Van Winkle* will be heard, forever playing at his game of ninepins.

## Annual Banquet of the Washington College of Law

### EXTENSION OF REMARKS

OF

HON. ROBERT T. SECREST

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

ADDRESS BY HON. GUY M. GILLETTE, OF IOWA

Mr. SECREST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. GUY M. GILLETTE, Senator from Iowa, delivered at the annual banquet of the Washington College of Law, Washington, D. C., on February 10, 1940:

It is a real privilege to have even a small part in these proceedings tonight, dedicated to the commemoration of the work of the Washington School of Law, which, I believe, is now within a few years of a full half-century of service in its field of legal instruction. But I wish, if possible, to make this small contribution of mine a helpful one.

I am here tonight on recruiting service. Your country and mine is at war—not a war waged with lethal instruments for destroying human life, but a war destructive of human happiness and which, unless won, is fraught with greater danger to America than one which we might wage against another world power or combination of powers.

I am bringing this appeal for enlistments here tonight because this is one of the most promising fields for securing the type of effective recruits that I have in mind. At this gathering there are men and women, young and old, who have adopted the law as a profession. It is needless to say that your profession is not only a proud and an honorable one, but one that is exceedingly essential. We know that law is a rule of human conduct. We know that all human laws, whether emanating from a high or a low agency, are

definite restrictions on the freedom of action of the individual, in the assumed interest of the general community. It is very necessary for the individual to know his rights, his duties, and his obligations under these rules. Because of the complexity of modern communities and the multiplicity of social, financial, and individual interests, and because of the great number of governmental agencies from which these various rules emanate, it is obviously impossible for the average individual to familiarize himself with the laws or to learn the machinery of administration and of legal procedure. But schools such as yours teach these things thoroughly to those desirous of engaging in the profession of law, and are continuously employed in especially fitting hundreds of thousands of young men and women to know the rules of statute law and to know the recognized principles both of law and procedure as developed by experience and established by the courts, and to apply these laws, these principles, and this procedure to the myriads of factual situations which arise in everyday life. And to do this well, of course, constitutes the practice in which you will engage as attorneys at law.

But deeper than these statutes and rules, much deeper even than the legal principles underlying both statutory and common law, there are certain basic or foundational systems of governmental philosophy from which we, as Americans, have chosen, and on which we have builded our Nation. This choice of ours is threatened today—not seriously from without, but seriously enough from within, to challenge our attention and our best endeavors. Bear with me, please, while I review as briefly and succinctly as possible four basic governmental systems:

1. The representative democracy: Its basic philosophy is voluntary participation in the government by the individual, freedom of speech, of the press, of worship, of petition, of assembly. It insists on equality of opportunity and equal voice in government. It assumes to develop wisdom of collective action by individuals through agencies of free expression, debate, and interchange of opinion. Its agencies of government, however they may be named, must justify themselves by serving the general happiness and welfare. It works through these agencies freely chosen by groups organized for political action, and all types of minorities have recognized rights. It upholds private ownership of property under social decisions in the interest of the general community welfare.

2. Communism: Basically, this system is not only atheistic but rejects every pattern of religious thinking and considers social events and developments as the rigid results of materialistic cause and effect. It seeks to set up a classless society, with social ownership and control of all instruments of wealth production. And because it starts with the premise that all working classes are linked in interest throughout the world, it fosters and believes in the destruction or liquidation of all other classes by parallel violent revolutionary action throughout the world. Hence, it definitely rejects nationalism and rules by a one-party system, and all other parties are viciously attacked as being counterrevolutionary.

3. Socialism: Socialism in its various manifestations may be anti-religious or not. It also sets up the goal of a classless society, with communal ownership of all instruments of wealth production, advocates solidarity of the working classes with a larger voice for them in politics and industry, but it advocates attaining these goals not by violent political action but by convincing the masses of its desirability and by adapting itself at least temporarily, to the political forms under which it now conducts its activities. It also is not nationalistic, but has for its eventual goal internationalism.

4. Nazi-ism or fascism: These philosophies start with two foundational premises. First, that the national state is the best possible organization of men and must have their complete loyalty as individuals. Individuals have rights and meaning only as they are parts of and contribute to the state itself. As the second premise, they believe that there is a natural hierarchy among men, races, and nations, giving to certain ones a superior quality that must be acknowledged and obeyed. One race is superior to all others, one nation to all others, and one man to all others. This, then, is the fuhrer or leader principle. This system recognizes private ownership of property and private rights only if they are maintained completely subservient to the state, its welfare, and that of the superior racial groups. It is necessarily nationalistic and rejects entirely all international community of interest.

These four governmental systems are forced into strife and physical warfare in Europe and Asia today, not because of their political antagonisms alone, but because of the fact that the tremendous pressure of commercial, industrial, financial, racial, territorial, and population antagonisms brings on the conflict, and with it the opportunity to appeal for the support of the people for their respective political systems, and to excite and incite the citizens to bitter warfare.

Many efforts have been made and will continue to be made to establish in our minds the community of interest of our Nation with other nations now at war because of the similarity, real or assumed, of our basic political system with that of some of the contestants, and to read into a triumph in the present warfare of some of the contestants a definite threat to our national political philosophy and even our national existence. I do not care to discuss that question. Whether or not the triumph of any political system in a European or Asiatic war carries a potential future threat to America and Americans, a threat to our security through war involvement, should not, and must not drive from our minds the fact that the greatest contribution the United States can make today to world peace and security, as well as to our own, is to prove to the wide world that representative democ-

racy is the best governmental system yet devised by man, that it brings a further measure of individual welfare and security for all classes, all citizens and sections, than any other. We must prove this, not at the point of cannon or bayonets. We must prove it by definitely winning the terrific war in which we are now engaged and in which we have been engaged for several years, the war we are waging against unemployment, against national debt, against unjust and unhealthful working conditions, against inequality of opportunity, against maldistribution of our wealth production, against dishonesty in public office, against hunger, disease, and suffering, wherever found within our Nation. If we win this war through our democratic agencies, there will be no need to attempt to impose our governmental system on any other nation anywhere on earth. There is nothing that will stop other nations in the fullness of time from applying within their borders the lessons of our success.

We are prone to quote from the immortal Declaration of Independence these words:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by the Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

We seldom quote the statement which follows:

"That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness."

So I come to you young people tonight trying to emphasize the tremendous need that our Nation has today for men and women schooled in legal principles and affairs, carrying the deepest convictions of the value of our governmental institutions and philosophy, and enlisted with every other upright American citizen to build on this philosophy a structure which the people of our Nation will behold with amazement and envy, and be imbued with the desire to emulate through change in their political system, such as we assert is their inalienable right.

It is for this war that I am seeking soldiers. We need the unselfish aid of every citizen. We need the hearty cooperation, suggestion, and aid of every political party and group. We need courage to acknowledge, face, and solve the problems. To fail to win would leave our democratic system prone and helpless before the plausible sophistry of the arguments presented by the proponents of fascism, Nazi-ism, communism, and other philosophies that we hold subversive of the things we love and live for in the United States of America.

### Lincoln Day Address

#### EXTENSION OF REMARKS

OF

HON. JOHN McDOWELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

ADDRESS BY HON. JOHN McDOWELL, OF PENNSYLVANIA

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered last night at Parkersburg, W. Va.:

My friends of West Virginia, you have assembled here and I have journeyed many, many miles over the mountains to tonight add your humble tribute and pay our devotion to the memory of a man who has received more attention than any other figure in history—Abraham Lincoln.

This night, 131 years ago, in a miserable one-roomed cabin not so very far west of here, in an atmosphere that was similar in many respects in its humbleness and poverty to the birth of the Christ, the babe that was Abraham Lincoln was delivered and those humans of the earth who crave liberty more than any other thing had received their greatest gift.

To us in America now the birth, life, career, accomplishments and death of Lincoln is our most familiar story but, like the prayer of the Lord, it grows more sweet by its repetition and generations yet unaccomplished will retell the story with the same warm enthusiasm in which I do it again tonight.

Lincoln's noble simplicity has been constantly mistaken for mysticism and oddness. Those who have termed him a strange, mystical, ununderstandable man viewed him with such fierce observation that they missed the thing which has made him immortal—they could not see the forest for the trees.

We know Lincoln was the gentlest of men, yet with a firm and unyielding hand he launched his armies to the bloody conflict that was necessary to preserve the Union to which he was devoted. He was termed melancholy and sad, yet his entire life was replete with fun and humor and laughter and, aside from his other qual-

ities, Lincoln takes his place as one of the greatest humorists of all time.

The mark of Lincoln is not only upon us but upon all of the nations of the world. With the passing years his massive stature towers higher and higher amongst his fellow men and, although there are countless images of Abraham Lincoln graven in steel and bronze and marble and stone, the true image of this great character is impressed upon the heart of every American as his birthright.

The mark of Lincoln is upon Washington, the capital, the city in which his triumphs, and his heartaches, his victories, and defeats and death occurred.

To one who holds a seat in the body he once graced, his daily presence is inescapable. Many, many times, in my chores as a Member of the Congress of the United States, I walk down the twisting stairs from the Chamber to the ground, ignoring the modern innovations, because the very atmosphere whispers, "Before you was Lincoln, who loved his fellow men."

My bed in Washington is a stone's throw from where he lay in his.

It is impossible to walk across the Capitol plaza without the shade of the lumbering, towering, gaunt young lawyer striding along under the ancient trees, bent on the destiny that was Lincoln's.

At the west end of the long, green Mall he sits enthroned in marble magnificence, and day after day the worshipers and the curious walk up the steps and stand in silent contemplation before Lincoln.

The artist has caught him completely. The strong, sympathetic face that is America's hope; the simple garb; the strong, beautiful hands that wrought so well for the common man. I have been countless times to the shrine to drink in the inspiration Lincoln gives to those who desire it.

Lincoln was a child of the people, and his destiny carried him to those heights that can only mount from the people. Someone once said, "There is no accounting for genius; it has neither ancestors nor descendants; genius is the child of destiny, of necessity." Lincoln was such; he was the product of a crisis. Reared in the environment of abject ignorance, he rose to the utterances of such simple yet noble declarations that they have become classics, both because of their literary loveliness and their human truths.

Lincoln was a politician; of that there cannot be any doubt. He accepted the American system of government, furthered it, administered it, and left it immeasurably better than he had found it.

He learned, early in life, that those who captured the imagination of the citizenry would rule, for good or bad. It was his deathless fame to capture that imagination and administer for good, and Abraham Lincoln proved beyond any peradventure of a doubt that an honest politician, with clear convictions, with his eyes on the horizon can bequeath to posterity a wealth that can be estimated only in history.

Abe Lincoln was the product of a crisis, and the crisis gave birth to its own savior. There have been other critical periods since those dark days of the late fifties when Lincoln was forming and shaping for the task that confronted him. They were met and won by the American people in various ways and by various methods up until the melancholy gloom of the world-wide panic swept over the Nation at the beginning of the last decade.

The crisis that confronted America then was similar in many respects to the one which gave Lincoln to the world. There is slight difference between physical slavery and economic slavery. Misery, regardless of its origin, is much the same. The lash of a cruel proprietor hurts no more than the pinchings of a deprived stomach. The angry temper of a divided people is just as destructive, whether it be caused by the controversy of the question of men owning other men or between labor and industry. The political ideals that Abraham Lincoln gave the Nation through his party, the Republican, were not maintained as Lincoln would have maintained them, and we Republicans should be the first to admit that.

After the panic struck the Nation it was facing a serious situation, and every citizen in the Nation knew it. As always, a politician caught the fancy of a worried people, and once again the American people entrusted their fate and gave almost absolute authority to a President to deal with a desperate situation that was equally as dangerous as that which confronted Lincoln.

The long years have passed, but a comparison of the achievements that began in 1860 and those that began in 1932 reveal a dismal difference.

I have no desire to address you tonight in innuendo or by phrases that might leave the door open for political escape. My convictions in the matter are firm and sincere; I am fresh from the national scene and anxious that you should know and realize and appreciate what I believe to be the complete failure of the present administration to meet and solve the problems that confront the people of America.

Eight years ago the Nation was going through its armageddon. Industry was stilled, labor was suffering, finance was frozen, banks were crashing to the ruination of both stockholders and depositors from coast to coast—even the mighty hand of God seemed to have been raised against the people of the stricken Nation, and unusual floods, droughts, duststorms, and other catastrophes added their quota to the Nation's distress.

Out of the blackness of national concern came the clarion call of loud voice, soothing in its timbre, sincere in its tones, hopeful in its premises and once again the people of America were captivated by what it hoped was a strong, sincere man with a vision.

There the parallel of Lincoln and the New Deal ends. Seven long years have passed and the nostrums the Nation eagerly accepted have been fruitless. Seven long years have passed and America has not only the bitter taste of the medicine but the cure has not yet been effected.

With ruinous and ruthless force the academic theories were inflicted upon a trusting population and there was shackled upon the people the most cruel and misrepresentative and expensive political machine the children of the United States have been forced to maintain since they revolted in political nausea from the maladministration of King George III.

Seven long years after all power, funds, and authority had been vested in those who ask for it more than 10,000,000 American breadwinners are still haunting the relief lines; the wheels of industry, clogged by partisan and unfair legislation are gathering rust and cobwebs, the public debt daily mounts in staggering sums; the youth of the Nation view their future with forebodings and little hope; the aged cry for comfort and security from the only source left from which it may be derived—the Government.

Seven years after the triumphant ride to power of those who were going to protect the poor, advance labor, stop injustices, and decrease the national expenditures we have only one sure matter ahead of us—an increase in the national debt and a subsequent increase in the national taxes.

What is the profit to labor if their advances and gains are in Washington-made laws but not to their tables and their bank accounts? What a shallow, hollow victory and what despicable trickery to make the man who works with his hands believe that an unworkable law, passed with a fanfare of trumpets, will give him the things free that he can only hope to earn by the sweat of his brow.

Can I bring out to you in sharp relief what I believe is the epitome of the New Deal by informing you that Uncle Sam now owns more than 80,000 homes of American citizens who have been sold out of them in the same harsh and cruel manner the prophets of the New Deal were railing against when they were coming into power?

Can you appreciate that in Washington we have great and expensive departments devoted exclusively to the scientific study of increasing the crop yields of all of the farmers, and other departments studying the science of reclaiming wasted and non-profitable lands and in the same city are other great and expensive departments from which comes the theories of overproduction and of paying farmers to let their land fallow?

The United States Department of Agriculture has asked the Congress for gigantic appropriations to teach more people how to become farmers and, in the same breath, asks us to appropriate even more money to furnish food and seed and stock to the thousands of farmers who fail every year.

Do you people who mine coal appreciate that through the ruinous and illegal reciprocal trade agreements soft coal may be purchased on our eastern coast that was imported from another country cheaper than can be bought good, black coal from the hills of West Virginia?

Almost a million persons are now full-time employees of the Government of the United States—the record-breaking number in its history—and this only 7 years after the firm declarations of both the Democratic Party and its candidate, in the city of Chicago, gave a solemn pledge to abandon useless and expensive bureaus and eliminate the thousands of deadwood that are sucking away the lifeblood of the people of the country.

The New Deal has been zealous over the radio and in the public press in expressing indignation and making laws to maintain a proper wage level for the workers in private industry, yet the self-same New Deal has blocked every effort to grant a proper increase to thousands of Government workers who receive shamefully low salaries and who do not know the meaning of an 8-hour day. Indeed, I have personal knowledge of high governmental officials who have been most vociferous about the rights of the downtrodden and who have in their offices heads of families working for a pittance that is a disgrace to America.

The New Deal is a two-faced Janus that smiles on the voter and frowns on the taxpayer and, believe me when I tell you in all earnestness that the United States of America will never stand another 4 years of this sort of government and still remain the United States.

However, cursing an evil will never cure it.

We are Republicans gathered here tonight to honor the greatest of our party. Our tribute can assume no greater proportions to Abraham Lincoln than attempting to carry out on the course he charted for the Nation fourscore years ago.

With belief in the right as God gives us to see the right is a shining beacon of light that will forever guide our ship safely through the dangerous reefs.

The charge has been made that the Republican Party has no objectives, can only criticize and not suggest, remains to scoff but not to lead. This a canard and we all know it.

The charge has been made that the Republican Party has not yet produced a man who can measure up to the standards the Nation will demand of the Presidency. Let me refute by simply stating that we have many Republican patriots who can and will save the Nation from itself if given the opportunity. To be more specific, I feel I would be remiss in my duties if I did not inform Republicans everywhere that the man whom I believe measures

nearest the political standards of Abraham Lincoln is one who is daily laboring in behalf of his country and his party and has probably saved the Nation more millions of dollars than any other man now alive; and I am referring to the Honorable JOSEPH MARTIN, Jr., of Massachusetts, minority leader of the House of Representatives. There is no poverty of material in the Republican ranks, as will be proven in the short months to come.

The charge that the Republican Party has no constructive platform is mere political pap that will be entirely refuted next inauguration day. Is the advocating of economy in government a minor matter with a government rushing headlong into financial bankruptcy? Is the conviction that the owners of a business have a right to operate it without hindrance from the Government so long as they obey the laws and treat their employees in the manner in which the American people demand for labor? Is the denouncing of ruinous trade treaties, never ratified by the Senate and inflicted upon a helpless nation, a thing of no consequence? Is the belief that a tariff wall to protect agriculture from the products of the peon labor of the world a minor matter to be lightly disregarded? Is the firm belief and announcement that Europe's troubles are her own and that their wars are not our wars nor will they become our wars and that our frontiers are the oceans that bound us and not the Rhine River nor the Yellow Sea?

The Republican Party, when it takes over the administration of the affairs of the people of the United States, is prepared to carry out Abe Lincoln's political theories of the most good for the most people, and to believe that not all of the old things that made America great were wrong and must be twisted into queer shapes that look like they were patterned in Moscow.

The administration of the United States in the last few days has risked a new international situation by openly berating the Russian Government. If you will recall, it was the Republican Party that considered the Russian Bolshevik Government a gang of bomb-throwing murderers from the very beginning of their bloody regime, and the cruel killers of the Kremlin were never recognized by an exchange of ambassadors until the parlor pinks of the New Deal brought that circumstance about.

The people of the Nation might well consider the constant efforts of the high officials of the Nation to sabotage and stop the Dies committee which is daily bucketing up filth that has been collecting about the roots of our country since the influx of spies, saboteurs, agitators, and dangerous enemies that followed the Roosevelt accord with the Soviets.

The people of the Nation might well ponder the fact that the dangerous and powerful "red" enemy of the United States, Harry Bridges, has been kept and protected in America through the almost obvious efforts of the pinkish Department of Labor and its bizarre head, Madam Frances Perkins.

Labor, which has been the stoutest champion of the New Deal, is slowly beginning to make obvious the fact that it has been taken for a very expensive buggy ride by a soothing radio voice and a Harvard accent.

May I point to the fact that many of my colleagues, both in the House and the Senate, have stepped down from the New Deal bandwagon, and that the music emanating from that gorgeously painted vehicle is rapidly dwindling down to the thin and rather hysterical pipings and scrapings played by what remains of that great American intellectual blight—the "brain trust."

We have strayed far from the path that Lincoln trod in America. Last week I was invited to attend the sessions of the American Youth Congress and declined because of the fact that many of them would take equal rank with Benedict Arnold in their faithlessness to the United States—yet they were the welcome guests in the first American home.

The Republican Party wants to give the people of America a chance to redeem themselves—to get their breath—to go back to work. It wants to bring genuine hope once more to American youth—it wants to offer something more than a military camp or a Government job to the millions of idle youngsters whose wealth of talents are being cruelly wasted for lack of opportunity. The Republican Party wants to remove the choking hand of governmental bureaucracy from the throat of the small storekeeper and the little farmer and the middle-income employees of the Nation. We want to remove from the Government pay rolls the thousand admitted Communists who are now being paid the people's money that they may live to destroy the very people who maintain them. We want to build an adequate Navy and Army but we will not build a ship for every Congressman and erect a new fort for every Senator.

We want to remove several dozen of these accursed taxes that have settled down upon America's prosperity like a swarm of locusts and which accomplish nothing but provide more jobs for more bureaucrats.

You are Americans here tonight and you have a duty to perform. Whether you belong to my party or not you accepted citizenship and you are betraying that citizenship unless you perform your full share of your task and that is to rescue America from the hands of triflers, incompetents, experimenters, and reckless opportunists and turn it back in the channel that Abraham Lincoln dug and through which it rose to the highest pinnacle of success that has been recorded in the history of nations.

My seat in the Congress is important to no one but me, but the control of that great body must be vested in the Republican Party in 1941 lest these political adventurers squander completely America's heritage.

I am very fortunate and deeply honored that it is my great privilege tonight to express my deep devotion to the ideals of Abraham Lincoln in the State of West Virginia, that should have, I deem, a special affection for this great man. West Virginia is the only State of the Nation that, of its own intense desire, underwent a rebirth of freedom and wrote a new chapter in defense of the liberties of mankind, arm in arm with Lincoln himself. Lincoln and West Virginia entered the Union together, and the great honor was sufficient for each to partake of it in full measure.

Over and above our political affections must always be that great golden frame of America that he penned and spoke in a rolling Pennsylvania valley—"a government of the people, by the people, and for the people."

Our strife in America between our people daily grows more bitter, more destructive, more dangerous. With the world on fire around us to quarrel over the riches that we possess and which are ample for all of us but which is being denied to most of us, must be a diabolical contrivance organized in hell itself. We must cease and go to work.

May I close with repeating the kindly words of Abraham Lincoln, spoken the day he swore to defend and protect his country. When he said this he must have lifted his eyes far above the throng around him and looked out over the hills and the valleys and the fields and the mountains that are America.

Abraham Lincoln said, "We are not enemies but friends. We must not be enemies. Though passion may have strained it must not break our bonds of affection. The mystic chords of memory, stretching from every battlefield and patriotic grave to every loving heart and hearthstone all over this broad land, will swell the chorus of the Union when again touched, as surely they will be, by the better angels of our nature."

## Tariff Classification of Products of American Fisheries

### EXTENSION OF REMARKS

OF

HON. ROBERT L. DOUGHTON

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

LETTER FROM HON. D. W. BELL, ACTING SECRETARY OF THE TREASURY

Mr. DOUGHTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Hon. D. W. Bell, Acting Secretary of the Treasury:

TREASURY DEPARTMENT,  
Washington, February 12, 1940.

Hon. ROBERT L. DOUGHTON,  
Chairman, Committee on Ways and Means,  
House of Representatives.

MY DEAR MR. CHAIRMAN: In view of certain statements by Representative Brewster on the floor of the House of Representatives on February 6, 1940 (CONGRESSIONAL RECORD, pp. 1096 to 1111), with respect to the issuance of Treasury Decision 49682, dated August 12, 1938, defining the term "products of American fisheries" so as to include fish taken by or under the supervision of American vessels operating in conjunction with their shore plant for the preparation and preservation of such fish, the Treasury Department deems it appropriate to make the following comments.

All the circumstances surrounding the issuance of this Treasury Decision were fully set out in the Department's letter of January 26, 1940, to you, which was incorporated in your committee's adverse report on House Resolution 361 (H. Rept. 1558, 76th Cong.) and printed in the CONGRESSIONAL RECORD of February 1, 1940 (pp. 917-918). Further information on the subject was furnished in Secretary of State Hull's letter to you dated February 8, 1940, which you inserted in the RECORD of February 9, 1940 (pp. 1991-1992).

This Department would like to add, however, that it has long been the practice of the Bureau of Customs to furnish American businessmen and others, upon their request, with advisory advance rulings as to the tariff classification of imported merchandise. The present Secretary of the Treasury has continued this practice of his predecessors, believing it to be a sound one, since it affords businessmen an opportunity to obtain tentative assurances before they make commitments as to what their customs liabilities will be. Naturally, these advisory rulings of the Department are subject to the scrutiny of the courts. In the present situation a legal study made by this Department, as a result of such a request for an advisory ruling, indicated that a provision in the Department's customs regulations was not a proper interpretation of existing law. In accordance with its customary practice in such matters, therefore, the Department issued Treasury Decision 49682 appropriately

amending the regulation involved. In view of Mr. BREWSTER's observations, I believe it is pertinent to make a brief statement about the legal aspects of the ruling incorporated in Treasury Decision 49682.

Paragraph 1730 of the Tariff Act of 1930 provides for the free entry of products of American fisheries. Included in paragraph 1730 of the Tariff Act is a specific proviso to the effect that products of American fisheries, prepared and preserved by an American fishery, on the treaty coasts of Newfoundland, Magdalen Islands, and Labrador shall be exempt from duty.

For many years it has been the practice of American fishing vessels to proceed to the treaty coast of Newfoundland and there employ residents of Newfoundland to assist them in their fishing operations; that is, both in the taking of the fish and in their preservation on shore to enable the catch to be brought back to this country without being spoiled. The fish caught and prepared on the treaty coast of Newfoundland, with the assistance of Newfoundland residents, have for many years been regarded as products of American fisheries entitled to free entry. As early as 1886, in a published ruling of the Treasury Department, it was stated that fish caught by the crew of an American vessel with the assistance of men and nets hired in Newfoundland would be regarded as having been taken by the American vessel and entitled to free entry. That the employment of foreign fishermen would not destroy the free-entry privileges of fish caught by such fishermen under the supervision of an American fishing vessel is a principle which has had judicial sanction for a considerable period of time.

In 1910 the Board of General Appraisers (now the United States Customs Court) had before it a case involving fish caught by citizens of Newfoundland supposedly under the supervision of an American vessel. The importer in that case protested to the Board of General Appraisers the Treasury Department's imposition of duty on the fish. The Board sustained the importer's protest, stating, in part:

"While none of these fish were actually caught by the manual labor of Americans, still the opportunity, funds, place, and appliances necessary for the operation to be carried on were furnished by an American with American money. The whole enterprise was conducted and carried on by an American, who was responsible for the operations. The law was intended, in our judgment, to favor operations carried on by Americans in this way and to encourage the taking of fish in the treaty waters" ((1910) T. D. 31028).

The case was reversed on appeal by the Court of Customs Appeals in 1911 in a decision referred to by Congressman Brewster. However, the apparent reason for the reversal was that the American vessel, which was claimed to be in control of the fishing operations of the foreign fishing boats, did not participate in the actual operations involved in the taking of the fish, and was, in fact, some 30 miles away from such boats. The appellate court did not appear to disagree with the above-quoted principles stated by the Board of General Appraisers ((1911) T. D. 31534).

In 1914 a case arose before the Board of General Appraisers involving fish caught by citizens of Newfoundland employed by an American fishery and taken to the Newfoundland shores for preparation and preservation for shipment to the United States. The importer in this case protested to the Board of General Appraisers the imposition of duty by the Treasury Department and in sustaining the importer's protest the Board held that the fish were entitled to free entry as products of the American fisheries, stating, in part:

"The evident intent of the statute, however, is that Americans engaged in fishing in foreign waters by means of a fishery maintained and supplied by American money and enterprise shall be placed upon the same footing as Americans engaged in the same occupation in domestic waters, so far as the duties upon the fish are concerned.

"It was not, in our judgment, the intention of Congress to limit a fishery in its operation to the deck or hull of a vessel. It is conceivable that the operations might be so extensive as to make it impossible either to take, cure, or prepare the fish on board the vessel. We are therefore of the opinion that a fishery includes the operation of taking, preparing, curing, and packing fish, and making them ready for market, whether conducted by means of a large boat and small boats independent of the land, or by means of the same connected with the land, where the fish are cleaned, dried, prepared, and packed for market." ((1914) T. D. 34440, abs. 35520.)

In issuing Treasury Decision 49682, therefore, the Treasury Department followed the above cases and other cases decided by the customs courts in holding that fish taken by or under the supervision of American vessels, operated in conjunction with their shore plant for the preparation and preservation of such fish, are entitled to free entry as products of American fisheries. The Treasury Department, of course, is bound by those judicial decisions to the extent that the statutes under which they were rendered are substantially the same as those now in operation. The term "products of American fisheries" appears in both the present statute, paragraph 1730 of the Tariff Act of 1930, and the statutes in effect at the time of the judicial decisions. Furthermore, as already pointed out, the present statute contains a specific proviso to the effect that products of American fisheries prepared or preserved by an American fishery on the treaty coasts of Newfoundland, Magdalen Islands, and Labrador shall be exempt from duty.

Very truly yours,

D. W. BELL,  
Acting Secretary of the Treasury.

Cassius C. Dowell

## EXTENSION OF REMARKS

OF

HON. WILLIAM S. JACOBSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

Mr. JACOBSEN. Mr. Speaker, under leave to extend my remarks, I should like on this occasion to pay tribute to my colleague and friend the late Honorable CASSIUS C. DOWELL, of Iowa.

The passing of Congressman DOWELL represents an almost irreparable loss to the Sixth Congressional District of Iowa, and to that State, and to our Nation. His death marks the end of a career of faithful public service ennobled by 12 years in the State legislature and 23 fruitful years in the Congress of the United States.

His work was marked by a quiet, unassuming, but penetrating and intelligent attitude toward all questions affecting his constituency and the welfare of his country. Thorough and painstaking in his study of legislation, he carved out a career notable among the many great figures Iowa has given in service to the Nation. He ranked high among them.

It was my privilege to serve with him. I knew him as a friend and counselor who gave unstinted service and a helping hand to everyone, regardless of political affiliation. He was concerned always with the best public interest and welfare of our Nation. While chairman of the Roads Committee in the House of Representatives he secured enactment of legislation providing Federal aid for the building of roads. This accomplishment will serve as a lasting monument to his career as a legislator. To him as an individual, more than to any other, the thanks of the Nation are due for the progressive program he sponsored in providing the present network of highways throughout the country.

Any tribute to this illustrious public servant would be incomplete if it failed in reference to the faithful service of an affectionate wife and devoted helpmate, who by her encouragement and inspiration contributed in no small way to her husband's successful career. To Mrs. Dowell, I, too, pay tribute.

In Congressman DOWELL's death I have lost a friend whom I admired and in whose judgment I had faith and confidence.

## Shield of Liberty

## EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

EDITORIAL FROM THE WASHINGTON POST

Mr. HAVENNER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include the following editorial from the Washington Post entitled "Shield of Liberty."

The editorial is as follows:

[From the Washington Post]

## SHIELD OF LIBERTY

During recent years the Supreme Court has tended to modify and, in some notable instances, even to reverse positions it had previously taken with regard to great constitutional issues which have come before it.

In one vital particular, however, the highest tribunal has remained steadfast and unchanging. It is today, as it has been for so long, a jealous and uncompromising guardian of the Bill of Rights. In a series of notable opinions it has struck out with

unfailing vigor against attempts to restrict or deny freedom of speech and freedom of the press, the right of assemblage, and the right of habeas corpus. As the late Senator Borah pointed out 3 years ago:

"When war passion, or mob passion, or political zeal, or selfish schemes have carried men beyond reason or justice, the Court, when called upon, has interposed to avert great wrongs."

It has done so again in yesterday's unanimous opinion reversing the decision of the Supreme Court of Florida in the case of four Negroes who had been sentenced to death after they had confessed to the murder of an elderly white man. The Supreme Court has ruled that the third-degree methods employed by the Florida authorities to secure these confessions made them invalid.

"We are not impressed," said Justice Black, in expressing the unanimous opinion of the Court, "by the argument that law-enforcement methods such as those under review are necessary to uphold our laws. The Constitution proscribes such lawless means irrespective of the end." And in an eloquent aside, which has particular pertinence in the present age of dictators and arbitrary rule, Justice Black reaffirmed the Court's solemn determination to act as guardian of civil liberties.

"Under our constitutional system," he said, "courts stand against any winds that blow as havens of refuge for those who might otherwise suffer because they are helpless, weak, outnumbered, or because they are nonconforming victims of prejudice and public excitement. \* \* \* No higher duty, no more solemn responsibility, rests upon this Court than that of translating into living law and maintaining this constitutional shield deliberately planned and inscribed for the benefit of every human being subject to our Constitution—of whatever race, creed, or persuasion."

## Decision of Supreme Court in Case of Isiah Chambers et al.

## EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday, February 7), 1940

## OPINION OF SUPREME COURT

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a very notable opinion delivered by Mr. Justice Black and concurred in by all the other members of the Supreme Court of the United States, which again demonstrates that the Supreme Court is the outstanding, uncompromising guardian of the Bill of Rights.

Mr. NORRIS. Mr. President, it seems to me it is very appropriate that the opinion of the Court in this case should have been handed down by Associate Justice Black, formerly a Member of this body. It seems appropriate in view of the criticism made against his record in a certain particular.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[From the New York Times of February 13, 1940]

[Supreme Court of the United States. No. 195. October term, 1939. Isiah (Izell) Chambers, Jack Williamson, Charlie Davis, and Walter Woodward (Woodard), petitioners, v. The State of Florida. On writ of certiorari to the Supreme Court of the State of Florida February 12, 1940]

Mr. Justice Black delivered the opinion of the Court.

The grave question presented by the petition for certiorari, granted in forma pauperis,<sup>1</sup> is whether proceedings in which confessions were utilized, and which culminated in sentences of death upon four young Negro men in the State of Florida, failed to afford the safeguard of that due process of law guaranteed by the fourteenth amendment.<sup>2</sup>

<sup>1</sup>—U. S. —.

<sup>2</sup>Petitioners Williamson, Woodward, and Davis pleaded guilty of murder and Petitioner Chambers was found guilty by a jury; all were sentenced to death, and the Supreme Court of Florida affirmed (111 Fla. 707, 151 So. 499). Upon the allegation that, unknown to the trial judge, the confessions on which the judgments and sentences of death were based were not voluntary and had been obtained by coercion and duress, the State supreme court granted leave to present a petition for writ of error coram nobis to the Broward County Circuit Court (111 Fla. 786, 152 So. 437).

The circuit court denied the petition without trial of the issues raised by it and the State supreme court reversed and ordered the issues submitted to a jury (117 Fla. 642, 158 So. 153).

First. The State of Florida challenges our jurisdiction to look behind the judgments below claiming that the issues of fact upon which petitioners base their claim that due process was denied them have been finally determined because passed upon by a jury. However, use by a State of an improperly obtained confession may constitute a denial of due process of law as guaranteed in the fourteenth amendment.<sup>3</sup>

Since petitioners have seasonably asserted the right under the Federal Constitution to have their guilt or innocence of a capital crime determined without reliance upon confessions obtained by means prescribed by the due process clause of the fourteenth amendment, we must determine independently whether petitioners' confessions were so obtained, by review of the facts upon which that issue necessarily turns.<sup>4</sup>

Second. The record shows:

About 9 o'clock on the night of Saturday, May 13, 1933, Robert Darcy, an elderly white man, was robbed and murdered in Pompano, Fla., a small town in Broward County, about 12 miles from Fort Lauderdale, the county seat. The opinion of the Supreme Court of Florida, affirming petitioners' conviction for this crime, stated that "it was one of those crimes that induced an enraged community."<sup>5</sup>

And, as the dissenting judge pointed out, "the murder and robbery of the elderly Mr. Darcy was a most dastardly and atrocious crime. It naturally aroused great and well-deserved indignation."<sup>6</sup>

Between 9:30 and 10 o'clock after the murder, petitioner Charles Davis was arrested, and within the next 24 hours from 25 to 40 Negroes living in the community, including petitioners Williamson, Chambers, and Woodward, were arrested without warrants and confined in the Broward County jail at Fort Lauderdale.

On the night of the crime attempts to trail the murderers by bloodhounds brought J. T. Williams, a convict guard, into the proceedings. From then until confessions were obtained and petitioners were sentenced, he took a prominent part.

About 11 p. m. on the following Monday, May 15, the sheriff and Williams took several of the imprisoned Negroes, including Williamson and Chambers, to the Dade County jail at Miami.

The sheriff testified that they were taken there because he felt a possibility of mob violence and "wanted to give protection to every prisoner \* \* \* in jail."

Evidence of petitioners was that on the way to Miami a motorcycle patrolman drew up to the car in which the men were riding, and the sheriff "told the cop that he had some Negroes that he was taking down to Miami to escape a mob."

This statement was not denied by the sheriff in his testimony, and Williams did not testify at all; Williams apparently has now disappeared.

Upon order of Williams, petitioner Williamson was kept in the death cell of the Dade County jail. The prisoners thus spirited to Miami were returned to the Fort Lauderdale jail the next day, Tuesday.

It is clear from the evidence of both the State and petitioners that from Sunday, May 14, to Saturday, May 20, the 30 to 40 Negro suspects were subjected to questioning and cross-questioning (with the exception that several of the suspects were in Dade County jail over 1 night).

From the afternoon of Saturday, May 20, until sunrise of the 21st, petitioners and possibly one or two others underwent persistent and repeated questioning. The Supreme Court of Florida said the questioning "was in progress several days and all night before the confessions were secured," and referred to the last night as an "all-night vigil."

The sheriff who supervised the procedure of continued interrogation testified that he questioned the prisoners "in the daytime all the week," but did not question them during any night before the all-night vigil of Saturday, May 20, because after having "questioned them all day (he) was tired." Other evidence of the State was "that the officers of Broward County were in that jail almost continually during the whole week questioning these boys and other boys in connection with this" case.

The process of repeated questioning took place in the jailer's quarters on the fourth floor of the jail. During the week following

Upon a verdict adverse to petitioners, the circuit court reaffirmed the original judgments and sentences.

Again the State supreme court reversed, holding that the issue of force, fear of personal violence, and duress, had been properly submitted to the jury, but the issue raised by the assignment of error alleging that the confessions and pleas "were not in fact freely and voluntarily made" had not been clearly submitted to the jury (123 Fla. 734, 737, 167 So. 697).

A change of venue to Palm Beach County was granted, a jury again found against petitioners, and the Broward Circuit Court once more reaffirmed the judgments and sentences of death.

The Supreme Court of Florida, one judge dissenting, affirmed (— Fla. —, — So. —).

While the petition thus seeks review of the judgments and sentences of death rendered in the Broward Circuit Court and reaffirmed in the Palm Beach Circuit Court, the evidence before us consists solely of the transcript of proceedings (on writ of error coram nobis) in Palm Beach County Court, wherein the circumstances surrounding the obtaining of petitioners' alleged confessions were passed on by a jury.

<sup>3</sup> *Brown v. Mississippi* (297 U. S. 278).

<sup>4</sup> *Pierre v. Louisiana* (306 U. S. 354, 358); *Norris v. Alabama*, (294 U. S. 587, 590).

<sup>5</sup> — Fla. —, —

<sup>6</sup> Id., —.

their arrests and until their confessions were finally acceptable to the State's attorney in the early dawn of Sunday, May 21, petitioners and their fellow prisoners were led one at a time from their cells to the questioning room, quizzed, and returned to their cells to await another turn.

So far as appears, the prisoners at no time during the week were permitted to see or confer with counsel or a single friend or relative.

When carried singly from his cell and subjected to questioning, each found himself, a single prisoner, surrounded in a fourth-floor jail room by 4 to 10 men—the county sheriff, his deputies, a convict guard, and other white officers and citizens of the community.

The testimony is in conflict as to whether all four petitioners were continually threatened and physically mistreated until they finally, in hopeless desperation and fear of their lives, agreed to confess on Sunday morning just after daylight.

Be that as it may, it is certain that by Saturday, May 20, 5 days of continued questioning had elicited no confession. Admittedly a concentration of effort—directed against a small number of prisoners, including petitioners—on the part of the questioners, principally the sheriff and Williams, the convict guard, began about 3:30 that Saturday afternoon.

From that hour on, with only short intervals for food and rest for the questioners, "they all stayed up all night."

"They bring one of them at a time backwards and forwards—until they confessed."

And Williams was present and participating that night, during the whole of which the jail cook served coffee and sandwiches to the men who "grilled" the prisoners.

Sometime in the early hours of Sunday, the 21st, probably about 2:30 a. m., Woodward apparently "broke"—as one of the State's witnesses put it—after a 15- or 20-minute period of questioning by Williams, the sheriff, and the constable, "one right after the other."

The State's attorney was awakened at his home and called to the jail. He came, but was dissatisfied with the confession of Woodward, which he took down in writing at that time, and said something like "tear this paper up; that isn't what I want; when you get something worth while call me."

A constable of the community, testifying about this particular incident, said in part:

"Q. Were you there when Mr. Maire [State's attorney] talked to Walter Woodward the first time he came over there?—A. Yes, sir.

"Q. Take his confession down in writing?—A. Yes.

"Q. If he made a confession, why did you all keep on questioning him about it? As a matter of fact, what he said that time wasn't what you wanted him to say, was it?—A. It wasn't what he said the last time.

"Q. It wasn't what you wanted him to say, was it?—A. We didn't think it was all correct.

"Q. What part of it did you think wasn't correct? Would you say what he told you there at that time was freely and voluntarily made?—A. Yes, sir.

"Q. What he freely and voluntarily told you in the way of a confession at that time, it wasn't what you wanted?—A. It didn't make up like it should.

"Q. What matter didn't make up?—A. There was some things he told us that couldn't possibly be true.

"Q. What did Mr. Maire say about it that time; did you hear Mr. Maire say at this time, 'Tear this paper up; that isn't what I want; when you get something worth while, call me,' or words to that effect?—A. Something similar to that.

"Q. That did happen that night?—A. Yes, sir.

"Q. That was in the presence of Walter Woodward?—A. Yes, sir."

And petitioner Woodward testified on this subject as follows:

"A. I was taken out several times on the night of the 20th.

\* \* \* So I still denied it. \* \* \*

"A. He said I had told lies and kept him sitting up all the week, and he was tired, and if I didn't come across I would never see the sun rise.

"A. \* \* \* then I was taken back to the private cell \* \* \* and shortly after that they come back, shortly after that, 20 or 25 minutes, and bring me out. \* \* \* I [told Williams] if he would send for the State attorney he could take down what I said; I said, 'Send for him and I will tell you what I know.' So he sent for Mr. Maire sometime during Saturday night, must have been around 1 or 2 o'clock in the night, it was after midnight, and so he sent for Mr. Maire; I didn't know Mr. Maire then, but I know his now by his face.

"A. Well, he come in and said, 'This boy got something to tell me?' and Captain Williams says, 'Yes; he is ready to tell you.'

"\* \* \* Mr. Maire had a pen and a book to take down what I told him, which he said had to be on the typewriter, but I didn't see any typewriter; I saw him with a pen and book, so whether it was shorthand or regular writing I don't know, but he took it down with pen. After I told him my story, he said it was no good, and he tore it up.

"Q. What was it Mr. Maire said?—A. He told them it wasn't no good; when they got something out of me he would be back. It was late; he had to go back and go to bed.

"A. \* \* \* I wasn't in the cell long before they come back.

g

This same State's attorney conducted the State's case in the circuit court below and also made himself a witness, but did not testify as to why Woodward's first alleged confession was unsatisfactory to him. The sheriff did, however:

"A. No; it wasn't false; part of it was true and part of it wasn't; Mr. Maire (the State's attorney) said there wasn't enough. It wasn't clear enough.

"Q. Was that voluntarily made at that time?—A. Yes, sir.

"Q. It was voluntarily made that time?—A. Yes, sir.

"Q. You didn't consider it sufficient?—A. Mr. Maire.

"Q. Mr. Maire told you that it wasn't sufficient, so you kept on questioning him until the time you got him to make a free and voluntary confession of other matters that he hadn't included in the first?—A. No, sir; we questioned him there and we caught him in lies.

"Q. Caught all of them telling lies?—A. Caught everyone of them lying to us that night; yes, sir.

"Q. Did you tell them they were lying?—A. Yes, sir.

"Q. Just how would you tell them that?—A. Just like I am talking to you.

"Q. You said, 'Jack, you told me a lie'?—A. Yes, sir."

After 1 week's constant denial of all guilt petitioners "broke." Just before sunrise the State officials got something "worth while" from petitioners which the State's attorney would "want"; again he was called; he came; in the presence of those who had carried on and witnessed the all-night questioning, he caused his questions and petitioners' answers to be stenographically reported.

These are the confessions utilized by the State to obtain the judgments upon which petitioners were sentenced to death. No formal charges had been brought before the confessions. Two days thereafter petitioners were indicted, were arraigned, and Williamson and Woodward pleaded guilty; Chambers and Davis pleaded not guilty.

Later the sheriff, accompanied by Williams, informed an attorney who presumably had been appointed to defend Davis that Davis wanted his plea of not guilty withdrawn. This was done and Davis then pleaded guilty. When Chambers was tried his conviction rested upon his confession and testimony of the other three confessors.

The convict guard and the sheriff "were in the courtroom sitting down in a seat"; and from arrest until sentence to death petitioners were never, either in jail or in court, wholly removed from the constant observation, influence, custody, and control of those whose persistent pressure brought about the sunrise confessions.

Third. The scope and operation of the fourteenth amendment have been fruitful sources of controversy in our constitutional history.<sup>8</sup>

However, in view of its historical setting and the wrongs which called it into being, the due-process provision of the fourteenth amendment, just as that in the fifth, has led few to doubt that it was intended to guarantee procedural standards adequate and appropriate, then and thereafter.<sup>9</sup>

To protect, at all times, people charged with or suspected of crime by those holding positions of power and authority. Tyrannical governments had immemorially utilized dictatorial criminal procedure and punishment to make scapegoats of the weak or of helpless political, religious, or racial minorities, and those who differed, who would not conform, and who resisted tyranny.

The instruments of such governments were in the main two. Conduct, innocent when engaged in, was subsequently made by fiat criminally punishable without legislation; and a liberty-loving people won the principle that criminal punishments could not be inflicted save for that which proper legislative action had already by "the law of the land" forbidden when done. But even more was needed.

"Q. How long was that from the time you was brought into that room until Mr. Maire left there?—A. Something like 2 or 3 hours, I guess, because it was around sunrise when I went into the room.

"Q. Had you slept any that night, Walter?—A. No, sir. I was walked all night; not continually, but I didn't have no time to sleep except in short spaces of the night.

"Q. When Mr. Maire got there it was after daylight?—A. Yes, sir.

"Q. Why did you say to them that morning anything after you were brought into the room? A. Because I was scared."

<sup>8</sup> There have been long-continued and constantly recurring differences of opinion as to whether general legislative acts regulating the use of property could be invalidated as violating the due-process clause of the fourteenth amendment. *Munn v. Illinois* (94 U. S. 113, 125), dissent 136-154; *Chicago, Milwaukee & St. Paul Railroad Company v. Minnesota* (134 U. S. 418), dissent 461-466. And there has been a current of opinion—which this court has declined to adopt in many previous cases—that the fourteenth amendment was intended to make secure against State invasion all the rights, privileges, and immunities protected from Federal violation by the Bill of Rights (amendments 1 to 8). See, e. g., *Twining v. New Jersey* (211 U. S. 78, 98-99), Mr. Justice Harlan dissenting, 114; *Maxwell v. Dow* (176 U. S. 581), dissent, 606; *O'Neill v. Vermont* (144 U. S. 323), dissent, 361; *Palko v. Conn* (302 U. S. 319, 325, 326); *Hague v. C. I. O.* (307 U. S. 496).

<sup>9</sup> Cf. *Weems v. United States* (217 U. S. 349, 372, 373), and dissent setting out (p. 396) argument of Patrick Henry, 3 Elliot Debates, 447.

From the popular hatred and abhorrence of illegal confinement, torture, and extortion of confessions of violations of "the law of the land" evolved the fundamental idea that no man's life, liberty, or property could be forfeited as criminal punishment for violation of that law until there had been a charge fairly made and fairly tried in a public tribunal free of prejudice, passion, excitement, and tyrannical power.

Thus, as assurance against ancient evils, our country, in order to preserve "the blessings of liberty," wrote into its basic law the requirement, among others, that the forfeiture of the lives, liberties, or property of people accused of crime can only follow if procedural safeguards of due process have been obeyed.<sup>10</sup>

The determination to preserve an accused's right to procedural due process sprang in large part from knowledge of the historical truth that the rights and liberties of people accused of crime could not be safely entrusted to secret inquisitorial processes.

The testimony of centuries, in governments of varying kinds over populations of different races and beliefs, stood as proof that physical and mental torture and coercion had brought about the tragically unjust sacrifices of some who were the noblest and most useful of their generations.

The rack, the thumbscrew, the wheel, solitary confinement, protracted questioning and cross-questioning, and other ingenious forms of entrapment of the helpless or unpopular had left their wake of mutilated bodies and shattered minds along the way to the cross, the guillotine, the stake, and the hangman's noose.

And they who have suffered most from secret and dictatorial proceedings have almost always been the poor, the ignorant, the numerically weak, the friendless, and the powerless.<sup>11</sup>

This requirement of conforming to fundamental standards of procedure in criminal trials was made operative against the States by the fourteenth amendment. Where one of several accused had limped into the trial court as a result of admitted physical mistreatment inflicted to obtain confessions upon which a jury had returned a verdict of guilty of murder, this court recently declared, *Brown v. Mississippi*, that "it would be difficult to conceive of methods more revolting to the sense of justice than those taken to procure the confessions of these petitioners, and the use of the confessions thus obtained as the basis for conviction and sentence was a clear denial of due process."<sup>12</sup>

Here the record develops a sharp conflict upon the issue of physical violence and mistreatment, but shows, without conflict, the dragged methods of arrest on suspicion without warrant, and the protracted questioning and cross-questioning of these ignorant young colored tenant farmers by State officers and other white citizens, in a fourth-floor jail room, where as prisoners they were without friends, advisers, or counselors, and under circumstances calculated to break the strongest nerves and the stoutest resistance.

Just as our decision in *Brown v. Mississippi* was based upon the fact that the confessions were the result of compulsion, so in the present case the admitted practices were such as to justify the statement that "the undisputed facts showed that compulsion was applied."<sup>13</sup>

<sup>10</sup> As adopted, the Constitution provided, "The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it." (Art. I, sec. 9). "No bill of attainder or ex post facto law shall be passed" (id.). "No State shall . . . pass any bill of attainder, or ex post facto law . . ." (id., sec. 10), and "No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court" (art. III, sec. 3). The Bill of Rights (amendments 1 to 8). Cf. *Magna Carta*, 1297 (25 Edw. 1); The Petition of Rights, 1627 (3 Car. 1, ch. 1); the Habeas Corpus Act, 1640 (16 Car. 1, ch. 10), an act for (the regulating) the private counsel and for taking away the court, commonly called the Star Chamber; Stat. (1661), 13 Car. 2, Stat. 1, ch. 1 (treason); The Bill of Rights (1688) (1 Will. and Mar. Sess. 2, ch. 2); all collected in "Halsbury's Stat. of Eng." (1929), vol. 3.

<sup>11</sup> "In all third-degree cases, it is remarkable to note that the confessions were taken from men of humble station in life and of a comparatively low degree of intelligence, and most of them apparently too poor to employ counsel and too friendless to have anyone advise them of their rights." Filamor, Third Degree Confession, 13 Bombay, L. J., 339, 346. "That the third degree is especially used against the poor and uninfuential is asserted by several writers, and confirmed by official informants and judicial decisions," Fourth National Commission on Law Observance and Enforcement, Reports (1931), ch. 3, p. 159. Cf. *Morrison v. Calif.* (291 U. S. 82, 95).

<sup>12</sup> 297 U. S. 278, 286.

<sup>13</sup> See *Ziang Sung Wan v. United States* (266 U. S. 1, 16). The dissenting judge below noted (— Fla. —) that in a prior appeal of this same case the Supreme Court of Florida had said: "Even if the jury totally disbelieved the testimony of the petitioners, the testimony of Sheriff Walter Clark and one or two of the other witnesses introduced by the State was sufficient to show that these confessions were only made after such constantly repeated and persistent questioning and cross-questioning on the part of the officers and one J. T. Williams, a convict guard, at frequent intervals . . . (while) they were in jail, over a period of about a week, and culminating in an all-night questioning of the petitioners separately in succession throughout practically all of Saturday night, until confessions had been obtained from all of them, when they were all brought into a room in the jailer's quarters at 6:30 on Sunday morning and made their

For 5 days petitioners were subjected to interrogation culminating in Saturday's (May 20) all-night examination. Over a period of 5 days they steadily refused to confess and disclaimed any guilt.

The very circumstances surrounding their confinement and their questioning without any formal charges having been brought, were such as to fill petitioners with terror and frightful misgivings.<sup>14</sup>

Some were practical strangers in the community; three were arrested in a one-room farm tenant house which was their home; the haunting fear of mob violence was around them in an atmosphere charged with excitement and public indignation.

From virtually the moment of their arrest until their eventual confessions, they never knew just when any one would be called back to the fourth floor room, and there, surrounded by his accusers and others interrogated by men who held their very lives—so far as these ignorant petitioners could know—in the balance.

The rejection of Petitioner Woodward's first "confession," given in the early hours of Sunday morning, because it was found wanting, demonstrates the relentless tenacity which "broke" petitioners' will and rendered them helpless to resist their accusers further. To permit human lives to be forfeited upon confessions thus obtained would make of the constitutional requirement of due process of law a meaningless symbol.

We are not impressed by the argument that law enforcement methods such as those under review are necessary to uphold our laws.<sup>15</sup>

The Constitution proscribes such lawless means irrespective of the end. And this argument flouts the basic principle that all people must stand on an equality before the bar of justice in every American court.

Today, as in ages past, we are not without tragic proof that the exalted power of some governments to punish manufactured crime dictatorially is the handmaid of tyranny. Under our constitutional system, courts stand against any winds that blow as havens of refuge for those who might otherwise suffer because they are helpless, weak, outnumbered, or because they are nonconforming victims of prejudice and public excitement. Due process of law, preserved for all by our Constitution, commands that no such practice as that disclosed by this record shall send any accused to his death.

No higher duty, no more solemn responsibility, rests upon this court than of translating into living law and maintaining this constitutional shield deliberately planned and inscribed for the benefit of every human being subject to our Constitution of whatever race, creed, or persuasion.

The Supreme Court of Florida was in error and its judgment is reversed.

confessions before the State attorney, the officers, and J. T. Williams, and several disinterested outsiders, the confessions, in the form of questions and answers, being taken down by the court reporter and then typewritten.

"Under the principles laid down in *Nickles v. State* (90 Fla. 659, 106 So. 497), *Davis v. State* (90 Fla. 317, 105 So. 843), *Deiterie v. State* (98 Fla. 739, 124 So. 47), *Mathieu v. State* (101 Fla. 94, 133 So. 550), these confessions were not legally obtained."

<sup>14</sup> Cf. The statement of the Supreme Court of Arkansas (*Bell v. State*, 180 Ark. 79, 89): "This Negro boy was taken on the day after the discovery of the homicide while he was at his usual work and placed in jail. He had heard them whipping Swain in the jail; he was taken from the jail to the penitentiary at Little Rock and turned over to the warden, Captain Todhunter, who was requested by the sheriff to question him. This Todhunter proceeded to do day after day, an hour at a time. There Bell was an ignorant country boy surrounded by all of those things that strike terror to the Negro heart; \* \* \*." (See Munsterberg, on the witness stand (1927), 137 et seq.)

<sup>15</sup> The police practices here examined are to some degree widespread throughout our country. See report of Commission on Lawless Enforcement of the Law (American Bar Association), 1 Amer. Journ. of Pol. Sci., 575; note 43 H. L. R. 617; IV, National Commission on Law Observance and Enforcement, supra, ch. 2, sec. 4. Yet our national record for crime detection and criminal law enforcement compares poorly with that of Great Britain, where secret interrogation of an accused or suspect is not tolerated. (See report of Commission on Lawless Enforcement of the Law, supra, 588; 43 H. L. R., supra, 618.)

It has even been suggested that the use of the "third degree" has lowered the esteem in which administration of justice is had by the public and has engendered an attitude of hostility to and unwillingness to cooperate with the police on the part of many people. (See IV, National Commission, etc., supra, p. 190.) And, after scholarly investigation, the conclusion has been reached "that such methods, aside from their brutality, tend in the long run to defeat their own purpose; they encourage inefficiency on the part of police." (Glueck, Crime and Justice (1936), 76. See IV National Commission, etc., supra, 5; cf. v. Wigmore, Evidence (2d ed.), sec. 2251.)

The requirement that an accused be brought promptly before a magistrate has been sought by some as a solution to the problem of fostering law enforcement without sacrificing the liberties and procedural rights of the individual. (2 Wigmore, supra, sec. 851; IV, National Commission, etc., supra, 5.)

## Trade Agreements and the Northwest, As Stated by Dr. Coulter

### EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

LETTER FROM JOHN LEE COULTER

Mr. CASE of South Dakota. Mr. Speaker, in the opinion of many Members and others, the testimony given by Dr. John Lee Coulter before the Ways and Means Committee on the reciprocal-trade agreements was outstanding for its clarity, its mastery of the subject, and its importance to northwestern agriculture.

I have wanted to get at this question from the standpoint of facts and not prejudices or partisanship. The problem of farm prices and national prosperity is too important to approach in any other way. Dr. Coulter's testimony was so factual and his reputation as an economist so well recognized that I asked him for a summary of it, which he has given, which I here offer for the RECORD, under permission given by the House:

WASHINGTON, D. C., February 7, 1940.

Mr. FRANCIS CASE,

New House Office Building, Washington, D. C.

DEAR CONGRESSMAN CASE: I am glad to pass on to you an analysis made by myself and staff, regarding some of the aspects of the present Reciprocal Trade Agreements Program, as it affects the Northwest States.

#### AGRICULTURAL EXPORTS, 1934 AND 1939

Preliminary figures from the Department of Commerce indicate that agricultural exports from the United States in 1939 totaled \$655,583,000, a figure even lower than that of the very low year, 1932, or those of any intervening year. This is in spite of the fact that our price levels, in terms of our present depreciated currency, have increased materially on most farm products since 1932, and in spite of the fact that export subsidies helped swell 1939 shipments from our shores.

United States exports of farm products in 1934, the year the Trade Agreements Act was launched, were \$733,400,000, so that exports have fallen off during the trade-agreements period.

This must come as a shock to many of our Northwest growers of wheat, flax, sugar beets, livestock, and wool, who expected that the trade agreements would help to restore our exports and that a world at war would usher in an abnormal demand for our farm products, and have a strengthening effect upon our price structure.

#### AGRICULTURAL IMPORTS, SAME YEARS

On the other hand, agricultural imports during 1939 were \$450,000,000 greater than in 1932, and about \$300,000,000 more than in 1934. Much of the increases have come about in those products which the American farmer is fully equipped to produce, such as cattle, beef, and other meats, cheese, and other dairy products, sugar, wool, hides, vegetables, oils, etc.

The Department of Agriculture, through acreage restrictions, export subsidies, and surplus commodity purchases, assures us they are attempting to restore price levels on farm commodities. They even make loans on corn, wheat, and cotton, based on 1909 to 1914 prices, an assumed parity, irrespective of present cash market quotations.

This would seem an honest (if not the best) approach, and while the propriety of using Federal funds for such purposes might be open to question, it would appear to be a genuine attempt to aid agriculture. But in the midst of this demonstration, along comes the State Department and reduces tariffs on many farm commodities, and at a time when the domestic prices on those products are far below parity. Hogs, poultry, eggs, barley, oats, rye, hay, potatoes, and other crops were as much as 62 percent below parity (as was the case with rye) when the tariffs on these items were reduced through the medium of trade agreements.

Secretary Wallace characterizes his program as "supplementary to that of the State Department," but I cannot see anything but a fatal conflict in these two approaches.

#### CERTAIN NEGOTIATIONS INTERRUPTED

It is true that the proposed trade agreements with Argentina and Uruguay were not successfully negotiated. Had they been, we would have witnessed reductions in our duties on flax, wool, beef,

casein, etc. Congress is now being urged to extend the authorization for these trade treaties for another 3 years, because of a "continuing emergency."

It is my belief that no industrial nations, other than some of those now at war, remain with whom we might negotiate treaties, hoping to exchange our farm products for their manufactured articles, and thus providing an outlet for our surpluses. About the only nations to whom we might look for trade-agreement relations are those whose principal exports are agricultural commodities, such as Latin America, Australia, New Zealand, etc.

I feel quite confident that the renewal of this authorization which expires June 12, 1940, will make possible a resumption of our negotiations with numerous South American nations, such as Argentina and Uruguay. This would be almost a death blow to our northwest agriculture.

The United States is the greatest market in the world, doing almost half of the world's total business. Proponents of the trade-agreements program argue that so long as we can retain the great bulk of our market for domestic producers, we should be willing to surrender a small slice of this market to foreign nations, who "must sell to us, if, in turn, they are to buy." There are two serious fallacies to this reasoning:

#### LOW BIDDER SETS THE MARKET

1. Many of our domestic markets are so sensitive that the arrival of one shipload of farm produce at one of the Nation's ports can easily force down the price. In fact, the National Cooperative Milk Producers' Association, consisting of 350,000 members of co-operative-owned and operated plants in 41 States, frequently finds that by purchasing 100 tubs of butter in the New York market of a morning, they can strengthen the market for that day. The reverse is bound to obtain.

2. When other nations sell to us, they do not necessarily purchase our goods in return. Their dollar balances with us are never fully utilized, and through the medium of bilateral agreements among themselves, war embargoes, empire preferences, quotas and barter, they can almost entirely eliminate higher priced American produce from their purchases.

George Peek, as the first president of the Export-Import Bank, shows how this can work out. He shows how, during the final 7 months of 1934, following our original tariff cut and the subsequent trade agreement with Cuba, during which we reduced our tariffs on numerous items, including sugar, that country was enabled to ship to our shores an increasing volume of goods. Through minor concessions granted us in return, we sold Cuba a total of \$45,323,374 in goods during the remainder of that year. While this might appear to be a fancy bill of goods, careful bookkeeping, including the item for reduced revenues from duties, he shows that it cost the United States \$47,000,000 in cold cash to do \$45,000,000 worth of business.

Incidentally, after our agreement with Cuba, during which our two countries were to have entered upon a new high plane of business transactions, Cuba was charging us 1.97 cents per pound, f. o. b. Cuba, whereas she was selling the same sugar to the world at large for 0.80 cent simultaneously.

#### EFFECT OF FOREIGN WAGES

The farmer of the Northwest, with his high taxes, his high costs of transporting his goods to market, increasing labor costs, can never hope to compete with foreign farm labor, which is paid as little as 10 percent of the prevailing United States wage. We have set up strict immigration quotas to protect American labor and American farmers, but when we lower our protection on United States products, we import the labor of foreign workmen. This is more ruinous than to permit them to enter our borders for at least they would then remain as consumers, if they emigrated here.

Prior to the last World War import duties for revenue practically maintained the Federal Government. Now, through increased Federal expenditures, and through an average reduction of 38 percent on more than 1,100 items through the trade-agreement program, this shrank to 6 percent of the Federal income in 1938.

#### WHEN SOLDIERS RETURN TO FARMS

Secretary Hull told the Ways and Means Committee that there are now 25,000,000 men under arms, and that possibly as many as sixty to one hundred millions are engaged either in warfare or supplying needs of the warring forces. He maintains that the United States needs a continuance of the trade-treaty authorization in order for America to take the lead in a restoration of normalcy when present warfare ceases.

Personally, I fear the day when sixty to one hundred million men, of even 25,000,000 men, will be returned to their normal peacetime pursuits, and, when rather than starve, will be forced to work for a pittance in the production of farm and industrial products. With our tariff walls now lower than in 1922, our markets will be glutted with foreign merchandise which will completely demoralize our entire domestic economy. The post World War depression will be repeated, in fact, surpassed.

#### DUTIES CUT ON WOOL PRODUCTS

The State Department tried to pacify the wool growers by pointing out that they had not reduced the tariff on wool. But they did lower duties on wool fabrics, rags, and products. And for the first 11 months of 1939, imports of woolen and worsted fabrics alone increased 110 percent over a like period in 1938, accounting for a total of \$8,093,044. It is estimated that this displaces \$15,000,000 in United States manufactured wool products, involving over 9,000,000 man-hours. How can it possibly be said that this does not harm the wool growers of this country?

#### DISPLACEMENT OF DOMESTIC ACRES

The Raw Materials National Council estimates that imported agricultural products in 1939 displaced \$1,954,974,927 of American producers' dollars, and displaced a total of 43,982,410 acres of United States farm produce. It is generally conceded that our United States agriculture now has about 35,000,000 acres devoted to the production of surplus farm crops, destined for export. It would appear that our imports might easily account for this distressed acreage. Rather should some plan like that of Wheeler McMillan of the Farm Journal, which is being espoused by Governor Stassen, of Minnesota, and others, be invoked, whereby instead of parity loans, benefit payments, etc., the United States would make an inducement payment for the production of each import basis.

Imports of numerous farm products, duties of which were reduced under the trade-agreement program, show an increase of more than 500 percent between 1934 and 1938. This was true with such items as cattle (700 pounds or more each), alfalfa, alsike and sweet-clover, timothy, bluegrass seeds, red-clover seed, live poultry except baby chicks, various leather and cotton products, etc.

Acreage allotments in our Northwest States were reduced under the Agricultural Adjustment Administration program for 1939 as follows: South Dakota, 1,015,000 acres; North Dakota, 2,862,000 acres; Minnesota, 489,000 acres; and Montana, 1,177,000 acres. Is this consistent with our present import pattern?

Our Northwest States grow hard spring wheat and durum. Frequently the United States is on an import basis on these grains, not raising enough to satisfy national requirements. And yet the spring-wheat section has been unable to secure classification of wheats under the A. A. as is done with tobacco and peanuts, for instance. Meanwhile we were forced to curtail our wheat acreage by about 26 percent last year.

Preliminary figures for 1939 show decided drop in exports of numerous crops which the Northwest produces. Among these are barley, which dropped from 18,130,000 bushels in 1938 to 5,410,000 bushels last year. Corn declined from 147,505,000 to 32,117,000, and oats from 8,517,000 to the astonishingly low figure of 226,000 bushels. Wheat sank from 86,902,000 bushels in 1938 to 63,214,000 last year.

The Trade Agreements Act is, in all probability, unconstitutional, but it has been drawn in such form as to prevent a test of its constitutionality in the courts. The Constitution provides that treaties must be ratified by the Senate and that all revenue acts must originate in the House of Representatives; trade agreements partake of both, and yet are now negotiated by the State Department, with Congress given no power to review, extend, or terminate.

#### IMPORTS OF LIVESTOCK

Imports of live cattle and beef amounted to almost 10 percent of our inspected slaughter last year. Our hog surplus has disappeared with the growth in population, and exports have fallen to a nominal figure. Imports of raw wool during the past 5 years have been almost one-third of our total supplies. Much of our cheese is imported. We must gradually divert much land in the northern Great Plains area from wheat, which we cannot sell abroad, and put it back into grass for livestock which we might sell at home. But if tariffs on livestock, and continued heavy imports, should perpetuate our present unsettled conditions, we might soon find again that we were still unable to adapt our northwest agriculture to national needs. Of course we could grow more flaxseed and sugar under favorable circumstances, thereby producing for native consumption. This would seem to be far more American than to make our farmers compete with the world for our own domestic market.

#### UNCLE SAM, GOOD FELLOW

One hundred years ago only 5 percent of our imports in the United States were on the free list. Ninety years ago there were 15 percent; 65 years ago, 25 percent; and in 1900, 50 percent. Now, between 60 and 70 percent of all our imports are on the free list. This is by far the greatest free market in the world for all export nations. And to make good fellows of ourselves, Uncle Sam has reduced tariffs on 42 percent of all our dutiable list through the medium of these trade agreements, effecting an average reduction of 38 percent in the tariff which obtained in 1934. Through the minimum wage and hour law, social-security legislation, and through mounting taxes, we are raising our own production costs on every item produced within the United States, and simultaneously removing sorely needed protection for our producers, both farmer and laborer. It doesn't make sense.

A careful analysis of the United States tariff structure, as compared with those of other principal nations, reveals the fact that foreign powers employ largely specific duties, such as so much a bushel, or pound, or ton. This duty applies irrespective of price fluctuation, and affords increased protection proportionately when domestic prices sink. Of the entire list of 4,000 items on the dutiable list in the United States, 52 percent are based on ad valorem values. Here again we provide inadequate protection to our producers.

Advocates of a continuation of the trade-agreement program overlook a number of very pertinent factors. They point to the satisfactory level which our exports of automobiles maintain. Presumably, a million dollars' worth of automobiles exported would balance a million dollars' worth of imports of some farm crop. But this is not true. Say, for instance, that the United States imports \$1,000,000 worth of woolen goods. There would be a theoretical balance of trade on our side of the ledger. But that \$1,000,000 represents the foreign valuation of imports, and the goods would carry on a 40 to 70 percent duty. So their actual value in this country, upon arrival, is \$1,400,000 to \$1,700,000. Obviously, the domestic

product, with which they compete, is worth more than this figure, or the foreign product would not move into consumption.

So the imports actually displace perhaps \$1,500,000 to \$2,000,000 worth of our products. And they take the place of \$1,000,000 worth of automobiles, manufactured by one of the industries in the United States, which is so highly developed that it can successfully vie with all competition in the world markets, regardless of whether we make exchange purchases of foreign goods or not.

YES; WE HAVE NO BANANAS

Those who uphold the present trade-agreement program, which is obviously just a ruse under which our entire tariff structure is being skillfully and rapidly riddled, point to many imports on our free list, such as bananas, and announce that these items are not in any sense competitive, since we do not grow bananas. True, we do not grow bananas, or numerous other fruits. But if the housewife goes down to buy fruit and is unable to buy bananas, or other foreign-grown fruit, she obviously would buy domestically grown fruit. There is no single food item which is not somehow competitive. If we are to import these items, we should insist upon exports of an equal value of our surpluses, without sacrificing our other farm products.

I could go on indefinitely, Congressman CASE, reciting innumerable other weaknesses in this present program. I fear that, unless corrected, this trend is heading us toward the most dangerous collapse in trade which our Nation has ever experienced in its history. That is the reason we must be on the alert. We must examine all the evidence carefully, rather than just taking a casual look at the picture.

#### ORGANIZATIONS INTERESTED

Numerous northwest organizations in Minnesota, the Dakotas, and Montana have joined in engaging me and my staff as consultant, during the present session of Congress, during which these trade agreements are being studied with a view to renewing them, or circumscribing the present autonomous procedure by the State Department. Rest assured, therefore, that my services are at the command of all Members of Congress from Northwest States mentioned.

Those groups which have joined in engaging me are:

South Dakota: Greater South Dakota Association, South Dakota Bankers Association, Chamber of Commerce of Watertown, Chamber of Commerce of Huron, Chamber of Commerce of Rapid City.

Minnesota: St. Paul Association of Commerce, Chamber of Commerce of Duluth, Chamber of Commerce of Moorhead, Flax Institute of the United States.

North Dakota: Greater North Dakota Association, North Dakota Motor Trades Association, Fargo-Moorhead Fuel Exchange, North Dakota Highway Contractors' Association, North Dakota Retail Hardware Association, North Dakota Bottlers' Association, Civic and Commerce Association of Valley City, Civic and Commerce Association of Harvey, Tri-State Farm Owners' Association, North Dakota Cooperative Wool Marketing Association, North Dakota Dairymen's Association, North Dakota Implement Dealers' Association, North Dakota Livestock Breeders Association.

Montana: Chamber of Commerce of Miles City, Chamber of Commerce of Glendive, Chamber of Commerce of Great Falls, Chamber of Commerce of Helena, Chamber of Commerce of Butte, Chamber of Commerce of Billings, Montanans, Inc., Southeastern Montana Counties Association.

Yours very truly,

JOHN LEE COULTER, *Consulting Economist.*

**We Are Coming, Father Abraham!**

#### EXTENSION OF REMARKS

OF

**HON. EDWARD H. REES**

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, February 13, 1940*

ADDRESS BY WILLIAM ALLEN WHITE, OF EMPORIA, KANS.

Mr. REES of Kansas. Mr. Speaker, having been given unanimous consent to extend my remarks in the RECORD, I include an address delivered by my friend and fellow townsman, the nationally known and respected editor and author, William Allen White, of Emporia, Kans. The address was delivered before the Abraham Lincoln Association, of Springfield, Ill., last evening:

It is one of the proofs of the genius of Abraham Lincoln that he turned a thousand sides to his fellows, each one reflecting some vital phase of human life. Today it may be well to think of Lincoln on Washington's birthday, just a few days before his inauguration. He was standing for the first time in Philadelphia, before Independence Hall. Amid those sacred precincts Lincoln's mind went back to the days when the Declaration of Independence was written. He thought of the long years of war followed by strife among the

Colonies. He thought of the jealousies and divergent opinions of the 13 embryonic commonwealths, and then obviously he remembered the Constitution, the American Constitution, the compromise of intercolonial interests, the harmonizer and pacifier of many conflicting desires. Standing there before Independence Hall, he said:

"I have often inquired of myself what great principle or idea it was that kept this confederacy so long together. It was not the mere matter of separation of the Colonies from the motherland but that sentiment in the Declaration which gave liberty, not alone to the people of this country but hope to all the world for future time."

We were united then by the spirit of liberty and it bound us together before we found the formula to make our liberty secure. Today, across those 80 years, we are facing something like the same tension that strained us 150 years ago. We shall answer today's riddle of the Sphinx only by cherishing the spirit of liberty, only by keeping in the paths of law. The love of liberty and the fundamental law that guarantees our liberties, the Declaration and the Constitution—these form the footing stones upon which is erected our national strength.

Nothing more aptly illustrates Lincoln's breadth of vision than this expression of his understanding that we have two great human documents as the bases of our Republic, that declaration of human rights, sometimes called the Declaration of Independence, and the Constitution of the United States. That day when Lincoln stood before Independence Hall, his mind must have been occupied by fundamentals—the day's constitutional problems, the rights of States, the rights of property under Federal and State jurisdiction, the newly challenged right of the Federal Government to maintain the Federal Union at any cost. These constitutional questions were crowding upon him with tragic insistence. Yet, even under the pressure and stress of those times, he knew that the Constitution could not survive if human rights were ignored—human rights fostering and guaranteeing the liberty and the dignity of men. This old balance between the Constitution, representing the basic structure of law and order, on the one hand, and on the other hand the declaration of human rights stemming back to the Declaration of Independence and written in the Bill of Rights amending the Constitution—this old balance has been threatened in every crisis in our history. When the Constitution was adopted, we dodged the issue of slavery. So as Lincoln faced his problems in 1861, that balance between our two charters was again threatened. He knew that the South had its legal right to property in slaves. He knew that the slaves also had their rights as human beings. He knew that under the Constitution as it was interpreted by the Supreme Court, the irrepressible conflict between those rights, the one legal, the other moral, might rend this country and wreck it forever.

At bottom, the struggle was economic. Slavery and the plantation system had thrived in the South. But slavery and the plantation system could not survive the sturdier individual agricultural pattern necessary to settle the great West and Northwest, the Louisiana Purchase. We were a rural Nation then. The interests of industrial New England and the middle States were minority interests, but they controlled a political majority. The vast economic waste that would come if we tried to populate the Missouri Valley, for instance, on the slave economy—quite apart from the moral issues involved—seemed to the powerfully entrenched North and to New England, tragically unnecessary and ultimately impossible.

Yet there was the Constitution upholding the right of property, defending the right of States. Also there, ever in Lincoln's heart, was the right of the Negro to his liberty and the right of the free worker of the North to his daily wage upon the scale higher than the living standard of the slave. Coming out of Independence Hall that day in '61, after paying that wise tribute to all the aspirations which are written into our great declaration, how baffled Lincoln must have been. This is one of the major tragedies of modern civilization that Lincoln was forced to solve his problems in the bitterness of war hatreds and war's essential injustices. That which might have been arbitrated without war in the decade of the sixties has left us problems that two generations have not solved. The Civil War established firmly the constitutional stability of the union of the States.

But the war left elements of disunion that have disturbed our whole Nation, elements of injustice that have mocked our ideals of human brotherhood, and have developed wrongs that still menace our national solidarity. I mean the political, social, educational, and economic injustices to the slave and his children and his children's children. These wrongs that Lincoln tried to redress in war are presenting new problems as grave as those that Lincoln had to meet.

How startling is the parallel of our crisis today: Two million slaves in 1860. Ten million idle men today. Ten million men who are dependent upon the whim of government for their food and shelter. These 10,000,000 men are chained to public work which they must take or starve, as the slaves were in bondage to their masters. The unemployed today find their political rights menaced by party machines. Their freedom is lariat to economic circumstances out of their control, no less terribly because they are cushioned by our national kindness, our love of mercy, our yearning for justice. The unemployed worker on made work has little free will as a man socially, as a man politically, as an economic individual. His initiative is gone. I feel that 10,000,000 jobless men in our land today present a problem no less menacing than was the problem of 2,000,000 slaves. For 10 long years that tragic situation has stood before us challenging our best thought and appealing to our deepest sympathies, calling for our highest

patriotism. The decade of the 1850's, with its slave politics and the decade of the 1930's with its problem of unemployment, present similar, almost parallel, issues in our history.

How curiously alike politically are these two tragic periods. Lincoln at Independence Hall, deeply moved in his sympathies by the Declaration of Independence and its aspiration for liberty, yet holding fast to the unswerving principles of our Constitution, saw life in his country as we must see it now. For our sympathies are shaken, as his were, by those in distress. We are moved by the tragedy of those for whom freedom is almost an empty word. We are stirred by the profound conviction that only under the Constitution, only under the banner of its evolutionary process shall we answer the terrible challenge to our national stability.

Here again we must turn to Lincoln with his many-sided wisdom. He was forced by war to make an arbitrary settlement of his problem and with all his kindness, all his courage, and all his deep desire to preserve the Union, he left the problem only half solved, for the slave was denied at least half his freedom. The renewed Union's guarantee of his political rights to the Negro was a hollow promise. The warrant for social equality could not be served. So it will be with us if we try to go too fast toward the solution of this problem of the unemployed. Haste will make waste. Yet these 10,000,000 needy idle men soon may coalesce socially and politically as now they are united in economic misery. It is as true today as when Lincoln said it, that this Nation cannot long survive half slave and half free. Patience is, of course, the first virtue of democracy. It may seem cruel at times, but in the end it is deeply wise and kind. Yet no one must go hungry; no one must be cold and homeless. That is our immediate job. The great masses of our population, from 65 to 75 percent, are prosperous. They are reasonably happy. They are blessed with all their social, political, and economic rights. But the others, maybe a third, we may hope only a fourth, standing in places of danger, restricted in their opportunities as American citizens, cannot be blamed if they cry to us, "Hurry; be up and doing." And remember this: When these idle workers get steady jobs that will make them middle-class consumers, then most of the ills of our social and economic body will be cured.

It's all very well to say that if we unchain business the problem of unemployment will be solved. Today in certain industries that are unchained, technical improvements have reduced, not increased the number of men employed, compared with that of 1929. In other industries production is at its peak; but fewer men are employed than were hired in those industries 10 years ago. Free enterprise will help a little but not much more than the dole and public works. We may have to try both at first. Planned economy requires omniscience. But, alas, democracy has only plain common sense. Maybe that is not enough. These unemployed are not looking for work because of the depression. They are looking for work because unemployment is the product of our enterprise, our business, our economic organization. If we put these idle men to work, we must go deeper than merely to swing open the gates of our factories, to release our frozen capital. There is much truth in the theory that made work and relief should be shifted in its administrative details more closely to the people, to the taxpayer. But when we shift it, we shall still face the same old injustice. We must not forget that individually every middle-class citizen who has enjoyed through the devastating decade of the thirties, his full privileges, economic and social, as an American citizen, has some individual duty to help in this crisis. He must help as an employer by keeping up his pay roll and finding business to justify it. He must help as a householder in considering how he spends his income. He should spend it so that it will have some relation to the idle men, his neighbors in his town and county. Most of us in the middle class spend our incomes without thought of our less-privileged neighbors and then when the Government does publicly what we should do privately, how easy it is to raise the cry of socialism to hide our personal individual neglect.

We, who are on the right side of the economic dead line, would do well to take Lincoln's attitude. It was an attitude of boundless sympathy stemming back to the Declaration of Independence and a righteous wisdom holding fast for the solution of this problem under our Constitution. Yet we cannot be too rigid in our constitutionalism nor too mushy in our sympathies if this economic riddle is solved. The mystifying enigma of unemployment, of seasonal unemployment, of regional unemployment, of technological unemployment, and of the unemployment problems that rise out of economic maladjustment—all these heartbreaking questions set up a menacing red light before our perpetuity as a free people. Other nations, modern nations, have stumbled at this crossroads and have been bombed into fleeing to one of the totalitarian horrors, to Stalin or Hitler. Those lands have tried the hasty way. They have put men to work universally making munitions. But these workers are chained to a war economy. They have no freedom but the right to a lower political status and a meaner standard of living that even our unemployed have endured. That is not the way. God only knows the way. But in the end it must be Lincoln's vision there in Independence Hall, a balance between the aspiration of our immortal declaration of human rights and an unshaken loyalty to our Constitution. And always we must hold fast the truth; as a nation we can only enjoy our rights under the Constitution if we do our duty under it also.

America's special gifts of initiative, ingenuity, and courage have settled a continent and kept democracy and justice alive for a century and a half. Surely those gifts will lead us into some way along the trail of our national tradition to put these 10,000,000 men back into their rightful place in our social order. Surely our

schools, our universal education, our institutions of higher learning and of free research have given men the powers that are needed now. Surely trial and error will bring us to the truth. But trial and error is different from trial and retrial bolstered by the vanity of failure ever trying the same old futilities. It must be trial and error and then change of trial. This is no time to placate any man's vanity, no place to consider any party's triumph. Above all, let us not pamper class consciousness either of the little man, the middlemen, or their big brothers. America is standing in the need of prayer. We demand a leader who will not be ashamed to try in some solemn and humble way to reach the forces outside ourselves which make for righteous judgment.

We live in a dark day in the world's history. Here in our country we are baffled and bewildered by the prospect ahead of us. Debt and pending disaster are shaking our courage, beclouding our vision. We are a milling herd in the storm. We listen for a voice. Instead we hear the babble of strange tongues. Yet if we read our history well, we shall find prophecy there. Out of this turmoil and danger reason shall come. Some way, the Good God only knows how, democracy will work its miracle. A free people may be trusted to grow wise. Free men learn in time to separate the false from the true. Give democracy time, and it will reject the charlatan. Thus freedom breeds wisdom, and Lincoln's dictum is true that "you can't fool all the people all the time." This principle that freedom and time beget wisdom in democracy is the basis of our hope. Democracy cannot pick an expert. But democracy eventually will put its finger unerringly upon the plain, honest, brave man of common sense. That man will be ready for power when it comes. His talents will crystallize under pressure into heroic qualities. That crystallizing process was well under way when Lincoln stood in Independence Hall in 1861.

In this crisis of 1940, we should choose as our leader, a humble man and kindly, purged of all vanity. We do not see him even now. Who saw Washington 6 months before Bunker Hill? Who saw Lincoln on his fifty-first birthday in 1860? I do not feel that democracy is impotent in this hour. We still have the democratic privilege of choice. Democracy is not so dead at heart that it needs any man to make it function. The democratic will is not broken. The voice of the people is not strangled. The old flag still waves and America still marches.

So I feel that we may be of good cheer. Washington came in crisis, through the democratic process, bravely yet meekly, to his task. So stood Lincoln there before Independence Hall, fearful in his gentle courage, unshaken in his deep faith in the destiny of our democratic Republic. Thus, though they wore no plumes, and without the pomp of heralds to point them out, we have followed our heroes. The water of Lincoln's hope and love and judgment gushed from the rock. The miracle of democracy is merely the impact of tremendous power and grave responsibility upon a wise, brave, kindly man giving him judgment.

Today we wait and watch and pray for the voice of the new dispensation which shall rise upon the strength and justice of the old. Free men always have found their statesmen, their envisioned champions armed only with the strength of the humble. Democracy's ancient miracle is due which fits the leader to his hour and brings wisdom to his followers.

I believe with all my heart that the democratic process, with its slow progress but sure, is the one hope of this hate-riddled world. But we need more than one leader. We need an army to follow him, an army of brave, wise, self-respecting followers. I am sure that under the stress of these times that deeply kind and soundly wise leader shall rise. Some gentle, brave, and honest man, wise with the love of the people. Him we shall choose, and having chosen, we shall trust his leadership. Then shall we cry out again: "We are coming, Father Abraham, ten hundred thousand strong!"

## Farm-Ownership Program

### EXTENSION OF REMARKS OF

HON. LUTHER PATRICK  
OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

EDITORIAL FROM THE BIRMINGHAM (ALA.) AGE-HERALD OF  
FEBRUARY 7, 1940

Mr. PATRICK. Mr. Speaker and fellow Members of Congress, on the 7th day of February of this year the Birmingham (Ala.) Age-Herald published a short editorial called "On With It." I believe that there is enough in the editorial and believe it is stated well enough to entitle it to a place in the CONGRESSIONAL RECORD. So here it is, and I thank you:

[From the Birmingham (Ala.) Age-Herald of February 7, 1940]  
ON WITH IT!

In weighing the opposing demands of need and economy in relation to the cuts which the National House has made in the farm

appropriations measure, each item of reduction should be separately considered and judged on its own merits. There can be no sound appraisal of these cuts which sweepingly lumps them all into one group and accepts or rejects them.

This paper is deeply conscious of the need for Federal financial retrenchment. We realize that unless definite progress in that direction soon is made, calamities may result that would quite overbalance the good achieved by particular expenditures.

Nevertheless, it does not follow that every proposed reduction of activity and expenditure is sound. Obviously, the most conservative would not shut off these outlays entirely. The question is one of degree and of particular situations.

The general test to be applied at this stage in the country's battle with human need and economic maladjustment probably should concern itself with the question of immediate human need. Everyone agrees that no one should starve or be without shelter or clothing. But it is also generally agreed now that our financial position is such that we cannot afford expenditures that primarily constitute uncertain economic experimentation. Even on such a test, however, we strongly believe that an appropriation sufficient to maintain the program to assist farm tenants in becoming farm owners should be restored to the bill.

This tenant program is not a mere experiment. It has now been in operation for more than 2 years. Behind that experience are many years of successful operation of such programs in Scandinavia.

The program in this country is working. Families being put into possession of farmsteads are making good. Delinquents are rare.

This great project is not something that has been suddenly necessitated by acute depression. The conditions which it combats have been developing for many years. They should not be regarded as representing a temporary emergency. Nor can they be overcome in any great degree in a few years. It will take 10, 20, or even more years to get far in reversing the alarming trend toward ever-increasing tenancy in this country. Nevertheless action in this direction is immediately urgent to provide that courage, that momentum, that experience that are essential to reverse this trend before it is too late.

A good start now has been made on a reconstructive and creative program of fundamental and urgent importance to the entire country.

This undertaking aims not at a sudden transformation of our entire rural economy but at a gradual, essentially conservative effort to check forces that have been progressively working toward national disintegration.

This farm-ownership campaign is an essential part of the general national endeavor to meet pressing human needs in our rural areas. It represents, aside from its contribution to the general strengthening of our economy, an incentive, a great objective, for tenants who have been struggling along—and, for the most part, successfully—with subsistence and crop loans.

Courage and hope are basic essentials in finally overcoming the acute disruptions of severe depression. This tenant home-loan program is an immensely inspiring influence in the rebuilding of human faith, in the acceleration of individual efforts to overcome handicap and disaster.

Moreover, these loans are not sheer expense to the Government. They are loans, a large percentage of which will be repaid and which are secured by the land, our source of material wealth.

Conscious as it is of the necessity for strict economy, the Age-Herald believes it would be a tremendous calamity now to cut short the heartening start that has been made in dealing with one of the Nation's major problems. A reasonable appropriation for continuing this great enterprise should be restored.

## American Youth Unemployment Problem

### EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

RADIO ADDRESS BY HON. VITO MARCANTONIO, OF NEW YORK

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered yesterday over the radio:

I have introduced the American Youth Act in the House of Representatives. The American Youth Act sets up a National Youth Administration in the Federal Security Agency directed by an Administrator who shall carry out the policy decided by a board of directors, on which shall be represented youth groups, labor, civic, and other welfare agencies appointed by the President. The National Youth Administration set up under the American Youth Act shall provide:

(1) Work projects for unemployed young people at prevailing rates of pay and prevailing conditions at a minimum of \$12.50 per week and a maximum of 30 hours per week.

LXXXVI—App—47

(2) Academic work projects for college students at a rate of 50 cents per hour, with the proviso he shall work only so long as to bring his total income to at least \$30 per month.

(3) Employment of vocational-guidance advisers to provide free service to all young people in cooperation with other agencies in the locality.

(4) Stimulation of apprenticeship-training programs set according to local trade-union standards for such apprentice work.

(5) Federal scholarships for needy high-school students at a maximum of \$5 per week, save those young people obliged to live away from home due to lack of adequate educational facilities. In such cases the Administrator may make the necessary adjustments.

(6) Federal scholarships for needy students up to the amount required for them to continue their education at law, medicine, and other graduate and professional schools.

To put all this into effect Congress is authorized to appropriate \$500,000,000.

The American Youth Act is not only an augmenting of the present National Youth Administration but it is fundamentally different. The present set-up is grossly inadequate and temporary, dealing with the problem of the American youth on a year-to-year basis. The American Youth Act authorizes an adequate appropriation and sets forth a permanent program for a permanent problem. It is not stopgap legislation; it is directed toward a solution. The American Youth Act is basically democratic. By virtue of representation given to youth, labor, civic, and welfare organizations in the making of policy, those who are directly affected by the program will have a voice in its administering. Under the present N. Y. A., wages are low, giving to the young people a bare existence. It does nothing to maintain prevailing rates of pay and has not in any manner caused any rise of substandard conditions in certain parts of the country. The American Youth Act guarantees a decent wage and thereby reinforces the benefits won by American workers by the strength of organized labor.

The present N. Y. A. has never had more than \$95,000,000 and has never assisted more than 700,000 youths. The American Youth Act provides for \$500,000,000 annually to assist in a democratic way 4,000,000 young Americans to obtain a decent American living and an education and training in keeping with the best of American traditions.

The question now arises, Why an American Youth Act? The answer, my friends, is that 4,700,000 of our young Americans find themselves out of school and unemployed through no fault of their own.

The American Youth Commission, composed of business leaders such as Owen D. Young, chairman of the board of the General Electric Co., and Robert E. Wood, chairman of the board of Sears, Roebuck & Co., in a recent report informs the country that 30 percent of our young people between the ages of 16 and 25 are without jobs. Despite the alleged increase in employment, the New York N. Y. A. director has pointed out that since 1937 there has been an increase in the number of unemployed youth.

Thus we see that even with an alleged decrease in unemployment there has been an increase in youth unemployment. Nor can American young people derive any comfort from any war boom. The American Youth Commission, on page 6 of its report, states:

"While it seems probable that business will be stimulated by war purchases, the most optimistic estimates indicate only two or three million new jobs for the many millions of unemployed workers. The Commission believes that the remaining unemployment will be concentrated heavily in the lower age groups. The continued pressure of unemployment on youth, in the midst of a war boom, will add to the danger of drifting into active participation in the war."

There is, therefore, only one alternative, and that is that our Government provide economic opportunity for young America.

The enactment of the American Youth Act will be no innovation on the part of our Government in dealing with our youth problem. Opportunity for young people is a traditional American ideal. In the past, new fields were opened by the Federal Government to provide an outlet for the initiative of generations of American youth, through such legislation as the Homestead Act of 1862. With the closing of the physical frontier this was ended. The principle of Federal responsibility was reasserted in the establishment of the present N. Y. A., and the Civilian Conservation Corps. Only the most violent and subversive reactionaries now refuse to accept these agencies as vital necessities of our system. However, only 700,000 are touched by the N. Y. A. Four million are deprived of any means of help.

Everyone admits the serious inadequacy of the Government's present youth program. In the face of this country-wide admission what are we doing about it in view of the failure of private industry to even remotely touch the problem? We have been given a Budget and we have a Congress. The people should know that both the Budget and Congress propose drastic reduction for N. Y. A., W. P. A., and other social-welfare appropriations and tremendous increases for war appropriations. Instead of ameliorating we aggravate the youth unemployment situation. We now make an about-face. Instead of schools, we build battleships; instead of hospitals, we build submarines; instead of providing jobs, we prepare for war. We substitute for the American ideal of economic security and education the dictator doctrine of guns, not butter.

I believe in reasonable appropriations for national defense, for the defense of our country against invasion and for the protection of our national interests. I, however, do oppose the proposed extravagance of militarism, this war program which proposes to solve

the youth problem by giving American youths the jobs of stopping bullets and shrapnel at the front.

The young people of America do not want war. They ask for peace, jobs and education, and civil liberties. They have assembled in Washington, over Lincoln's birthday week end and through the Citizenship Institute of the American Youth Congress they have brought to Congress their program. They ask us for an opportunity to live as decent Americans, to keep them out of war, and to preserve the Bill of Rights. They want to live for America, and history will give us in Congress a notorious black page if we force them to die for America.

During these 3 days while these young people have in a democratic and American way organized to bring their problems before the Nation, Tories and Bourbons have heaped vituperations upon them in order to conceal the real issues that these young Americans have raised before the people.

They have been vilified because they have refused to scrap the Bill of Rights and have refused to put "ifs" and "buts" in it. On this anniversary of the birth of the Great Emancipator, I cannot help but pause and think of what Lincoln would have said to those who are taking his name in vain tonight, to those self-constituted paragons of Americanism; the same brand of Americanism which gave American youth red apples to sell in 1930 is now offering American youth a "red" scare to execute. To the convenient flag wavers who are throwing stones at young Americans, he would say today as he said in his day:

"I have tried to inquire: What great principle or ideal is it that has kept this Union so long together? And I believe that it was not the mere matter of separation of the colonies from the motherland, but that sentiment in the Declaration of Independence which gave liberty to the people of this country and hope to all the world. This sentiment was the fulfillment of an ancient dream, which men have held through all time, that they might one day shake off their chains and find freedom in the brotherhood of life. We gained democracy, and now there is a question whether it is fit to survive. Perhaps we have come to the dreadful day of awakening, and the dream is ended. \* \* \* And yet—let us believe that it is not true. Let us live to prove that we can cultivate the natural world that is about us, and the intellectual and moral world that is within us, so that we may secure an individual, social, and political prosperity, whose course shall be forward, and which, while the earth endures, shall not pass away."

### Waterman Steamship Corporation Case

#### EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 13 (legislative day of Wednesday, February 7), 1940

#### OPINION OF THE SUPREME COURT

Mr. WAGNER. Mr. President, the unanimous decision handed down yesterday by the Supreme Court, sustaining in full the order of the Labor Board against the Waterman Steamship Corporation, marks the twenty-third decision of our highest Court in cases concerning the National Labor Relations Act. The position of the Board in these cases, decided over the past 3 years, has been fully upheld in 19 cases, partly upheld and partly reversed in 2 cases, and wholly reversed in 2 cases. This is by far the best record of any major administrative agency before the Supreme Court in the history of our jurisprudence. In 3 years of unrelenting legal attack by able counsel, not a line, not a single provision, of the Labor Act has been held to infringe the constitutional rights of employers or employees.

The Supreme Court's decisions have ranged over a variety of issues—constitutionality, procedure, jurisdiction, propriety of remedial orders, and interpretation of the statute. The case just decided turns on the facts. It emphasizes that the scope of judicial review under the labor act is in line with a general congressional policy, "to apply an orderly, informed and specialized procedure to the complex administrative problems arising in the solution of industrial disputes." After an exhaustive review of the evidence, the Court found that all of the Board's findings, far from resting on "mere suspicion," as had been decided by the lower court, "are supported by evidence which is substantial." Accordingly, under the statutory division of authority between the administrative agency and the courts, the Board's order was affirmed,

and 43 men who had been discharged because of their union affiliation were returned to their jobs with back pay.

Because of the general interest in the subject at this time, I ask unanimous consent that the text of the Court's opinion, delivered by Mr. Justice Black, be printed in the RECORD as a part of my remarks.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States. No. 193. October term, 1939. *National Labor Relations Board, Petitioner, v. Waterman Steamship Corporation*. On writ of certiorari to the United States Circuit Court of Appeals for the Fifth Circuit. February 12, 1940]

Mr. Justice Black delivered the opinion of the Court.

The court below, upon petition of respondent to set aside an order of the Labor Board, decided that the Board's order was not supported by substantial evidence, said the order was based on mere suspicion, and declined to enforce it. Whether the court properly reached that conclusion is the single question here.

We do not ordinarily grant certiorari to review judgments based solely on questions of fact. In its petition, however, the Board earnestly contended that the record before the court of appeals had presented "clear and overwhelming proof" that the Waterman Steamship Co. had been guilty of a most flagrant mass discrimination against its employees in violation of the National Labor Relations Act, and that the court had unwarrantedly interfered with the exclusive jurisdiction granted the Board by Congress. The Board's petition also charged that the present was one of a series of decisions in which the court below had failed "to give effect to the provisions of the act that the findings of the Board as to facts, if supported by evidence, shall be conclusive."<sup>1</sup>

In that act Congress provided, "The findings of the Board as to the facts, if supported by evidence, shall \* \* \* be conclusive."<sup>2</sup> It is of paramount importance that courts not encroach upon this exclusive power of the Board if effect is to be given the intention of Congress to apply an orderly, informed, and specialized procedure to the complex administrative problems arising in the solution of industrial disputes. As it did in setting up other administrative bodies, Congress has left questions of law which arise before the Board, but not more, ultimately to the traditional review of the judiciary. Not by accident, but in line with a general policy, Congress has deemed it wise to entrust the finding of facts to these specialized agencies. It is essential that courts regard this division of responsibility which Congress as a matter of policy has embodied in the very statute from which the court of appeals derived its jurisdiction to act; and, therefore, charges by public agencies constitutionally created, such as the Board, that their duly conferred jurisdiction has been invaded so that their statutory duties cannot be effectively fulfilled raise questions of high importance. For this reason we granted certiorari.<sup>3</sup>

Respondent, Waterman Steamship Co., of Mobile, Ala., is engaged in maritime transportation between this country, Europe, and the West Indies. Upon complaint made by the National Maritime Union, a labor organization affiliated with the Congress of Industrial Organizations, the Board held hearings and found that respondent had, at Mobile, laid up the ships *Bienville* (27 days) and *Fairland* (7 days) for drydocking and repairs, and had, in violation of the National Labor Relations Act:

(a) Discharged and refused to reinstate, because of membership in the N. M. U., the entire unlicensed crew and the chief steward, Edmund J. Pelletier, of the steamship *Bienville*, and all but three of the crew of the steamship *Fairland*;

(b) Discharged and refused to reinstate C. J. O'Conner, second assistant engineer of the *Azalea City* because of his activities in representing aggrieved members of the Marine Engineers Beneficial Association, a labor organization of licensed ship personnel affiliated with the C. I. O.; and

(c) Pending an election directed by the Board to permit the ship's crews to select their bargaining agencies, had interfered with its employees' free right to select a union of their own choosing under section 7 of the act by refusing to grant the ships' passes to representatives of the C. I. O. affiliate, while at the same time issuing passes to representatives of the International Seaman's Union affiliated with the American Federation of Labor.<sup>4</sup>

The Board's order in question was based on the foregoing findings.

<sup>1</sup> The Board specifically referred to *National Labor Relations Board v. Bell Oil & Gas Co.*, 98 F. (2d) 406, rehearing denied, 98 F. (2d) 870 (also, 91 F. (2d) 509; 98 F. (2d) 405; 99 F. (2d) 56); *Peninsular & Occidental S. S. Co. v. National Labor Relations Board*, 98 F. (2d) 411, certiorari denied, 305 U. S. 652; *Globe Cotton Mills v. National Labor Relations Board*, 103 F. (2d) 91.

<sup>2</sup> 49 Stat. 449, sec. 10 (e).

<sup>3</sup> — U. S. —. Cf. *Federal Communications Commission v. Pottsville Broadcasting Co.*, decided January 29, 1940.

<sup>4</sup> In outline, the Board ordered the Waterman Co. to cease and desist from issuing ships' passes to the A. F. of L. on a favored basis as compared to the C. I. O.; from discouraging membership in C. I. O. affiliates by discriminating against its members; and from interfering with its employees' rights of self-organization and free collective bargaining. It affirmatively ordered the company to grant equal passes to the C. I. O. and the A. F. of L., if granted to either; to make whole and offer full reinstatement to those employees found to have suffered discrimination; and to post appropriate notices on the Waterman vessels.

A clear understanding of the issues presented by the mass discharge of the crews of the *Bienville* and the *Fairland* necessitates initial reference to the Federal laws governing engagement of seamen for foreign voyages. There is provision (46 U. S. C. 564) that a master of any vessel bound from the United States to foreign ports (with exceptions not pertinent) "shall, before he proceeds on such voyage, make an agreement, in writing or in print, with every seaman whom he carries to sea as one of the crew \* \* \*." This written agreement, commonly referred to in maritime circles as articles, must specify the nature and duration of the intended voyage or engagement; the port or country at which the voyage will terminate; the number and description of the crew and their employments; the time each seaman must be on board to begin work and the capacity in which he is to serve; wages; provisions to be furnished each seaman; regulations to which the seaman will be subjected on board, such as fines, short allowance of provisions, or other lawful punishments for misconduct; and stipulations of any advance and allotment of the seaman's wages. And the provisions of 46 United States Code 567, 568 impose penalties for carrying seamen in ships' crews on foreign voyages without entering into the required articles. All seamen "discharged in the United States from merchant vessels engaged in voyages \* \* \* to any foreign port \* \* \* shall be discharged and receive their wages in the presence of a duly authorized shipping commissioner \* \* \* (Id., 641). The master and each seaman shall, 'in the presence of the shipping commissioner, \* \* \* sign a mutual release of all claims for wages in respect of the past voyage or engagement'; the release must be recorded in a book which shall be kept by the commissioner, and such release 'shall operate as a mutual discharge and settlement of all demands for wages between the parties \* \* \* on account of wages, in respect of the past voyage or engagement' (Id., 644).

Respondent, the Waterman Co., has taken the position that when the crews of the *Bienville* and *Fairland* received their wages and signed off statutory articles in Mobile, all tenure of employment and employment relationship of these men were at an end. From this premise the company insists that vacancies were created as the men signed off and, under an outstanding contract with the I. S. U., preference in filling these vacancies had to be given to members of the I. S. U. unless contractual obligations were to be violated.<sup>5</sup> However, the Board contends that the signing off of articles when the ship's voyage ended at Mobile served only to end employment "in respect of the past voyage or engagement" and, therefore, it proceeded to examine the evidence to determine whether there was, after completion of the voyages in question of the *Bienville* and *Fairland*, a continuing relationship, tenure, term, or condition of employment between the company and its men. The act provides<sup>6</sup> that—

"It shall be an unfair labor practice for an employer—to interfere with \* \* \* [the employees' right of self-organization]. \* \* \*

"By discrimination in regard to hire or tenure of employment or any term or condition of employment to encourage or discourage membership in any labor organization: \* \* \*

The protection to seamen embodied in the Federal statutes which have been referred to has existed in some form since the earliest days of the Nation.<sup>7</sup> This statutory plan was never intended to forbid the parties from mutually undertaking to assure a crew the right to continue as employees and to re-sign if it desires after signing off articles at a voyage's end. The design was to protect seamen from being carried to sea against their will, to prevent mistreatment as to wages, and to assure against harsh application of the iron law of the sea during voyages.<sup>8</sup> The Board, therefore, properly heard evidence as to whether the crews of the *Bienville* and *Fairland* had, unless discharged for cause, a continuing tenure or relationship entitling them to re-sign when the temporary lay-ups of their ships ended. If, as the Board found, there were such continuing tenure and customary term or condition of employment, of course no vacancies occurred when the men of the *Bienville* and the *Fairland* signed off articles in Mobile. And respondent's contract with the I. S. U., which only provided preferential treatment of the I. S. U. (A. F. of L.) in filling vacancies, did not require the company to discharge the N. M. U. (C. I. O.) men from these ships.

If therefore there was substantial support in the evidence for the findings that these crews had a continuing right to and customary tenure, term, or condition of employment within the purview of the act even though their ships were temporarily laid up, and that this relationship was terminated by the company because

<sup>5</sup> In part, that contract reads: "Section 1. It is understood and agreed that as vacancies occur, members of the International Seamen's Union of America, who are citizens of the United States, shall be given preference of employment, if they can satisfactorily qualify to fill the respective positions; provided, however, that this section shall not be construed to require the discharge of any employee who may not desire to join the union, or to apply to prompt reshipment, or absence due to illness or accident." Only the discharge of Pelletier is claimed by the company to have been due to incompetency. The court below held that O'Connor had taken a vacation and was not discharged, and was thus entitled to vacation pay and reinstatement; the Board had ordered that O'Connor be made whole "for any loss of pay" suffered as a result of the company's acts which the Board found had been discriminatory.

<sup>6</sup> 49 Stat. 449, 452, secs. 7, 8.

<sup>7</sup> See 1 Stat. 131.

<sup>8</sup> See *Lent Traffic Co. v. Gould* (2 F. (2d) 554, 556); *United States v. Westwood* (266 Fed. 696, 697); *The Occidental* (D. C., 101 Fed. 997). As to the history of this legislation, see *United States v. The Brig "Grace Lathrop,"* (95 U. S. 527).

of the crews' C. I. O. affiliation, the court below was required to enforce the Board's order.

Evidence as to the continuing tenure, and conditions and relation of employment: On the basis of 9 to 10 years at sea, one witness testified that a ship's crew is customarily kept on when she goes into drydock and is laid up for temporary repairs, and that both the Waterman Co. and the unions had observed that custom. Another, with a background of 10 years' experience at sea, in visiting some 50 ships in drydock at Mobile during the preceding few months had learned of 49 which had not laid off their entire crews but had kept a substantial number of their crews working aboard ship; the fiftieth had laid off its entire crew after going into drydock, but "the company kept the jobs open." He knew of one vessel that had remained "in drydock for a period of 45 days and maintained its crew during that period"; several which had done so recently for 30-day periods; and many for periods "from 5 to 10 days, 15 days." He had himself been a member of a crew maintained in its entirety while his ship was in drydock for 22 days.

An oiler and deck engineer, with 8 years in the service, had been on a Waterman ship which, as recently as 1936, spent 6 days in repairs, keeping its crew on, and had "known them to stay on 15 or 20 days and continue working that long." Asked what obligation an employer owes a sailor after the latter returns from a foreign voyage, completes his contract under the ship's articles, is paid off, and discharged before a shipping commissioner, he answered, "If my services are satisfactory and my work efficient, I have the right to stay on that ship, if I have not done anything to be discharged for. Why shouldn't I make another trip? \* \* \* Q. Is it true to state that a seaman's job is still existent, although he may not be drawing pay while the boat is tied up for repairs?—A. Yes, sir. Q. There is no vacancy in his job?—A. No; there is no vacancy."

The chief steward of the *Bienville*, employed by Waterman since 1934 and a seaman since 1918, testified that crews of ships in drydock—tied up for repairs for a few days—"have to do their work and get paid for it by the Waterman Steamship Corporation," and unless they quit or are fired "for cause" there is no vacancy. The giving of a discharge according to the ship's articles, he understood "to be a termination of the voyage, but not a termination of the employment."

Although at sea but 3 years, a fireman and oiler testified that he had been re-signed, upon the termination of articles, after each of 14 trips on a single ship, from southern ports, including Mobile, had been kept as a member of a crew on a ship in for repairs 9 days, and had "known of one ship that was laid up [for lack of cargo] for 5 weeks and the crew went back."

A marine fireman, oiler, and watertender, at sea since 1922, had been on a Waterman ship in for repairs 10 or 12 days, the crew of which was retained only in part, but those laid off "were notified when the ship went into commission they can go out again." He "was on one [ship] that stayed 2 months in drydock \* \* \* just part of the crew \* \* \* [were kept on, but] the whole crew was there for their jobs when she was commissioned again." He had never heard of a mass discharge of an entire crew such as occurred on the *Bienville* and *Fairland*. In part, the testimony of this former I. S. U. member was: "Q. Do the unions consider that there is no vacancy until a man resigns? A. Yes; they do not figure it is any vacancy until they call the [union] hall for another man."

A seaman in the employ of the Waterman Co. intermittently since 1924, had been on a Waterman boat which kept its whole crew during 6 or 7 days in drydock. It had been his experience that a crew was kept on ships in drydock or being repaired, unless a ship was to be laid up indefinitely, i. e., for 2 or 3 months, in which event only a skeleton crew would be maintained. But, he added, the Waterman Co. itself follows the custom of "calling back to the ship" men who have been laid off indefinitely and "are still around," and men standing idly by without pay at the end of a voyage still regard themselves in the employ of the shipowner.

One witness had served as a fireman on a Waterman ship that spent the period between the first of November and Thanksgiving of 1932 in dry dock and undergoing repairs; she kept "approximately all of" her crew aboard ship working during this period; a few were permitted to go home in the interim, but returned when she started her voyage. On another occasion, he testified, the same Waterman boat stayed in dry dock about 60 days, retaining approximately the entire crew; although after 5 days in dry dock he was called out of town to appear as a witness, he later got his job back. In his capacity as a shipyard worker in which he was employed at Mobile at the time of this hearing, this same witness observed "we have boats coming in from 25 up to 30 days \* \* \* and the crew works in there, and they may want to lay off part of the crew, or work a major part, or maybe they will be discharged, but those that want to go back, their jobs is open if they wish them." Of some 600 ships he had seen or worked on in dry dock or being repaired, he had seen but one complete discharge of an entire crew, but even that crew were told they could come back "if they wanted their jobs." According to his understanding and that of seamen as he knew it, articles "were protection to the seamen by the United States Government for a certain voyage, and to a certain port, or your final port of discharge or first loading port. That is a termination of the articles to the seaman, but not the end of the employment."

A witness who had worked for the Waterman Co. since 1929, who had been a marine engineer for 14 years, and at sea 20 years, testified that a crew which is laid off is customarily reemployed when a

ship emerges from dry dock, unless laid off "for cause." A Waterman ship, on which he had been at the time serving, laid up in Mobile from December 1936 to about January 25, 1937, "and the engineers were kept on her, and to the best of my knowledge the firemen and water tenders and ollers were kept on there."

The executive vice president of the Waterman Co. recalled that recently the crew of only one other vessel going in for repairs had been discharged, and that this particular crew also had been affiliated with the N. M. U. (C. I. O.). Of the several Waterman vessels which he mentioned as having been put up in Mobile for drydocking or repairs during the previous year, he could note only the one that had not kept its entire crew (other than the *Bienville* and *Fairland*); the one other crew that was discharged en masse, he admitted, was the one other also affiliated with the C. I. O.

The witness who had been captain of the *Fairland* when she went into drydock, had served the Waterman Co. continuously since 1924, with the exception of 1 year, in capacities ranging from ordinary seaman to ship's master. Yet, in all his experience with the company, he had never heard of a ship in drydock that had laid off her entire crew. And Waterman's port captain, a veteran of 24 years, had taken perhaps a half dozen of Waterman ships into drydock, never staying more than 24 hours in drydock but with a total of 8 to 10 days in port, and his crews were never laid off; he preferred to retain a crew for a succeeding voyage.

In the very contract which the Waterman Co. made with the I. S. U. there are terms providing that "in home port, all men may be required to work 8 hours daily \* \* \* [with provision for overtime]." And the section of the contract covering preference for I. S. U. men "shall not be construed to require the discharge of any employee who may not desire to join the [I. S. U.] \* \* \*." That the contract contemplated an employment independent of the articles and subject to termination in a manner other than by the mere expiration of articles is apparent from the provision that "Nothing in this agreement shall prevent \* \* \* [the company] from discharging any member of the crew who is not satisfactory to the company."

All the evidence on this issue which the Board had before it has, of course, not been set out. In summary, it is glaringly apparent that men who had in various capacities followed the sea in the aggregate for roughly a hundred years, offered testimony that a seaman's tenure and relationship to his ship and employer are not terminated by the mere expiration of articles when his ship lays up in drydock or for repairs, and that the Waterman Co.—and maritime people generally—have recognized and followed this custom. Even the Waterman Co.'s executive vice president could cite only one instance in the company's recent past in which this custom had been departed from, but that particular mass firing of the crew of a ship headed for a temporary lay-up was directed against the only C. I. O. crew, other than those of the *Bienville* and *Fairland*, with which the Waterman Co. apparently had been asked to deal. And the master of the *Fairland*, with personal knowledge of the company's practice reaching back to 1924, had never heard of "another case where the entire crew was laid off."

In the words of the act, an employer cannot terminate his employees' "tenure of employment or any term or condition of employment" because of union activity or affiliation. These words are not limited so as to outlaw discrimination only where there is in existence a formal contract or relation of employment between employer and employee. They embrace, as well, all elements of the employment relationship which in fact customarily attend employment and with respect to which an employer's discrimination may as readily be the means of interfering with employees' right of self-organization as if these elements were precise terms of a written contract of employment. The act, as has been said, recognizes the employer's right to terminate employment for normal reasons.<sup>10</sup> No obstacle of legal principle barred the Board from finding that there was, even after the ships were temporarily laid up, a relationship of employment or tenure between the Waterman Co. and its men. That there may be a tenure or term of employment determinable at will is a recognized principle of law.<sup>11</sup> For the purpose of the act, it is immaterial that employment is at will and terminable at any time by either party.<sup>12</sup> A large part of all industrial employment is of this nature. For illustration, factory workers are customarily employed at will, without obligation of employer or employee to continue the relationship when the day's work is done; or, if there is an agreement fixing salary or wages per unit of service, at so much per day, week, or month, there may be an indefinite employment terminable by either party at the end of any unit period. But when such employees are customarily continued in their employment with recognition of their preferential claims to their jobs, it cannot be doubted that their wholesale discharge at the end of the day or other unit period, in order to favor one union over another, would be discrimination in regard to the "tenure" or "condition" of their employment in violation of the

act. And employees under such tenure of employment as these seamen were have a right guaranteed by the act that they will not be dismissed because of affiliation with a particular union.

Since the Board justifiably found that an employment relationship protected by the act continued after the *Bienville* and *Fairland* were temporarily laid up, it becomes unnecessary to consider the additional finding of the Board that the "dates and durations of the particular lay-ups were arranged for the purpose of making it possible to discharge the crews because they had joined the N. M. U."

The sole question remaining is whether the evidence supported the findings of the Board that the employment or tenure of the crews and of O'Conner and Pelletier were terminated because they had joined or engaged in the activities of the C. I. O.

Evidence of discrimination because of C. I. O. affiliation: About July 1, 1937, the entire crew of the *Bienville* and all but three of the *Fairland*, previously I. S. U. (A. F. of L.), joined the N. M. U. (C. I. O.) in Tampa, Fla. Such action had been decided on in June by the crew of the *Bienville* while she was in Le Havre, France. After the crew of the *Bienville* changed to the C. I. O. at Tampa and before she reached Mobile, the A. F. of L. representative at Tampa informed the A. F. of L. representative at Mobile, by telephone, that the change had taken place. And the Mobile A. F. of L. representative at that time notified the Waterman Co. of the change. Intervening scheduled stops of the *Bienville* were canceled by a memorandum purporting to have been written on July 1 and ordering her to Mobile to "go on inactive status for a period of about 20 days." The port captain of the Waterman Co., who signed this memorandum, stated that it was written on July 1, "to the best of \* \* \* [his] knowledge." He added that it had not been written until after the *Bienville* was on her return voyage from Le Havre. That was after the ship's crew had, in assembly, determined to turn C. I. O. No such cancellation was directed to the *Fairland*. The *Fairland*, he testified, was laid up because periodic repairs were due. On the other hand, her master had no knowledge of any contemplated lay-up until she reached Mobile, and understood, according to advice given him, that she was laid up because "she was behind schedule \* \* \* and they put her back to the next sailing." The Waterman port captain thought she was laid up because repairs were due; he had no knowledge that it was because she was behind schedule. Her master's testimony showed:

"Q. The laying-up plan, then, had been something that was contemplated in Tampa?—A. No, sir.

"Q. It was something that came into existence after you sailed from Tampa and before you came to Mobile, is that right?—A. Yes."

The *Fairland* is equipped with radio. The ships were in Mobile by July 6. There was testimony that a member of the crew of the *Bienville*, on the 6th, was asked by the executive vice president of the company why the change of unions was made and was told by that official "a man has to use his own head." This same witness testified that several of the discharged crew were given some work ashore and that "on a Saturday afternoon we collected 3 days' pay—they held back 2 days in the week—and about 3 o'clock in the afternoon the first assistant came around there and I was working on some safety valves on the boilers, and \* \* \* [the assistant port engineer of Waterman Co.] said, 'Well, I got a chance to fire you at last.' And I said, 'What is that?' And he said, 'Well, you can get the rest of your money when you are finished.' And I said, 'What's the matter; aren't we going to sail the ship?' And he said, 'No; not unless you go back to the other place.' And I said, 'What other place?' And he said, 'The I. S. U.'"

Pelletier, the steward on the *Bienville*, worked for Waterman from 1934 until discharge after joining the N. M. U. (C. I. O.). When the *Bienville* arrived at Mobile Waterman's port steward went to the boat and talked with the mate, who informed him that some of the men had joined the N. M. U. According to the port steward's testimony, he then asked the mate, "How is the steward's department?" and the mate replied, "Well, some of them joined the N. M. U." \* \* \* "and later on I [the port steward] found the steward in his room. \* \* \* I asked Pelletier did he join the N. M. U. And he said, 'Yes.' And I said, 'What about the rest of your crew?' and he said, 'Well, they all did.' I asked him did they have any reason for it. And he said, 'Yes; everybody did,' so I said, 'All right.' And I left the ship." He returned to the company's office. Two hours later he came back to the ship, charged Pelletier with incompetency, and discharged him. Pelletier testified that the port steward, when told that the crew and Pelletier had turned N. M. U., said, "Well, I have got orders to lay you all off." Pelletier had been promoted just prior to the voyage in question. A new I. S. U. man was put on to finish up his work and remained on as watchman practically the full time the *Bienville* was laid up.

Although her captain had, prior to the coming aboard of a company official, expressed a desire to keep the *Fairland's* crew, as one of her crew testified, the crew was informed by this official that they could not sail, "but if you take your books and give them to \* \* \* the I. S. U. you can keep your jobs;" another Waterman official "told me I could not sail on any Waterman steamship as long as I was an N. M. U. man." According to this witness, he had left his clothes on the *Fairland* and slept aboard ship when she was in drydock with the understanding he would re-sign; he was, however, ordered off the ship.

An engineer on the Waterman vessel *Azalea City*, 8 years with the company, O'Conner, a member of the M. E. B. A. (also affiliated with the C. I. O.), testified that he acted as spokesman for other engineers on his ship in complaining about working conditions, hours of employment, and rates of pay; when he discussed the complaint with the company's representative during July, he was told to take a vacation and left the ship on a promise of a more desirable job;

<sup>10</sup> Sec. 8 (1), (3).

<sup>11</sup> *Labor Board v. Jones & Laughlin* (301 U. S. 1, 45).

<sup>12</sup> See, e. g., *Alabama Mills v. Smith* (237 Ala. 296); *Peacock v. Virginia-Carolina Chemical Co.* (221 Ala. 680); *Great Atlantic & Pacific Tea Co. v. Summers* (25 Ala. App. 404, cert. den., 226 Ala. 635). Cf. *U. S. F. & G. Co. v. Milonas* (206 Ala. 147, 29 A. L. R. 520).

<sup>13</sup> Cf. *Morgan v. Comm. of Int. Rev.*, decided January 29, 1940, p. 2; *Lyeth v. Hoey* (305 U. S. 188, 193).

neither the vacation, the promised job, nor reemployment of any kind was ever given him. Waterman's executive vice president had never had an engineer act in such a representative capacity relative to asserted violations of a union contract. And the assistant port engineer stated that it was the custom to call a man of O'Conner's rank when not on vacation; that O'Conner had been promised and then denied a vacation, but had not been called although work had been available; and, in addition that O'Conner had, in conversation with him, asked, "Would Waterman give me employment?"

The executive vice president of the company would not "until the actual time came" answer the query whether he would reinstate the N. M. U. men even if there were no contract with the I. S. U. He stated that he had received a wire from the Board's regional director at New Orleans on July 7, recommending and insisting on reinstatement of N. M. U. men dismissed at Mobile, and did not deny that he had first told the director that his reason for not working N. M. U. men was the existence of the I. S. U. contract. He admitted, however, that later on the same day his decision that the men were removed because the vessels were laying up was attributable to an apparent change of his own mind.

Additional evidence that the discharged N. M. U. men were again treated with discrimination in the allotment of repair work on the *Bienville* and *Fairland*; and were laid off in a block even from this work—all tended to buttress and illuminate the Board's finding that the tenure of employment of these men of the *Bienville* and *Fairland* was cut short because they had exercised their lawful right to join the C. I. O. One of the men who was given temporary repair work—subsequent to the Board's telegram of the seventh—testified:

"Q. While you were a member of the N. M. U., did you ever wear your N. M. U. badge or button?—A. Yes, sir; I used to wear it on my cap, on the dock while I was working down there.

"Q. Was there anything ever said to you at the Waterman Steamship about wearing it?—A. Mr. Ingram told me I would have to take that Maritime Union button off if I wanted to stay around there, and I took it off, and put it in my pocket"

From all this evidence, there can be no doubt of the substantial support for the Board's finding that the crews, O'Conner and Pelletier all lost their jobs because of C. I. O. affiliation and activities.

Evidence of discrimination as to ships' passes: The Board found "that the respondent, by issuing passes to representatives of the I. S. U. and refusing to grant such passes to representatives of the N. M. U. for the same purpose and under the same conditions, had interfered with, restrained, and coerced its employees in the exercise of their rights guaranteed in section 7 of the act."<sup>13</sup> An election to permit a choice of bargaining agency by the crews has been directed but has not been held pending termination of the present proceeding.<sup>14</sup>

Upon this issue of discrimination concerning passes, N. M. U.'s representative testified that the company's executive vice president, about September 24 or 25, 1937, refused his request "for passes for the election of the N. L. R. B." because of the I. S. U. contract. But no provision of the I. S. U. contract referred to ships' passes for representatives of other unions. The respondent's attorney took the position that N. M. U. representatives would not be permitted on board under any conditions. Testifying that I. S. U. representatives were permitted aboard the *Bienville* at all times to contact the men, Pelletier "did not recollect seeing anyone with them." Waterman's executive vice president who pointed out that I. S. U. delegates were given passes on certain conditions, such as taking out insurance for delegates going aboard, did not know whether in fact there had been compliance by the I. S. U. with the conditions. He testified that he had issued instructions, July 13, to permit I. S. U. representatives aboard ship only to collect dues. But he also testified that they were still permitted to contact members. The master of the *Fairland* stated that he did not receive the instructions of July 13 until August; and that even after the instructions were put in effect, he permitted I. S. U. representatives to board ship unaccompanied; he did not know what they said to the men, whether they brought literature aboard or whether they restricted themselves to the collection of dues. Although always present at the paying off and signing off of articles, when the I. S. U. representatives collected dues, the company's port captain "did not pay any strict attention whatever to what they were doing." Asked whether he knew what these representatives did at such times, he replied, "I did not follow them around to see what they were doing."

Enough has been shown to establish the reasons for the Board's decision that if the company was to permit any opportunity for contact with the men a fair election required that equal opportunities be given to both the C. I. O. and the A. F. of L. The control of the election proceeding, and the determination of the steps necessary to conduct that election fairly, were matters which Congress entrusted to the Board alone.<sup>15</sup> Interference in those matters constituted error on the part of the court below.

<sup>13</sup> The Board ordered, as to ships' passes, that the company—  
"Cease and desist:

"From refusing to issue passes to authorized representatives of the National Maritime Union of America in equal numbers and under the same conditions as it grants passes to representatives of the International Seamen's Union of America or its successors; \* \* \*

<sup>14</sup> See 12 N. L. R. B., 766, 767, 769.

<sup>15</sup> *American Federation of Labor et al. v. Labor Board* (— U. S. —); *Labor Board v. The Falk Corporation* (— U. S. —).

All of this is not to say that much of what has been related was uncontradicted and undeniable by evidence offered by the company and by the testimony of its officers. We have only delineated from this record of more than 500 pages the basis of our conclusion that all of the Board's findings, far from resting on mere suspicion, are supported by evidence which is substantial. The court of appeals' failure to enforce the Board's order resulted from the substitution of its judgment on disputed facts for the Board's judgment—and power to do that has been denied the courts by Congress. Whether the court would reach the same conclusion as the Board from the conflicting evidence is immaterial, and the court's disagreement with the Board could not warrant the disregard of the statutory division of authority set up by Congress.

The cause is reversed and remanded to the court of appeals with directions to enforce the Board's order in its entirety.

It is so ordered.

## Importance of Reciprocal-Trade Treaties

### EXTENSION OF REMARKS

OF

HON. ORVILLE ZIMMERMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

LETTER FROM OSCAR JOHNSTON, PRESIDENT OF THE NATIONAL COTTON COUNCIL OF AMERICA, AND STATEMENT FROM NATIONAL COTTON COUNCIL OF AMERICA

Mr. ZIMMERMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Hon. Oscar Johnston, president of the National Cotton Council of America, dated February 12, 1940, and a statement from the National Cotton Council of America relative to benefits flowing to the Cotton Belt of America from reciprocal-trade treaties:

NATIONAL COTTON COUNCIL OF AMERICA,  
Memphis, Tenn., February 12, 1940.

Hon. ORVILLE ZIMMERMAN,

House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: The National Cotton Council, representing 15,000,000 producers and handlers of raw cotton and raw cottonseed in the 19 cotton-producing States of the American Cotton Belt, earnestly solicit your full support for House Joint Resolution 407, which will extend for a period of 3 years the authority now vested in the executive branch of the Federal Government to negotiate reciprocal-trade agreements with the nations of the world.

It is not necessary for us to emphasize to you the importance of foreign trade to the Cotton Belt. The reciprocal trade agreements program has already been of inestimable value to cotton. Its continuance is our greatest immediate hope for solving our all-important foreign-trade problem. If foreign markets are to be denied our cotton industry, it necessarily follows that production must be placed upon a purely domestic basis, which would mean a further curtailment of cotton acreage, a disastrous displacement of labor, and a serious disturbance of our national agricultural economy.

We sincerely trust that you will devote your untiring efforts to the support of House Joint Resolution 407, which is so vitally essential to the welfare of the people of the Cotton Belt.

Yours very truly,

OSCAR JOHNSTON, President.

### NATIONAL COTTON COUNCIL OF AMERICA

WHAT THE RECIPROCAL TRADE AGREEMENTS PROGRAM MEANS TO THE COTTON BELT AND TO THE NATION

The National Cotton Council, in requesting support for House Joint Resolution 407, which provides for the continuance of the reciprocal trade agreements program, submits the following in support of its position:

#### 1. Population and area of Cotton Belt

Approximately one-third of the farm population of the United States—2,500,000 farm families aggregating more than 10,000,000 persons—are engaged in the production of cotton and cottonseed. More than 20,000,000 people of the Cotton Belt are directly dependent upon the cotton industry for a livelihood.

The Cotton Belt embraces more than one-third of the total area of the continental United States, extending from Virginia on the east to California on the west, and from southern Illinois and southern Kansas on the north to the Gulf of Mexico and the Rio Grande River on the south.

#### 2. Large percentage of American cotton must be exported

Normally 40,000,000 acres were planted to cotton. Loss of export markets for cotton resulted in the accumulation of a tremendous cotton surplus which depressed the price of the commodity to a level that threatened the economy of the Cotton Belt and seriously

affected the economy of the entire Nation. In an effort to remedy this situation the 40,000,000 acres normally planted to cotton have been reduced to approximately 24,000,000 acres—a reduction of 16,000,000 acres. This curtailment of acreage and production has seriously adversely affected the economy of this section and could not have been achieved without the expenditure of hundreds of millions of dollars supplied from the Treasury of the United States and made as soil-conservation payments, cotton price adjustment payments, and cotton loans.

Notwithstanding this drastic curtailment in acreage, our annual production is still much in excess of domestic consumption. The figures for the past 3 years speak for themselves:

Crop year	Production	Domestic consumption
1937-38	18,252,075	5,747,978
1938-39	11,623,221	6,858,423
1939-40	11,500,000	8,000,000

<sup>1</sup> Estimated.

<sup>2</sup> Estimated—a high level rarely reached in the history of the industry.

At the beginning of the current crop year, namely, August 1, 1939, the carry-over in America amounted to 13,032,513 bales. If export markets are not recovered and maintained for from 6 to 8 million bales of cotton annually, there will of necessity have to be a further curtailment of acreage with consequent economic disturbance, labor displacement and serious geographical shifts in the production of agricultural commodities.

### 3. What reciprocal-trade agreements mean to cotton

The continuance of the reciprocal trade agreements program is our greatest immediate hope for solving cotton's all-important foreign-trade problem. We believe that, through the instrumentality of reciprocal-trade agreements, it is possible to develop and maintain export markets for our surplus cotton and cottonseed products without serious domestic economic disturbance.

### 4. What reciprocal-trade agreements mean to the United States

Normally the United States can and does produce more of a great number of farm and nonfarm products than the American public can use. Surpluses of such production must (1) be sold in other countries, (2) pile up in unmarketable carry-overs in this country, or (3) be sold by producers at ruinously low prices. Unless exported, such surpluses force down prices, employment, and income of American producers. Sound expansion of United States trade with foreign countries accomplishes the following:

- (a) Directly benefits American producers whose goods are exported.
- (b) Improves domestic markets. Any American producer, farmer or nonfarmer, whose goods find a foreign market, becomes a better customer for the goods of other American producers.
- (c) Increases the supplies available to American consumers at reasonable prices of goods produced to better advantage in other countries or not produced at all in the United States.

Foreign trade must of necessity mean two-way trade. This country cannot have the benefit of foreign trade without, in return, importing. There is no sound and enduring way for maintaining export markets for our surplus commodities except by buying in foreign markets those commodities, the purchase of which will not seriously disturb our domestic economy.

To increase foreign markets for products of the United States is the primary purpose of the trade-agreements program. This purpose is sought through the reciprocal adjustment of excessive trade barriers.

### 5. What reciprocal-trade agreements mean to general world trade

The abandonment of the reciprocal trade agreement program would, in our judgment, be the equivalent of saying to the nations of the world that the United States is unwilling to negotiate with them further for the restoration of normal international trade. Such an act on our part will—justifiably, we think—be construed by the other nations of the world as a declaration of purpose by the United States to develop to the highest possible degree nationalism, to become self-contained, and to withdraw behind our excessively high tariff wall from the commerce of the world. Such action on our part would, in our judgment, constitute an open invitation to all the other nations of the world to do likewise. The effect would be a further disastrous decrease and paralysis of all trade between nations.

### 6. What reciprocal-trade agreements mean to world peace

We believe that there must come an end to the wars which now affect both Europe and Asia. Following these wars and in connection with their termination there will be discussions between the belligerent nations looking to the restoration of peace and of commerce. These negotiations and conversations will involve the economic and social structure of every nation in the world. Results obtained from these negotiations will determine the future security or insecurity industrially, socially, and economically of the peoples of every nation in the civilized world.

It is essential that our Government have a part in these negotiations and discussions in order that our governmental structure and our domestic and national economy may be safeguarded. Regardless of the outcome of the war in Europe, there is serious danger that international trade, as it has heretofore been conducted by democracies, will be greatly imperiled, and that prob-

ably its only salvation will depend upon the attitude and influence of the United States in connection with the negotiation of peace. Our sphere of influence, as well as our possible opportunity of protecting and preserving the principles of true democracy, will be seriously jeopardized if we abandon our reciprocal trade agreements program and thus, in effect, serve notice on the rest of the world that the United States is withdrawing from international commerce. To pursue such a policy would be to renounce our interest in, and right to, participate in, the negotiations which are to come for an economically sound and lasting world peace.

## Additional United States District Judges

### EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

Mr. WALTER. Mr. Speaker, the judicial conference, composed of the senior circuit judge of the 10 circuits, in session at Washington in September 1939, recommended additional United States judges as follows: Two for New York, and one additional for each of the seven judicial districts of New Jersey, Pennsylvania, Georgia, Ohio, Missouri, California, and Oklahoma.

These recommendations were based upon a study of the dockets and the cases brought and tried, the report being printed in the November American Bar Association Journal on pages 930 to 933.

How does this recommendation strike the average citizen? In America, we are accustomed to everyone expressing his opinion, whether he has adequate, or inadequate, facts.

A comparative study can be made by anyone, and this writer assembled a base table showing, 1, each State; 2, the judicial districts therein; 3, population of the district; 4, State population; 5, lawyers in district; 6, lawyers in State; 7, United States district judges in each district; 8, aggregate for State; 9, ratio of population to lawyers in each district; 10, ratio of population to lawyers in each State; 11, ratio of population to each United States district judge; 12, same for the State; 13, ratio of lawyers in each State to the United States district judge; and 14, ratio of lawyers in State.

The population was taken from the 1930 United States Census, the number of lawyers by counting the names in the 1937 Martindale-Hubbell Law Directory, the number of district judges from a mimeographed list of the United States Department of Justice—omitting retired justices—and on those the ratios were computed.

This table is set out as table I and speaks for itself.

This table shows that there are 178 United States district judges in the United States, which works out 1 for each 693,644 of population, or, on a count of 159,479 lawyers—United States census gave 160,605—1 for each 901 lawyers. Naturally a Federal court has more business in a larger city than in the smaller places. The congestion of population requires the need of lawyers, and that is a factor to be reckoned. The population of 93 cities with 100,000 inhabitants or more aggregates 36,325,836, which is 30 percent of the population.

Any discussion of the need for United States district judges, or there being a sufficiency, can be contrasted by taking the ratios of the several States.

Table II arranges the States in numerical rank according to the ratio of population to each United States district judge, which varies from 1 for 40,572 in the District of Columbia and 1 for 91,055 in Nevada to 1,880,999 in Kansas. The average is 693,644.

Table III is a table of the ratio of lawyers to each United States district judge, by States, varying from 220 lawyers in Delaware and 231 in Nevada to 1,940 lawyers in Kansas and 2,083 in Indiana to each United States district judge.

As the larger cities are usually in States where there are two or more Federal districts, a comparison can be made by

taking the 18 larger cities, in order of their population, next the number of lawyers to each United States district judge, and then take the same facts for 15 other well-known cities in as many different States and rank them in numerological rank, as shown by the ratio of lawyers in that judicial district to each United States district judge. This is table IV.

The count of lawyers being less than the United States Census of 1930 can be explained, as numerous attorneys are general counsel of large corporations, active in their profes-

sion, solely for a single client, and are not listed in a law directory, but were counted in the United States census.

As showing that litigation is dependent upon lawyers, as well as the business involved in a community, it is striking that in the eight judicial districts in which recommendations were made for an additional judge, with the single exception of California—ratio of 857 lawyers—all have a higher ratio of United States district judges to lawyers than the average of 901.

I.—United States of America, 49 States, United States judicial districts; population, lawyers, and judges; ratio of population to each lawyer and judge; ratio of lawyers to each judge, Nov. 1, 1939

### Butler University Confers LL. D. Degree on Representative Ludlow

#### EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

Mr. RANDOLPH. Mr. Speaker, a high honor came to one of our colleagues on February 7 when Butler University with colorful ceremonies conferred upon the gentleman from Indiana, Representative Louis Ludlow, the honorary degree of doctor of laws.

The citation which was the basis of the university's award to the gentleman from Indiana [Mr. LUDLOW] was read to the throng assembled in the field-house gymnasium at Indianapolis by Dr. Roy M. Robbins, head of the department of his-

tory, who presented Mr. LUDLOW for the degree. The Members of our legislative body, in which the gentleman from Indiana [Mr. LUDLOW] has grown constantly in esteem and affection during his six terms of service, will be impressed with the accuracy of the citation, which describes him as "a product of the valley of democracy," as "representing most clearly the Hoosier prototype," as an idealist whose philosophy is "fundamentally American," whose writings "represent the generous liberalism of a vigorous age," who "in modes of life and manner is a man of the people," and whose interest in the common people has caused him to assume leadership in the cause of peace. The citation in full follows:

Mr. President, I have the honor of bringing to your attention a distinguished citizen—a product of the valley of democracy—a man who represents most clearly the Hoosier prototype. At an early age this gentleman came to Indianapolis and became employed on the staff of the Indianapolis Sun. In 1901 he was chosen Washington correspondent for all the Indianapolis newspapers and later became president of the National Press Club. While serving in this distinguished position he had the distinct honor of making the address of welcome to Col. Charles A. Lindbergh on the latter's return from his epochal flight to Paris. Elected to Congress in 1928, he was the first newspaper correspondent to go directly from the Press Gallery to a seat in Congress.

During his journalistic and congressional career he has managed to find the time to write five books—all representing the generous liberalism of a vigorous age. His philosophy is not unique; it is fundamentally American. A free soul, he loves freedom enough to deny it to none; an idealist, he believes that the welfare of the whole, and not the prosperity of any group, is the single end of government. In modes of life and manner this Congressman is a man of the people; in fact, his constant and pervading thought has been for the people. It is his interest in the common people that has caused him in recent years to assume leadership in behalf of the peace movement.

Mr. President, this gentleman is a man of Christian ideals. He is a man of genuine excellence, honorable, benevolent, and of uncorrupted disposition. His life has been the very edification of the teachings of the Sermon on the Mount. Mr. President, I have the honor to present for the degree of doctor of laws the Honorable LOUIS LEON LUDLOW, our Indianapolis Congressman.

The conferring of this degree upon the gentleman from Indiana [Mr. LUDLOW] was an incident of the celebration of founders' day at that ancient institution of learning. On February 7 Butler University was 90 years old. Twenty-seven educational institutions and civic organizations sent representatives to witness the installation of Butler's sixteenth president, Dr. Daniel Sommer Robinson. These joined Butler faculty members in the impressive grand march which opened the program. The presence of such a large and brilliant array of college and university presidents was a striking tribute to the personal popularity of the incoming president. The processional and recessional presented an array of academic dress such as rarely occurs at any educational institution. Each gowned member of the faculty wore the academic hood of his alma mater. Its colors indicated the degree earned by the bearer as well as the school from which he had earned the degree. Official representatives of numerous other universities wore similar insignia. As a result, there were scores of color combinations which brightened an otherwise austere occasion. They ranged from Butler University's own blue to the rich crimson of the University of London worn by Dr. Allegra Stewart. Dr. Raphael Harwood Miller, pastor of the National City Christian Church, of Washington, D. C., delivered the principal address, in which he stressed the importance of Christian education to democratic government and free society.

Mr. Hilton U. Brown, of the Indianapolis News, president of the Butler University Board of Directors, presided and introduced the new president in a very felicitous manner. The inaugural address delivered by President Robinson will have imperishable value as a model of educational literature.

Special guests of the university attended an invitational luncheon at the Marott Hotel following the services at the gymnasium, and the closing event of the historic celebration was a banquet in the James Whitcomb Riley room of the Claypool Hotel at night, when Dr. Miller again spoke.

At the luncheon, levity was mingled with serious sentiments apropos of the occasion in a flood of speeches of a more or less informal nature. John W. Atherton, secretary-treasurer of the university, was toastmaster. The gentleman from

Indiana [Mr. LUDLOW] was one of those called upon, and he spoke as follows:

Dr. Wildman, president of DePauw University, has just told you with some evidence of surprise and concern that he had not expected to be called upon today to make any remarks. I will say to the good doctor with considerable more evidence of surprise and concern on my own part that he has not got anything on me in that respect.

I, nevertheless, thank you for calling me to my feet, and I will say in all frankness that I think it is meet and proper that you should require the latest additions to your alumni to stand up and show themselves for your inspection.

In complying with this requirement, I am reminded of a hectic campaign years ago when we candidates were running around over Marion County wooing the electorate, and there was one bright young candidate for the legislature who received more applause wherever we went than all the rest of us combined. His speech consisted of just one sentence. Everywhere he went he would draw himself up to his full magnificent height, expand his bulging chest, and say:

"Ladies and gentlemen, I thought I would come out here today and show myself to you, and I hope it won't ruin me."

That, ladies and gentlemen, is what I am doing here and now. I am showing myself to you, and I fervently hope and pray that it won't ruin me.

I understand that a person who is fortunate enough to receive a university degree is thereby vested with all of the rights, privileges, immunities, and prerogatives—mind you, prerogatives—of an alumnus. I asked my son-in-law, who is a dean of George Washington University, whether that includes the privilege that is so sacred to the alumni—the privilege of abusing the faculty—and he said that privilege goes with the degree.

When I arose to my feet my wife, sitting here by my side, whispered, "Don't you dare to speak more than a minute." She is an old Butler girl, and she is trying to protect you. I recognize that as very salutary advice from the standpoint of the audience, but I wonder if that woman understands the standard length of a Congressman's speech. Over in the Halls of Congress we think a speech anything less than 2 hours in duration is a mere whisper. At times there are exceptions, but that is always when the gag is applied, for no Member of Congress ever makes a short speech of his own volition. Last week a Member managed to wangle a minute out of the hard-boiled bosses in which to deliver a 4-hour speech that had long been ranking in his system. He liked to speak, but he also had a kind, generous heart, and he then yielded 30 seconds from his allotment to a Member who couldn't get any time.

If I were to undertake within the limitation of 1 minute to give voice to the emotions that surge through my mind after witnessing that great ceremonial today, I would find myself in the predicament that confronted a certain noted divine and educator a few years ago when the moderator of the Presbyterian General Assembly arose and said:

"The next number will be an address by Rev. James McCosh, chancellor of Princeton University; subject, The Immortality of the Soul; time allotted, 1 minute."

The eminent clergyman consumed his 60 seconds very creditably but without exhausting his subject, and I have a very distinct consciousness that if I were to speak for hours about Butler University, its splendid history and fine traditions, I would not begin to exhaust the subject, so I shall leave that task to others.

Out there today we saw a great man take the helm as the head of a great university, and I know I express the sentiments of all when I fervently pray that success will crown all of his efforts and that Butler University, the university of high educational and cultural achievements and broad humanitarian service, which we all love, will go on and on and on and on doing good in the world forever.

And now just one more word, a little more personal to myself. When I was first informed that Butler was to give me this degree, I said to my helpmate: "It must be a case of mistaken identity. I don't know what I ever have done to deserve this." There are times when the tongue cannot speak the language of the heart, and that is the fix I am in now. My faltering tongue cannot begin to express the appreciation in my heart for the distinguished honor you have conferred upon me. I can only say simply, sincerely, and truly, "I thank you."

**Shall We Aid Finland and China, or Millions of Americans?**

#### EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

Mr. LARRABEE. Mr. Speaker, the Congress has before it a bill which, among other things, is intended to provide

loans to the Governments of the nations of Finland and probably China.

Finland is now threatened with extinction by the invasion of Russian troops; and Russia in this conquest appears to have, or is expecting, the aid of Germany. China has been invaded by Japan, which aggressor seems at this time intent upon continuing the conquest on Chinese soil at any cost.

We are asked by the proponents of this bill to take from the Treasury of the United States, through the Export-Import Bank, a Federal agency, a sum not to exceed \$20,000,000 as a loan to Finland. A like sum is proposed, from the same source, as a possible loan to China.

Little has been said, however, by proponents of the bill concerning the proposed loan to China.

The principal discussion and debate has been limited almost entirely to the question of a loan to Finland, and that is the question which the public in general believes is involved. Perhaps there has been no serious thought given the proposed loan to China. Perhaps the intention is to await developments, but to have the authority granted in advance in the event the loan is sought later.

Since the proponents of the bill have limited their case, generally, to pleading for aid for Finland, my remarks, generally, in opposition to the loan will be directed toward the question of the desirability of making a loan of the people's money to Finland.

Advocates of the bill base their case on the premise that it is the moral and Christianlike duty of our Nation to go to the aid of an oppressed people—a people who have in the past refrained from violating their former financial obligations to the United States.

Considered alone from the moral issue point of view, it is exceedingly difficult to find any strong arguments against the proposed loan.

Considered in the light of cold reason from other points of view, I find it exceedingly difficult to advance any strong arguments in favor of supporting the loan.

First, we must consider that the loan we propose to make to Finland is merely a gesture of good will from one nation to another in the family of friendly nations and in the family of democracies. The loan in itself will not do much toward preventing the aggressor nation from completing its objective of overrunning Finland, and of taking over all the lands and resources of the Finnish people. That has been admitted in many instances.

Admitting that it is our moral obligation to aid the Finnish people we are obligated to ourselves, to the people of the United States, to consider other phases of the proposal, also.

It appears, and this has also been admitted frequently even by the strongest and most ardent proponents of the proposed loan, that there is grave doubt that Finland will ever be able to repay the loan. The overwhelming force of the numbers of men involved in the conflict points to a very serious probability that Finland, ultimately, will fall to the aggressor. Certainly if Finland loses its national identity, and if Russia succeeds in its military drive, Finland will cease to exist as a nation, and we will have no hope of obtaining repayment of the money we propose to take from the Treasury—from the pockets of the taxpayers, if you please—and loan to Finland. The transfer of funds of the United States to Finland, then, should be considered as a probable gift, or grant, and not as a loan.

Second, the question of whether or not the Government of the United States can afford to make the loan, or grant, must be considered. It is our constitutional duty as the elected representatives of the taxpayers, to consider this question carefully.

The Government, through both its Executive and through action of the Congress thus far in this session, has said that we have reached the point where we must retrench—must cut Federal expenditures, in order that we shall not exceed the statutory limitations on the national debt.

Congress has, thus far, made commendable progress in reduction of appropriations for the operation of the Federal Government, on the theory that reductions are necessary.

If that be the case, and I believe that we should make all economies that are possible without incurring hardships among our own people, there is a very serious doubt in my mind that our Government can afford to make the proposed grant to Finland.

We have in this Nation today, according to all available statistics, thousands of men and women, heads of families with little children, who are unable to find any gainful occupation or employment. These people, just as much as the people of Finland, are in need of help, and it seems to me that they have the first call on our sympathies and on the resources of our Government.

From the best figures available, there are now approximately 9,000,000 jobless people in America.

Finland's entire population, according to 1938 figures, was only 3,667,000 persons.

At the present time, in my State and in my district alone, there are thousands of persons who have recently been laid off of W. P. A. employment, with no hope of finding other work, because of a shortage both in funds and in the number of projects in operation.

These conditions apparently exist in all sections, or at least in most all sections, of our Nation.

In the light of conditions at home—conditions general throughout the entire Nation—I find it very difficult to place myself in the position of voting the money of our own people to assist the less than 4,000,000 people of Finland until such time at least as I feel certain that we have made adequate provision for the care of our own unfortunates.

It would be using a trite expression to say that charity should begin at home, but I feel that I, the elected Representative of the people of the Eleventh Congressional District of Indiana, would be derelict in my duty to my people if I did not insist on relief for our own people first.

I have no objection to those people who feel strongly that the people of Finland should have such help as we may extend them contributing just as liberally as they wish and feel they can contribute. But I do object to the Congress of the United States taking the people's money from the Nation's Treasury—the people's Treasury—and lending it to the people of Finland at this time.

If we had no serious economic problems of our own, if we did not face the necessity of reducing our national expenditure, and if our 9,000,000 jobless citizens were employed or had reasonable assurance of employment, then I could, and probably would, feel otherwise.

For my part, I choose to devote such money as is available to saving the 9,000,000 unemployed of the United States and their dependents first.

### An Appraisal of the New Deal by Labor

#### EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

ARTICLE BY PROMINENT LABOR OFFICIALS

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recent appraisal of the results of the New Deal by prominent labor officials, under the challenge, A Call for United Action.

#### A CALL FOR UNITED ACTION

For 7 years a great experiment has been undertaken by the Federal Government upon the industrial and social economy of the United States.

However high the motives which prompted that experiment, the time has come to analyze the experiment, to survey its operation, and to assay its results.

It has been an experiment on the lives of 125,000,000 Americans. It has profoundly affected the conditions and the relations of the

worker and the employer. It has affected trade and finance, industry and agriculture, government and business.

Innovation after innovation have followed upon each other so fast and furiously that only a trained few could keep abreast of changes. If, after 7 years, the situations of labor, industry, and agriculture had materially improved, if happiness and progress, hope and confidence had resulted, we could conclude that the experiment had been worth while.

Instead we find labor torn into warring camps. We find industry depressed and capital on a strike. We find 10,000,000 of America's workers unemployed. We find youth discontented and age discouraged. We find not only widespread material suffering, but in every walk of life we find fear for the great intangibles of America; fear for the liberties that Americans have cherished for more than a century and a half. It has therefore seemed a necessary duty to survey the facts of the experiment, to measure impartially the results that have ensued, and to state the conclusions that necessarily follow.

Through the strains and stresses of many years, organized labor has developed a philosophy of industry and of industrial relations. It is an American philosophy, and one under which American labor has prospered and America has flourished.

In 1923 at an annual convention of the American Federation of Labor presided over by Samuel Gompers, a prophetic declaration was adopted. Under the title of "Industry's Manifest Duty" it said:

"The largest freedom of action, the freest play for individual initiative and genius in industry cannot be had under the shadow of constant, incompetent political interference, meddlesomeness and restriction.

"The threat of state invasion of industrial life is real. The continuing clamor for extension of state regulatory powers under the guise of reform and deliverance from evil can but lead into greater confusion and more hopeless entanglements."

That conviction was reaffirmed in 1938 when the executive council of the American Federation of Labor stated that—

"Unemployment can only be overcome through the creation of work opportunities for working men and women in private industry. This is the real remedy for unemployment."

It therefore becomes pertinent to inquire into what the experiments of the past 7 years have done, or not done, to free industry and labor from political interference; what it has done and not done to encourage private industry; what it has done and not done to provide opportunities for employment.

#### INDUSTRY

To succeed, industry needs ample and continuing financing, satisfactory supplies of raw materials, satisfied labor, adequate transportation, public confidence, reasonable taxation and profits.

All these factors have been latent in the American economy for the past 7 years, and yet, for reasons that are known to all who deal with industry, they have not been permitted to function.

#### FINANCE

Instead of providing industry and business with ample and continuing private capital, the banks have been compelled to invest and finance the Federal Government. How severe that competition was may be seen from the fact that from 1926 to 1938 the percentage of Government securities held by the banks of the country compared to the commercial loans outstanding rose from 15 percent in 1926 to 75 percent in December 1937. In 1926 the total loans and discounts of America's banks totaled \$26,200,000,000. In that year the banks held \$4,000,000,000 of Government securities. In December 1937 the total loans and discounts were \$22,100,000,000. But the Government securities held by our banks reached a total of \$16,600,000,000.

#### LABOR

Industry and labor alike have been disturbed, the production of useful goods has been hampered by the introduction into the industrial scheme of boards and bureaus which assumed ill-advised authority over the relations between labor and management.

So far as it strengthened and upheld labor's traditional right of collective bargaining, the National Labor Relations Act received the unstinted support of labor and of far-seeing management. Yet in the administration of that act, in the distrust and disappointment created by those set up with authority to command both labor and industry, business confidence was impaired.

With the setting up of the National Labor Relations Board, staffed with men who neither knew nor cared for the traditions of organized labor, a bad situation became rapidly worse. Labor itself was split. Management was disregarded. Labor strife was the inevitable result, and the orderly processes of industrial relations were shattered. New uncertainties were introduced into the industrial field. Strike followed strike, as labor found itself adrift on an uncharted sea. Production suffered. Unemployment increased.

As long ago as 1932, Andrew Furuseth, respected and revered for his many years of service to labor, declared:

"There is nothing to prevent the United States, if it wants to, having a 4-day week and a 4-hour day. There is nothing in our Constitution that would prevent it. But, lodged in the exclusive power of the Federal Government, may God help you and your children's children! Do you know what it would mean to give this power to the Government to rule the hours of labor? How do you know that you will not get 12 hours instead of 4 hours?"

Labor has long recognized that the worker cannot be secure in employment unless industry is prosperous. And no better summary of this belief, and no severer indictment of the 7 years of

experiment, can be found than the declaration of the annual convention of the American Federation of Labor on October 2, 1939. This declaration stated:

"The American Federation of Labor is not willing to tolerate permanent unemployment. We know that idle plants can be brought into operation, idle capital can find investment in productive enterprise, and idle men be put to work producing the goods they need for a decent living. Our Nation has all the elements necessary to provide an adequate living for every family; we lack only the proper coordination of effort.

"Today the picture is entirely changed. Now there is no longer opportunity for highly profitable investment in great expansion of the Nation's producing plant and equipment, for our industries cannot sell enough goods to keep their present plant in operation. The high profits and huge fortunes of the past cannot be made in industry today. The Cleveland Trust Co. estimates that the chance of even succeeding in business today is only about half as great as in the past, and the profits rewarding those who do succeed are at least 20 percent less. The risks are greater, the reward less. Consequently, private capital is not seeking investment in productive enterprise, but instead seeks security in tax-free Government bonds. During the depression private investment in industrial plants and in housing shrank to 3,500 million or less in contrast to the 12,000 million invested annually before depression."

Every idle plant means unemployment. Every contraction in business means loss and privation for the worker. Capital unemployed in productive enterprise means men and women unemployed. This is the basic reason behind the long and cruel roll of those who seek employment and cannot find it.

When the 7 years of experiment upon the lives and hopes of those who labor have resulted in the gloomy picture painted by the economist of the Cleveland Trust Co., it is high time that, before it is too late, this Nation should return to the tried and tested procedures under which trade prospered and employment spread.

#### TAXATION

Experiments are costly luxuries. For the upkeep of innumerable boards, bureaus, and authorities, for the maintenance of persistent relief rolls, and the building of new and imposing Government enterprises, the cost has been met by increased taxes and increased public debt.

One of the great drags upon industry during the past 7 years has been the burden of taxation that has been imposed upon big and little business. There are literally thousands of industrial and commercial concerns which have been forced into red figures by the taxes which have been imposed on flagging business.

How heavy these taxes have been may be seen from reference to some of the Nation's largest and strongest industries. The total amount of ascertainable tax bill for a leading automobile concern for 1935 was \$63,150,000. This represented \$1.37 per share of common stock, and \$334 per employee. In 1936 total taxes were \$91,150,000, representing \$2.13 per share of common stock and \$440 per employee. In 1937 total taxes were \$104,959,000, or \$2.45 per share of stock and \$444 per employee. In 1938 the total taxes were \$73,812,000 (including excise tax), or \$1.72 per share of common stock and \$450 per employee.

In 1929, steel taxes represented 14 cents per dollar of wages paid. In 1938, taxes equalled 21 cents per wage dollar. In 1929, steel taxes represented \$2.91 per ton of finished steel produced. In 1938, steel taxes represented \$5.18 per ton.

In an examination of 163 typical corporations, the American Federation of Investors reported that in 1938 taxes consumed 61.6 percent of the net earnings of these 163 corporations before taxes were paid. Nineteen of these companies reported a deficit before taxes, while the earnings of 15 others were wiped out by taxes, leaving deficits for the year.

The effect of this tremendous drain on industry is doubly disastrous to labor and employment. Every dollar paid in taxes by industry is a dollar that cannot be used for pay rolls, for development, or for expansion. Yet industry at least has a possibility of passing on to the consumer, in increased prices, a substantial part of the taxes that it pays.

The one person who cannot pass on taxes is the ultimate consumer, and the worker and the worker's family must, and do, pay a large part of industry's taxes in everything they consume. In their necessities and their pleasures, consumers are bearing a lion's share of the staggering tax bills imposed to cover the cost of Federal spending.

At least \$185 a year is required to cover the indirect or invisible taxes involved, in the production and distribution of the merchandise and services purchased by a worker's family spending \$30 a week or \$1,500 a year.

#### PUBLIC CONFIDENCE

Of all the factors upon which the prosperity of industry and labor depend, none is more important than confidence. Confidence in the stability of business and of jobs. Confidence in the permanence of the rules and regulations under which business must operate. Confidence in the Nation's currency. Confidence in the fairness and goodwill of those who are clothed with official authority over management and labor. The most tragic result of the 7 years of experiment has been the destruction of confidence, by incessant tinkering with established forms and procedures.

Tinkering with the hours and wages of labor under the N. R. A. Tinkering with the cost of labor's food under the A. A. A. Tinkering with property rights in the confiscation of private gold savings. Tinkering with the foundations of American Government in the

attack on the Supreme Court. Scarcely a month has passed without action or rumors of action, which would alter the plans and the outlook of labor and industry. And overhanging all has been general awareness of a national debt of \$40,000,000,000 as a mortgage on the future of America.

These material factors affecting labor and industry are in themselves sufficient to paralyze confidence. Yet to men, whether they be workers or employers, who know and love their country there is still another phase, emerging from the experiments which they view with patriotic alarm.

So fearful were the founders of our Government of the concentration of powers in the Federal Government that in the Bill of Rights, article X, they expressly limited the Federal power in these words:

"The powers not delegated to the United States by the Constitution nor prohibited by it to the States, are reserved to the States respectively, or to the people."

With money taxed or borrowed from the people the Federal Government has set up a multitude of public and semipublic corporations, which have gone into the States to weaken the authority and the financial soundness of the States.

Counties and municipalities have been placed in debt to the Federal Government. The States have seen, set up within their own borders, Federal agencies and corporations to create undertakings which directly competed with private enterprise. Federal lending corporations have competed with their financial institutions. Federal building corporations have competed with their private builders. Federal utility authorities have competed with State-regulated utilities. Federal farm corporations have competed with and superseded the public and private agencies within each State.

In many of these instances the Federal corporations and agencies have gone far beyond the intentions of the authority which was granted to them by the Congress. But steadily and surely they have undermined the sharp line between State and Federal authority to increase the concentration of power in Washington.

As labor and industry survey what has happened to labor and industry in those lands where all powers have been concentrated in the central authority, they fear and oppose the steps which thus far have been taken here, to enlarge the dominion of the Federal Government over the lives and fortunes of the American people.

It is not a problem for labor alone, or industry and agriculture alone. It is a problem which must be solved by an awakened citizenship. It is a problem to be discussed at every fireside, to be dealt with by every publicist, to be prayerfully considered by those Americans who this year will be called upon to draft the platforms of both political parties.

The hour has come for Americans to recognize the dangers that confront them, and to join in an united effort to halt the drift toward national insolvency, industrial collapse, and the extension of opportunity for the Americans of today and tomorrow.

William L. Hutcheson, general president, United Brotherhood of Carpenters and Joiners of America, member, executive council, American Federation of Labor; John Possehl, general president, International Union of Operating Engineers; John P. Coyne, president, Building and Construction Trades Department of the American Federation of Labor; Robert Byron, general president, International Association of Sheet Metal Workers; Charles J. MacGowan, vice president, International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America; Joseph W. O'Neill, representative, Distillery Workers' International Union; James J. Ryan, first vice president, International Association of Sheet Metal Workers; Roland Adams, member, general executive board, United Brotherhood of Carpenters and Joiners of America; J. R. Weyler, general representative, United Brotherhood of Carpenters and Joiners of America; Matthew Woll, vice president, member executive council, American Federation of Labor; and others.

### The American Youth Congress

#### EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

#### ADDRESS OF THE ATTORNEY GENERAL

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I submit the speech given by Attorney General Robert H. Jackson.

The quotations from Carl Sandburg's Abraham Lincoln is interesting. The speech was given before the American

Youth Congress now assembled in the Nation's Capital, and is as follows:

Perhaps it is hard for you to imagine how flattering it is to such a well-worn youth as I to be invited to share the platform at a Youth Congress. For more reasons than one it is appropriate that you open your institute tonight with a memorial meeting for Abraham Lincoln. He was one Republican who would not have been afraid of you. Speaking of his long fight for human freedom, Carl Sandburg says of Lincoln:

"He knew that his best hopes for listeners to such an appeal were the young people. The 15- and 16-year-old boys who had read Uncle Tom's Cabin when it was published 6 years before Lincoln's house divided speech had grown into 21- and 22-year-old voters. In what he was doing and saying Lincoln kept in mind the young men; he knew that the challenging radical tone of what he was saying about the Declaration of Independence would interest not only the foreign-born voters but also the young people of all classes, those to whom the American Revolution still had a breath of smoke and a banner of sacred flame."

And, as Sandburg adds:

"Perhaps, after all, only the young people with dreams and wishes in their eyes would understand his language. When his talk was ended and his language had failed to measure off all he wanted to say, it might be the young who would best understand the desperation of his dreams, the unmeasured lengths of the adventure he was for."

#### LINCOLN'S AIMS EXAGGERATED

I do not know what your dreams are, and it probably will not be for me to experience the unmeasured length of your adventures. In any case, I am quite certain that I believe in your right to have your dream and your adventures.

Of course, to some people this spirit of social and political unconventionality is terrifying, and to some people such an assembly of young people is a symbol of dark and nightmarish plottings against government. Lincoln, too, experienced that. A book written at the time of Lincoln's campaigns so exaggerated his real aims as to anger him. It said:

"Men once fairly committed to Negro slavery agitation—once committed to the sweeping principle that 'man, being a moral agent, accountable to God for his actions, should not have those actions controlled and directed by the will of another' are in effect committed to socialism and communism and to the most ultra doctrines—to no private property, no church, no government—to free love, free lands, free women, and free churches."

#### DANGEROUS?

Thus, it was sought to blast the dreams and ideals of the early Republican Party by labeling its antislavery sentiment as dangerous radicalism. Seems a little far-fetched today, doesn't it? But what seems more surprising is that the political party which has been trying to wear Lincoln's political garments now refuses to associate with any of you youths because you are now labeled radicals and Communists.

Of course, I do not know how dangerous you really are, but I do hope you are not so bad as to warrant the suggestion that you must clean up and purify yourselves in order to be worthy of a message, even from the party of Warren Harding, Albert Fall, and Joe Pew.

I may be wrong about it, but it always seemed to me that a parent or a citizen who thought a youth in danger of great error was under an equally great duty to give patient and understanding counsel. That was the spirit and the practice of Abraham Lincoln. Convinced that he was right and that it was a duty and a privilege to set others right, he went out and sought to present his views to those who differed with him. He set before us the classic example of revealing his own thoughts in debate—in the generous confidence that out of the free competition of ideas the American people can be trusted to choose the best one.

My embarrassment in speaking to you tonight is not from a sense of being hollower than thou but from a confused sense of inferiority. While I try to be unconscious of the passing years, I am still vaguely aware of the mortality tables. They tell men of my age that, on average, you will be here long after we are gone. That means that our work, our capital, our institutions, and even our reputations will be left in your hands. Some men, like Lincoln, have grown in fame with posterity—others shrivel. The best we of today can do is at the mercy of time, and more time remains to you than to us.

Then, too, I am not so cocksure that my own generation has done such a good job in its time that I feel qualified to tell you what you should do with your lives in your allotted time. It would be too devastating if you should, as you probably would, reply:

"Well, if you are so wise, why are you leaving us such a mess of wars, and rumors of wars, of social strife, economic stagnation, and political reaction, which has overwhelmed much of the world and bedevils all of it?"

I freely acknowledge that the world of today lives in a glass house and is not privileged to throw stones at those who are to follow.

#### PART OF STATUS QUO

It is, I admit, a little difficult for one of my generation to talk to you in terms of your own dreams and visions, for we cannot share them fully. After all, we are a different generation, and we are a trifle afraid of you. That because, while you are tossed about by the same storms as we, you are riding free, while we older ones

are mostly anchored. Some of us are anchored to a little accumulation of property; some, anchored to a prospect of accumulating. Some are anchored to jobs, or to social position, or political affiliations, or to some of those things which are tangible assurances that we will "stay put."

No matter how free we try to be, we are all tangled up in the existing order of things, and it is woven into us. We are part of the status quo.

And, too, no honest man can expect a free and hopeful youth to accept a status quo in which involuntary unemployment, foreclosed opportunities for independence, dependent old age, and so many injustices play so large and disastrous a part. We know we are leaving you an indefensible legacy. We know you are going to do something to it, and we don't know what. We know that you don't know what. We only know that the pattern of the future is in your minds, not in ours.

#### NOT ONLY ONES

Although you do inherit a good deal of difficulty and confusion, you here in America are also the inheritors of things which have cost blood and sacrifice to win and which you will find still worth preserving. We have a system—an imperfect one, it is true—but one which aims to give us government by consent of the governed. And in order that such popular will may be enlightened and freely known, there was established the right of free speech, and of the press, and of petition, as well as other liberties from restraint. These limitations are to protect your freedom against the persons you elect to office.

Of course, they are not the only persons from whom you will need to guard your liberties. Under our economic system grave injustices and inequalities may be perpetuated by men never elected to office, but who through economic advantage control jobs, or credit, or monopolize commodities, or who can otherwise strike at your means to live or your standard of living. From these sources come the greatest modern threats to your pursuit of happiness.

This democratic Government of ours was so fashioned as to be a power for your protection against such private injustice and exploitation and, at the same time, not to become an oppressor itself. It was placed in the hands of the people that they might stop wrongdoing by irresponsible private power, without becoming subject to irresponsible public power.

Time will not permit me to trace the steps by which this virile and strong Government envisioned by John Marshall was stealthily deprived of its power to curb private exploitations and injustices of an economic nature. The slave power feared a government strong enough to check it, and its penetrating influence was long dedicated to the task of restricting, through judicial decision, the power of the National Government. After Lincoln struck down that menace there arose the great combinations of finance and industry which found strong government an obstacle to their imperial designs for exploitation. By 1936 the National Government was reduced by judicial decision to its lowest efficiency.

It has seemed to me that the biggest task of the New Deal was to restore to this people's Government its original powers, lost through judicial interpretation. That is the task in which I have been chiefly engaged, and we are prepared to hand on to you a more effective government than the one Franklin D. Roosevelt has had to work with. Consider with me a list of the things that he was told he could never, never do, but which we now are told the Government always really had a right to do.

When President Roosevelt took office the people were powerless to enact, either through State or Nation, a minimum-wage law to protect women. Both the States and the Federal Government now have that power.

#### FARM PROGRAM UPHOLD

President Roosevelt took over a Nation without power to enact a law dealing with child labor. We now have such a law.

President Roosevelt found a Nation with its power to protect the right of labor collectively to bargain condemned as unconstitutional by a junta of 52 of the lawyers of America. The Nation has now won recognition of that power.

It was only about a year ago that we won the final decision of the Supreme Court confirming the power of this Nation to enact a valid farm-adjustment program.

It was only about 3 years ago that I sat before the Supreme Court on decision day to learn for the first time that our argument had prevailed and that a system of unemployment compensation could be legally undertaken.

Less than 3 years ago I was standing before the Supreme Court as a representative of this administration pleading for the power to deal with the urgent problem of decent care for our growing population of aged and infirm. We were opposed by the conservative argument that the Nation could not take any step whatever to deal with old-age pensions. Now we have that power.

#### UTILITY HONESTLY WON

President Roosevelt found this Nation without power to aid a distressed industry, like the bituminous-coal industry. The Guffey Coal Act was thrown out as wholly illegal in 1936. This year the Coal Commission won its first contest in the Supreme Court.

President Roosevelt found the power of the Nation to enact a public utilities holding company act challenged. Its power to impose common honesty upon great interstate utility combinations, which had always been the purse of reactionary politics, was doubted. We have won the power to do that.

He found the country without power to enact a municipal bankruptcy act to permit its cities and villages to restore financial order and credit where there had been overobligation from years of political looting or improvidence. We have won the power to do that.

He found it without power to tax the public officeholder's salary as it did other citizens' salaries. We have won the power to do that.

He found it without power to tax the salary of a Federal judge, as it did other citizens' salaries. Today the Nation has the power to do that.

In short, Roosevelt has won for the Nation that which he found it without adequate power to do—either to govern the powerful or to protect the weak.

The reason I call your attention in such detail to this change of constitutional interpretation is that I think it may answer in your mind, as it has in mine, grave doubts as to whether our Government could be made equal to solving its problems.

Four years ago, as measure after measure of recovery and of reform were crushed as unconstitutional, I too was pretty despondent about the future. I did not, and do not, feel that the New Deal measures were the perfect nor even the best solution of our problems. The loss of these particular measures was not so serious as the loss of the power to enact any measures dealing with those admitted evils.

Before you look wistfully at any other form of government, let's see what we can do with this American Government with its powers thus restored. Here are old frontiers reopened to statesmanship. Here are new possibilities for the redress of grievances, restoration of lost opportunities and equalities.

#### AMERICAN SYSTEM

Of course, it will not move as fast as some would like, but our Government can move as fast as our underlying society and economy will assimilate changes, and efforts to move faster always produce countermovements that undo much of what has been accomplished. If the people are really determined, they can now utilize our Federal Government to knock out old privileges and unfair advantages, to open the closed doors to individual opportunity, and to turn out unprecedented national wealth to a source of individual security.

I know full well that many people who talk of preserving this American system really mean only that they want to preserve the status quo and their advantageous position in it. But I would urge you to preserve our American system for an exactly opposite reason. Our system is really a great system for the changing of the status quo by peaceful and orderly means. Except in nations that have the device of popular elections, there is no way to repudiate and change a governmental policy except by force. Elections are the civilized substitute for force to keep a government abreast of public opinion.

I know that in many places abroad and in a few at home it is the custom to scoff at free government, to call democracy the "cult of incompetence," to complain of it as slow and compromising and outmoded. But if we were to grant all of those charges—which we need not—it is still democracy alone which preserves that priceless thing for which youth in all ages has searched—the dignity and worth of the individual.

#### ALMOST ALONE IN INFLUENCE

With all our gropings and uncertainties we have in America held to that ideal. If our practice does not measure up to the ideal then, that discredits not the ideal but only the weakness of our efforts. You live in a country where the individual may listen to his radio even if what he hears does him no good. The individual here may have grievances against his system, but he does not disappear unaccountably if he unites with others in denouncing them. The individual may read anything he can get hold of, write as he pleases, and speak his mind, even if what he says is distasteful to the rest of the country.

Among the great nations of the earth this is one of the few where plain ordinary citizens are preparing to go to the polls and settle our national policy by a choice of leaders for the next 4 years. You are almost alone of the peoples in which the individual in humble station may register his influence on questions that settle the fate of the Nation.

You may truthfully say that we have not the complete democracy and the perfect justice that we dream of, but you cannot deny that we are among the few who have in our own hands the possibilities of approaching those hopes. Is it any wonder that among us are people passionately attached to this system, in spite of its shortcomings, and intensely resentful of any movement which they think would overturn it?

You will soon take over from your elders unsolved problems as vexing as have fallen to any generation. But there is also handed to you a government more responsive, more effective, and more useful than we have had. Your great opportunity is to make it work. Let that be your crusade. Drive out of power the incompetent, the corrupt and the indifferent. Walk into this democratic process and master it. Make it serve your dreams and realize your visions. I, for one, welcome your active, unbossed, and unpurchasable enthusiasms in public affairs.

If your enthusiasms and visions at times conflict with the lessons of experience and our cautions, that is only what happens under every roof that is blessed by housing two generations. For my part, I am glad it is so.

## Questions and Answers on Pure Streams Legislation

### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

ANALYSIS OF PENDING LEGISLATION PREPARED BY THE IZAAK WALTON LEAGUE OF AMERICA

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following analysis of pending legislation on pollution prepared by National Headquarters, Izaak Walton League of America:

Question. Who started the present Federal legislative movement?

Answer. The Izaak Walton League of America with the Dern-Loneragan conference in Washington, D. C., December 1934, followed by Senate Document No. 16, of January 30, 1935, "Stream pollution and stream purification," and introduction of the first Loneragan bill, S. 3958, in the Seventy-fourth Congress, second session, January 16, 1936.

Question. Does the present Mundt bill have any connection with the former Loneragan bill?

Answer. The Mundt bill is a continuation of the original movement started by the first Loneragan bill. It has been amended, revised, and rewritten from experience gained in many hearings to provide close cooperation with all existing agencies and to eliminate all valid objections of those who were interested in pure streams, but who felt that the original Loneragan bill was drastic.

Question. Who would administer the Mundt bill?

Answer. The Chief of Engineers of the United States Army.

Question. Is the Army Engineer Corps equipped to administer such a bill effectively?

Answer. Yes; the Army Engineer Corps now has district offices and stations located at strategic points along the navigable waters of the United States. For many years it has collected data on pollution of these waters. It is now in charge of navigation and flood control on these same waters. By reason of its present facilities it is in an excellent position to administer a pollution-control bill.

Question. Would not the United States Public Health Service be a more logical and appropriate agency to administer the Mundt bill?

Answer. No; because this bureau is traditionally an investigating agency without any police powers; because it has consistently objected to police powers and refused to accept any; and because its responsibility and interest in the pollution problem is confined to human health alone.

Question. Why do most State health departments support the Barkley bill (S. 685) and often oppose the Mundt bill (H. R. 7971)?

Answer. Because the Barkley bill is a typical bureau aggrandizement bill; because it holds out to them a \$700,000 annual bait; because the United States Public Health has urged their support and they fear being placed on the blacklist if they fail to give their support.

Question. Is not pollution a public-health matter?

Answer. Yes; it is a public-health matter, but it is very much more. Public health, while admittedly the most important consideration, is by no means the only consideration. There are many cases of industrial pollution which are not considered objectionable by health authorities, even though such pollution may render the streams absolutely dead biologically. The narrow viewpoint of public health concerns itself only with human health as it is affected by the ultimate product which comes through the water faucet. When this water is given sufficiently elaborate treatment to render it bacteriologically safe for human consumption, the responsibility to public health is considered to have been met and the concern of health authorities does not extend to the condition of the source of this supply—the public streams.

Question. Does the Mundt bill extend the authority of the Federal Government to every little tributary in the country?

Answer. The jurisdiction of the Mundt bill is limited to navigable waters.

Question. Is the Mundt bill constitutional?

Answer. Its constitutionality has been passed on favorably by many competent attorneys.

Question. Does the Mundt bill supersede and supplant existing State agencies with a completely Federal control?

Answer. No; it provides for fullest cooperation with existing State agencies and specifically states that "action by the Federal authority will be taken only after such existing authorities have been given an opportunity to act, and 6 months after receipt of written notice from the Chief of Engineers, have failed to do so." In other words, the passage of the bill would in no way interfere with those existing agencies that are trying to do a good job in correction of pollution, but, on the contrary, would give them

valuable moral support. It would, however, prevent a stalemate of the program in those cases where existing agencies are stalling on the job.

Question. Would the Mundt bill require pollution to be eliminated immediately upon passage of the bill?

Answer. No; it outlaws the spread of future pollution immediately, but gives a 2-year period of grace for existing pollution before anything need be done, and states that "A reasonable time shall be allowed for completion of treatment works" which are started within this period. It further provides that when necessity can be shown to the satisfaction of the Chief of Engineers after a public hearing, that a 5-year extension of time may be granted; and at the expiration of that time, following the same procedure, "such further extension of time as may reasonably be necessary."

Question. Does passage of the bill summarily require complete elimination of all pollution?

Answer. No; the bill defines pollution and authorizes the Chief of Engineers to set up standards of purity in each watershed with minimum requirements for treatment of polluting wastes.

Question. Does the bill provide for criminal action with fines and imprisonment?

Answer. No; the bill provides no fines or imprisonment or criminal action. It authorizes an action in equity in the name of the United States by any United States attorney when requested to do so by the Chief of Engineers or the district board of a sanitary water district, to prevent or abate pollution as defined by the bill.

Question. Would the Mundt bill be unfair to or disrupt American industry?

Answer. No; it gives every consideration to both industrial and municipal polluters as above outlined, and in fact, by providing uniform Nation-wide regulations, would put all industries on a level competitive basis and eliminate such inequalities as now exist by reason of one State having or enforcing adequate pollution-control laws while another State either had none or did not enforce them.

Question. Does the Mundt bill provide any assistance to polluters for installation of treatment plants?

Answer. Yes; it provides loans and grants to municipalities and loans to industries.

Question. Does the Mundt bill supersede or abrogate the powers of interstate compacts or ones that may be formed in the future?

Answer. No; it authorizes the formation of interstate compacts and says that where they exist, or may be set up in the future, with authority to enforce the provisions of the act, that the interstate compact shall be the district board.

Question. Would the Mundt bill be administered by arbitrary ruling from a central office in Washington?

Answer. No; the bill provides for district boards in each sanitary water district, which shall be truly representative of all interests with all members bona fide residents of the watershed district.

Question. Why is Federal control of pollution necessary?

Answer. Water flows by gravity from one State to another and the effect of pollution cannot be confined to the political division or subdivision of its origin. Voluntary action, attempted control through State laws or interstate compacts, and similar methods have been tried for 50 years. For 6 years Federal funds were available to municipalities for correction of municipal sewage. The polluted condition of the Nation's waters stands as mute testimony that existing agencies and methods are unable to cope with it, and the very worst pollution is interstate in character. In view of these long-time efforts by existing agencies it is evident that the remaining polluters are immune to persuasion or control by existing agencies and that they have no intention of doing anything about correcting their pollution unless they are obliged to do so. The Mundt bill affords them the opportunity to do so voluntarily which they have had for many years; affords existing agencies the opportunity to enforce correction of pollution if they can and will; affords them financial aid, and finally as a last resort, provides the authority for forcing the hard-boiled recalcitrants into line.

Question. What is the present status of the Mundt bill?

Answer. It was introduced in the last Congress and held in the Rivers and Harbors Committee. In order to accord the same courtesies in time extensions to municipalities for the installation of treatment plants accorded to industry, it was reintroduced by Mr. Mundt in this revised form at the regular session of Congress in January. It will bear the same name, "Mundt bill," but will be given a new number. It now bears the number H. R. 7971, and is not to be confused with the so-called Barkley bill which is S. 685, which has the support of polluters but is definitely opposed by national conservation organizations.

Question. Is there any other bill before the Seventy-sixth Congress which affords any control over any pollution to any agency?

Answer. No; five other bills were introduced in the first session of the Seventy-sixth Congress under the titles of "antipollution bills" or "pollution-control bills," but not a single one of them afforded any control over any pollution to any agency. They were all essentially alike and proposed to spend a million dollars a year for further investigation and research without doing a single thing about correcting pollution.

Question. What can you, as a Member of Congress, do to help pass H. R. 7971 and to exert your influence on the side of real antipollution legislation? How can you cooperate with the friends of clean streams and pure waters in promoting a program which will protect the health and recreational opportunities of your friends and neighbors?

Answer. You can first of all vote to recommit S. 685 (the so-called Barkley bill) and thus send it back to committee where

open hearings can be held on it together with H. R. 7971 in order that an effective antipollution bill may be reported out. Failing in that, you can vote against S. 685, because only by its defeat will the way be open for legislation to correct America's pollution problem. To vote for the Mundt bill it is first necessary to vote against the Barkley bill.

## A Refutation of Certain Dies Committee Findings

### EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

#### STATEMENT BY OFFICERS OF THE SPANISH REFUGEE RELIEF CAMPAIGN

Mr. COFFEE of Washington. Mr. Speaker, at the request of eminent intellectuals identified with the Spanish refugee relief campaign, I am incorporating in the CONGRESSIONAL RECORD a statement by the officers of that organization in reply to observations in the recent report of the Dies committee reflecting upon that enterprise as a "front organization of the Communist Party."

Mr. Speaker, I resent, as do many other liberals, promiscuous commentaries made by witnesses before the Dies committee upon progressive men and organizations. Opinion evidence is inadmissible in any court of record in America unless the witness has been properly qualified and has demonstrated beyond peradventure his intimate knowledge of the thing or person about whom he purports to have a carefully arrived-at opinion. It is an outrageous miscarriage of justice that many splendid citizens of national reputation have been impugned and maligned before this committee, without the opportunity being accorded them to be present so that they may confront their accusers and confute the charges, if necessary.

Let the statement speak for itself.

#### STATEMENT BY THE OFFICERS OF THE SPANISH REFUGEE RELIEF CAMPAIGN

[Bishop Francis J. McConnell, chairman; Philip Merivale, vice chairman; Mrs. Caspar Whitney, vice chairman; Dr. Guy Emery Shipley, treasurer]

In its recent report to Congress the special House Committee on Un-American Activities describes the Spanish refugee relief campaign as a "front organization of the Communist Party."

The national officers and the members of the executive board of this organization are under obligation to the men and women in every part of the country who support the organization to answer this accusation. And they do so, not by offering general statements in rebuttal, but by a simple recitation of the concrete and verifiable facts concerning the organization.

First. The sole purpose of the Spanish refugee relief campaign is to aid in relieving the suffering and in solving the problem of a hundred and fifty thousand Spanish refugees now living in France and north Africa. It does not concern itself, directly or indirectly, with any aspect of domestic or international politics. Its character and purposes are parallel with those of many other refugee relief organizations. Any attempt by anyone to commit the organization, in word or act, to the support of any government or political philosophy would be instantly repudiated as an improper use of a humanitarian enterprise. We assume that such a statement will not, to any American, seem incompatible with giving aid to people who are homeless because they defended their republic against aggression.

Second. The Spanish refugee relief campaign grew out of the Medical Bureau and North American Committee to Aid Spanish Democracy. The latter organization was established during the war in Spain for the purpose of interpreting to the American people the meaning of the war and of giving aid to the loyalists in the form of food, clothing, and medical supplies. Paralleling the popular front character of the Spanish Government, the American organization was composed of representatives of various political bodies, fraternal and progressive organizations.

At the end of the Spanish War the structure of the organization underwent radical changes. Its representative character ceased. Its direction was placed in the hands of a board of 25 people, most of whom had no connection with the medical bureau and North American Committee and who act in a personal capacity only. The name of the original organization was retained for a time but on October 1, 1939, the Medical Bureau and North American Committee ceased to exist both in name and in fact.

The citation in the Dies committee report of the North American Committee to Aid Spanish Democracy is eloquent evidence of

the completely casual character of the investigation and its consequent unreliability. There has been no North American Committee to Aid Spanish Democracy since January 1, 1938, and the organization known as the Medical Bureau and North American Committee to Aid Spanish Democracy had not been in existence for 3 months when the report was submitted.

Third. The relief funds of the organization are administered by representatives of the American Friends Service Committee, whose record of efficient, nonpolitical administration of relief is well-known to all Americans.

Fourth. None of the responsible and active heads of the organization—the chairman, the vice chairman, the treasurer, and the executive secretary—are in their official positions or in their personal opinions either Communists or so-called fellow travelers. This is a fact which has never been and cannot be successfully challenged. The honorary chairman is Mr. Harold L. Ickes, Secretary of the Interior.

Fifth. The Spanish refugee relief campaign has no organizational affiliates, political or otherwise. It asks and receives contributions from the public without regard to political beliefs and depends on no political party or other organization for any part of its income. Its work is directed by an executive board of 24 men and women who, as members of the board represent nothing save their own and the public's interest in the Spanish refugees. These men and women are well-known, and their integrity is unimpeachable. They assume full and sole responsibility for the policies and work of the organization. The following constitute the board:

Jay Allen; Mrs. Eleanor Copenhaver Anderson; Roger N. Baldwin; Edward K. Barsky, M. D.; Prof. Lyman R. Bradley; Tom Davin; Clark M. Eichelberger; Miguel Garriga; Dr. Samuel Guy Inman; Paul Kellogg; D. William Leider; Louis Miller, M. D.; Michael Niselson; W. W. Norton; Miss Josephine Schain; Prof. T. C. Schneirla; Mrs. Vincent Sheean; Dr. Guy Emery Shippler; Maxwell S. Stewart; Leland Stowe; Miss Katharine Terrill; Jesse A. Tolmach, M. D.; Mrs. Caspar Whitney; and Roy Wilkins.

Sixth. The files in the organization's national office constitute a complete record of all financial transactions, publications, appeals, and statements; and these files, which are open to inspection by any responsible person, contain not a single fact or syllable which provides any ground for the conclusion reached by the Dies committee. An official report on the income and expenditures of the organization for the period of its existence will shortly be made public.

It should be noted that the records of the organization were not examined by the Dies committee; that no representative of the organization was permitted to testify before the committee concerning the organization's character and work; that no one at any time officially associated with the organization gave any adverse testimony concerning it; that not a single concrete fact was ever adduced before the committee on which any estimate whatever of the organization could be based.

In view of these facts, we believe the public will agree with us that the House Committee on Un-American Activities has been guilty of a most flagrant disregard of all rules of evidence and of the most elementary considerations of justice. But, more than that, the committee has attempted, for no cause save its own unsubstantiated prejudice, to undermine the public's confidence in an organization to which 150,000 suffering and homeless people look for help.

We appeal from such an unworthy act to a fair-minded American public, not because of concern for ourselves or the organization we represent but because of our profound concern for men, women, and children who need American sympathy and aid.

Treasurer.

### Migratory Waterfowl Refuge, Muleshoe, Tex.

#### EXTENSION OF REMARKS

OF

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

Mr. MAHON. Mr. Speaker, the Nineteenth Congressional District of Texas, which I represent, has a small part in the national program for the conservation of wildlife. I refer to what is known as the Muleshoe Migratory Waterfowl Refuge. This national wildlife refuge of 5,809 acres is located in Bailey County, Tex., about 16 miles south of Muleshoe. The refuge was established by an Executive order of October 24, 1935, to protect ducks, geese, coots, sandhill cranes, plovers, and other wildlife.

It is reported that prior to acquisition few, if any, of the lakes held water throughout the entire year. By using a

very satisfactory W. P. A. program the normal lake areas were reduced to about one-third their previous size with a result that this winter water was maintained on a year-around basis.

Through the courtesy of Dr. Ira Gabrielson, Chief of the Bureau of Biological Survey in the Interior Department, who has supervision over the wildlife conservation program, I received a photograph of the ducks on the Muleshoe Migratory Refuge taken on December 6, 1939. The scene is on White Lake, which 1 year ago was entirely dry. It was estimated by Mr. James K. Walton, refuge manager, and Mr. George Barclay, regional refuge supervisor, that at least 200,000 ducks were present on December 6, with 75 percent being mallards, 15 percent being pintails, and the remaining 10 percent baldpate or widgeon and scaup.

Because of the normal concentration of migratory waterfowl into this part of Texas, and with the continued development of the Muleshoe refuge, it is thought that this refuge is destined to become one of the important units in the national system of wildlife refuges.

I was interested in a radio program sponsored by the American Wildlife Institute over the mutual network on February 11. As a part of this program Mr. Philip A. DuMont, of the Division of Wildlife Refuges in the Bureau of Biological Survey, made some very interesting remarks regarding wildlife refuges. Having received unanimous consent to do so, I quote the following from his remarks:

These 266 national wildlife refuges are located in nearly every State of the Union; Alaska has 13—one is the extensive Aleutian Islands chain of nearly 3,000,000 acres. In all, three and a half million acres are primarily suited for waterfowl. They include nesting grounds in the North, such as are found in Montana, Minnesota, and the Dakotas. They include resting areas along the 4 principal migration routes—1 route down the Atlantic coast, 1 down the Pacific, and 2 through the Mississippi River Valley. They also include extensive wintering grounds in the South. To be selected as a refuge, an area must have water sufficient for the production of needed food and protective cover. Certain of the 178 waterfowl refuges were chosen because they offered natural protection to rare birds. For instance, when the 40,000-acre Red Rocks Refuge was established in Montana 5 years ago, only 46 of the once plentiful trumpeter swan were known to exist. All were in that immediate vicinity. Today there are 200 birds on or near the refuge. The very rare whooping crane is now protected on the 50,000-acre Aransas Refuge, near Corpus Christi, Tex. The sage grouse of the western ranges, the Florida sandhill crane, and the roseate spoon-bill, reddish egret, and great white heron, all of the Gulf coast, now have refuges on which they are unmolested. The use made of these areas by waterfowl is astounding. Out on the Bear River Refuge, near Salt Lake City, over 2,000,000 ducks stop on their way south from Canada en route to California, New Mexico, and Texas.

The Sacramento Refuge in north-central California and the Tule Lake Refuge near the Oregon-California line provide food and protection for thousands of ducks and geese each fall and spring. Over a million pintails have been present on the Sacramento Refuge at one time.

Probably the most intensely used refuge in proportion to its size is the 5,000-acre Chataqua Refuge on the Illinois River. Last fall over 500,000 ducks and 2,500 geese fed there at one time.

The White River Refuge, in the center of the huge mallard wintering grounds in Arkansas, protects an adequate seed stock of birds to send back north.

The Sand Lake Refuge in northeastern South Dakota offers another example of the immediate use made of these new areas. In 1937, the first year the refuge was established, the Franklin's gull, not previously known to have nested there, established a nesting colony with nearly 6,000 nests. Next year the number of nests increased to 6,100, and last summer there were over 20,000 nests.

### America at the Crossroads—Beating the Depression—Our Way Out

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

ADDRESS BY HON. HOMER D. ANGELL, OF OREGON

Mr. ANGELL. Mr. Speaker, on December 2, 1939, at Spokane, Wash., I delivered an address at the Northwest Con-

ference of Republicans, from Montana, Wyoming, Idaho, Washington, and Oregon, which I ask leave to include in the extension of my remarks, as follows:

#### AMERICA AT THE CROSSROADS

It is a happy omen for the future that representatives of our party from the several States in this great northwestern country are meeting here, in this beautiful city of Spokane, to consider mutual problems, outline a program of cooperation, and turn our eyes toward the future, that we may give the full measure of our devotion to our country in this critical hour. Many believe that America is at the crossroads. If our course which lies ahead is properly charted at this time, our Nation may again come out onto the broad plains of prosperity, and may again find our citizens happy, employed in free enterprise, proving to the world that democracy will and does work.

#### PARTY GOVERNMENT

Under our system of representative government political parties are a necessary function. By assembling, coordinating, and systematizing the social, economic, and political issues confronting our country, a political party may enunciate a program which will place before the country a plan of action for governmental activity. Such a program, if it offers a solution to the perplexing problems confronting us as a nation, will attract to its banner the right-thinking citizens of America. No political party can hope for success nor deserve success unless it is motivated by an impelling desire to accomplish those things which will bring prosperity and happiness to our people. Down through the years the Republican Party has seen our Nation in the throes of depression, rocked to its foundation by perplexing problems, threatening to rend it asunder, and yet it has, through its leaders and supporters, laid down courses of action for our country which have led it safely through the difficulties besetting it and brought about security and contentment. It can do so again. One of the purposes of this meeting is to bring together some of the leaders of the political thought of our party in this western territory that they may reappraise the unwholesome conditions in which we find ourselves as a nation and study these problems anew, to the end that a solution may be found.

I believe it is worth while also that we should, while assembled here, particularly give attention to the fundamental, political, social, and economic issues which are of special interest to us in the Northwest, so that our representatives in the Republican convention, as well as our representatives in the Congress of the United States, may have the considered views of the people of the Northwest on these issues so vital to our own welfare.

#### POTENTIALITIES OF COLUMBIA RIVER BASIN

In considering our particular problems, it may be worth our while to refer briefly to some of the underlying resources and activities of this region which give rise to legislative consideration, and which, in turn, may be of importance in formulating a program upon which our party shall stand in the coming elections.

From the early days when our pioneer forebears first forged ahead across this great continent, fording streams, wending their way by ox team across great expanses of deserts and prairies, over mountain ranges, finally reaching this great borderland of the Pacific, to fell the forests, hew homes out of the wilderness, and build these great Pacific Northwest States, this land indeed was the land of promise. It has been said that there are no more frontiers to conquer, but we have only begun to explore the possibilities of the great Columbia River watershed, embracing within its territory the several States you represent here tonight.

These sturdy pioneers for years dreamed of the development to full use of the great Columbia River artery of commerce, and its tributaries, and of harnessing the vast potential energy which through the centuries has been locked up and wasted in this immense volume of water going unhampered on its way through the Columbia River gorge to the Pacific Ocean. We are just now beginning to make headway in this immense development. The channel improvements made, and in the making, of the Columbia River and its tributaries, the removal of the barriers crossing its course, have at last opened this great waterway to commercial water-borne commerce, originating in the broad hinterland embraced in this vast watershed.

This work has only begun; much remains to be done. The complete cooperation of the representatives of this entire area is necessary in order to bring to final fruition the plans for the full development and utilization of this great gift from nature. Today, as we pass up and down the Columbia River gorge we observe the ever-increasing use of this mighty river by barges and other watercraft plying upon its bosom, moving quantities of grain, lumber, petroleum products, minerals, and other merchandise going to and from this vast trade territory.

On behalf of myself and other Members of the Congress, I bespeak your continued, vigorous, unselfish cooperation in presenting to the Congress the needs of this thriving, growing community. Only by the fullest cooperative effort can we, who at most are but a small delegation in the Halls of Congress, hope to achieve our ends and secure adequate and necessary appropriations to carry on these public works, making possible the full development of our natural resources. Our party has always been a leader in sponsoring and bringing to consummation public improvements and public works. It should take the leadership in bringing about the full development of the natural resources of our Northwest.

#### SURFACE WATERS

The Columbia River, the second largest in the United States and greatest in potential power, is the great water artery of the

region's drainage system. It embraces a watershed of 259,000 square miles, 39,000 of which are in Canada. Coastal streams west of the Cascades embrace an additional 39,772 square miles, of which 390 are in Canada. The river itself rises in British Columbia; traverses the length of 1,210 miles. Tidewater extends 110 miles inland which, together with the channel improvements giving facilities for ocean-borne traffic to The Dalles and barge traffic to the interior, gives to these Columbia River ports a commanding position in world maritime traffic. Portland and the Columbia River exported 26,422,764 bushels of grain during the cereal year ending June 30, 1939.

The Columbia River at The Dalles, Oreg., has a mean annual run-off of 146,000,000 acre-feet, and the mean annual run-off of the entire Columbia River Basin is estimated at 155,000,000 acre-feet, and the Pacific slope, exclusive of the Columbia River, 145,000,000 acre-feet. Although the Pacific slope basin represents 14 percent of the river basin area, it yields approximately 50 percent of the run-off. The region has 10,000,000 acres of irrigable land and when it shall have been fully reclaimed will require 50,000,000 acre-feet annually.

One of the problems with which we are confronted and in which we may join hands in cooperative effort is the conservation and proper utilization of these great water resources, perhaps unsurpassed in any place in the world. Industries, agriculture, and fisheries are primarily dependent upon these water resources. To accomplish this flood control, uniform flow, conservation by storage of seasonal rainfall are necessary. These all involve public action and depend for their success upon the cooperative support of all of us.

#### HYDROELECTRIC POWER

The third great natural resource embraced within these waterways is hydroelectric power. The earliest settlers made use of the natural facilities of these waters for transportation and also for domestic and agricultural use in a limited way, but it remained for the present generation to reach out and capture this immense energy which, through the ages, we have allowed to waste itself in a ceaseless flow to the sea.

Bonneville is now a reality. The huge transmission lines radiating from the turbines at the Cascades are reaching out like the spokes of a wheel into distant parts of this far-flung agricultural and industrial territory. Districts are being formed for utilization of this energy; municipalities are entering into contracts, and private utilities are acquiring power from Bonneville.

The other great hydroelectric and reclamation project, one of the boldest and most stupendous ever conceived by the engineering skill and ingenuity of man, is Grand Coulee, lying here at your very doorstep. Our Government, with its eyes on the future, is building this great public work. It will not only provide 1,980,000 kilowatt-hours of electrical energy but the water and power for reclaiming 1,200,000 acres of land.

I envisage the day when not only prosperous farms far removed from the roaring turbines at Bonneville and Grand Coulee will take this energy for lights, domestic use, and power for farm activities, but when great industrial plants and reduction works will be located within the field of this low-priced electric energy. Those of us who have had a part to play in the initiation or in the continued development of these outstanding power, reclamation, and navigation projects, I am sure are of one mind in our desire that the electric energy may be put to the widest possible use, at the lowest possible cost to the ultimate consumer, not only bringing cheap power to every farming and residential community but also making possible industrial development in this Northwest Territory, thereby affording much needed pay rolls and purchasing power. Such a development will provide a market for the products of our farms in this garden spot of America, and will also make possible the utilization of the great deposits of minerals and natural resources buried away in our hills and uplands, as well as the forest products carpeting much of the area.

#### IMMIGRATION AND RECLAMATION

During the last several years, when nature has been so cruel in visiting disaster upon so many of our citizens in our prairie States, the so-called Dust Bowl, we have had a great influx of immigration in the Northwest Territory. Thousands of American families, like the pioneers of almost 100 years ago, have packed their few belongings into motor cars, many of ancient vintage, and trekked their way across the prairies and mountain ranges to find a home with us here. While they followed the ox teams of yesterday, they found, instead of mountain trails, broad, hard-surfaced roads leading into this land of promise. They are on our doorstep; they need your assistance; they need mine. They will be absorbed in the body of our citizenry and make useful citizens, lending their efforts to the upbuilding of our great Northwest.

The reclamation and irrigation of these immense upland areas will afford homes for these new citizens and others who will follow in their footsteps. This area contains 13 percent of the total land area of the United States but only 6 percent of the tillable lands, 10 percent of the grazing lands, and 16 percent of the forest lands. Forest lands cover one-half of the area. This region alone contains over one-half of the remaining timber supply of the United States, and furnishes over one-third of the lumber produced.

The population in this region in 1930 was 2.8 percent of that in the United States, while the land area of the region is 13 percent of the national total and produces 2.13 percent of the Nation's manufactured goods, 1.7 percent, however, is lumber products. It uses 6 percent of the national total electric energy, whereas its population is only 2.8 percent, or almost 2,000 kilowatt-hours per capita as compared with the national average of less than 900

kilowatt-hours. Electrification of farms in the State of Washington is over 50 percent, in Oregon and Idaho over 30 percent, whereas the national average of farm electrification is but 13 percent.

#### WATER-POWER RESOURCES

Potential and developed water-power resources in this area are about 15,500,000 kilowatt-hours of power available 90 percent of the time. Of this total about 11,500,000 kilowatt-hours are located in the Columbia River and its tributaries. These water-power potentialities represent over 40 percent of the total potential water power of the entire United States, and the potentialities of the Columbia River watershed alone represent about 30 percent of the total potential water power of the entire United States.

#### MINERALS AND STRATEGIC MATERIALS

The Seventy-sixth Congress, at its regular session, passed an act approved June 7, 1939, which directs the Secretaries of War, Navy, and Interior, after consultation with the Secretaries of State, Treasury, and Commerce, to determine the quantity and quality of the strategic materials needed to supply the Nation's industrial, naval, and military needs for common defense. The act authorizes the purchase of these materials through the Procurement Division. Such materials are to be stored at certain places the Secretaries may designate and may be rotated in order to prevent deterioration. It further authorizes an appropriation to be spent under direction of the Secretaries of War and Navy of \$100,000,000 to be available from June 30, 1939, through June 30, 1943, and authorizes an appropriation of \$350,000 for the Bureau of Mines and \$150,000 for the Geological Survey, of the Interior Department, for use in determining the utilization of ores in the United States in relation to the common defense.

With new, abundant, assured low-cost hydroelectric power, more economical transportation, and improved market conditions, the mineral resources of the four Pacific Northwest States will be susceptible of much development. Of particular importance among nonmetallics are the great phosphate deposits of Idaho and Montana and the considerable reserves of coal located principally in Washington and Montana. Among other nonmetallics of probably much greater future importance are lime, diatomite, clays, sulfur, oil, and gas. Deposits of variety of metallic ores (among them those of a number of the so-called strategic metals), including aluminum, magnesium, manganese, chromium, vanadium, molybdenum, cadmium, tungsten, antimony, and others may also become of great economic value in the future.

Our Representatives in this great Northwest region should embrace this opportunity not only to cooperate with our Federal Government in providing an assured source of strategic materials but also of developing the great body of ores, minerals, and nonmetallics which abound within the confines of our several States. By so doing we will serve our Government well and we will also put to use our immense stores of hydroelectric power and also develop industry, reduction plants, and other public works, bringing pay rolls, purchasing power, and prosperity to our several communities.

I believe I am not releasing prematurely possible industrial development, having for its purpose the utilization of cheap power from Bonneville and Grand Coulee, in saying that before I left Washington it came to my attention that there were at that time outstanding national industrial organizations negotiating for the erection of such plants in the vicinity of these great hydroelectric projects in order to avail themselves of the cheap energy.

#### RECIPROCAL-TRADE AGREEMENTS

The Congress of the United States, at the last regular session, appropriated \$1,194,498,633 to aid farmers and promote the farming industry. For several years the Government has been paying the farmers for soil conservation the sum of \$500,000,000 a year to reduce acreage and production. At the last regular session of the Congress the sum of \$225,000,000 was provided for parity payments. Notwithstanding this and earlier appropriations for farm relief, our great agricultural industry is tottering. Farmers today do not get back the cost of production. Farm prices for many commodities are the lowest for decades. Farm income is so low that farmers not only secure no return on their investment but receive the lowest wage for their own efforts of any of our major activities. Notwithstanding these huge appropriations of Federal funds, the Congress of the United States thus far has given no answer to the question, What will restore agriculture to a profitable basis?

Foreign markets have dwindled and in many cases disappeared. Our local market often has been traded off to foreign countries for industrial concessions by letting down the bars to competitive agricultural products without equalizing productive costs. The so-called reciprocal-trade agreements have proven to be the undoing of the lumber industry and agriculture, and many of our northwestern farmers and timber dealers have suffered immensely from this misguided policy.

Tariff making is a legislative function and cannot be delegated. Trade agreements are treaties. The Constitution provides that treaties must be made by and with the advice and consent of the Senate. The reciprocal-trade legislation expires next year; it should not be renewed. The Congress should restore these constitutional rights to the Congress and lift from the backs of our farmers and lumbermen this burden which has traded for a mess of pottage our valuable home markets for agricultural, mining, and forest products.

#### BEEF IMPORTS

We should not, it is true, erect trade barriers to keep out all foreign trade. We should, however, insist on the application of the policy long adhered to in maintaining equality of competition by equalizing the cost of production of competitive commodities.

We should protect our home markets by preventing their use as dumping grounds for cheap competitive foreign products. One of my colleagues, on the floor of the House of Representatives, exhibited a can of Argentine beef which he purchased at the commissary in the Agricultural Building in Washington, at which time he was advised that no American product could be obtained there. I recently received a letter from a gentleman in Arizona stating that the tax rolls in his State showed that there was about one-tenth of the livestock in that State now as formerly, and he enclosed a wrapper from a can of Paraguay beef sold there, stating that he was unable to obtain any American product in his community. We will recall that our own President stated that Argentine beef was preferable to American beef, and our Government is contracting to import such product for governmental use, while the States from which you, my listeners, come are endeavoring to maintain their herds. Stock raisers are in dire distress. They are unable to market their products at a profit, and many of them are discontinuing business. In my own State of Oregon great herds formerly roamed the hills of the eastern and southeastern part of the State, where now in many places there are none at all.

In the first 9 months of 1939 we imported foreign products for consumption in the amount of \$794,700,000, while in the same period in 1938 we imported \$711,600,000. During the same period our agricultural exports declined from \$602,700,000 to \$418,400,000. In discussing this subject before the Committee for Reciprocity Information in Washington, D. C., Senator TOM CONNALLY said:

"We don't feel so kindly toward Argentina that we want to hurt our own farmers to help the pampas cowboys. We don't want to build up industry which is already bloated and overextended. Congress appropriated \$700,000,000 to help the farmers last year, and we don't want to do something now to harm them."

#### IMPORTATION OF FOREST PRODUCTS

We all realize the serious inroads importation of forest products from Canada and elsewhere has made on our lumber industry, particularly shingles, pulp, and certain types of finished lumber. Within 5 years the United States wood-pulp importations have risen almost two-thirds in tonnage and more than doubled in value. For a number of years past there has been a steady increase in pulp imports to America. The year 1937 witnessed the greatest importation of wood pulp, paper, and paper products on record, setting a new record for the third consecutive year.

We formerly supplied 75 percent of the north Pacific coast lumber used by the British Nation. Our trade was reduced to 6 percent in 1936 and under 10 percent in 1937. The Canadian agreement of 1935 lowered the American tariff wall one-half, but left the British Empire tariffs intact. American duties on Canadian lumber were cut 50 percent—all the law allowed. It is true in the case of Douglas fir and west-coast hemlock importation at the lower duty was restricted to 250,000,000 feet annually. Under the favored-nation clause, this reduced lumber duty was automatically extended to every other country in the world shipping lumber to the United States, including Soviet Russia. Lumber imports to the United States increased at once. Douglas fir and west-coast hemlock from British Columbia were practically doubled. In the first 11 months of 1938 Canada shipped 135,000,000 feet of Douglas fir and west-coast lumber into the United States, while west-coast shipments to the entire British Empire, Canada included, totaled only 59,000,000 board-feet—a ratio of 3 to 1. In other words, American lumber exporters have been cut off from the British market, but the home market has been opened to Canadian shipments.

In 1932 Canada exported 40 percent of all lumber which was exported from the combined trade territory of Washington, Oregon, and British Columbia, whereas in 1938 she exported 78 percent. The reasons for this unfavorable export trade to Oregon and Washington are the Empire preferential tariff, higher wages in Oregon and Washington, and better and cheaper transportation facilities from Canada than from Oregon and Washington. Wages alone in British Columbia averaged lower cost production of more than \$3 per thousand board-feet, as compared with Oregon and Washington. The minimum of 48 hours per week prevails in British Columbia, whereas only 40 hours in the American industry. The average wage in 1938 in the Douglas fir logging camps and sawmills in Oregon and Washington was 76.7 cents per hour, whereas the comparable wage in British Columbia was 57 cents per hour, as shown by production costs submitted to the Department of State.

#### WOOL INDUSTRY

We in Oregon are especially interested in the wool industry. Many of you have a like interest. The reciprocal-trade agreement with Great Britain became operative on the 1st day of January 1939. Approximately 90 percent of American products on which tariff concessions are made by Great Britain are on the prohibitive list, and export license must be obtained for any of the products to be shipped. In other words, anything Britain shall ship may come to us free from quota restrictions and currency regulations. France, Belgium, and Italy benefit equally with Great Britain by this treaty, which is further enhanced by the rate of exchange. During the first 8 months of 1939, representing the period during which the reciprocal-trade agreement with Great Britain has been in effect, our imports of woolen rags totaled 5,461,292 pounds, an increase of 4,969,167 pounds, or more than 1,000 percent, compared with the corresponding months in 1938. Imports of manufactured woolen goods also showed tremendous increases, amounting to 8,749,587 square yards, during the first 8 months of 1939, or more than 100 percent over the imports for the corresponding period of 1938. The imports of these materials amounted in the 8-month period to over 12,000,000 pounds, which would equal approximately

25,000,000 to 30,000,000 pounds of raw material. The combined raw materials and finished products is the equivalent of 35,000,000 pounds of raw wool. It is estimated that it amounts to twice the annual wool clip of such States as Oregon, Idaho, South Dakota, Ohio, and many other wool-producing States, and more than half of the total annual raw wool production in the great sheep-raising State of Texas.

#### FARM RELIEF

America has never been prosperous unless our farmers were prosperous. Our party has always championed the cause of agriculture. We should now, at this critical time, take the lead in a constructive program of farm relief, the first plank of which should be insistence that the reciprocal trade agreement law shall not be renewed and that the nefarious trade agreements negotiated under it should be repealed or modified so as to prevent the dumping of competitive agricultural products on the American market, thus depriving our farmers of a market for their produce.

Under our labor relations and social security acts and standards of living for our laborers, we have established a cost of production which cannot meet competition on an equal basis with products coming from South America, Canada, European and Asiatic countries. In these countries no such wages or standards prevail. Cheap peon and coolie labor and abominable working conditions exist. Agricultural and other products produced under such conditions may be dumped on the American markets, if no restrictions prevail, and undermine our price structure. As an example, when we were considering the Argentine trade agreement before the Committee for Reciprocal Information it was disclosed that turkeys could be shipped from Argentina to New York for 10 cents per pound and sold there for 16 or 17 cents per pound, whereas the shipping costs of turkeys from Oregon to New York were greater, and western birds could not compete with this cheap Argentine product. Under living conditions and wage scales in this area, turkeys cannot be produced for less than 20 cents per pound.

Another striking effect of the operation of these agreements was brought to my attention recently. State Senator C. H. Zurcher, of Oregon, recently reported that in our territory he found 6,300 Canadian calves, weighing about 250 or 300 pounds each. These calves were being fattened for the American baby-beef market and were being fed, according to State Senator Zurcher, Argentine corn and East Indies molasses. A small duty had been paid on the calves, but the Argentine corn was delivered cheaper here than Iowa corn could be procured, and ships from the Orient brought molasses from the East Indies cheaper than our own sugar wastes could be obtained. This is a striking example of the operation of the reciprocal-trade agreements and the havoc they are working upon agriculture. It shows the impossibility of American agriculture competing with the cheap labor and living conditions of South America and the Orient as long as we maintain the American wage scale both as to agricultural employees and maritime workers. The importation of these Canadian calves and the food products for fattening them, of course, deprive the American farmer of a market for a like amount of his products. It brings forcibly to our attention the fact that the American market is the best market we have for our agricultural products. If we trade it away to foreign countries in order to build up the manufacturing industry in America, we are undoing the very thing that the Congress has been attempting to do in solving the farm problem. The Congress appropriated \$700,000,000 for the assistance of farmers this year, and immediately thereafter the executive department, through the so-called reciprocal-trade agreements, which are in reality treaties, is now letting down the bars so that importation of competitive agricultural products may flood the American market.

In addition to legislation correcting the evils of the reciprocal-trade agreements, we should adopt a farm program that will assure to our farmers an equal opportunity with industry, and such assistance and protection as will insure a reasonable profit from farming operations. It cannot be hoped that the farmer can continue indefinitely to operate at a loss. When the farmers fail, America fails.

#### SUGAR-BEET INDUSTRY

Many of our people in the Northwest have large investments in the sugar-beet industry. It has come to be one of major importance in our communities, and particularly is this true in my own State of Oregon. Our refinery at Nyssa has a 112-day record of producing 750,000 bags of sugar and the refinery company has fed 8,000 head of cattle from beet pulp as a pulp-feeding demonstration. Growers in the Owyhee reclamation project produced 16.2 tons per acre on 17,000 acres last year, the highest production in the United States, save one area in northern California. The fly in the ointment, however, is that under the A. A. A. crop-control program Oregon growers, as well as those in the other districts of our sugar-beet producing States, are not permitted to place this fertile land in production. The regulations even threaten to reduce our own acreage in Owyhee from 17,000 acres to 12,000. This plant alone has added \$1,000,000 to the assessed value of Oregon and is a most striking instance of the manner in which we may, by proper Government legislation, bring capital out of hiding to seek investment in free enterprise, giving the unemployed jobs and merchants markets for their products. Notwithstanding our favored situation with reference to the production of this important domestic crop, under existing laws and regulations and trade treaties we freeze this thriving industry and refuse to permit expansion and import the most of our sugar demands from Cuba, the Philippines, and elsewhere.

#### TAX STRUCTURE

The whole tax structure needs revamping. In 1931 the Government received in taxes and fees \$3,189,638,632, and in 1940 these receipts are estimated to be \$5,669,300,000. A comparison of the

receipts and disbursements of our Government discloses that the enormous and abnormal deficits are due not to the impoverished condition of the country by reason of the depression through which we have been passing, and therefore a dearth of tax revenues, but to an inordinate orgy of spending. Thus in each of the years 1932 and 1933 our tax receipts were little in excess of \$2,000,000,000, whereas for 1937, 1938, 1939, and 1940 they will average approximately five and one-half billion dollars per year, between two and three times the amount collected during earlier years. In 1938 the total tax bill of America—National, State, and local—amounted to nearly 25 percent of the income produced during the year, and the American people will have paid during the period from February 28, 1933, to June 30, 1940, approximately \$34,000,000,000 in Federal taxes alone. Our President, when a candidate for the high office he now holds in October 1932, said:

"Taxes are paid in the sweat of every man who labors, because they are a burden on production and can be paid only by production. If excessive, they are reflected in idle factories, tax-sold farms, and hence in hordes of the hungry tramping the streets and seeking jobs in vain. Our workers may never see a tax bill, but they pay in deductions from wages, in increased cost of what they buy, or (as now) in broad cessation of employment. There is not an unemployed man, there is not a struggling farmer, whose interest in this subject is not direct and vital."

Mr. Roosevelt said in Sioux City, September 29, 1932:

"And on my part I ask you very simply to assign to me the task of reducing the annual operating expenses of your National Government."

The March American Federationists' preliminary figures show that in January 1939 there were 11,523,031 unemployed. After taxing, borrowing, and appropriating more than \$65,000,000,000 and going in debt over \$24,000,000,000 since March 4, 1933, we have approximately the same number of unemployed and a great many more people on relief than we had when we started this program. Colonel Harrington, Administrator of W. P. A., said on his recent visit to this region that there are still nine and a half million unemployed. In considering these startling statistics, is there any reason why industry should not be discouraged and has lost faith in this program, and that fear dominates the businessman and the investor today? Sensible folks can only see one answer to this whole social, political, and economic muddle which threatens to wipe out the American system of free enterprise. If the incomes of all who receive \$150,000 or more were divided equally among the American citizens, each would get only 15 cents, and the incomes above \$5,000, if equally divided, would only furnish \$2.32 per capita. Million-dollar incomes are now taxed 84 percent, and hundred-thousand-dollar incomes 40 percent. No; the answer is not a socialistic division of wealth but the restoration of American industry to a normal basis, permitting a fair profit to industrial enterprise, and thus restoring to private pay rolls the great army of unemployed.

#### THE AGED MUST BE CARED FOR

The old folks of America, 60 years of age or over, who have been cast off by industry, must be cared for. Industry, which has put them aside, must assume the responsibility for their keep, and in so doing contribute materially toward industrial recovery.

#### SEVEN YEARS OF DEFICITS

For over 7 years now we, in America, have been laboring in the throes of this crushing depression. As shown by the report of the League of Nations, of the 17 leading nations of the world, we are at the bottom in recovery. Our Nation is the only one of the great family of nations of the world that has not been able to throw off the depression. Our Nation is the only one that has piled up an immense public debt in an endeavor to beat the depression. We alone have attempted to borrow and spend ourselves into prosperity. We alone have attempted, by the doctrine of scarcity, to supply the needs of a hungry nation. The per capita public debt has increased from \$131 in 1931 to \$305 in 1939. The interest on this public debt is \$1,100,000,000 a year—more than the total cost of government a few years ago. In 1913 only 6.4 percent of the total national income was required for Federal, State, and local taxes; in 1930, 14.2 percent was required for such taxes; and, in 1938, 23.6 percent of the total income of the American people was handed over to the tax collectors. Approximately one-fourth of the time of everyone who labors in the United States is spent in working for the tax collectors. In 1913, 1.9 percent of the national income went for Federal taxes; in 1930, 4.8 percent was required; but in 1938 it had increased to 10.9 percent. State and local taxes in 1938 had increased to 12.7 percent. Notwithstanding these staggering tax levies, we have created an average deficit each year of over \$3,000,000,000.

#### TAXING AND BORROWING FOR PROSPERITY HAS FAILED

It is obvious that the policy we have been pursuing for 7 years of attempting to borrow and spend ourselves into prosperity has failed miserably. It has only succeeded in piling up an immense Federal debt and in doubling the tax burden and keeping some 10,000,000 of our people still unemployed. Is it not time that those in charge of the Government put into operation some plan which will solve these problems and save our country? Are we American citizens speaking out of turn when we suggest that the plan which has brought us to such a predicament be abandoned? Well may we ask, "Why is it that America, with the greatest resources of any nation, with two-thirds of the world's monetary gold and one-half of the world's wealth, is on its knees and starving, with 10,000,000 of its workers unemployed, apparently resigned to idleness, poverty, misery, and a government pittance for bare existence? Must the millions of young Americans released from our colleges and schools face idleness and uncertainty, with only the hope of a W. P. A. job?"

Surveys recently made disclose that the underprivileged group numbering 12,500,000 families, which include nearly 50,000,000 people, or almost half the population, exists on incomes of less than \$605 per year. The next group of 10,938,000 families, of about 40,000,000 souls, receive an average of \$1,411.

Our President has said that one-third of our people are underfed, poorly clad, and poorly housed. It is true that a million new homes are needed in America every year, and only 300,000 were built last year. These, however, should be constructed with private capital. Uncle Sam has too many irons in the fires. He should liquidate some of his activities and give free enterprise an opportunity to function and thereby give an outlet for stagnant capital now locked up in savings banks, and lift from the relief ranks the unemployed. This building program alone should absorb 2,000,000 men. Over 30 percent of our railroads are insolvent, and the whole railroad system needs rehabilitation. A million men or more would be profitably employed in restoring our railroad system to full efficiency. Public utilities are in need of modernization and expansion. One billion dollars could be expended profitably in this endeavor alone, giving employment to another million men. The durable-goods industry has been allowed to deteriorate with practically no plant betterments, extensions, or repairs. A million men could profitably be employed in this industrial activity. The National Bureau of Economic Research shows that expenditures for durable goods and for private construction dropped from \$14,500,000,000 in 1929 to \$3,500,000,000 in 1933, and has increased to only \$6,000,000,000 in 1935 with 2 years of heavy Government spending. To provide the necessity of life, clothing, food, and shelter for the lower one-third of which the President spoke would require the services of several millions of laborers in the factories, the fields, the shops, the mines, the forests, and the transportation systems.

#### INDUSTRIAL MACHINE STALLED

The industrial machine of America, the finest and best on earth, manned with the most efficient and intelligent workmen, is idle. It is ready to start production; it only needs the green light to go ahead. Our whole economic and social structure is bogged down and is not functioning. Our national house is out of order. Our emergency measures, adopted to meet the situation, have apparently become permanent and the crisis chronic. Spending has depleted the Treasury and has frozen unemployment into our industrial structure. All we are given in answer to the cries of distress is more borrowing and spending. The only result of the whole miserable vicious circle is the ever-increasing tax burden, greater public debts, mounting deficits, increased unemployment, stagnation of business, and loss of confidence in our Government and its ability to bring order and normal industrial activity out of the whole sordid mess in which we are wallowing.

In the campaign, on July 30, 1932, Mr. Roosevelt gave this ominous warning:

"Any government, like any family, can, for a year, spend a little more than it earns, but you and I know that a continuation of that habit means the poorhouse."

We have continued in this wild, uncontrolled spree of spending now for 7 years, throughout the entire present administration, and have accumulated the largest debt in our history, and if we are to avoid the poorhouse, as suggested by Mr. Roosevelt, we must mend our ways. Mr. Roosevelt again said, on March 10, 1933:

"Most liberal governments are wrecked on the rocks of loose fiscal policy, and we must avoid this danger."

I most heartily agree that we are heading direct for the poorhouse, and if we are to avoid the danger of being wrecked on the rocks of loose fiscal policy we must immediately change our existing policy of reckless spending and take steps to put our house in order.

In the same address, Mr. Roosevelt said:

"For 3 years the Federal Government has been on the road toward bankruptcy."

And on July 30, 1932, said Mr. Roosevelt:

"Let us have the courage to stop borrowing to meet continuing deficits. Stop the deficits."

If these admonitions were true when they were pronounced by Mr. Roosevelt in 1932 and 1933, how much more ominous are they today, with the huge public debt and deficits piled up in the meantime, the total public debt now nearing forty-five billions, the amount fixed by law.

#### CRACKPOT SPENDING A FAILURE

Uncle Sam should right-about-face in this whole crackpot effort to bring recovery by regimented scarcity and to borrow and spend himself into prosperity. He should return to a pay-as-you-go program, reduce the back-breaking tax burden now killing industry, and substitute in its place a good-neighbor policy of friendly cooperation with industrial enterprise. Our 10,000,000 unemployed can only be restored to pay rolls by private industry. Free enterprise under proper supervision and regulation by Government has made American business what it was at the beginning of this depression, and private industry alone can restore it. The Brookings Institution in a recent study said:

"The vital problem is to secure a great increase in national production and income. The central issue, with respect to public finance, is whether such an expansion of production can best be stimulated by extravagant Federal expenditures, increasing deficits, and heavier taxes or by some modifications of taxes and a reduction of Federal expenditures—within the limits set by essential requirements."

"Unless we can promptly secure a substantial increase in the national income it will be necessary to conclude that the United

States has already reached the danger point in the growth of public indebtedness."

#### IDLE CAPITAL FOR PRIVATE ENTERPRISE

Some have contended that our economic collapse is due to the lack of capital. It is significant to note in considering this condition that in 1929, before the depression, the excess reserves in the member banks of the Federal Reserve averaged about \$43,000,000. On April 26 of this year these excess reserves reached the staggering total of \$4,120,000,000. In other words, there was lying idle in the banks of our Nation more than \$4,000,000,000 available as the basis for credit expansion, which was almost 100 times above the average of idle funds lying in the banks in 1929. We may well ask, Why is this? As I have shown, it is not because the funds are not needed in industrial enterprise. The utilities, the railroads, the durable-goods industry, manufacturers of consumer goods, the housing and building industry—all are in need of immense sums of capital; but all of these great fundamental American enterprises are stagnant, and yet these immense sums of idle private funds are lying without call in the coffers of American banks. Our job is to shape our program so as to bring these stagnant funds into private investment. The Government must step out of the investment field and let free enterprise step in.

The Brookings Institution estimated that in 1936 between \$25,000,000,000 and \$30,000,000,000 would be needed for the durable-goods industry alone to make up the deficiency that had accumulated during the depression. Idle money means idle factories and unemployment. Lack of faith in our Government, mistrust of the policies it has been following, fear of the borrowing and spending program and the mounting Federal debt and the unbalanced Budget and the inordinate taxes placed upon business have dried up at its sources the call of private enterprise upon bank funds. A normal condition, it is believed, will not return until this fear is removed and an assurance given to the investing public that the profit motive in private enterprise is to be acknowledged and protected, that Government itself will extend a helping hand and encouragement to industry to put back to work the unemployed.

As pointed out by John W. Hanes, then Under Secretary of the Treasury, before the House Ways and Means Committee, the removal of irritants and deterrents to business recovery is essential, and social security and other reforms approved by the American people can only be maintained through the recovery of private enterprise, which always has been and must continue to be the backbone of Federal revenue. The Government must recognize the psychological blockade it has raised by the program it has been following for the past 7 years. A note of encouragement was sounded by the pronouncements of Secretary Morgenthau and Under Secretary Hanes that the administration at last recognizes that the path of recovery lies in the field of a definite assurance by our Government that private initiative will have encouragement from the Government rather than deterrents heaped upon it.

There must be also some assurance to business that the Government will gradually relinquish the functions of private enterprise which it has taken on in the last 7 years. Restoration of business confidence and faith in our Government cannot be accomplished until industry is assured that the Government itself will not enter into private competition with the great industrial enterprises of our country which have always been carried on by private investors.

I agree with the statement of Senator JOSIAH W. BAILEY, who said:

"But what I want and what the country demands is a united Congress, not a group of Republicans seeking advantage, not a group of New Dealers defending and apologizing, not a group of Socialists scheming to gain power, not a group of Democrats trying to see how they will win the next election, but a group of American Senators and Members of the House of Representatives who have a sense of responsibility to their circumstances and who are willing to unite in the common task of putting employment and business and industry in this country upon a firm foundation."

We cannot escape our responsibility to the unemployed, unemployable, the handicapped, and the aged. We must make proper and suitable provision for them, regardless of consequences. We must, however, place as our goal the restoration of the great body of unemployed, able-bodied citizens to pay rolls in free enterprise. We have an opportunity if we will only embrace it. We should make clear to the country that our Government stands ready to give a helping hand and an assurance of friendly cooperation with industrial enterprise. I believe we should lay down a clear, well-defined program which will restore confidence to the Nation and to employers and employees alike. It should include a comprehensive and adequate legislative enactment for the care of our old people, the underprivileged, handicapped, and the youth of our country.

#### STEPS TO PROSPERITY

Ladies and gentlemen, I commend for your persual and consideration a program of action in order to beat the depression and put America back to work, some suggestions made by my colleague the Honorable JOSEPH W. MARTIN, Jr., effective minority leader in the House:

"1. Keep the United States out of war.

"2. Move immediately to curb unnecessary, wasteful, and reckless spending.

"3. Repeal the repressive tax on undistributed corporate earnings, which has proved so harassing and dangerous to business, large and small.

"4. Revise the remainder of the Federal tax structure to eliminate or modify provisions retarding business recovery.

"(5) Repeal the dangerous discretionary authority which the President now has over the Nation's monetary system.

"(6) Amend the National Labor Relations Act by clarifying the mutual obligations of worker and employer and the duties of both toward the public in order to end present paralyzing discord.

"(7) Define specifically the area of Government competition with private enterprise so that business may be able to create jobs with some certainty as to the future.

"(8) Restore American markets to the American farmer and wage earner and develop new markets for agricultural products.

"(9) Adopt immediate legislation to rehabilitate the railroads to make secure the jobs of many hundreds of thousands of workers and the investments of savings banks and life-insurance companies.

"(10) Create a special committee of Congress to inquire into the effect of the reciprocal trade agreement policy on American industry and agriculture.

"(11) Clarify Federal rules and regulations so industry and business may know what to expect.

"(12) Reject all experimental legislation not clearly helpful in promoting recovery, or which would subject agriculture, labor, or industry to compulsory decrees of a Federal bureaucracy."

#### CONCLUSION

Our objective as a party should be how can we as a party help save America. Our democracy is being challenged. Our liberties, purchased through a hundred and fifty years of ceaseless effort and sacrifice, are in jeopardy. Free enterprise is at stake. The cooperative efforts, high resolve, and patriotic devotion of all of us can and will save America's free institutions and ideals—all that we hold dear in America. May we all as Americans rededicate ourselves to this great task and by our resolves and deeds square our lives with the American creed adopted by the Congress of the United States April 3, 1918:

"I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies."

### Lincoln Versus Roosevelt

#### EXTENSION OF REMARKS

OF

HON. FRED J. DOUGLAS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

ADDRESS BY HON. JOHN M. VORYS, OF OHIO

Mr. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOHN M. VORYS, of Ohio, at the annual Lincoln Day dinner in Utica, N. Y., on February 10, 1940:

Lincoln belongs to the ages, to all Americans, to all people—but let us not forget that he belongs uniquely and particularly to the Republican Party. In principle and tradition we belong to him. He shaped us in our formative years. He believed in the party and it believed in him. He brought to it his lifelong principles.

In 1848, 8 years before the founding of our party, he was saying in Congress, "We hold the true Republican position. In leaving the people's business in their own hands, we cannot be wrong." In principle Lincoln was a lifelong Republican.

We are prone to think only of Lincoln's war years, of the fight he made in the Civil War for union and freedom. We forget that these twin needs of democracy, union and liberty, existed long before the Civil War and are still the twin goals of free men. We must have both union and liberty to make either worth while. Long before the Civil War Lincoln understood this everlasting problem of good government. Lincoln's matchless expressions of these principles didn't spring to his lips like magic in wartime. He had thought out and fought out these principles alone with his books, around the stove in the country store, in the Illinois Legislature, in Congress, in backwoods courtrooms through the years. He knew we must have both order and liberty. He saw the slavery problem in this light, and by his mere clear statement of the problem became the man of his party, then the man of his country to lead to the solution of the problem.

We must never forget, however, that before the war and during the war and aside from the war he gave his State and his Nation wise and sensible administration of its peacetime affairs.

What were some of the principles that guided him? Can we find in them help in solving the problems of our day?

First, on freedom: Lincoln freed the slaves, not only for humanitarian reasons, not only as a military act, but because he understood

the vital importance of freedom in a democracy. In 1850 he said: "As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this, to the extent of the difference is no democracy."

In 1860: "I like the system which lets a man quit when he wants to and wish it might prevail everywhere. One of the reasons why I am opposed to slavery is just here. What is the true condition of the laborer? I take it that it is best for all to leave each man free to acquire property as far as he can. Some will get wealthy. I don't believe in law to prevent a man from getting rich. It would do more harm than good. So, while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else." Lincoln was an economic realist.

In 1862 he said: "In giving freedom to the slaves we assure freedom to the free."

What would Lincoln have said of a system that makes a laborer pay \$500 to a union to keep on working at a job he already has; that leaves him with hours and pay, his right to work at all, controlled by Government bureaucrats in Washington, dominated by a rival union? What would he say as to the freedom left to an employer forced to give back pay to men he had never hired? I think Lincoln would say that a laborer whose right to work or quit is controlled by his employer, his union, or his government is a slave.

Lincoln saved the Union because he believed in the Union. He believed in a strong central government, but he understood the limits of such a government if liberty was to be preserved. He was able to preserve our Union in wartime without wrecking our democracy. He never would have thought of using the mere threat of war as an excuse to crush democracy with a dictatorship under the label of an industrial mobilization plan headed by a hand-picked superagency called a War Resources Board.

As a Congressman in 1848 he was for internal improvements—the building up of our country by the Federal Government—even when the Democrats were shying away from this responsibility; but he understood the right and wrong way to go about internal improvements. On June 28, 1848, he paid his respects to the Democratic self-liquidating scheme of his day, which was proposed then, as now, to avoid the difficulties involved in sound finance. It was a scheme to use the duties collected from a harbor to build that particular harbor. Lincoln said that this idea "involves the same absurdity of the Irish bull about the new boots: 'I shall never get 'em on,' says Patrick, 'till I wear 'em a day or two and stretch 'em a little.' We shall never make a canal by tonnage duties until it shall already have been made awhile so the tonnage can get into it."

Lincoln then told how he would carry on internal improvements. His language sounds strange in these days of frenzied Federal finance: "I would not borrow money. I am against an overwhelming, crushing system. Suppose that at each session Congress shall first determine how much money can, for that year, be spared for improvements, then apportion that sum to the most important objects. So far all is easy; but how shall we determine which are the most important? On this question comes the collision of interests. \* \* \* To clear this difficulty, let us have \* \* \* in statistical information \* \* \* a stern, unbending basis of facts—a basis in nowise subject to whim, caprice, or local interest. The preliminary amount of means will save us from doing too much, and the statistics will save us from doing what we do in wrong places." Shades of Passamaquoddy and the Florida ship canal!

On July 27, 1848, he again came back to the question of internal improvements, and said: "Particularly—expending the money of the whole people for an object which will benefit only a portion of them—is the greatest real objection to improvements."

What would Lincoln have thought of building private dwellings for individuals with Federal money on tax-free land?

Lincoln not only understood the limitation upon the Central Government but the limitations of all government on men that would be free. In 1854 he said: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves government ought not to interfere."

In 1858 he said: "I believe each individual is naturally entitled to do as he pleases with himself and the fruit of his labor so far as it in no wise interferes with any other man's rights."

Lincoln approved of the principles of Thomas Jefferson, who said: "Were we directed from Washington when to sow and when to reap we should soon want bread. \* \* \* When all government, in little as in great things, shall be drawn to Washington as the center of all power, it will become venal and oppressive."

Lincoln said: "I think a definition of genuine popular sovereignty in the abstract would be about this: That each man shall do precisely as he pleases with himself and with all those things which exclusively concern him. Applied to government, this principle would be that a general government shall do all those things which pertain to it and all the local governments shall do precisely as they please in respect to those matters which exclusively concern them."

Doubtless Lincoln never dreamed of a day when State relief, State pensions, State roads, and city streets would be controlled from Washington through the mechanism of Federal aid. What would Lincoln say of the particularity whereby the New Deal pours out borrowed billions to stop the use of farm land in one State and pours out other borrowed billions to create new farm land in another State? What would Lincoln say of a President who fined the State of Ohio \$1,300,000 of its own pension money, first, because he didn't

like a Democratic Governor of the State, and second, because he didn't like their new Republican Governor?

We love Lincoln for his humility, which was not only a personal quality but a fundamental part of his creed. Democracy, founded on the essentially Christian belief in the infinite worth and possibilities of a free man, has as its inevitable corollary the belief that no one is indispensable. The belief in the infinite worth of the individual meant the downfall of kings. If each of us has infinite possibilities, not one of us is all-important. Lincoln said, "The Lord must have loved the common people because He made so many of them." In his first political campaign, Lincoln introduced himself as "humble Abraham Lincoln." He bore insults from Cabinet officers and generals because he was humble. In his Gettysburg Address his humility obscured his prophetic vision when he said, "The world will little note nor long remember what we say here." Afterward he said of the address, "It wouldn't scour." As we celebrate his birthday we cherish and revere his humility. What would Lincoln think of a President who, like Augustus Caesar during the period he was plotting his dictatorship, promoted the celebration of his own birthday and tied it up with a pet personal charity in order to silence criticism?

Here is what Lincoln said about men of ambition who seek the gratification of their ruling passion. He said that many men could be found whose "ambition would aspire to nothing beyond a seat in Congress, a gubernatorial or a Presidential chair; \* \* \* think you these places would satisfy an Alexander, a Caesar, or a Napoleon? Never! Towering genius disdains a beaten path. It seeks regions hitherto unexplored. \* \* \* It scorns to tread in the footsteps of any predecessor, however illustrious. It thirsts and burns for distinction; \* \* \* Is it unreasonable, then, to expect that some man possessed of the loftiest genius, coupled with ambition sufficient to push it to its utmost stretch, will at some time spring up among us? And when such an one does, it will require the people to be united with each other, attached to the Government and laws, and generally intelligent, to successfully frustrate his designs."

Let us ponder well over these words of Lincoln when these designs take the form of creating a war-emergency third-term build-up.

President Roosevelt, in his Jackson Day nonpartisan speech, attempted to kidnap Lincoln. He said, "I do not know which party Lincoln would belong to if he were alive in 1940—and I am not even concerned to speculate on it."

I can tell the President which party Lincoln would belong to in 1940. He would belong to the Republican Party, and President Roosevelt should speculate on it.

The President said of Lincoln, "I am more interested in the fact that he did the big job which then had to be done." That is precisely where President Roosevelt has failed, in the big job then to be done when he took office—to bring about recovery of the richest Nation on earth.

The big job now to be done is the job that faced Lincoln—to preserve our form of government and maintain freedom. In his Cooper Union speech, Lincoln said, "At what point, then, is the danger to be expected? I answer, if it ever reaches us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of freemen, we must live through all time or die by suicide."

Republicans, let us, in the name and memory of Lincoln hereby "highly resolve that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth."

## New England and National Defense

### EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

ADDRESS BY HON. LOUIS JOHNSON, THE ASSISTANT SECRETARY OF WAR

Mr. CLASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable Louis Johnson, The Assistant Secretary of War, before the Boston City Club, Boston, Mass., on the evening of January 25, 1940:

Members of the Boston City Club, I speak to you tonight in my role as director of munitions for the United States Army. Within the appropriations made by Congress, it is my job to arm and equip America's fighting men for combat. Within the specifications laid down by the War Department General Staff, it is my duty to get weapons and materiel in the quality and quantity prescribed.

Quite naturally, I walk in the path of my predecessors. As they did, so do I, too, turn to New England, and especially to Boston, as

one of the principal sources of munitions; and I find, just as they did, that I have come to the proper place to shop. I am tempted to call you the "American cradle of munitions," for though others may challenge your claim to the birthplace of an American arms industry, no one will deny your contributions toward nurturing and sustaining it in its infancy.

In the field of cannon manufacture in America, Massachusetts was the pioneer. The first positive evidence of the casting of cannon in colonial North America may be traced to the year 1647, when Henry Leonard established his foundry in Lynn. Other enterprising munitions ventures followed. Orr's Foundry in Bridgewater and the Hope Furnace in Rhode Island were casting pieces of bronze, iron, and brass and training artisans in the art of making munitions long before the Revolutionary War.

In April 1775 there was only one gunpowder factory in the Colonies. It was located in Philadelphia. Thanks to Boston's illustrious and versatile Paul Revere, New England entered the field before the end of the year. On one of his spectacular, but perhaps less-known, rides he went down to Philadelphia and inspected its powder factory. The proprietor, Oswald Eve, it is said, revealed as little as possible, but the ubiquitous Paul heard and saw enough. He galloped back to Boston, got a factory built with public funds, and gunpowder began to roll out in kegs, every one of which made American history. Later he branched out into the manufacture of guns and howitzers.

From 1776 to the present the Army and the Navy, too, have depended on New England for munitions. If war should ever come we shall look to you for most of our rifles, our pistols, and our machine guns. Here we expect to get fire-control instruments, guns and carriages for our artillery, engines and propellers for our planes, searchlights for our seacoast and antiaircraft defenses, surgical instruments for our medical men, gas masks for our individual soldiers, and superchargers and turbines for our Navy. To assure ourselves that our munitions, especially in the field of ordnance, have come up to specifications we shall need inspection gages of all sorts, and practically 80 percent of them will have to come from this area. I shall not attempt to list all the items in the munitions field that New England is expected to furnish in an emergency, for the effort would take me well into the night.

The munitions problem in America is unlike that of any other great power. With the exception of airplanes and accessories, of fire-control instruments, and possibly of small arms, we have no munitions industry in this country. By a munitions industry I mean one that is engaged at all times, in peace as well as in war, in turning out a product of direct military use. Since we have no munitions industry except in the three fields mentioned, we must depend almost wholly on civilian plants, ordinarily engaged in other fields, to produce the bulk of our arms and equipment in time of war.

Our program for the solution of our military supply problem runs parallel to our plans for the procurement and training of manpower. Our first line of munitions preparedness is the Army arsenal. Like the Regular Army soldier, it must always be ready. It is the first source of military supply. It is the laboratory where arms and equipment must be developed. It is the primary proving ground for new inventions. It is the training school for highly skilled artisans in the art of munitions manufacture. In time of emergency and until industry is ready to carry the load the arsenal must be able to take care of the Army's needs. It follows, therefore, that these peacetime production facilities that are so vital a part of the Army should be fully equipped with modern machines, fully staffed with expert workmen, and fully organized under competent management.

From the close of the World War until quite recently our arsenals had been moving slowly downhill. Machinery was growing obsolescent. Few replacements were being made. Experienced skilled workers were growing old or turning to other and more lucrative fields, and relatively few were being trained to take their place. A shortage of Regular Army officers limited the numbers assigned to this important duty. There was grave danger that our arsenals, our first line of defense on the munitions front, would be irreparably damaged.

Thanks to the leadership of the President and to the support of Congress, some of these defects are now being corrected. Much remains to be done before our arsenals are geared to capacity and before their full potentialities are realized. I am confident, however, that with the revived national-defense spirit that now permeates our body politic we shall overcome most of our military weaknesses, including those affecting our arsenals. We should not be satisfied until we make our Army production facilities M-day machines, ready at all times to turn out arms and equipment for the needs of our fighting men.

Before dismissing the role of the arsenal in supply preparedness, I want to remind you that here in New England you have two of the Army's finest plants, the Springfield Armory and the Watertown Arsenal.

The Springfield Armory is the oldest Government munitions plant. In 1778 it was established as a laboratory. In 1794 it became a national armory for the manufacture of small arms.

The contribution of the Springfield Armory to the Connecticut Valley, to New England, and to the Nation is worthy of a speech in itself. Suffice it to say that Springfield was the pioneer in the development and manufacture of interchangeable parts in connection with rifle production, that industry later adopted this feature as essential for all mass production of fabricated articles, and that

this development more than any other single factor made possible the industrial supremacy of America.

Springfield manufactures complete rifles and makes parts for pistols, machine guns, and other small arms. Its name has been synonymous with high quality in gun manufacture. During the World War military authorities were generally agreed that the Springfield 1903 model rifle was the best in the world. Unfortunately, we could not produce it in time and had to arm most of our soldiers with the Enfield. This British rifle was inferior to the Springfield. If ever again we are called upon to issue rifles for combat, I trust that we shall be able to put into the hands of every soldier the best weapon that is available anywhere. It is toward that objective that our efforts are now directed.

In the Springfield Armory we are manufacturing today the new semiautomatic rifle popularly known as the Garand. This rifle has two and one-half times the fire power of the old Springfield, and with the Garand the wartime soldier can be trained in half the time. We are just now reaching the stage where we are producing this rifle in quantity. We shall not be satisfied until we have one for every soldier who may be called upon to shoulder a gun in an emergency.

While the Springfield Armory leads in the small-arms field, the Watertown Arsenal is the Army stand-by for casting larger guns and for fabricating large gun carriages. Here seacoast, railway, and antiaircraft gun carriages are built. Here many contributions in welding and in the development of alloy steels have been made, not only for military purposes but for general civilian adaptation.

Our arsenals have proved their usefulness in many ways, but at best they are but a relatively small factor in the mass production that a major war may demand. In the wars of today our Regular Army of men and our arsenals of munitions are not enough. They must be reinforced by the National Guard for manpower and a prepared private industry for munitions.

Comparable to the National Guard, whose members are, first, civilians, and, second, soldiers, are the private commercial plants of America engaged primarily in the manufacture of nonmilitary items but producing some munitions under peacetime contracts. There are many of them in Boston and New England. In the last 6 months the War Department gave New England plants production orders amounting to almost \$20,000,000.

Factories in Boston received more than \$1,000,000 worth of orders, while Cambridge got more than one-half million. Contracts totaling more than \$100,000 were awarded in Watertown and more than \$50,000 in Chelsea, while Somerville got \$5,000 and Malden about \$1,000.

To give you an idea of the variety of our military requirements, let me merely cite the principal jobs given from July 1 to December 31, 1939, to some of the industries of this metropolitan area:

The Hood Rubber Co., of Watertown, was awarded a contract for \$99,630 for winter flying caps, shoes, gloves, and overshoes;

The Simplex Wire & Cable Co., of Cambridge, \$473,518 for Signal Corps wire; and the

Austin-Hastings Co., of Cambridge, \$21,259 for drill presses and grinders.

In Boston itself—

Stedfast & Roulston got \$55,548 for boring mills.

Joseph M. Herrmann Shoe Co., \$58,817 for boots.

The Rivett Lathe & Grinder, Inc., \$28,015 for lathes.

William Whitman, Inc., \$583,000, and Premier Worsted Mills, \$79,040, both for cloth.

Remember, I am discussing the contracts of the last 6 months only. If I were to give you the full picture, I would point out among others the \$17,000,000 backlog of Army orders in Hartford for engines, propellers, and accessories. Nor would I overlook the fact that a contract let to the Pratt & Whitney Aircraft Division and Hamilton Standard Propeller Division carries in its wake subcontracts to factories scattered throughout New England, such as Wyman Gordon, of Worcester, for forgings, and Boston Auto Gage, of Pittsfield, for gages.

Massachusetts, and every one of the six New England States, has reaped direct benefits from the War Department contracts of the past 6 months—from the Brown Co. in Portland, Maine, which got \$1,200 for filter material, to the Winchester Repeating Arms Co. in New Haven, which was awarded \$3,710,000 to produce Garand rifles.

From the standpoint of supply preparedness these production orders are invaluable. The best way to learn how to make munitions is actually to produce them. Not every factory that may be called upon in a grave emergency can possibly be given a production order in time of peace. There must therefore be other ways devised to prepare them for service in time of war.

This consideration brings us to the third component of our munitions team—the civilian reserves. In our program for the mobilization of manpower we have considered the great body of civilians who must be converted into soldiers with a minimum of time and effort. So, too, we must provide for the industrial mobilization of our civilian resources, the private commercial plants that must be shifted from beating plowshares into casting swords. Just as the Army has provided for the training of Reserve officers, Enlisted Reserves, R. O. T. C. units, and C. M. T. C. men for a possible emergency, so the War Department has added educational orders and production plans for the munitions preparedness of our civilian factories.

First, what is an educational order as understood by the War Department? It is a contract between the Government and a civilian manufacturer calling upon him to produce a limited number of a military item not in ordinary production but indispensable to the equipment of a modern army. Examples would be the

Garand rifle, a gas mask, or a searchlight. Such articles are not in ordinary production. To manufacture them we must have the tools, skill, and experience.

Under the educational orders system the Army buys the tools and retains title to them. It selects plants with a record for achievement, whose personnel is competent to perform the delicate operations necessary in the production of these military articles. It gives them the experience in making weapons. The Army and the plant managers keep in constant touch with each other and try to eliminate all the barriers to mass production. The whole object of the educational orders program is to train industry to produce in the volume necessary for any grave emergency.

This program of education was inaugurated during the fiscal year 1938-39. The results attained already justify the experiment. Here in New England we achieved most satisfactory results. We gave the Winchester Repeating Arms Co. an educational order to manufacture a limited number of the new Garand rifle. As a result of the experience and production facilities accruing from this educational order the Government at a later date was able to place a large scale production order for 65,000 rifles with this company at a saving of \$1,000,000 in money and 1 year's time in delivery of the rifles. Time, I need hardly add, is the controlling factor in the success of any program of industrial mobilization. Time to mobilize industry is the very thing that an enemy bent on aggression will make every effort to deny us.

We have given educational orders in New England on two other items; on machinings for our 75-millimeter shells to the S. A. Wood Machinery Co., of Boston, and on aircraft parachute flares to the National Fireworks, Inc., of West Hanover. You know the reputation and the standards of these organizations yourselves. You can readily understand why we in the War Department feel that they will lick our production problems on these two vital items.

The educational orders have brought to light a number of production difficulties, the solution of which should help both the War Department and industry in meeting future problems. For example, when we prescribed the tolerances for 75-millimeter shell forgings there was grave doubt about the ability of civilian plants to meet them. As a result of this particular educational order the Army's tolerance requirements have been adapted to commercial production methods.

Educational orders are not only training industry but are teaching the War Department itself many lessons. The information gained regarding costs, I assure you, will expedite future negotiation of contracts.

One educational order which is directly responsible for a contract of \$328,329 to New England industry, I believe will interest you especially. We had called upon the Goodyear Rubber Co., in Akron, Ohio, to make us a limited number of gas masks. We asked, among other things, for a plant to produce them in quantity by May 1940. The plant is ready now. Production proceeded so successfully that the War Department became convinced that American industry had learned the art of producing gas masks en masse. The next step was to find additional industrial plants for such work. We called upon the Firestone Tire & Rubber Co. of Akron, and upon Johnson & Johnson, of New Brunswick, N. J. Firestone turned over the work to its plant in Fall River and we anticipate another job well done.

In addition to our educational orders we are purchasing production studies and other technical data to assist us in preparing industry for any emergency.

I have devoted this talk largely to munitions rather than to men. It is not that I am unmindful of the human role in modern combat. I realize that the free citizen is the very foundation of our national defense program. Because New England is the core of our supply system, I have emphasized munitions to you tonight.

In the question period that follows, I am ready to face your barrage on men as well as munitions.

## The American Way

### EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

EDITORIAL BY JAMES E. WEST

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by James E. West, chief executive of the Boy Scouts of America, and also the twelfth Scout law.

February 8 to 14 of this year has been set aside as Boy Scout Week, and I know of no organization that is striving harder or more successfully to instill in the youth of America a patriotic spirit which we need to overcome the subversive activities of those whose aim it is to overthrow our form of

government. The youth of today are the citizens of tomorrow, and it is for us to keep them in a proper environment if this country is to endure.

#### SCOUTING THE AMERICAN WAY

You as Scouts can have a definite share in preserving, yes, advancing, what are recognized the world over as the best things in American life. You have come into scouting, not as in some countries where boys have no choice as to what they will or will not do, but of your own free will, voluntarily, eagerly, the American way. In your personal lives and your activities you are not regimented; more than that, you are encouraged to think things through for yourself, to make decisions, to develop initiative, to stand on your own feet.

Opportunity in America today is limitless. There are more opportunities than there are young people willing to prepare for them. Never before has our country offered so many new frontiers as a challenge to youth.

This month we observe the thirtieth anniversary of the Boy Scouts of America. Since it was first organized nearly 9,000,000 boys and men have had the benefits of Scout training. Today scouting is recognized on the basis of its achievements as one of the institutions in American life. Again and again Scouts have proved the value of organized boyhood in service to the community. Again and again they have proved that scouting definitely does help build character and train for citizenship.

But it is not of our past that I wish to speak, gratifying as the record is. I would much rather look toward the future, represented by you as members of patrols and troops, trained in the American way. You as Scouts, by your special training, can be a force right now in the community. You need not wait until you reach voting age to make your influence felt as sturdy, loyal citizens. All about you every day are opportunities to serve and take hold as citizens, not alone through scouting and its civic-service program but through church, school, grange, neighborhood, and other groups. By your training as Scouts you have acquired a definite and distinctive citizenship standing in the scheme of things as they are today, which involves, not only many pleasures and privileges but definite responsibilities. You have accepted the personal responsibility to plan your daily life and actions so as to keep yourself physically strong, mentally awake, and morally straight.

Be constantly alert for opportunities to cooperate and render service. Cultivate your capacity to understand and care about other people. Be tolerant and respect the rights of others. Develop courage, self-reliance. Be vigilant in showing by your speech and action your faith in America, your faith in God. As Scout citizens, accept your responsibility for extending among those with whom you come in contact their understanding and appreciation of the ideals of Scouting and the principles that have made us, and in my judgment will always keep us, a great democracy.

The aim of the Scout movement has been to give you personal help in the building of your character and in training yourself for citizenship, and you are called upon to serve, in the American way, as "participating citizens."

Keep the fine spirit of American reverence, tolerance, and loyalty burning in your lives as participating citizens. That spirit is the lifeblood of America, guard it and live it.

JAMES E. WEST,  
Chief Scout Executive.

#### TWELFTH SCOUT LAW

"A Scout is reverent. He is reverent toward God. He is faithful in his religious duties, and respects the conviction of others in matters of custom and religion."

### Keep a State From Going "Haywire"

#### EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

ADDRESS BY HON. CHARLES A. PLUMLEY, OF VERMONT

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I made at Naperville, Ill., on the evening of February 12, at the "two-bit dinner" to which the President was invited and for which he bought two tickets—viz, two 25-cent stamps bearing the picture of William McKinley.

I did not see him there, and did not expect to, in view of his statement with respect to the impossibility of his being present, but there were between five and six thousand Illinois Republicans present, and quite a few Democrats, if reports are to be relied upon.

This is what I said to them:

Mr. Chairman, we have met here tonight to honor ourselves as we observe the anniversary of the birth of Abraham Lincoln, that uncommon commoner, great emancipator, and savior of the Nation.

"Some opulent force of genius, soul, and race,  
Some deep life current from far centuries  
Flowed to his mind and lighted his sad eyes,  
And gave his name, among great names, high place.

"Unschool'd scholar! How did you learn  
The wisdom a lifetime may not earn?  
Unsainted martyr. Higher than a saint  
You were a man's constraint,  
In the world, of the world was your lot;  
With it and for it the fight you fought  
And never 'til time is itself forgot and the heart of man is a  
pulseless clot  
Shall the blood flow slow, when we think the thought of Lincoln."

Illinois may be justly proud of the no small contribution it made and of the glory it finds in the fact that it helped to mold and to make this great American. "A type that nature wills to plan but once in all a people's years."

Abraham Lincoln, "Shepherd of the people," that name the world's best rulers ever crave. He fed us with counsel when we were in doubt, with inspiration when we faltered, with caution when we would be rash, and with calm, clear, trustful cheerfulness through many of the darkest hours in this Nation's history.

His rugged, honest, steadfast perseverance and staunch Americanism still stand as examples and as objectives which the Nation collectively and all of us as individuals do well to try to emulate.

Unwavering in his loyalty to the fundamentals of the American Government, his genuine respect for the Constitution, and his great concern for the common people as well as for the destiny of the Republic itself ended only with his death.

As Edwin Markham has well said:

"He held his place—  
Held the long purpose like a growing tree—  
Held on through blame and faltered not at praise—  
Towering in calm, rough-hewn sublimity.  
And when he fell in whirlwind, he went down  
As when a lordly cedar, green with boughs,  
Goes down with a great shout upon the hills  
And leaves a lonesome place against the sky.

"So they buried Lincoln! Strange and vain.  
Hast any creature thought of Lincoln hid  
In any vault 'neath coffin lid?  
In all the years since that wild spring of pain?  
It is false—he never in grave hath lain.  
You could not bury him, although you slid  
Upon his clay the Cheops pyramid,  
Or heaped it with the Rocky Mountain chain.  
If so, man's memories not a monument be,  
None shalt thou have."

A redeemed and reunited Republic is his monument.

#### THE ROOSEVELT GAMBLE

In the year 1932 that extraordinarily shrewd, wise, and unerring, that experienced judge and observer of men and events, Vermont's most distinguished son, the late Calvin Coolidge, read the mind of Franklin D. Roosevelt as if it were an open and a printed page. Anticipating Roosevelt's election, he said to Henry L. Stoddard: "We will be taking in America the biggest gamble in government that any people ever took. I do not believe," said ex-President Coolidge, "that the American people realize all that is in the mind of this man Roosevelt, as to his policies. There is something about his speeches that makes me think he is going to try to overturn things. You cannot safely do that with a government in one President's term. Government is growth—slow growth—you cannot gamble with it. That, however, is what I see ahead if Roosevelt is elected."

#### CALVIN COOLIDGE'S VISION

What prophetic vision, what wisdom; but, even so, he could not have seen and would not have believed that third-term candidate Roosevelt would have attempted the destruction of the judiciary's independence—a program typical of Charles I; or that he would have tried to destroy the independence of the legislative branch—which smacks of George III—a scheme involving centralization of government, invading the independence of local government, which is one of Mr. Hitler's successful ideas.

#### THE ABSENT GUEST

Your absent "guest" calls himself a "liberal" and defines "liberal" as one who is 100 percent in favor of the New Deal, its policy and its program. That necessarily makes me a conservative, for I am against it. The New Deal program, in parts, is as old as history. The devaluation of the currency is a trick of Roman emperors. Certainly no one can successfully maintain they were liberal.

Your President's financings are as old as the French kings, and may even date back to Babylon. If the New Deal program is liberal then so was George III, and Hitler and Stalin are also.

The truth is, real liberals have fought since the beginning of time, as the Republicans have been fighting, against these same destructive and un-American things for which the New Deal stands.

The New Deal program in its entirety contains the paving stones for the dangerous road which has wrecked liberal democracies all over the world.

Mr. Roosevelt denounces and accuses all of us who do not believe in these methods and these actions as conservatives. If being hesitant and opposed to dragging America into the morass of political immorality or into the dead sea of reaction is conservatism, then I cheerfully join that party. And that party will again become the hope of American life.

At this point you may have an inkling of my attitude toward some of the public questions which have been and continue to be perplexing to the body politic.

The topic assigned me and alluded to quite widely in the public press carries the broad implication and compels an inference that because Vermont has always kept its feet on the ground in Presidential election years, you presume me to be qualified, as its Representative, to make crystal clear (as the President hopes I shall, and as I shall attempt to do) the procedure to follow "to keep a State from going 'haywire' in an election year."

As a prelude, may I say that lured by the prophets of "a more abundant life" and seduced by the New Deal sophistry, all the States of the Union, except Vermont and Maine, lost their heads and about everything else they ever owned, in the Presidential campaign of 1936.

A preponderant majority of Vermonters holding onto the rope and keeping the old ship of state from floating too far out into the sea of bubbles and hot air of the "new delirium" have gradually succeeded in pulling it back to its moorings, and how you folks are climbing aboard.

The way to keep a State from going "haywire" is for the people in that State to follow the example of Vermont and Maine and DuPage County.

At one famous battle in our country's history General Sedgwick, in charge, gave the order: "Put the Vermonters ahead and keep the column well closed up."

Modestly, may I say, that always should be done in an emergency, for in so doing is found "the way, the truth, and the light."

#### STRAIGHT AND UNDILUTED REPUBLICANISM

We Vermonters take our Republicanism straight and undiluted. If that makes us isolated and old-fashioned and rugged individualists, we thank God for it! We are Republicans, and we are proud of it. We work too hard and too long for every dollar we earn and try to save not to know that if by common consent we allow ourselves to be hypnotized by the spending of money as if there never were to be a day of reckoning; we "sell our birthright for a mess of pottage" if by lack of appreciation and because of a disinclination to face facts or to advise ourselves of what concerns us we keep silent and suffer the Constitution to be nullified, our prerogatives as citizens to be preempted, and our rights to be taken away from us; just so certainly as the sun rises and sets, what we know as liberty will surely and steadily be undermined and destroyed.

Despotism, which by any other name will smell just as sweet, will crown itself with power and it will then be too late to recover the freedom at whose loss we have connived.

As Vermonters and as Republicans we still believe in the Constitution of the United States, the Declaration of Independence, and the Bill of Rights. We still insist, among other things, that Congress shall make no law abridging freedom of speech; that no person shall be deprived of life, liberty, or property without due process of law; and that powers not delegated to the Federal Government by the Constitution itself are reserved to the States respectively or to the people. We believe neither Congress nor the President on any plea of emergency may ever suspend its provisions in any particular at any time, at any place, or anywhere.

To us the Bill of Rights is the legal embodiment of the spirit of liberty which our Declaration of Independence proclaims to be God given and inalienable. Every part of the Constitution is a Bill of Rights, said Alexander Hamilton. The supreme emphasis is on individual liberty. The citizen, not the Government, is to be sovereign. Free to direct his own life. He and not the Government is to plan it. Such is the only "more abundant life."

#### FREE GOVERNMENT, FREE MEN, FREE ENTERPRISE

Free government, free men, and free enterprise, the outward expression of the liberal ideas of democratic institutions, a scheme of life, is more than a framework of government. Every American the sovereign citizen of a free republic, master of his own destiny, the most successful scheme of government and of life that man ever devised.

When President Roosevelt talks about "horse and buggy" days, and the establishment of a new order, he means that the free government, free man, and free enterprise system is to be disrupted, discontinued; that America is to abandon its free institutions and its voluntary economic system in favor of a totalitarian state and an economic system based on bureaucracy or coercion, or on the obedience of the many to the few. "We planned it that way." That's telling them, not asking—that's the story. There is no middle ground. There is no other way to turn. You are for the maintenance of the ancient and honorable landmarks or for their destruction, which is now in progress. Under the establishment of a centralized bureaucracy in Washington; the abolition of state rights; the expansion of Executive power through unwise and unlawful delegation to a power-greedy Executive; a centrally planned and controlled economy in which there is no economy; the beginning of the end of free enterprise; and the subordination of individual rights and of the sovereignty of the citizen to the supremacy of the State.

#### CONDESCENDING BENEVOLENCE

We free-born Americans do not take kindly to condescending benevolence on the part of our elected and appointed officials of government, nor do we subscribe to the belief that a huge vote in our Republic, no matter how large, constitutes such a "mandate" to those elected thereby that they may carry into practice the attitude so long ago expressed by the long-reigning Louis XIV, "L'etat c'est moi." No; nor do we allow ourselves to be misled by dire words uttered by Presidential linkboys now so blatantly engaged in fostering a third-term movement who would seek to impregnate the minds of the people with the Pompadourish idea that "Apres F. D. R. le deluge."

In the first place we know that our State is one of 130,000,000 people rather than that of a palace guard; in the second place, the only deluge we can visualize is the refreshing, revitalizing, life-imparting rain of a return to government sanity, one which would give us surcease from a myriad of restraints, from a top-heavy bureaucracy, and would allow free enterprise once again to function with a minimum of interference and with the knowledge that some degree of stability had been attained.

We believe that our liberties and our form of government can only be preserved by strict adherence to the principles laid down in the Constitution.

We know that a representative, democratic form of government under Republican administration has in a long period of years made greater material progress, produced higher standards of living, inspired superior love of peace, tolerance, and good will than ever has existed in any other place, at any other period, in any nation on earth.

#### PROFLIGATE SPENDING

We are opposed to the profligate spending of our hard-earned money, and we know that the Republican Party stands now, and ever has stood, for economy in government, for sound currency, full value money, and against any repudiation of government pledges to the people, in whatever guise such repudiation may be offered.

No complicated scheme of relief, no plan of Government price fixing, no resort to the Public Treasury will be of any permanent value in reestablishing industry, assisting agriculture, or bringing back genuine and permanent prosperity.

The America which Washington, Jefferson, and their compatriots founded and Lincoln saved does not mean we shall have everything done for us by the Government, but, on the contrary, that it guarantees to each and every one of us an opportunity to do everything for ourselves.

All governments derive their just powers from the consent of the governed. Plato declared the chief object in the construction of a state is the greatest happiness of the whole, and not that of any part. The greatest happiness of the whole is best achieved when every man who is a part of the whole is secure in the possession of his rights, and those liberties which a capricious, temporary majority cannot take away. That is what Calvin Coolidge meant when he talked about individualism.

The Republican Party recognizes the fact that the government exists for men, and not men for it, and that to every man and woman in America should be given and secured the freedom and the opportunity to achieve to the full measure of their capacity.

That form of established government is best which seeks in the development of the individual character the fulfillment of its highest purpose.

Such were the announced and fundamental doctrines on which the political philosophy of that great President, Calvin Coolidge, were based.

They are good enough for me. I think they are good enough for anybody.

So much for the general proposition. Now, let's get down to brass tacks.

By reason of the skill and industry of our forefathers we are the inheritors of a rich estate, which it is our duty to hand down, not only unimpaired, but improved.

#### BURDEN OF FEDERAL DEBT

Today the outward, visible manifestation right here in the United States of the hazard to free enterprise is the excessive and constantly mounting burden of Federal debt; of Federal, State, and local taxation. History teaches that in every country where taxation has reached the point where it absorbed in excess of from 35 percent to 45 percent of the national income, either anarchy or regimentation followed. It can happen here. You have only to look at the history of Egypt and Greece and France; the assertion could be substantiated by many another illustration were it necessary.

Back in 1913 our national income in this country was \$32,000,000,000 in round figures; Federal, State, and local taxes were \$2,000,000,000, some 7 percent of the national income. In 1938, however, the national income was sixty-two and a half billion dollars, approximately double that of 1913, but our expenditures had risen to over seventeen billion, some 27 percent of the national income; of this latter amount over \$13,000,000,000 was raised by taxes, the balance by borrowing. Right now governmental expenses are over 10 times what they were 25 years ago. It is happening here.

A long time ago a very distinguished Speaker of the House of Representatives in answer to the criticism of there then being a Budget of \$960,000,000, said on the floor of the House that this was a billion-dollar country. We are now a billion-dollar country insofar as our interest charges are concerned. Just interest on the public debt.

According to a statement issued by the Treasury Department last week, if all the money in circulation as of January 1 of this year were to be equally divided among every man, woman, and child in this country, each one would receive \$57.71. Before you spend that \$57.71, it might be fair enough for me to call your attention to the fact that if the obligations evidenced by the admitted New Deal national debt of \$45,000,000,000, as of the end of the current fiscal year, were to be assumed, share and share alike, by every man, woman, and child of the 130,000,000 people of this country, each one of us would owe \$346. Think that over before you spend your \$57.71.

#### BRINGING IT HOME TO NAPERVILLE

Illinois' share per capita of the national debt on that basis is \$2,725,788,000. The citizens of DuPage County would owe \$39,800,000. The citizens of Naperville would owe \$2,076,000.

#### EIGHT DEFICIT BUDGETS

Those of us who serve on the Appropriations Committee are confronted by this administration's eighth successive deficit Budget—a Budget which calls for the expenditure of \$9,027,000,000 as against anticipated receipts of \$6,151,000,000, leaving a cool, stark deficit of \$2,876,000,000, which places the New Deal in the unenviable position of running true to form as it exceeds the debt limit.

Those of you who have earned and scrimped and saved and who live within your income, or intend to pay your debts, very well know that no person, no business, no State, no government can continue forever, or for any long period to spend more than is earned or received without being overwhelmed in bankruptcy.

Now comes the Secretary of the Treasury admitting that the \$45,000,000,000 debt limit has been reached, and suggesting that it be increased to \$50,000,000,000. The people are entitled to know all about this financial jugglery that has been going on; but they cannot know it all, for nobody in this administration knows where it actually stands. God only knows, and I do not say that sacrilegiously.

We are confronting a situation such as no Congress ever was asked to meet before.

#### A \$75,000,000,000 DEBT

The administration talks about the \$45,000,000,000 debt in which, however, is not included many contingent, but nevertheless positive, debts of the Federal Government, such as the \$1,600,000,000 debt of the United States Housing Administration; the \$6,000,000,000 of guaranteed bonds of that agency, and the millions tied up in contracts of local housing authorities; the \$10,000,000,000 obligation growing out of the administration of the Social Security Act, and the like. So when you hear talk of the \$45,000,000,000 debt, make a mental addition of such sums as would bring this up to the \$75,000,000,000 mark and you will have included actual and contingent liabilities to which you and your fellow citizens are to chip away at during your natural lives.

The maze which is the Federal Government's book of account is past understanding; administrators charged with carrying out specified programs when confronted with the huge sums spent, or loaned, speak of "recoverable assets." In most cases these so-called assets, against which Government bonds have been issued, consist of mortgages upon the homes of people held by the H. O. L. C., advances by the Commodity Credit Corporation, P. W. A. bonds, and the like—recoverable assets—the Government foreclosed on over 175,000 homes last year out of 1,017,000 loans made, with an average loss to the Government of \$920 a house.

Of the bonds held by the R. F. C. and the P. W. A., there are over 350 issues in default; about 10 percent of the whole number of issues are represented by waterworks systems, and one of the reasons for the default is illustrated by the situations which existed right here in Illinois at Grafton and at Shawneetown, a matter which one of your sterling Republican Congressmen from Illinois alluded to in the House not so long ago. At the latter, as a consequence of flood damage, the town was moved away from the W. P. A.-constructed waterworks and the bonds issued are in default.

That very briefly is where your hard-earned dollars are going and have gone—to carry out the wanton, wasteful, wicked, reckless spending policy of this New Deal.

It is high time that the taxpayers of this country were given a break instead of a gold brick.

I am for economy, and then more economy, said Calvin Coolidge, and to which we should shout a fervent amen.

#### BANKRUPTCY THREATENS

From July 1, 1939, to January 16, 1940, we spent \$5,165,434,493.22. We received \$2,902,832,615.58. The excess of our spending over and beyond what we received for the 6 months' period reached the startling total of \$2,262,601,877.64.

Per capita governmental expenditures rose from \$95.54 in 1929 to \$129.02 in 1938. The per capita tax burden rose from \$80.30 in 1929 to \$107.51 in 1938.

#### INTO THE RED \$15,000,000 A DAY

Just think of it—we spend \$25,956,957.25 a day. We spend \$1,081,539.88 each hour, or \$18,025.66 every minute. We are running into the red \$14,587,098.57 every day, or \$607,795.77 every hour.

Before leaving this little discussion concerning the financial condition confronting you and me as citizens of our country, let me give you an illustration of the magnitude of the debt which has been incurred under and by virtue of the New Deal administration.

Forty-five billion dollars in debt. Why, do you know that if you were to take 45,000,000,000 dollar bills and lay them end to end and

side to side you could construct a roadway 25 feet wide that would run around the earth and 10,432.44 miles out into space?

#### A \$42,000,000-MILE DEBT

And do you realize that since these dollars come out of the Treasury from the pockets of the taxpayer that, in order to discharge the obligations they evidence, somebody will have to pick up and put back into the Treasury to relieve the taxpayers' burden the \$45,000,000,000 plus the interest that is accruing? Do you know that these 45,000,000,000 dollar bills, if laid ribbonlike end to end, would make a band of bills 42,613,636 miles long? Somebody will have to pick them up. And it is going to be back-breaking picking.

#### THINK THIS OVER AND SWEAT

There are 525,600 minutes in a year. In 1,940 years there are 1,019,664,000 minutes.

If 50 men were to start today and work continuously for the next 1,940 years to pick up these bills, and each picked up one every minute every day every year, they would have only put back into the Treasury \$40,677,200,000, but that is only part of the job.

Let's look at another angle of the situation. What kind of a deal has the farmer had under this administration and under the reciprocal-trade program? His complaint is not, or should not be, political. The farmer rests his case on the fact that under the trade treaties he is getting the short end of the deal. He wants, is entitled to, and must have, a better deal.

He knows that not only have our cotton exports been cut in half and our exports of wheat just about disappeared, but there have been some 1,100 tariff-rate reductions—no increases—of which over 20 have been of agricultural products.

#### THE NEW DEAL PROGRAM FOR AGRICULTURE

The new dealers are squirming with the "mess" they have made of their agricultural program. Under the New Deal, farm values have shrunk every year. The assessed valuation of the United States is declining rapidly and farm tenancy is increasing by leaps and bounds, and the New Deal is directly responsible for this condition.

Thousands of farmers are living on farms that cannot be sold for the mortgage on them. You say, "How did the New Deal do this?"

First, by giving the farmer's market away and putting him in competition with the peasants of Europe, the peons of South America, and the slave labor of foreign lands.

For example, in 1937 over \$868,000,000 worth of competitive agricultural products were imported. By competitive, I mean crops that could have been grown right here in the United States. In addition we imported \$711,000,000 worth of noncompetitive agricultural products, which makes a total of \$1,577,000,000 worth of agricultural products imported, and we exported only \$797,000,000 worth of agricultural products.

During the past 7 New Deal years we have exported only \$5,000,000,000 worth of agricultural products and have imported over \$7,400,000,000 worth.

In other words, we have an unfavorable trade balance of over 47 percent, as our agricultural imports are 47 percent above our exports.

About half of our imports are agricultural products, whereas only 30 percent of our exports are agricultural products. Our total world trade in nonagricultural products shows a favorable trade balance of 70 percent, or, in other words, we export about 70 percent more agricultural commodities than we import. This is conclusive evidence that the farmer is not only "sold down the river" but is washed right out into the ocean.

#### UNFAVORABLE TRADE BALANCE

The fact that the farmer has an unfavorable trade balance of 47 percent, while the big monopolies have a favorable trade balance of 73 percent, shows the price paid by the farmers of the country for the so-called reciprocal-trade treaties.

For the first 8 months of 1939 our agricultural imports increased \$203,000,000, or 29 percent over the same period of 1934, or at the rate of \$300,000,000 a year. Seventy-five percent of these commodities are competitive with our own production; they represent the production of 11,000,000 acres of good farm land figured at \$20 per acre.

It is surely a reflection on this great agricultural country of ours when we import, as we do, some years up to 20 percent of our total agricultural income. When we import more competitive agricultural products than our whole total agricultural exports amount to, it is time to call to the attention of people of this country the great injustice that is being meted out to the farmers of America.

Since the trade treaties we have had a 75 percent unfavorable balance in our foreign trade and a 70 percent favorable trade balance in our nonagricultural foreign trade.

We have had an unfavorable trade balance every year of the New Deal. New dealers should rightly have their hearts bled for the "grapes of wrath" people, because their program, if carried out, will make tenants out of all farmers. Remember that these programs that are to solve these problems of the farmer apparently must include a set-up that makes for regimentation and gives the Secretary of Agriculture direct political control over farm loans and farm practices of every farmer that comes under his political agricultural machine. Is this Russia or is it the great United States of America?

#### THE INVISIBLE FARM MORTGAGE

The New Deal has put an invisible mortgage on every acre of cropland in America. The farmer may think his farm is paid for and the records in the register of deed's office may show that there isn't any mortgage on record, but the invisible mortgage must be paid by the production of crops off this farm just as much as if it were in the county recorder's office.

The public debt has increased by over \$20,000,000,000 the past 6 years, to say nothing about the millions of losses it will take on its business and agricultural loans now being carried on its books at full value. Of this \$20,000,000,000 increase in the public debt the farmers, who represent 25 percent of the people, will have to repay over \$5,000,000,000 through their farm operations. In other words, Mr. Wallace may have made farmers believe that he has been a Santa Claus and doled out two and one-half billion dollars during the past 6 years, but the facts are that the farmers have over \$5,000,000,000 to be paid back for the two and one-half to three billion dollars that the Secretary has distributed to them.

A \$1,000,000,000 increase in the public debt represents \$2.90 in mortgage on every acre of cropland, if agriculture were to carry the whole load.

#### THE AGRICULTURAL PICTURE OF THE AVERAGE FARMER

The average farm price of milk in the United States was \$2.21 per 100 in 1930, and it has never been \$2 a hundred since, and has only averaged \$1.68 a hundred the 6 years of the New Deal. The average price of butter on farms was 36.8 cents in 1930, and 6 years since the New Deal it has averaged only 27 cents, and in 1939 it went down to 25.8 cents per pound, about one-third less.

American cheese averaged 17 cents plus for the 6 years pre-New Deal and only 13 cents plus the first 6 years of New Deal, and after 7 years of "the more abundant life" averaged only 12.8 cents in 1939.

#### THE FARMER AND THE NEW DEAL

The destitute condition of the farmers of this country is due, in large measure, to the unfair procedure of the agricultural policy of the New Deal.

First, the New Deal went out and loaded farmers up with all the loans the farmers would carry and assured the farmer that better prices would prevail.

Second, the ink had hardly had time to dry on his mortgage before the new dealers lowered the tariff through the reciprocal-trade treaties. This was done right in face of the fact that Candidate Roosevelt in 1932 had assured the rural people of America that he contemplated no reduction of tariff on farm products.

Third, the new dealers then instituted the program of starting up new farmers. Thousands of new farmers were set up in business with a 100-percent subsidy from the United States Treasury to compete with farmers already on their farms. Many of these people were taken from the relief rolls and set up in business against the regular farmer.

Fourth, The new dealers then started a program of controlling surpluses by buying surplus food to hold up agricultural prices. They spent \$66,000,000 in 1 year to hold up agricultural prices—at least they claim that this helped materially in holding up prices—and then they turned around and imported as high as \$868,000,000 worth of competitive agricultural products that could just as well have been raised on the farms of our country. That's the story.

The criticism leveled at the manner in which the present administration has concentrated on production control as a cure-all for the farmer is well warranted; the suggestion made by these critics appears to me to be well founded that more attention be paid to, and that the emphasis be shifted to, marketing of the commodities produced.

#### MR. PEEK SAYS

I agree wholeheartedly with the remark made by your own George Peek when he said, in this connection: "We must replace theorists with realists, inconsistency with consistency, incompetency with ability, fiction with truth; and the time is now."

#### ILLEGAL TRADE TREATIES

Under our standard we do not expect the Government to support trade; we expect trade to support the Government, so I am opposed to the reciprocal trade treaties program as now constituted.

They are not in law worth the paper on which they are written, because they were negotiated on the basis of an alleged law in itself in direct contravention of the fundamental law of this land. Trade agreements, they call them; under whatever name, they are nevertheless treaties, the negotiation of which by the State Department's agents, functioning wholly outside the Constitution, under a delegated power that is not susceptible of being delegated, even though allegedly authorized by an act of Congress. I believe such activity to be contrary to the provisions of the Constitution, where it states that: "He (the President) shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur."

#### MR. O'NEAL AGAINST JUSTICE PINCKNEY AND SENATOR BORAH

Even Mr. O'Neal, of the National Farm Bureau, cannot sweep aside that provision, for "the Constitution has declared that whatever amounts to a treaty, made under the authority of the United States, shall immediately be supreme law. It embraces all the varieties which it could be supposed this Government could find it necessary or proper to make or it embraces none. It covers the whole treaty-making ground which this Government could be expected to occupy or not an inch of it." So said Mr. Justice Pinckney, one of the greatest statesmen and jurists this country ever knew, in discussing the making of a commercial treaty with Great Britain.

The late Senator Borah said: "These so-called trade agreements are treaties. They ought to come here for ratification; and if the Senate had any regard whatever for its constitutional rights and duties, they would come here."

So much for the proposition with respect to the illegality and unconstitutionality of the trade agreements as they have been ne-

gotiated and as it is proposed still further to continue their negotiation. They are not reciprocal. They are not legal. They are provocative of and not a panacea for war.

Our primary obligation is to put our own national house in order and by restoring our own balance to reestablish our great social groups. By so doing we shall make our best contribution to a sane and realistic internationalism.

#### EUROPE'S MADMEN

Europe today is a seething, boiling pot of war; a maelstrom of diplomatic intrigue and connivance; a center of secret treaties and negotiations; the home of the maddest men of all the ages. Why should we undertake to make contracts with them? Why should we dare to enter into alliances with these maniacs?

#### A NATIONAL SELL-OUT

As a national sell-out "down the river," the trade treaties heretofore negotiated take the gold medal offered for idealistic, impractical, governmental, theoretical economic effort. Carried away by their enthusiasm for what is right and good, too many people in these United States have been hypnotized by the words and the voices which have proclaimed the potentialities for recovery and relief and international good will supposedly inherent in these trade treaties.

#### GREED, GOLD, AND GLORY

Every attempt which has ever been made for territorial acquisition and expansion has had its origin principally or in part in the greedy grasping for trade that was to "follow the flag" and the profits to ensue.

Greed for territory, for gold, for gain, and for glory is at the bottom of this war-worn world's troubles.

In trade agreements heretofore negotiated since the beginning of time and in trade agreements hereafter to be negotiated with their concomitant ramifications will always be involved man's irrepressible greed and the cause for most of the ills which the world has suffered and will have to endure.

#### TABER, OF THE GRANGE

As Mr. Taber, of the Grange, told the Ways and Means Committee the other day, it just doesn't make sense to pay hundreds of millions of dollars annually to American farmers to reduce acreage and production and then enter into trade agreements with other nations to make it easier for them to swamp and glut our markets with competitive commodities.

No; it does not make sense, but it makes about as much sense as much of the New Deal program has made. It will not be difficult to winnow the good of the New Deal from the bad, though the job will be like the historic story of the farmer who undertook to sift three good kernels of wheat out of the bushel in which the rats had nested for 6 years.

#### CUT A MAN'S THROAT TO STOP THE NOSEBLEED

As a panacea for and preventive of war, trade treaties work out just as efficaciously as between nations as does the idealism and good intent as between individuals, when it is deemed best to cut a man's throat in order to stop his nosebleed.

#### WOMAN'S PART AND RESPONSIBILITY

The pages of history record repeatedly the large and important place that woman has occupied in the concerns of states and nations. Not only has she played a most conspicuous role in shaping the judgments and opinions of those in authority; not only has she been a dominant force in giving poise and direction to kings and rulers, but now and again she has occupied a more conspicuous place in governing and controlling directly the aims and actions of great nations.

In America, under popular government, women have risen to the highest plane they have ever occupied in human history. This is not an accident. It didn't just happen. It is a byproduct of American civilization. America has given you opportunity—has given you the same freedom as men. It gives you the same rights; it gives you the same voice in public affairs; and I tell you women this struggle against un-American doctrines and programs is your fight, and you will have to carry your share of the burden if the battle of the century is to be won. We have just commenced to fight.

The plain people of this country; the real women and men of this country; the great body of decent, hard-working Americans, who have no hope of being either famous or rich, but who love their homes, are proud of their families, and are anxious, above all things, that their children should make more of the opportunities our free competitive system affords, must all wake up to a realizing sense of the situation which still confronts them.

I do not want any grandson or granddaughter of mine to grow up in a United States of America in which he or she has traded his or her self-determination and individual initiative for the comfort and guaranty of a full stomach—for that every convict enjoys in a modern jail.

As someone has said, you haven't kept your nose to the grindstone and laid awake nights figuring how to save another few dollars and put it where it would do your children and grandchildren the most good, so that demagogues could put it all in jeopardy by buying the banks, the railroads, the corporations, the farms, the slums, the unemployed, and the unemployable into dependence upon their fancy, and into fealty to their tinfoil crowns.

Millions—yes; billions—of dollars, representing wealth dug from the earth and wrested from the sea, brought to public treasuries by the tax gatherers, was, and still is being, and, if the President carries out his announced intention, will continue to be, wasted

in an unprofitable expenditure—in an attempt to create a prosperity as unreal and as unsubstantial as the dreams of an opium eater.

The gigantic debts so already created will bear down and burden generation after generation yet to come.

Now the women of this country should be interested, disturbed, and aroused, for they have the first claim on most of the wealth of this country. They own 40 percent of all residential and farm real estate, 65 percent of all savings accounts in banks and elsewhere, and are the beneficiaries of 80 percent of all the outstanding life-insurance policies in this country.

They are faced with the fear, and should be impressed with the fact, that the value of their property and income will be largely destroyed, as it is being, through the heavy taxation now and which has been recommended, and by the theories, crazy as they are, of redistribution of wealth and income which characterize the New Deal.

#### WHAT DO THE MOTHERS THINK?

The mothers of the country know that spending just does not make prosperity. It only creates a greater necessity for more relief. They know that ridiculing our traditions teaches their children disrespect; teaches their sons and daughters to be lazy and spend-thrifts, and disrespectful of lawfully constituted authority. They do not like it—why should they?

#### A REAL REPUBLICAN PROGRAM

It has been said, and truly, that the American people over the years have enjoyed a greater and progressive diffusion of wealth, greater comfort, greater security, greater educational opportunities, and a higher standard of living than average men and women at any time, anywhere. These accomplishments are due, not to the wisdom of princes and rulers, but to the virtues, character, and energies of the people themselves, living under Republican administrations for the most part; and therefore a system of government that brought unlimited opportunity to all men. Because this is true, the Republican Party now opposes all changes in the form of our government which would, or will, or can retard continued progress and advancement. It stands for a return of a constitutional form of government. It is unalterably opposed to the continuance of or the creation and concentration of bureaucratic despotism and further experimentation in government at the taxpayers' expense.

In its 12-point program formulated and enunciated last session, the Republican Party developed a national program for economic recovery, an American platform, which shall confine the Government to its proper functions under the Constitution and insure preservation of the American system of free, private enterprise.

Such a plan and such a program the Republican Party, through its representatives in Congress, has over and over again outlined in detail, involving the balancing of the National Budget; the revision or the repeal of the capital-gains tax and the undistributed-profits tax; the establishment of just relations between capital and labor, insisting upon constitutional guaranties of the rights of person and property, the right of the worker to work, of the owner to possession of his property, and of every man to enjoy in peace the fruits of his labor; opposition to New Deal's Government policy of competition with private business and private savings; favoring a competitive system as against either private or governmental monopoly.

It has stood for State and local control, home rule, and local self-government; for a reduction of the amount of taxes, Federal, State, and local, which are responsible for the notorious spread between the prices paid farmers and the prices paid by consumers for their products.

The Republican Party has insisted that food, fuel, clothing, and shelter shall be provided, as shall useful work; that it shall be done economically to encourage individual self-reliance and the return to self-dependence.

The Republican Party proposes to continue to undertake to preserve and to rely upon the American system of private enterprises and initiative which carry the priceless condition of liberty and the dignity of action.

It has been well said—and it may be said again—that this Republic is founded on inalienable liberties. It is dedicated to the dignity and personality of individual men and women. It is consecrated to truth, justice, tolerance, and mercy. These liberties and obligations are inseparable. If political freedom, intellectual freedom, or economic freedom are any one of them undermined, all the others will fall.

These high purposes of this Nation are being undermined by the policies now pursued at home and by alien theories from abroad. Our first great mission is the preservation of these principles.

Today economic progress is being paralyzed. That destruction is the destruction of social progress. The imperious necessity of America is to restore economic productivity and thereby jobs for men. That alone can support our humanitarian aspirations. For social progress in care of the aged, the young, the ill-fed, the ill-clad, the ill-housed there must be parallel economic strength. Economic restoration is our second great mission.

We are the living custodians of the torch which fell from the hand of Abraham Lincoln. We may again rekindle the heart and mind of America with the glow of hope and promise for the future. Never since Lincoln has a political party faced such an opportunity for a service to a great people as now confronts the Republican Party.

## The President Admits the Way Has Not Been Found To Spread Employment

### EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1940

LETTER FROM HON. FRED L. CRAWFORD, OF MICHIGAN, TO PHILLIP S. ROSE, EDITOR OF COUNTRY GENTLEMAN

Mr. CRAWFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith submit a letter which I have mailed to Mr. Phillip S. Rose, editor of Country Gentleman, in which I offered comments on the articles by Mr. Allan W. Rucker, a reprint of which, under the caption "What is essential to prosperity" Mr. Rose recently mailed to the Members of Congress.

The fluctuating but more or less chronic disparity between farm and industrial prices with all of the consequent damage to our economy and particularly to our farm people has seemed to me to be very largely, if not almost entirely, traceable to monetary difficulties and to be related as cause rather than as effect to the development in industry of rigid administered prices and arbitrary hours and wage rates arranged by collective bargaining. It is worth while to have brought to the attention of the chronically clashing land-holding and labor-organizing groups the fact that security of income and standards of living goes not with short hours, reduced production, and high wage rates but with high rates of production and security of farm income through fair farm price levels. Only last Saturday the President, in addressing the National Citizenship Institute of the American Youth Congress, pointed out that in his opinion it is cheaper for most factory managers to work people overtime and pay the increased wage incident thereto than it is to put on a double shift. The President also observed that we have not yet found the method of spreading employment to more people when good times come. From this I can only come to the conclusion that the President now admits that his Wages and Hours Act and the Wagner Act have not attained their objectives and never will. The fact the acts have not accomplished what was claimed they would is no surprise to me.

The purport, as I see it, of Mr. Rucker's discussion is to stimulate thought along the line of greater production and more security of farm income. I trust that my criticism of his way out as being inadequate will prove to be of some constructive value toward attainment of that economic balance and prosperity which is the claimed objective of even the mistaken measures which he shows to be actually inimical to prosperity.

WASHINGTON, D. C., February 6, 1940.

PHILIP S. ROSE,

Editor, Country Gentleman, The Curtis Publishing Co., Independence Square, Philadelphia, Pa.

DEAR MR. ROSE: This will acknowledge receipt of the circular letter of January 24, together with your booklet containing an article in two parts written by Allen W. Rucker.

Let me thank you for the pamphlet dealing with what Hansen, of Harvard, and other economists are calling "dispersion" of price levels. It is heartening to a legislator, I assure you, to see the people of the world behind him making an earnest effort to aid in answering this as yet unanswered question which Mr. Rucker poses. I say poses, because it seems to me that he has shown, not what is essential, but what is inimical, to prosperity. I would like to suggest that you write Professor Hansen for a copy of the paper he read at the holiday meetings in your town of Philadelphia on this question, in which he argued cogently the need, not for flexibility in factory prices, but for inflexibility in farm prices. He may not have the answer, but his argument is worth considering.

There seem to be two sides to all prices and price problems, with few people capable of thinking at the same time in terms of both sides; that is, in terms of two variables. As a member of the Banking and Currency Committee, I have had to think of the other

side of prices, namely, the multifarious effects of money. I am enclosing a chart, prepared at my instance by the Bureau of Agricultural Economics, which suggests that the relation between money supply and grain prices is far closer than that between grain supply and grain prices. My discussion of this chart appeared in the Record for May 4 and is extended in debate on June 8. This farm-price problem is discussed in its more technical aspects in correspondence with the Bureau of Agricultural Economics, which I published in the Appendix of the Record, volume 84, page 2891, and which I hope you and your author can find time to read.

I do not wish to be understood as arguing that this chart proves what should or can be done to money supply to control farm-price parities. It strongly suggests the validity of some such development, however, and definitely refutes the theory upon which domestic production controls are based, namely, that "surpluses" determine farm prices in the final as well as the superficial analysis. Mr. Rucker's statistics also disprove the validity of the New Deal, especially in its labor laws. I have voted against all of the acts listed.

But however useful in refutation of fallacies, no soundly trained statistician ever claims that economic statistics can prove anything. They are necessarily very superficial and deal only with sequences which, as Marshall and many other thinkers have pointed out, are seldom causally significant. They are characterized by hindsight rather than foresight, and cannot be "extrapolated," i. e., made the basis of sound analysis upon which predictions can be made or legislation based. Disraeli's trenchant retort in parliamentary debate always recurs to me where statistics are overindulged in:

"There are three kinds of lies—white lies, damned lies, and statistics."

Let me ask your writer, through you, has it not occurred to him that the econostrums of new dealing—the "four horsemen"—were not in existence when the real trouble started? Is it not obvious that a do-nothing policy was not only illogical but also politically impossible? And wasn't doing the wrong thing simply the result of failure to do the right thing in the prevention of or in the solution of the problem?

Has not Mr. Rucker adopted as fallacious an argument as have the labor leaders—an argument which he especially assumes is proven by his statistics, namely, that parity prices will develop under a complete laissez faire and would automatically restore prosperity regardless of what is done to attain them? He argues only that they have not been attained. But, as I see it, the specious "trickle theory" of prosperity is as bad when the farmer presents it as it is when the labor leader or capitalist does so. The reader of your article is presented with a dilemma—a choice of evils—for all the alternatives suggested seem spurious, including the author's "way out."

He seems to argue that this wage-fund theory must be right merely because some other theories are wrong. His figures prove to me only that methods adopted have made matters worse, not that this "way out" will correct them. It appears to me he uses the world-market argument inconsistently to suit his convenience. He first contends that world markets determine our prices and yet later avers that our controls of supply or marketing determine world-market conditions. Verily this world market can be made to cover a multitude of statistical sins.

I'm afraid the way out is not a mere matter of statistics or of laissez faire. Not merely an undoing of new dealing but a doing of something which Rome failed to do, will have to be discovered if we are to justify democracy by its works and avoid the fate of Rome and the doom that now hangs over European civilization. These very same schemes, indirect as opposed to purely monetary controls, have repeatedly cropped up in human affairs. To charge them to themselves seems a strange mental aberration—a circular reasoning as to causation. So far as I know it has never yet, here or anywhere else, been possible to get rid of the "new" deals of history and avoid the fate which they held for liberty and freedom of enterprise in the face of lip service to democracy and the forms of the franchise. Why?

And why is it so utterly impossible, it seems, to get students and investigators (like the T. N. E. C.) to appraise this whole situation from the standpoint of monetary influence and control? Is it not a fact that our present dilemma in public debt and the avalanche of gold, is part and parcel of this same problem in price dispersion?

With respect to the relation of money to the problems of an industrial society, there is a peculiar schism of opinion due on the one hand to the universality of money as a factor in all prices and as a consequent universal economic influence, and on the other hand to the essential unreality of money as distinct from the other elements in commerce which we speak of as real wealth. It seems a paradox to hold that an economic factor which has reality only in a numerical sense (money), should have so pervasive an influence as to affect every important social and economic problem of civilization. But if it affects anything at all in our economy, money necessarily affects everything. At this point the skeptic may formally admit this inescapable logic, but will set up the reservation that it must affect everything alike—so what?

But that is precisely what monetary changes do not do. They do not affect everything alike. Students of the subject universally recognize this to be true. Of course, a mere uniform numerical difference would seem to be no effect at all. So the naive idea has taken hold among statisticians that when farm prices change all other prices should change, too, so as to remove the disparity. But

imagine, if you can, what a state of affairs that would bring. The whole platoon should change step because, forsooth, the rookie does.

Obviously, money cannot be made neutral to prices, as it should be, by any such naive scheme as enforced or (hypothetically) laissez faire flexibility. As long as labor is permitted to organize for collective bargaining (and who in a democracy will say them nay?) that will be a factor for inflexibility for the simple reason that unless organized completely and vertically as per C. I. O. theory they cannot absorb shifts in monetary value (price level) by the necessary simultaneous action. Labor groups cannot bring about flexible prices and employment by separate action. Any one of them alone would have to compensate for the whole of any monetary (general price level) shift in order to affect prices materially. In a serious deflation such as frequently characterizes our economy based on a thoroughly unsound bank "credit" system, that would mean, in some cases, an actually negative wage.

The implications of the idea of complete organization, however, of necessity entail an attempt at regimentation and a death blow to free enterprise. No one person or organization can be capable of taking the place of free enterprise in competition to make adjustments which will keep costs down. The failure of the existing order arises, not because of competitive profits but for the lack of them. Our existing system of "lending" fiat "credit" at bank "rates" is ineluctably noncompetitive in the final analysis. In the not distant future, if we continue to import gold, we may be forced to the conclusion that fiat money should be the Government's exclusive business. I here refer to 100 percent reserves. At present, I think you will agree with me that instead of this being exclusively the affair of Government we are operating as if it could be a private enterprise in lending.

An understanding of these reasons for virtually continuous price disparities is, however, no reason for a counsel of despair which holds to the idea that depressions are visitations from on high that must be endured with fortitude rather than met with prophylactic measures. When we realize that most other problems cannot be approached with a proper perspective until the *sine qua non* of neutral money has been attained, we will not have such difficulty in approaching the problems of prices and their control. Even in war, in my opinion, no such totalitarian schemes as are planned for us are requisite. It is not true that democratic ends cannot be defended without the paradox of regimentation. If we cannot, to quote Herbert Hoover's recent article in the Saturday Evening Post, "increase, control, and direct the economic activities of a people without compulsion" in war, that is because we have failed to do so, quite as grievously, in peace.

Sincerely yours,

FRED L. CRAWFORD.

## American Youth Congress

### EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

Mr. SPRINGER. Mr. Speaker, much has been said on the subject of the American Youth Congress, which has been in session in Washington during the last few days. The majority of our people believed this organization was properly organized and that their motives were praiseworthy. It is the laudable and commendable task of our people who are unemployed to seek jobs, in order that they may enjoy the fruits of their labor. This plan of this organization is to be commended.

However, when this organization joined with one group, which is notoriously communistic, and after that knowledge became public, it should have taken immediate steps to withdraw from such an unholy alliance. That it did not do. When a very few of the members of this organization sought to introduce a resolution before the convention condemning Soviet Russia because of her unwarranted attack on Finland, these members were forcibly ejected from the convention hall. When a large group of this organization visited the session of the House of Representatives, as the guests of the House, they hissed and otherwise indicated their contempt for the orderly procedure of that great lawmaking body. All of these acts give the real character which this organization bears.

The vast majority of the people in our Nation are unhesitatingly opposed to any organization which in any respect will countenance any policy or group which would either

advocate or stand by supinely and hear discussed the overthrow of our form of government by force or violence. If the American Youth Congress, or any other organization, proceeds upon any such unholy policy as it has indicated by its own conduct, then the time has come for governmental action to stop such groups from further progress in our Nation.

Mr. Speaker, I ask unanimous consent to extend my own remarks and to include therein a very brief but interesting editorial which appeared in the Indianapolis Star, of date February 12, 1940, which I hope each Member of the House will read; the editorial is as follows:

CONDEMNED BY OWN ACTS

A majority of the American Youth Congress once more has given evidence that it is not hostile to communism. That attitude is so outspoken it should make little difference whether the organization is a Communist "front" or actively allied with the subversive agents of alien heresies. A number of apologists may attempt to persuade the public that the Youth Congress is composed of "nice boys." So far as normal citizens of this land are concerned, the congress reflects a malevolent influence in our national life.

The congress previously had declined to accept criticism of Soviet tyranny and had devoted much of its energy to denunciation of the Dies committee, which has been doing such a good job in exposing radicalism throughout the United States. The latest evidence of its attitude was the forcible expulsion from a Washington session of two delegates who protested against the Soviet invasion of Finland. The two members sought to introduce a resolution "condemning the rape of Finland by Soviet Russia." They were unceremoniously ejected from the hall.

A critic of the organization pointed out that at previous sessions it had denounced the invasion of China, Spain, Ethiopia, Czechoslovakia, and Austria. The aggressors in those wanton acts were Fascist nations. When Finland was attacked by the Soviet dictatorship the Youth Congress had no word of protest against the barbarous assault launched by Communists under Comrade Stalin.

## An Appreciation of the Late Dr. Herman Oliphant

### EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

LETTER FROM EUGENE KELLY

Mr. COFFEE of Washington. Mr. Speaker, the late Dr. Herman Oliphant was one of those public officials who kept his light under a bushel and who was content to labor in the vineyard substantially in the category of one who is unwept, unhonored, and unsung. Too late credit has been given to this great man, who truly was a veteran in the New Deal's struggles to bring America out of the chaos of hard times. In the Washington Star recently there appeared a beautifully written appreciation of Herman Oliphant by Mr. Eugene Kelly, a former newspaperman. Because there are many Members of this body who knew Mr. Oliphant well and were very fond of him, and because the readers of the CONGRESSIONAL RECORD throughout the country may not be aware of the great work he performed, by permission of the House I append the article hereto:

[From the Washington Star]

REVIEWS WORK OF HERMAN OLIPHANT

To the EDITOR OF THE STAR:

This month marks the first anniversary of the death of Herman Oliphant, who laid down his life for the New Deal January 11, 1939. The Indiana farmer boy, born 54 years ago, struggled for an education and rose finally to the position of General Counsel of the Treasury Department, in which capacity he served his country and his fellow man with enthusiasm and success.

Oliphant was no ordinary man, and when the history of this era is written, his achievements, now little known to the general public, will receive their due credit. There was very little of the early New Deal fiscal program, drawn up quickly to avert a national crisis, in which he did not play a part. Some of his proposals met with success and today are an integral part of our national laws. Others met with defeat, notably the undistributed-profits tax, which was scuttled soon after his death.

It is no figure of speech to assert that he gave his life for the New Deal. That is virtually a medical fact, which can be attested by physicians who cared for him during his last days. The type of cardiac ailment which brought about his death is clearly traceable to overwork, exhaustion, and worry. He personalized, unfortunately, the entire New Deal program. He was warned repeatedly by friends and physicians to call a halt to his unreasonable labors.

We ourselves can report the many sleepless nights he experienced following long days at the Treasury, of the trials and tribulations besetting his efforts to make this a better country, and of the persecutions launched against him personally in an effort to discredit his proposals. Despite the cries of his enemies, and they were many, he never advocated wrecking our national economy.

On the contrary, Herman Oliphant made superhuman efforts to protect the major props of capitalism. Like thousands of intellectuals, he could not understand people starving in the midst of plenty, men walking the streets looking for work and the undeniable maldistribution of national income. These were economic mysteries which he attempted to solve as General Counsel of the Treasury Department.

An incredibly shy man, reticent, mystic, and ascetic in habits, Oliphant was little understood and therefore grossly maligned, even by the well-meaning. He was reputed to be variously a new dealer, a Communist, a Socialist, a radical, a conservative, a sort of economic ogre awaiting the opportunity to gobble up Wall Street. He was believed to be the New Deal Machiavelli, his crafty hand guiding the destinies of the country to certain collapse.

He was none of these things. He was merely attempting to avert a calamity, and his whole thought was predicated on a program which would fit in with the pattern of American democracy. He was the most unselfish man in public life this former reporter has ever met. He spurned riches. We have seen contracts running into thousands of dollars annually which he could have had with the nod of his head. He preferred to carry on his work at the Treasury where he believed he had a better opportunity for public service.

He was literally frightened by newspapermen, and his name in the paper or references to his work worried him for days. With the exception of Bob Allen, he never got to know reporters.

With his death the New Deal lost one of its best soldiers. Liberals of every tinge may well pause in tribute to Herman Oliphant, who dropped from their ranks 1 year ago. Even in the contemplation of his death there is one consolation: The machinery he set in motion is still going forward. Or is it?

EUGENE KELLY.

## Lincoln Day Address

### EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. LUCAS. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address by the Honorable James A. Farley at the public exercises of the Mid Day Luncheon Club of Springfield, Ill., commemorating the one hundred and thirty-first anniversary of the birth of Abraham Lincoln, held in the auditorium of the high school, Springfield, Ill., on February 11, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor to talk about Lincoln at any time, and it is doubly an honor to speak of him here, in the section from which he came. I am not going to presume on the opportunity. Many men have spent their whole lives studying and writing about Lincoln. I know very well that I could not add to their efforts. So I hope, instead, you will let me talk for a few minutes about a very great man, who for years has been a guiding star in many of the problems with which I have been confronted.

One of the proofs of Lincoln's greatness is that he does have something to say to everyone, high and low, rich and poor, no matter what his occupation. Most of us who have briefly emerged in national affairs will swiftly pass. Great men do not pass, and Lincoln is one of these.

I myself am very glad that his old associate and friend, William Henry Herndon, who was angry at seeing Lincoln made into a legend, decided to try to collect the material which would paint a picture of the man. Herndon, you remember, had known him as a country lawyer, a neighbor, a politician, a district worker, a job seeker, and a friend. It was his simple faith that the more people knew about the real Lincoln, the greater he would be.

For this reason, Herndon spent the latter years of his life in bringing together everything he could find about Lincoln, good or

bad, big or little. As a result we have, not a picture of an angel in a church window, but a knowledge of the man, great enough to give inspiration to every American; a Lincoln so human that every one of us feels he has had him for a friend. Not many men in history could pass that test.

A famous New York newspaperman, Don Seitz, used to spend much of his time outside his job in studying Lincoln. At the close of many years' work of this kind, he made this statement: "I would have Lincoln freed from all the sentimentality that has enmeshed him, from the embraces of the sob sisters of fiction and those who try to tie him to romance and religion, to stand forth coldly and clearly in his highest form as an American politician of the first rank."

I do not know that Lincoln's principal significance is as a politician, but that was certainly one of his great contributions, and it is worth thinking about a little in these times.

There is a striking contrast between the view which was held about Lincoln while he was alive, and the personality which has emerged since his death. It is not easy for us today to believe that Lincoln was pictured in his lifetime as a weak man. It was said that he did not follow a clear line of policy; that he wavered; and that he was dominated by stronger men around him. It has taken a good many years for the history books to make us realize that none of these judgments, which were freely passed by his contemporaries, was even remotely true.

Being a first-class political leader, Lincoln had the wisdom to call in and consult all sorts and kinds of men. Again with fine political instinct, he frequently allowed his visitors to believe that they were really initiating the policy of the country. More than one man of the period published his diary or papers, and showed that he was laboring under the delusion that he, and not Mr. Lincoln, carried off many of Mr. Lincoln's best strokes. Only later, as the whole truth comes out, have we discovered that it was Lincoln who made the policy, though he was humble enough and adroit enough to allow lesser men to believe that they were running the Government.

Somewhat the same thing was true of his alleged indecision. We know today that he was constantly calculating the political support needed to bring the Union together. He was constantly trying to bridge the wide gaps between all sorts of groups. Each one of these groups thought they had the only method of saving the country, yet Mr. Lincoln knew that if the country was to be saved he needed to get them all working together.

This, I think, explains a good deal of the misunderstanding of the time. What seemed like hesitation then, we now know was really a long and carefully thought out campaign to bring group after group nearer to common ground, and on that common ground to build the political structure which enables a democratic government to function. It was politics, if you please. It was cruel to the President, but it saved the country.

And today, 75 years after his death, we honor the man who was great enough to think out that political structure, humble enough to permit other men to take the credit for it, and brave enough to stand, without complaint, the endless amount of criticism and abuse which it aroused.

This is a model worth following; and it is worth remembering when loose tongues are raised against the people on whom falls the burden of carrying the country through difficult times.

Mr. Lincoln is frequently thought of as a war President. Yet the policy which has made him great in American history was his persistent use of political methods. He was convinced that wherever political measures could be used, force might be avoided. He stuck to this both before, and in the middle, and at the end of the Civil War.

Politics, as he practiced it, was a means by which people are brought to agree on a line of action; brought to agree in numbers great enough so that the policy can be carried out. He was no stranger to all of the means that were used at the time. They were, in fact, much the same means as those which are used today. Politics has not changed in the past 80 years except that, I really believe, it is cleaner and less devious today than it was then.

So we find Lincoln endeavoring to make political compromises, rather than to force the issue which led to the Civil War. He differed on the point from many of his colleagues and rivals. Seward, capable New York politician, had taken a position which represented the opinion of New York, but did not give enough common ground on which the entire country could stand.

Lincoln's anti-slavery sympathies were certainly as strong as Seward's. But when he made his famous campaign in 1860, he was careful to emphasize those elements which would hold the country together, rather than those which would split it in two. Let me be bold enough to risk a theory of my own as to the history of that period.

It seems to me at least possible that if Lincoln had taken office immediately upon his election in November 1860, instead of having to wait until March of 1861, Civil War might possibly have been avoided. The reason I think so is this.

Passions were running high in 1860, and the only chance of avoiding the Civil War lay in bringing together, by political methods, the moderates both of the North and of the South.

But during the months between election and inauguration, a President-elect cannot do very much to guide political movements. He is obliged to leave the hold-over President as free as he can; and President Buchanan seemed obviously unable to handle the situation.

Lincoln was doing his best to see that the extremists in the North did not force matters to an impossible point; and he was trying, so far as he could, to establish contact with the more thoughtful

southerners, who realized the dangers which would come from forcible uprising. Actually, the moderates in both the North and the South probably were a majority.

Yet the people who were making the most noise were the extremists. On both sides of the Mason and Dixon line they were building up hatred, at a time when Lincoln's policy was to build up understanding. Until he actually reached the White House there was not a great deal he could do; and during that fatal period emotions were being aroused all along the line. If ever we needed Lincoln the politician, it was then.

No one can prove a historical "might have been"; but having had some contact with politics, I really wonder whether Lincoln's very great gifts in handling politics and politicians might not have been able to bring about a solution by political methods instead of by war.

There is a lesson to be learned from this. Today we can go over the history of that period and we can see that the extremists on both sides were probably wrong. We know that Lincoln was not the uncouth and brutal figure which some southern hotheads made him out. The southern group who felt so bitterly obviously were sincere and thought they knew what they were talking about; and yet they were dead wrong, and history proves it.

Those northern extremists who thought Lincoln was a floundering weakling were equally mistaken. Because he did not press for immediate reform, they believed him a failure. On one occasion the New York Times actually proposed to replace him with a dictator. Today history has shown that they were as wrong as their southern counterparts.

Perhaps we—all of us—will be a little more humble and a little better advised if we take the lesson to ourselves. Bitter feelings are not unknown in politics today. We do not have to go back to the Civil War to find people who feel strongly about national affairs, indulge in personalities, and very sincerely believe evil of men without reason.

Intolerance, as a political weapon, has been used in connection with issues other than that of slavery. If we remember the lesson of the Civil War—a lesson which is better taught by the life of Lincoln than in any other way—all of us may be protected a little against our natural inclination to feel violently and talk violently.

All of us may realize that we do not always know the whole truth, and that sometimes it is wise to suspend judgment. All of us in time may even learn to feel that the men who are trying for a common agreement are usually safer guides than the men who are trying to make divisions or stir up hostility.

As a man, I think the use of hatred, and of intolerance, and of evil stories, is plain wrong. As a man in active politics, I have an added dislike of that kind of tactics. The reason is simple. These weapons make it impossible for men ultimately to agree; while it is my job in politics to try to find ways by which they can agree.

Lincoln's doctrine was that democracy would be impossible if nobody ever agreed, and particularly if a minority felt that it could break ranks and go its own way when political decisions had been reached. This is as true now as it was in his time.

Consequently, I know, as one active in politics, that if issues are not discussed on their merits but on personality, if any political group tries to stir up hatred, and, of course, thereby provokes hatred on the other side, or if resort is had to the tactics of abuse, it becomes extremely difficult for these groups ever to agree again.

Men tend to repay hatred with hatred, or insult with insult; and if that process is allowed to go on, it becomes impossible for them finally to cooperate in carrying out any course of action. And yet, in a democracy like our own, our entire national life is a vast cooperative scheme. To the technical politician, extremism is not only a crime, it is a blunder.

I think Lincoln taught us this, and though from time to time some may forget, the country as a whole has learned its lesson. It cost us the life of our ablest and noblest statesman. But I think that if he were to come back today he would say that the sacrifice was not in vain.

Elsewhere we see a world tearing itself to pieces as group fights group, doctrine clashes with doctrine, and nations war upon nations. Nevertheless, the United States has steadily preserved the ideal of good will, of moderation, of justice. Even in our wildest political conflicts today we do usually remember that there is something to be said for the other fellow's point of view. We do have the tradition of justice to opponents and of generosity to men of opposite political views.

We are able to attack social problems which are often bitter in the extreme, and still find the way of moderate common sense toward an ultimate goal of progress.

Without trying to usurp the place of the historian, I think I may say that we owe this in great measure to Abraham Lincoln. Indeed, I think it is not impossible that Lincoln himself hoped that this might be one result of his life's work. His second inaugural address, which contains, as you remember, the famous words, "With malice toward none; with charity for all," was itself a plea for greater understanding.

Thurlow Weed, a politician of the time, wrote him a note of praise. Mr. Lincoln's answer is not as well known as is the second inaugural address; but what he said was this:

"Thank you for yours on the notification speech and on the recent inaugural address. I expect the latter to wear as well as—perhaps better—than anything I have produced; but I believe it is not immediately popular. Men are not flattered by being shown that there has been a difference of purpose between the Almighty and them. To deny it, however, in this case is to deny that there

is a God governing the world. It is a truth which I thought needed to be told, and, as whatever of humiliation there is in it falls most directly on myself I thought others might afford me to tell it."

This was Lincoln anticipating the coming peace, and trying to bring back the state of mind and the political attitude which would make real peace possible.

He was engaged in his last and greatest attempt to bring this about, and to reunite the country, almost to the hour of his death.

Time after time, since then, this country has had its problems and its troubles. Time after time, wild tongues have again been loosed. Yet the lesson of a great spirit and a great man has remained with us to make of this country a union so firm that even the forces of today which are tearing the rest of the world apart find little echo here.

The Union was saved, with God's help, for all time. But the real authors of its salvation were the great spirits, North and South, who followed Lincoln's plan, who cast hatreds aside, and in Lincoln's sympathetic spirit attempted to make the Government a means by which this republic binds all Americans in common brotherhood.

### A New Weapon for Peace Insurance

#### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ARTICLE BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the RECORD an article by my pen entitled "A New Weapon for Peace Insurance," recently published in Liberty magazine, since our citizens now are particularly interested in the subject of national defense.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEW WEAPON FOR PEACE INSURANCE—HOW THE UNITED STATES OF AMERICA CAN HAVE A TRAINED ARMY RESERVE OF 1,000,000 VOLUNTEERS

(By Senator ROBERT R. REYNOLDS)

"\* \* \* We are in an armed world and without ascribing to or suspecting any nation of aggressive designs upon us, we live in a world which is at the mercy of incident."—Newton D. Baker, former United States Secretary of War.

America wants safety and security above everything else.

In a world racked with chaos we look about us for the best means of preserving safety from foreign aggression, safety from treason within as well as from foes without.

We demand security within our own borders in order that we may hold our place among the nations of the world.

Europe bristles with bayonets. Rapid advance in science makes slaughter more efficient. International tribunals are rendered ineffective as peace treaties and international agreements are scrapped with impunity.

We have found that cooperation in pacific efforts to prevent wars is not enough. We have seen the expensive lessons of the lack of preparedness. Our answer to the multifold threats to our security will be made when the concerted will of the American people demands that we have an adequate national defense, with the necessary personnel and matériel to cope with sudden emergency and demand the uninterrupted respect of the rest of the world.

We must, of course, keep abreast of the times in mechanization and motorization. Man, not machines, makes war. The United States Senate munitions investigation revealed racketeering in armaments. We must curb the racketeer in armaments. A decent defense without capitulating to war makers or arms racketeers can be achieved through intensive study and intelligent action.

I should like to make a suggestion for forging a new and invaluable weapon of national defense. This weapon would be the best peace insurance in the world, a weapon which represents the sum total of effectiveness in manpower—a great enlisted reserve augmenting the Regular Army and other constituent Reserve units.

Adequate protection depends upon the ability of trained manpower to utilize effectively the engines of defense. By a properly organized and administered building up of our Reserve units, we can avoid what might otherwise lead to extravagant expenditures for armament and onerous burdens on the taxpayers.

I should like to suggest that an enlisted reserve of 1,000,000 men can be built up out of the Civilian Conservation Corps enrollees, their enlistment to be voluntary.

Throughout our history we have depended on voluntary efforts to man our National Army and to furnish personnel for the reserve units. I am firmly against involuntary militarization of units like the C. C. C. But here is an amazing source of reserve manpower which can be utilized with little effort.

Designed as a relief project, it has been assiduously kept free from any characteristic smacking of militarization. Enrollment, organizing, feeding, and clothing the men are the chief tasks of the Army. Some measure of discipline, by no means burdensome, is necessarily administered.

An educational program under competent advisers gives an opportunity for study and self-improvement which tens of thousands of these lads would never have enjoyed; and after 6 months of work and C. C. C. routine, they are literally as "hard as nails." In military parlance, they are "processed" and would make admirable material for an enlisted reserve.

After the regular enrollment period of 6 months, I would suggest that those who volunteer should undergo an extra period of training for the length of time the War Department deems most practicable. The Army could organize the training time in such a way that various periods are held throughout the year at stipulated camps, and necessary equipment is utilized to the greatest advantage. Such a rotating system of training for the enlisted reserve would also give an additional opportunity for practical periods for the Officers' Reserve Corps which is not now afforded.

We are occupied in a great program of domestic recovery. We are not going to allow munitions racketeers or internationalists to get us involved directly or indirectly with the troubles of Europe or Asia. And the only way to guarantee our safety is to have the personnel in the Regular Army and an active reserve standing ready to back up our words of neutrality. This adequate personnel through reserve units is our new weapon which we should forge in behalf of peace.

### The American Heritage of Religious Liberty

#### EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask to have printed in the Appendix of the RECORD a speech delivered by me on August 20, 1939, on the occasion of the unveiling of a monument presented by the Jewish people of Newport, R. I., to the city of Newport, and dedicated to "The American Heritage of Religious Liberty."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are standing on sacred soil. Two hundred and eighty-one years ago a small band of Jewish families, after a long and hazardous sail from Brazil and the West Indies, entered this seaport and became part of the community which the followers of Roger Williams had founded.

They were poor, weary, discouraged, and disheartened. They brought with them, however, the spiritual values of the religion of their fathers. It was the one influence that sustained them, that gave them hope and courage. Realizing the priceless value of the ancient religion of their forebears, they immediately turned their thoughts to God. And recognizing the great fundamental duty that man owes to the Almighty, namely, worship, gratitude, praise, and prayer, they built on this spot the first synagogue erected in America. From that day to this, persecuted and exiled Jews have continued to find an asylum in every seaport that encircles the territory of the United States of America. Today, in gratitude, those who have succeeded them and their fellow citizens of varying religious creeds are assembled to dedicate a monument to these courageous founders, to the spirit of religious and civil liberty which these early Jewish settlers established here and which has been preserved and cherished to this day.

The message which you have invited me to bring you today cannot be more appropriately introduced than by directing your attention to the quotation from the charter of King Charles in 1663, and inscribed on this monument. There is another inscription, however, that is on one of the public buildings in the city of Washington that I desire to use for my text today. It contains a sentiment that applies both to nations and to men: "God made us neighbors; let justice make us friends."

If every American Protestant, American Catholic, and American Jew could live this sentiment they would not only give public manifestation of the sincerity of their religious belief but we would indeed all really live in the sunlight of American liberty.

The progress of mankind through the centuries has given to us many priceless heritages. Outstanding among them all is what we call religious liberty. Religious liberty in America means that the State guarantees to every individual freedom of conscience; that intermeddling by the civil authority with religious institutions, doctrines, disciplines, or exercises is absolutely forbidden.

It is conceded by all classes of citizens who understand American political ideals that the civil power has wholly distinct functions and must not hamper nor restrain nor interfere with religion. One covers the temporal sphere; the other the spiritual. The state is concerned about the citizen's civic rights; religions make their appeal to God and to the moral instincts of mankind. Whether a man enters a house of worship of one of the religious bodies of the older tradition or the house of worship of a newer faith that is founded but yesterday or whether in his own private house he engages in prayer, all are agreed that the state—the civil authority—may not cross that threshold.

Each man naturally feels strongly about the rightfulness of his own faith, and in proportion as he feels, so he must think that other men with other faiths are wrong. This was one of the defects in the Puritan's philosophy, for, though deeply religious, yet they were unwilling to recognize the religious rights of others.

To a degree we are witnessing today the spirit of 300 years ago, which was a persecuting spirit. It was then abroad in almost the whole world. Today it is abroad in many parts of the world, with even greater intensity than 300 years ago. Today it is called by a different name, but racial discrimination is just as foreign to the spirit of religious liberty as is religious persecution.

Religious liberty is the outgrowth of the long struggle of mankind with religious persecutions. It is the outstanding victory for human dignity and human liberty won by the common man after the centuries he and his children had groaned under a contrary concept of states' right and duty. And no group of human beings has borne the yoke longer and with more cruelty than the Jew.

It is the same spirit of tolerance that achieved religious freedom that alone can preserve religious freedom in the world. Tolerance is one of the last and finest fruits of man's long struggle upward from barbarism to grasp the torch of liberty. Tolerance is a word of healing, the great enlarger of the sympathies and the understanding. When that departs everything departs, and religious liberty and most else besides that we should cherish will be things of the past.

May we not in this day of ease, luxury, and self-complacency take it altogether too much for granted that we shall continue to be fortunate, that ours is a land of destiny, that religious and civil liberty are secure, that our natural resources never will be exhausted, and our genius never dimmed? Yet there are many developments of our time that may well give us concern and cause us to give heed to the need of eternal vigilance.

Who would have dreamed a dozen years ago that in this so-called age of enlightenment we should be witnessing in Germany today a persecution of religion as cruel and terrorizing as in the Dark Ages of bygone centuries?

More and more challenging are the threats of those who will have no king but Caesar. And the thought of what they have accomplished may well give us pause. In this very hour there are millions of people whose only choice is the will of a despot or imprisonment and death. Wherever in the world religion lies crushed today and races are being persecuted, tyranny is enthroned.

Happily we are not threatened with the loss of religious freedom in America, but candor compels us to admit that we are suffering from a substantial loss of religion.

The record of decline in religious beliefs in young men and women in our schools and colleges is but one of many symptoms of religious decline in our Nation at large. We see it in the decline in church attendance and in the decline of religious instructions and training of the children in the home.

The late President Coolidge stated a great truism when he said "the government of a country never gets ahead of the religion of the country." "There is no way by which we can substitute the authority of the law for the virtue of man. The real reforms which society in these days is seeking will come as a result of our religious convictions or they will not come at all."

Some years ago in an address to the people of the Philippine Islands, the late Governor General Wood remarked: "One fact is made plain by the study of history. The first sign of decadence in a people is the neglect of religion." Justice and charity, which are so essential to the peace and orderly existence of a people, cannot survive without it.

The service to society, to stable government, and to democratic institutions that religion can give—aye, must give—by stimulating the spiritual nature of man and nourishing spiritual ideals natural to the human heart is a task ample and absorbing enough for all without nourishing the spirit of intolerance. Let Americans of every faith stop blasting at the rock of each other's religion and approach, rather, the struggle against those forces whose philosophy of life is purely secular or a compound of materialism and greed, of tangible advantage or cynical mistrust of human nature, with a united front. It is in the light of the noble moral forces of justice and charity that religion fosters that our inheritance will be secured, and public order, international law, world peace, civilization rest secure.

Between those assembled here there are differences of doctrine, but here is one point on which all may well agree: That the religious-minded people of this country should be as one in opposing the efforts of those who would make this Nation a godless nation, promote intolerance, or array class or religious or racial groups against each other. Let not our petty jealousies, distractions, backbiting, angry words, enmities, long-continued feuds, unceasing and jarring discords—some of it of Old World origin—longer permit men to look askance at the believer in the Almighty and to look upon the teachings of Christ as unpractical and out of date.

I conclude with the words, appropriate for both Jews and Christians to emulate, of the Apostle John, whom the Holy Scripture states Jesus loved exceedingly, and who was one of the four evangelists. He lived to a very old age, and, indeed, until so feeble that he could scarcely be carried to worship with his fellow disciples. Not being able to make a long discourse, he said at each meeting of the brethren, "Love one another." At last the disciples and brethren grew weary of hearing the same words and said, "Master, why do you always say the same thing?" The answer John gave was worthy of him, "Because it is the commandment of the Lord; do this alone and it is enough." In these words of John we have the solution of all those problems of life which breathe hatred and strife among men and religions and divide nation against nation.

## Canadian Bar Association

### EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ADDRESS BY HON. PRENTISS M. BROWN, OF MICHIGAN

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech which I delivered before the Canadian Bar Association on January 27, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am indeed happy to come again to Ontario. I pride myself on knowing your beautiful country. I have traveled from the Lake of the Woods on your west to the Lake of Two Mountains on the east. I have seen the blue waters of the St. Lawrence on an early June morning where it borders northern New York and have crossed the St. Marys at Sault Ste. Marie before the end of the same day. I journeyed up the Ottawa, one of the most beautiful valleys in the world, a highway of commerce for 300 years, connecting ancient Mackinac, from whence I come, with Montreal and Quebec in the days of the fur trade. I have seen the rock cairn near Mattawa that marks the course Champlain took when he portaged from the Ottawa to Lake Nipissing and became the first white man to view Lake Huron, in 1615, a country now famous because Papa Dionne sired five babes at one time. I have not been able to do that well, but as the descendant of a French grand pere born on the banks of the lower St. Lawrence at Baie St. Paul, I have been true to the French Canadian tradition and have sired seven sons and daughters, but only one at a time.

I have visited the fair country at the south end of Georgian Bay where Father Brebeuf (he who stood undaunted while savages burned him at the stake and then in their barbarous custom ate his heart to gain his courage), where Father Brebeuf and his Jesuit colleagues founded the ancient missions of St. Joseph, St. Marie, and St. Ignace in the 1630's, predecessor missions to those of the same names a generation later founded in my Michigan, one of which is the city of my birth. All my life I have lived on or near the border line between the United States and Canada. It is the longest boundary line between two nations in the world. It extends approximately 3,000 miles, from Passamaquaddy Bay on the east to Puget Sound on the west. It again extends from the southern limits of Alaska approximately 1,500 miles to the Arctic Ocean. It is a little over a century and a quarter since the tramp of the feet of enemy soldiers was heard on the border between Canada and the United States.

Of course, as I visited your beautiful capital of Ottawa and read the inscriptions there, at Sault Ste. Marie, and elsewhere, which tell what you did to us in 1812, a flush of the ancient schoolboy feeling engendered by the anti-British textbooks of my youth comes to me, but a little contemplation cools me off. I recall a few of our heroics commemorating 1812 and conclude that they about match yours. So I salute your General Brock as he stands so proudly, high above the surrounding trees in Victoria Park, and gazes over the turbulent Niagara, apparently expecting to see an enemy Yankee or two.

When we recall that, with one or two possible exceptions, the boundaries of every country in Europe have changed in the last century and a quarter, some of them many times, an idea of the respect that Canada and the United States have for each other can be gleaned. The simple fact that we have dwelt in peace together is our greatest mutual achievement. We have, of course, a common language and a common ancestry. We have a common literature and our ideals are much the same. To be fair, our accomplishment in peaceful living was easier than that of the suffering nations of continental Europe. However, there was much that tended to make us enemies in the early days of our Republic. Upper Canada was settled in part by those who differed with the colonists who fought Britain in 1776, and that bitterness had much to do with the War

of 1812. It is probable that more American lives have been lost in battle on Canadian soil than on any other foreign soil. But since the Treaty of Ghent our mutual relations have been unmarked by violence; they have been friendly and cordial. No ships of war patrol the blue waters that divide us for considerably over a thousand miles and the only cannon on our borders are the sterile relics of a long-dead past. May the God that rules our common fate ever keep it so.

I am a lawyer speaking to lawyers. I come from a profession which in the United States has played a tremendous part in the Government of our country. Sixty percent of the Members of the Congress of the United States were educated as lawyers. They were practicing lawyers before they became Members of the Congress. To an extent the lawyer in the States has taken the place of the landed gentry in England in government. But 15 percent of the House of Commons of England as constituted a short time ago, and I think is now constituted, are members of the legal profession. While the percentage of lawyers in the Canadian Parliament is not as great as in the United States, yet almost a third of the members of the senate are lawyers and considerably over a quarter of the members of the House of Commons belong to the legal profession. This places a great responsibility upon the members of our profession here. The masters of Europe have often been military men. They have in the large been drawn from classes who have not been trained in compromise, adjustment, and determination of controversies without the use of force, by peaceable means. The western world from Tierra del Fuego to Baffin Bay has seen far less bloodshed, strife, and war than have the sorely tried nations of Europe.

The record across the seas has indeed been a bloody one. I will not even attempt to mention the wars that have disturbed the Eastern Hemisphere in the past century. I make my point by saying that a compilation given to the United States Senate last October showed that there have been 107 wars engaged in by two of the principal European nations in the past 150 years. The sad part of the record is that the first half of the twentieth century indicates that it will be far worse than the nineteenth. We citizens of the Western Hemisphere cannot contemplate this history of slaughter without having the most dismal view of the future of civilization.

It does seem that 2,000 years of the Christian era should have taught mankind the truth of the Golden Rule, but it has not. At least, mankind has not applied it.

Perhaps what I am about to say will not be well received in a country now at war with a powerful and unscrupulous foe, whom the neutral nations of the world quite generally condemn as the aggressor in the present conflict. I know it is most difficult for a people situated as are you to contemplate anything but an imposed peace. In my own country on the floor of its highest legislative body, I have condemned your foe. I have heard many Senators do the same. I have heard a few condemn England but I have never heard one praise Hitler. I believe the overwhelming majority of the American people feel as do I. Why is this so? Much of this sentiment has to do with Canada. Much of it is because we love justice, because we entertain those feelings that are common to right-thinking men and women the world over. The sentiments I express are my own as an individual though I firmly believe they are shared by the great majority of my fellow countrymen. We Americans see no probability of a result that could bring a Hitler dominated government as close to us as are you. Because we have lived for 125 years in peace with you, regardless of any promises that have been or might be made, any treaties that might be entered, our selfish interests dictate that we should continue to have you as our neighbor to the north. The simple fact that we have dwelt in peace and security together swings our sentiment to you. I say these things preliminary to the point I hope to make tonight, to assure you of my own complete friendship for you which I know is the sentiment of the vast majority of the American people. I would also point out that there are other potent reasons why the predominant sentiment of our people is against your enemy in this struggle.

We do not like the present German Government because the ruler of the German people has seized and throttled democratic government in Germany and reorganized a powerful people with the purpose of dominating Europe. Our sentiment is against him because he has cruelly persecuted a Jewish minority. Because he has endeavored to break down religion, to drive out the leaders of the Christian church, Catholic and Protestant alike. Because he has mercilessly bombed Polish cities and slaughtered Polish citizens without cause. Because he has devoured the democratic countries to the south—Austria and Czechoslovakia—against their will. We condemn him because he has plunged an unwilling world into war, unleashed the most contagious passion known to man, and menaced my sons and yours. In short, America is neutral, but is pro-ally in sentiment. This is known to every government in the world but let me again turn to my theme. We are lawyers. We have eliminated trial by ordeal and trial by battle. We have, through the application of our common heritage of the principles of the English common law, substituted justice for brute strength.

I confidently believe that when the next peace conference is held the British Empire and the French Republic will be in a position to dictate the peace. Let us recall a little recent history. I think President Wilson's phrase used before our entrance into the World War—"peace without victory"—was an unfortunate one. I do not want the next peace in the interest of all mankind to be a peace without victory. Justice, right, and morality are on your side. Not only do I think you will be victors—I think you should

be victors. But President Wilson used another phrase which I think among the grandest that have ever been uttered by man. He asked for "peace with justice."

I do not look forward to that peace conference with confidence that such a result can be achieved. A government that has plunged a world into bloodshed, that destroys billions in wealth cannot look after its defeat for justice. Lay aside the human losses for the moment. I saw, a few days ago, a picture in our splendid illustrated weekly magazine *Life* of a great ship with its prow pointed toward the sky rising out of the sea, its stern deep under the surface, just before it slipped back to an untimely death, utterly destroyed, utterly lost forever. I thought of the marine architect who had spent days and months drafting the blueprints, by which the construction was guided. I thought of the toiling hundreds in the shipyard who laid her steel keel, fashioned the giant ribs, and attached the plates. I thought of the inventive genius and skill that brought into being the giant engines that drive her. Of the workman who with pride in his skill gave that extra effort which put into the craft all the beauty that men build into ships that they love. I thought of the sacrifices that men make to supply the capital with which these great ships are built. The picture of that dying ship made an unusual impression on me. The futility of saving, the uselessness of effort were all exemplified in this photograph of this great gleaming ship of steel, mortally wounded by an undersea assassin, slipping beneath the waters. Paltry indeed, however, are losses of that kind compared with the human losses. I shall not take the time to describe them because in the near future they will be brought home vividly to the fathers and mothers, the brothers and sisters of your khaki-clad boys who are now crossing the seas. War indeed is destroying civilization. Your enemies destroyed that ship. Your enemies sadden those homes. Your enemies started the war that might destroy civilization.

So it is with little hope that I can look to a peace conference that will contemplate, after your victory, the cold-blooded destruction which has been brought about because the rulers of Germany demanded this war. I say I cannot look forward with confidence for a fair treatment if such a foe, nor for a just peace. But, Mr. Toastmaster, if such could be the result of that peace conference, it would be the greatest victory civilization has won. If some great character can come out of the vortex of struggle and can lay aside passion in victory, can resist the urge for revenge, can apply the words of Holy Writ: "Vengeance is mine saith the Lord," and can arouse among victorious people a compelling demand for a just peace, he will earn the plaudits of a war-weary world.

I do not exalt my profession above others—the architect, the builder, the engineer, the scientist, or the physician who devotes himself to the alleviation of human suffering and to the saving of human lives. I do not exalt the lawyer above his fellowmen, but I do know that the leadership in this task—this almost impossible task of which I speak, the task of assuaging human passions, of holding back the spirit of vengeance, can best come from the men who have long been trained in the repression of the spirit of vengeance and who have been trained in the task of establishing justice among men. The general public has asked much of the legal trained mind and it has been most generous to legal trained men. We could perform no greater service—and it will have to be a service performed not by one, not by some, but by all of the men in our profession—than to bring about a sentiment for a just peace because that is the only peace that can endure. Unless that kind of a peace is established, your children and my children will come into a world that will run red with their blood. To prevent it is the great task of all men, but the leadership is in those who have established the rule of reason in our domestic relationships. We must banish the rule of vengeance among nations.

### Importation of Russian Gold

### EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

STATEMENT BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement by the Senator from Delaware [Mr. Townsend], entitled "Ten Reasons Why I Want to Keep Out Russian Gold."

There being no objection, the statement was ordered to be printed in the Record, as follows:

#### TEN REASONS WHY I WANT TO KEEP OUT RUSSIAN GOLD

(1) Russia is the world's second largest gold-producing country. According to the last annual report of the Director of the Mint,

Russia, in 1933, produced 5,235,909 ounces of gold, which at our buying price of \$35 an ounce is worth \$183,256,815.

(2) The United States gold-buying policy is the chief support of the world's gold market. Without this support, Secretary of the Treasury Morgenthau recently testified before the House Appropriations Committee, the price would decline.

(3) It follows that our gold policy is of major interest and advantage to Russia.

(4) Helping Russia in this way is equivalent to bringing economic pressure on Finland.

(5) Even if there were no Russian aggression against Finland, Russia's unfriendly acts in counterfeiting American currency, in carrying on her propaganda here, in the treatment of our Ambassador when the steamship *City of Flint* was at Murmansk, etc., would warrant our withdrawing from Russia, insofar as possible, the large financial support it constantly obtains as a result of our gold-buying policy.

(6) In any case, we have absolutely no need for more gold. Every ounce of foreign gold purchased swells the excess reserves of the Federal Reserve System, which already stand at the tremendous total of some \$5,500,000,000. The Board of Governors and the Chairman of the Federal Reserve System have repeatedly cautioned Congress about the dangers inherent in that situation.

(7) The Soviet Union is prepared to sell us every last ounce of gold it produces, but it will never accept from us a single ounce of gold. It would be impossible for this country to use any gold at all in buying goods from Russia, because Russia regards gold simply as a commodity which gives it access to our real wealth.

(8) Our gold dealings with the Union of Soviet Socialist Republics are on the lines of a one-way street. The gold we buy from Russia at \$35 an ounce, directly or by way of third countries, cannot be resold by us at that price elsewhere. If we tried to sell even a small fraction of our now colossal hoard of gold (\$18,016,000,000 in all), we could never realize from it the value we have given it.

(9) How our gold policy benefits Russia and Germany was evidenced last week by the reports of the arrival in San Francisco of the Russian steamer *Kim*, carrying only a cargo of gold bars for sale to us, and the almost simultaneous departure from San Pedro for Vladivostok of another Russian vessel carrying strategic minerals.

(10) In 1939 Russia sold us \$25,000,000 of merchandise and purchased from us \$56,600,000 worth. Thus Russia bought here more than twice as much goods as it sold here. The difference of \$31,600,000 was made possible by our policy of buying any and all gold offered here. The Secretary of the Treasury last month told the press that gold marked with a hammer and sickle is just as welcome here as any other gold. He also told the press that he has the power to exclude Russian gold, but does not plan to do so.

### Tolerance

#### EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ADDRESS BY HON. W. WARREN BARBOUR, OF NEW JERSEY

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the junior Senator from New Jersey [Mr. BARBOUR] at the dinner of the American Jewish Congress, held at the Mayflower Hotel in Washington, on Sunday night, February 11, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There can be no peace until human beings everywhere recognize the rights of others less fortunate than they or who possess different religions or philosophies to live and work under comparable conditions of comfort and freedom. Tolerance lies at the bottom of the whole problem. Enduring peace will be found only in the doctrine of "live and let live."

While tolerance is in flight, Europe by her recurrent wars piles stone on stone in building the most shocking monument to intolerance the world has ever seen.

Without Hitler, the product and personification of intolerance, the present European war would never have started.

If Stalin and his associates of the Russian Soviet had shown anything less than complete intolerance of religion and the rights of small nations, the Soviet armies would not now be on the march, threatening the absorption of one of the bravest and most tolerant peoples the modern world has known.

Now that war has again engulfed the world, I see no hope of a return of peace without a return of tolerance based on the American pattern. We have in our own population representatives of all of the nations and races now at war, living peacefully side by side. As its latest contribution to peace and tolerance, the West-

ern World has again shown the way for the Old World in the signing of the Dominican agreement for settlement of European refugees there. We are told that ultimately large numbers of persecuted Jewish families will be settled on Dominican soil. They will in time contribute, as elsewhere, to the cultural and material progress of mankind.

The American people and the Western World in general have found the formula for peace. It is built on the sure foundation of tolerance. There can be no peace without it.

### American Jewish Congress

#### EXTENSION OF REMARKS

OF

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. BARBOUR. Mr. President, earlier in the day the Senator from New Hampshire [Mr. TOBEY] inserted in the Appendix of the RECORD the speech I delivered at the dinner meeting of the American Jewish Congress held at the Willard Hotel in this city last week. In the light of the fact that my colleague the Senator from New York [Mr. MEAD] also delivered an address to this Congress at their lunch meeting last Monday, I ask unanimous consent that his speech on that occasion be inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a real pleasure to me that I am able to meet with you today and to join in this symposium on good-neighbor relations in the United States.

This is a fitting occasion, I believe, for all of us to take stock of the liberties we unconsciously enjoy as American citizens.

We believe in democracy, but sometimes we blind ourselves to its full significance. We believe in defending the right of man to follow the dictates of his conscience, but sometimes we are led astray by false and misleading dogmas. We subscribe to a philosophy which permits and encourages freedom in personal and public life, but sometimes we find ourselves applauding the glittering but deceptive doctrines of the demagog who seeks personal power rather than the public good.

If we will keep firmly in mind that our liberties under this Government embody freedom of speech, assembly, press, radio, and religious expression; freedom in government, in home life, and in the everyday pursuits of happiness, we will never be misguided into alien or antidemocratic ideologies.

American citizenship stands for the enthronement of law and equity, for the preservation of representative government, for the right to individual freedom, for the redemption of the oppressed, for the education of the poor and the unfortunate, for the establishment of free institutions, and for the protection of life and property. That is our heritage as citizens of this Republic. It is our sacred responsibility to preserve that heritage for future generations.

Let us not make the fatal error, however, through a sense of smug satisfaction, of closing our eyes to the fate of less fortunate peoples elsewhere in the world. Due to the modern means of swift communication, we live today in a shrunken world, and we cannot isolate ourselves from our neighbors across the seas. We can insulate ourselves against pagan and oppressive practices of government which prevail in other lands, but we cannot blind ourselves to the existence of those practices.

Today in Europe, as war rages, the ugly clouds of prejudice and bigotry have once more gathered, and into this unhappy vortex helpless minorities have again been cast. Chief among these defenseless minorities are people of the Jewish faith. Stripped of their earthly belongings and denied their personal liberties, they are faced with persecution from within and with closed doors from without.

As American citizens we cannot look upon this tragedy with callous indifference. To do so would be repugnant to our ideals of equality and liberty. To ignore the seriousness and implications of this problem would be to deny the lofty sense of justice inherent in our democracy.

Bigotry, prejudice, and persecution are repulsive to us. Since the beginning of this Nation this has been a haven of refuge for the oppressed of other lands. Here we live in peace and in fraternalism with our neighbors. All races, creeds, and colors can find advantage and opportunity, equality and independence, dignity and happiness within our shores. The preservation of those rights and privileges has been made possible under our free system of government. Political, social, and religious difficulties abroad should

make us even more deeply appreciate and cherish the liberties that are ours to enjoy.

Speaking of good-neighbor relations in this country, I call to mind the words of Rev. Father Maurice Sheehy, of the Catholic University of America, some months ago. Father Sheehy dwelt upon the statement of the recently deceased pontiff, Pope Pius XI, who, speaking for the membership of the Catholic Church, declared "We are Semites spiritually." Father Sheehy voiced the sentiment of the tolerant Christian when he said: "As a Catholic, I salute the Jew as my spiritual ancestor, who preserved belief in one God in hard cruel times—who worshiped and who still worships the true God. We Catholics must then be both spiritually Semites and spiritually Christian, and no heart is Christian that harbors any hatred or ill will toward anyone. That explains why from time immemorial the Popes have so frequently and fiercely condemned anti-Semitism. In America we all, Catholic, Protestant, and Jewish, have learned to live side by side in peace and understanding." "But," he warned in conclusion, "there are forces operating in our day to arouse racial and religious animosities. We must strive diligently to get at the causes of this intolerance and to eradicate them, since they have no place in the American way of life."

Father Sheehy was right. Whether it be the Episcopalian in New England, the Catholic in Louisiana, the Latter Day Saint in Utah, or the Jew in Manhattan, their common hope and objective must be the preservation of brotherhood among men, of personal liberty, and of the guaranties of religious freedom.

While we dine here today under a circumstance of happy accord, there is a heaviness in our hearts because today in Europe another tragic chapter in Jewish history is being written. Again the Jew takes up his weary pack and he searches once more for the peace and contentment he loves. His heart is the sorest and his way is the hardest in a world gone mad with lust for war.

The Jews in America are honorable, self-respecting citizens. They have contributed vastly to America's free institutions and to the privileges we now all enjoy. I think that today we should dedicate ourselves to the principle of increased brotherhood and neighborliness, and that we should extend to our European brothers the sympathetic hope that the cruelties of persecution and intolerance may be of brief duration.

When the codes of religious, social, and political morality are violated by any system of government that constantly shows its disrespect for human liberties, we must vigorously oppose that system, and we must deny its infiltration into American soil. We feel that such violation to human rights has taken place under the totalitarian regimes which have prostituted decent government, raped weaker neighbors, and staggered the civilized world with its campaigns against all religions and its premeditated programs in arbitrary abuse of human rights.

We cannot too strongly condemn the antidemocratic, anti-religious concepts which have motivated the rise to power of dictatorships abroad. Our best insulation against the breeding of such alien philosophies here is the spread and practice of just such a program as you are advocating here today. I heartily subscribe to the efforts being made by the American Jewish Congress to advance the cause of good-neighbor relations between all races and creeds in this country. It is a cause that should be advocated and advanced in all nations of the world. You have my sincerest good wishes and my pledge of cooperation in your endeavors.

### Dedication of the Post Office at Lincoln's New Salem, Ill.

#### EXTENSION OF REMARKS

OF

#### HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ADDRESS BY HON. SCOTT W. LUCAS, OF ILLINOIS

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the dedication of the post office at Lincoln's New Salem, Ill., on February 12 last.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

We meet here today in a ceremony that has no parallel in American history. The dedication of a new post office on the very spot made sacred by the activities of Abraham Lincoln is a drama that will thrill liberty-loving citizens throughout the world. On this occasion we live in the pioneer days of a century ago. All around us are the resurrected homes of an extinct village of a former day.

Credit for this restoration is given to our great and illustrious Governor, the Honorable Henry Horner, as well as the National Park Service of Washington, D. C.

Lincoln knew every citizen of the village. He was a welcome guest in every home. His voice as a friend and counselor kindled the fire of liberty within the walls of these primitive homes which, pray God, shall burn forever in this Republic. It was a small voice, unknowingly crying out in the wilderness for larger worlds to conquer. It was a voice that Shakespeare and the Bible understood, as he lingered by the old cabin fireplace—always the dreamer's paradise.

It was a voice pleading for the oppressed in the Hill-McNamara store. It was a voice filled with emotion and pathos as he won and lost in his first romantic touch with life. It was a voice of patriotism as he commanded his company to fight the Indians in the Black Hawk War. Certainly, it was here that Destiny laid her immovable hand upon the sad and dramatic life of the homely Lincoln.

And now the shadows move. The voice of Lincoln leaves these ancient hills and fertile valleys at New Salem forever, but his spirit remains. The eventful and tragic days to follow make Lincoln's New Salem, once destroyed and forgotten, a greater shrine of liberty than Faneuil Hall in Boston.

We next hear his voice in the courtroom, and after that in the halls of the legislature, and then again in every section of Illinois as he debated with Stephen A. Douglas that no nation can remain half slave and half free.

Lincoln became the idol of Illinois primarily because of his sound position upon the great question of human rights, and also because he was a genius at public persuasion.

Next we find his voice of sincerity and conviction not only conquering this State but also penetrating the Nation.

Once again the shadows move, and next we find Lincoln reaching the coveted goal of the mighty as he became President of these United States. In the city of Washington he lived out a terrible destiny during the War between the States. It was then that the world heard the voice of tolerance, the voice of unity, and the voice of equality. No one will ever forget that inspired utterance, "With malice towards none and charity for all, let us bind up the Nation's wounds."

His was a successful but tragic life. His assassination was a shock to the civilized world. He died the idol of all mankind; and today, wherever liberty lives with an outstretched hand, the name of Lincoln is immortal.

### Address by Governor Sprague at Seattle, Wash.

#### EXTENSION OF REMARKS

OF

#### HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ADDRESS BY HON. CHARLES A. SPRAGUE, GOVERNOR OF OREGON

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Governor Sprague, of Oregon, on February 10, 1940, at Seattle, Wash., before the King County Young Men's Republican Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, nations possess the paraphernalia of religions. National heroes, generals, presidents are their saints; places of historical significance their shrines; utterances of great men their sacred writings; noted birthdays their "holydays." In this regard the United States has been singularly blessed. Plymouth Rock, Faneuil Hall, Independence Hall, Valley Forge, Mount Vernon are altars keeping fires of patriotism aglow. Washington, Adams, Hamilton, Jefferson are men whose names command veneration and whose papers are the veritable bible of American politics. But among the names of our immortals, our national saints, if you please, there is none more greatly beloved than that of Abraham Lincoln. His birthday is a national "holyday," an occasion for renewed tributes to his memory and consecration to his conceptions of liberty and government.

Tonight you citizens of this great State, organized as a territory in Lincoln's time, assemble to do him honor. You met as Republicans, members of a political party he helped to organize and led to victory. To honor Lincoln as a party founder is not to shrink his stature as a national hero. It is to recognize that he used the medium of a political party to achieve his objectives.

We Republicans can point to Lincoln as a party member without apology or explanation. He was of the true Republican tradition, stemming through the Whig Party from the Federalist. I have noticed recently in high circles an attempt to kidnap Lincoln for political purposes, but if there is one thing which a study of his

life reveals, it is that from the time he first entered politics, Lincoln was never a Democrat. His first declarations were in favor of a national bank, a high protective tariff, and internal improvements. Hostility to all these was the very cornerstone of the Democratic policy of that time.

Why Lincoln became a Whig is one of the unsolved mysteries. Consider that he came of age in the very heyday of democracy, when Andrew Jackson was President, the popular hero of the middle border. Consider that Lincoln attained his majority in staunchly democratic Indiana and fixed his political opinions in staunchly democratic Illinois. Yet this self-taught youth, admirer of General Jackson though he was, worked out his own political philosophy along the conservative lines of the Whig Party. The glamour of Henry Clay may have caught his fancy; the arguments of Denton Offut, Whig, on the long flatboat trip to New Orleans in 1831 may have had an effect. But Lincoln was so original a thinker, so little impressed by casual influences, it seems safe to conclude that he came to his convictions through the same reasoning processes which later distinguished him as one of the most logical minds in American political history.

It is a safe assertion that Lincoln would not be a Democrat today, least of all a new dealer. Herndon, his law partner and close friend for about a quarter of a century, described him as "a very conservative man and a cautious one." He was not a radical in any sense of the word. He was never an abolitionist or a free soiler; he stayed with the Whig Party until it went down. While he opposed slavery on moral grounds his program of political action was based on the policy of the founding fathers who, he demonstrated, had sought to put slavery "in the way of its ultimate extinction." He regarded the Dred Scott decision as bad law, but expected the error to be corrected in orderly manner.

In this connection a significant incident from Lincoln's legislative record is worthy of mention. It seems that in 1841, when the Whigs were taking over the national administration under Taylor, that Stephen A. Douglas, then register of the land office in Illinois, prepared a bill which he forced through the legislature for the "reorganization of the judiciary." This bill provided for abolishing four circuit judgeships, creating five new supreme justiceships, and authorizing the legislature to appoint nine new members of the supreme court, who would conduct both the supreme and circuit courts of the State. Lincoln and other Whig legislators joined in the following petition entitled "An Appeal to the People of Illinois":

"The undersigned cannot assent to the passage of the bill or permit it to become a law without this evidence of their disapprobation; and they now protest against the reorganization of the judiciary because: (1) It violates the great principles of free government by subjecting the judiciary to the legislature; (2) it is a fatal blow at the independence of the judges and the constitutional term of their office; (3) it is a measure not asked for, nor wished for, by the people; (4) it will greatly increase the expense of our courts or else greatly diminish their utility; (5) it will give our courts a political and partisan character, thereby impairing public confidence in their decisions; (6) it will impair our standing with other States and the world; (7) it is a party measure for party purposes from which no practical good to the people can possibly arise but which may be the source of immeasurable evils."

The bill, however, passed, and Stephen Douglas received his reward, being made chief justice of the reorganized supreme court. But Lincoln took a stand for an independent judiciary which 96 years later a worthy band of Senators, on the national stage, with the whole people for observers, were to maintain successfully.

Tonight in discussing the subject, Lincoln in Politics, I want to review Lincoln's activity in politics before he became President, as party member and public-office holder, as stump speaker, and to show something of his development in his environment which prepared him for the tasks of Presidency. Then I shall turn to a discussion of the political problems of our own day.

Lincoln became one of our greatest statesmen, but he attained his high rank only after a lifetime of experience as a practical politician, and I mean "practical," though in no unwholesome sense. He scarcely had cast his ballot before he became a candidate for office, that of representative in the legislature, in 1832. Defeated then, he later served as postmaster, as deputy surveyor, was five times elected to the legislature, and twice was a candidate for speaker of the house. He was a member of the "long nine" who manipulated the shift of the State capital from Vandalia to Springfield. He was a Whig elector in 1840, Congressman for a term, candidate for the Federal appointment of Commissioner of Public Lands, candidate for United States Senator in 1855 and in 1858, balloted on for Vice President in 1856, elected President in 1860 and reelected in 1864.

Not only was Lincoln active in politics as candidate and officeholder, he was diligent as a party member. He was a "regular"; when defeated in his party convention for Congress he declared his support of the nominee. He served as party committeeman, signing calls for conventions. He was a delegate to local conventions and to the Whig National Convention in 1848. He took the stump on behalf of Harrison in 1840; of Clay in 1844; of Taylor in 1848; and of Winfield Scott in 1852. He gave the principal speech at the convention organizing the Republican Party in 1856. He handled patronage. He encouraged formation of political clubs, especially among young people. He cultivated the newspapers. He was sensitive to the foreign vote, and owned a German-language newspaper in 1859-60.

Had Lincoln not served as President he would be remembered, if at all, as an Illinois politician. Yet it was his political activity

which brought him the Presidency and his practical political experience which equipped him to handle the people and meet the problems in Civil War days. His example should encourage you as party workers and leaders, and is a standing reproach to those who regard politics as a sordid occupation.

Activity in politics did not make Lincoln a compromising politician. Instead he had the courage of his convictions. Along in 1834 when Lincoln was struggling under debts incurred in his merchandising adventure at New Salem, a friend solicited and obtained for him an appointment as deputy surveyor. Lincoln first asked him: "Do I have to give up any of my principles for this job? If I have to \* \* \* I wouldn't touch it with a 10-foot pole." That policy governed him in all essential matters thereafter.

He often espoused new or unpopular causes. As early as 1836 he declared himself in favor of "admitting all whites to the right of suffrage who pay taxes or bear arms (by no means excluding females)." He appeared as an orator in favor of temperance before the newly formed Washington Temperance Society in Springfield in 1842. He opposed the Mexican War. He favored a liberal immigration policy at a time when the "know-nothings" were sweeping the country with antislavery propaganda. To aging Jefferson, the controversy over the adoption of the Missouri compromise in 1820 rang out like a firebell in the night. To mature Abraham Lincoln in 1854, the Kansas-Nebraska bill with its repeal of the compromise was another alarm bell, summoning him back to the political arena for his famous forensic battles with its sponsor, Stephen A. Douglas. The battle was fought on principle, the debates at Freeport and Galesburg standing as highwater marks of the senatorial campaign of 1858. Lincoln the politician was also Lincoln the man of intellectual integrity and moral courage.

As a speechmaker Lincoln was not only competent in formal address or debate, but he knew how to take care of himself in the rough-and-tumble stump speaking of that period. One instance of his ability at rejoinder has come down to us from the campaign of 1836. A man named George Forquer made a speech attacking Lincoln at a big mass meeting. This Forquer had been a Whig, but just at the time he became a Democrat he was given the fat office of Register of the Land Office. He had also recently put a lightning rod on his house, about the first to be put up in Springfield and the subject of a lot of town talk. After Forquer got through with his speech, Lincoln, who had heard him, rose to reply and concluded as follows:

"The gentleman commenced his speech by saying that this young man would have to be taken down, and he was sorry the task devolved upon him. I am not so young in years as I am in the tricks and trade of a politician; but live long or die young, I would rather die now than, like the gentleman, change my politics and simultaneous with the change receive an office worth \$3,000 a year, and then have to erect a lightning rod over my house to protect a guilty conscience from an offended God."

Another time when he was running for Congress his Democratic opponent was the Rev. Peter Cartwright, a pioneer Methodist preacher, who had defeated Lincoln in his first race for the legislature. Cartwright was preaching one night and Lincoln dropped in to hear the service. Cartwright gave a rousing evangelistic sermon and wound up by asking all who expected to go to heaven to rise. All rose but Lincoln. Then he asked who expected to go to hell. None arose. So Cartwright leaned over the pulpit and said: "I have asked all who expect to go to heaven or to hell to rise; and now I should like to inquire where does Mr. Lincoln expect to go?" Lincoln got up and replied, "I am going to Congress, Brother Cartwright."

Yet all the while the yeast of thought was stirring in his brain, the rhythm of prose poetry was forming in his speech, until Abraham Lincoln who out-orated his early opponents, who floored Forquer and Cartwright, became the orator of the "House Divided" speech, of the debates with Douglas, of the Gettysburg dedication, and of the second inaugural.

A great deal is made, I know, of Lincoln's lowly origin. He was born in a log cabin and lived in crude shelters until he was man grown. But many have risen to eminence from humble birth. William Henry Harrison, Andrew Jackson, Millard Fillmore, James A. Garfield, were all Presidents who were born in similar cabins. In fact I tremble for the future of this country when I realize that biographers and photographers of future Presidents will have to report that they were born in great lying-in-hospitals. We'll miss the log cabins then.

But the picture of Lincoln as an uncouth fellow, socially inferior, is badly distorted. His political enemies called him an ape and a baboon. Even Wendell Phillips referred to him as "a huckster in politics," "a third-rate country lawyer." And Edward Everett whose own oration at Gettysburg was to be completely cast in shadow by Lincoln's brief address, wrote in 1861, "He is evidently a person of very inferior cast of character, wholly unequal to the crisis."

They did not know Lincoln.

It is true that he was ungainly, tall and angular; that he lacked some of the parlor graces. But Lincoln was a product of the border where thousands of people lived in log cabins until they could conquer the wilderness. When Lincoln came to Springfield in 1837 it was a town of only about 2,000 inhabitants. He was already favorably known there as a member of the legislature. His friends were the leaders of the young capital city, and he never lacked their aid. Joshua Speed, merchant, gave him his first room. William Butler, State treasurer, later took him to room and board. He was invited to social affairs, attended parties and balls regularly,

though he danced rarely and not very gracefully. We find his name as one of the managers for a cotillion at the American House in 1839. Among other names on the printed invitation, still preserved, are Speed, Stephen A. Douglas, a young lawyer come out from Vermont, and Ninian W. Edwards, whose father had been United States Senator and Governor, and who was one of the wealthiest men of the town.

As soon as he could afford it, Lincoln wore broadcloth suits, tall silk hats, white shirts, and black cravats, and his linen was always clean. He was careless of his day-by-day appearance; but contrast him with his one-time partner, Judge Logan, who sat on the bench in an unbleached colored shirt without tie or stock.

Finally his marriage could only be rated as a great social success; for Mary Todd, well-educated, keen-witted, of good Kentucky birth, related to the elite of Springfield, was certainly the belle of the capital. Yet among her numerous suitors she chose Abraham Lincoln.

The simple truth is that, product of the frontier as he was, Lincoln had capacity for growth. As the West emerged through the influx of settlers, and as railroads, newspapers, magazines, and the telegraph linked the raw Midwest with the more cultured East, Lincoln developed. In speech and actions there remained traces of the roots from which he sprang, but he also absorbed the customs and the culture of his fast-unfolding environment.

To the equipment of broad practical experience and steady intellectual and cultural growth, Lincoln added the benefit of rather wide travel and acquaintanceship as preparation for the Presidency. He had lived in three States, had made two trips down river by flatboat to New Orleans and up river by steamboat. He had made occasional trips to Kentucky, to Louisville and Lexington, and to St. Louis. He had gone to Washington, D. C., for Congress; had made political or professional trips all over Illinois and to Indiana, Ohio, and Kansas; had made a business trip to Iowa, as far west as Council Bluffs, where General Dodge showed him the terminus of the Pacific Railroad. He had made a speaking trip to New York and two extended speaking trips through New England.

He knew the public men of his time. When he went to Congress John Quincy Adams was still a Member. There he met Alexander Stephens, destined to be his enemy as Vice President of the Confederacy and yet remain his personal friend. In the Senate were Webster and Calhoun and Thomas H. Benton and Jefferson Davis. Lincoln had met Van Buren, Governor Seward, Thurlow Reed, and Henry Clay. He had heard Emerson lecture. At Cooper Union, Horace Greeley had escorted him to the platform and William Cullen Bryant had served as presiding officer.

The newspaper critics, the cartoonists at home and in England, who lampooned him without mercy, the disappointed highbrows of the East, all had Lincoln sized up wrong. Lincoln was a man of power. Henry Villard, interviewing Lincoln after his election, reported to the unfriendly New York Herald:

"No one can see Mr. Lincoln without recognizing in him a man of immense power and force of character and natural talent."

In December 1862, when things were going badly and the Senate was almost in revolt, his old Illinois friend, Senator Browning, went to the White House and discussed matters with Lincoln. When Browning went home he wrote in his diary:

"He said with a great deal of emphasis that he was the master." It must have been that Lincoln had the awareness of his power and capacity which Lord Chatham possessed in England's dark days of the eighteenth century wars when he said:

"I know that I can save England and that no one else can." Such was the stuff of which Abraham Lincoln was made. On his intellectual strength and tough moral sinews hung the fate of the Nation in 1861 and 1865. Thanks to him the Union was preserved and the curse of slavery wiped out. One hundred and thirty-one years have passed since his birth and near three-quarters of a century since his death, but his memory lives, for it is part of the very soul of America.

#### PART II

Ladies and gentlemen, I am reluctant to turn aside from the Lincoln story which I have only half told. But this is 1940, and we Republicans have pressing business ahead. In 1860 the Republican Party offered Abraham Lincoln as a leader fit for a crisis. Now, 80 years later, fresh and grave problems trouble the Nation, and a disturbed people look to Republicans for leadership and for constructive policies. I wish now to speak for a while on the political issues of our own day.

We are in the eighth year of the New Deal. What is the New Deal? We know what the New Deal was, but who offers any definition of it today? The country was dazzled by the legendariness of Franklin D. Roosevelt in the early years of his administration, but what has become of the white rabbits of those years? Who hears anything now of N. R. A., and what has become of Hugh Johnson's blue eagle? What happened to the 25-percent cut in expenses and the balanced Budget promised in 1932? Where are Rex Tugwell and the "abundant life"? What became of the price level of 1926 which Professor Pearson's devalued dollar was to restore? What struck the 1936 boomlet of prosperity ("we planned it that way, and don't let anyone tell you differently")? Who hears anything now about planned economy?

All these were the war cries of the first New Deal. For Roosevelt's second term the legislative record is almost a perfect blank—perhaps that's what makes it "perfect." He was soundly defeated on the court-packing bill and the blanket reorganization bill, and the drastic tax legislation of 1937 has been virtually repealed. So what is the New Deal, the saving of which, according to Secretaries Ickes and Jackson, calls for a third term for Roosevelt?

Well, my friends, there is a New Deal—a New Deal which is alien to the whole American tradition, alien to the fundamental principles of the great Democratic Party, and alien to the principles of the Republican Party. That New Deal is the one which is in the saddle, with its strange ideology, its ardent apostles, and its "party line." That New Deal is one which seeks to impose upon this country a centralized, socialized bureaucracy. By steadily absorbing power through frightening and repopulating the Supreme Court, and by steadily absorbing economic power through oppressive legislation and decrees, it has virtually destroyed the unique Federal-State relationship which existed here; is progressively reducing the States to the role of provinces and invading the historic rights of individuals.

The distressing thing is that all this is done with a Messianic fervor, with the holy-war complex which is always the mark of the bigot. Oddly enough, the label applied to this process is "liberal." In truth it is intolerance. The palace guard of the New Deal are implacable in their hatreds. For slight deviation from the "party line," marked out by them, they have sought to purge loyal members of their own Democratic Party, while a conservative or a Republican was fit game only for a witch burning. Not since Lincoln's time have the social tensions been so taut in this country, stirred up as they have been by these heresy hunters of the New Deal and responded to in kind by the objects of their lashings.

Let me review something of this concentration of power in Washington.

The Government now exercises rigid control of credit, and has so strangled normal business operations that the major channels for credit are now the Federal agencies.

The Federal Government has taken over regulation of labor relations, wages, and hours of work in all but a restricted field of enterprise.

The Federal Government has become a dictator in agriculture, until we face the time of which Thomas Jefferson warned:

"If we are instructed from Washington what to sow and when to reap, we shall soon want for bread."

Through the power of the purse, States and communities are made dependent on Washington bureaus. The worst of it is that this Federal money is phoney money, the proceeds of borrowing that will stand as a debt against our children.

We are witnessing in the Northwest a sample of the progressive invasion of the field of local self-government. The Bonneville administration has sought the authority to control rates and budgets and restrict uses of plant profits even for publicly owned power systems. This means that rate authority rests not with local management but with a distant commission, and a political commission at that.

Western States have had to go into court to protect their original rights for control of western waters against the claims of the Reclamation Bureau, claims which if allowed will put our western irrigationists at the mercy of a distant bureau.

I could go on adding to this bill of particulars, but they are familiar data to the informed citizen. Now, I am not, as a governor, clinging to an old shibboleth of States' rights. I am, as a student of history and politics, adhering to the sound principle that a democracy cannot be converted into a centralized bureaucracy and remain a democracy. If bureaucrats in Washington, 3,000 miles away, are the ones to decide what the farmers of Washington may plant and the water your irrigators may use, what your utility districts and cities may charge for electricity, how many case workers you may hire in your welfare offices, what wages your shop must pay and what union it must recognize, then our Government will meet the fate of all bureaucracies. When you deprive individuals and communities of power and responsibility you condemn them to political atrophy and economic paralysis. The lotus flower of convenience and security is but the opiate of ultimate narcosis.

I give Mr. Roosevelt and most of his appointees credit for sincere good purpose, a genuine desire to do something for the people. But let me remind you of Lincoln's great phrase: Government of the people, by the people, and for the people. We shall not long have government for the people unless it is likewise of the people and by the people. Here, then, my Republican friends, is a rock to stand on in this campaign year: The preservation of democracy in this country through recognition of the rights and obligations of local self-government.

I charge that the very philosophy of the New Deal is collectivist; that it will result inevitably in the submergence of the individual to the State and erect here a structure with a ruling political oligarchy on one hand and a servile, mendicant people on the other. The issue today is not just the accountant's passion, a neatly balanced budget, important as that is. The issue is the preservation of a free political atmosphere and a free economy.

I turn now to a discussion of the labor problem. I realize that the present administration has gone far to meet the demands of organized labor, although lately we see through the glass windows of the New Deal, John L. Lewis commencing to throw furniture at the chef and the head waitress. Deliberate effort has been made to poison the minds of laboring men against the Republican Party.

I ask you, however, to review the industrial history of this country since 1860. In what States did labor make its greatest strides? Where have unions long been recognized, both in law and practice? Where have wages and working conditions been the best? Has it not been in the States where the Republican Party was in power?

What party has been most friendly to the development of this country which has provided employment and produced goods of amazing variety for mass consumption? In this very city, at a Lincoln Day gathering some 20 years ago, I heard Leslie M. Shaw, former Governor of Iowa, proclaim that the mission of the Republican Party was to foster industry and agriculture, and he meant that in the broadest sense—for the sharing of prosperity among all classes of people.

I am in private life an employer of labor—of union labor, if you please. I believe I can speak as a sincere friend of labor when I raise a warning against labor's dependence on government. Labor has made its way by independent fighting. If now it enters into alliance with government, it takes grave risks. If government is to fix wages and hours of labor, what need remains for labor organizations? When labor organizations become the favorites of government, sooner or later they become its prisoners. A slight shift in the wheel of political fortune and labor finds itself out of influence. Labor needs only to look at Europe to see what dangers it runs in letting government become the regulator in the field of labor relations. In Russia, once hailed as a promised land for workers, after 22 years of revolution, the people eat black bread, if they can get it, and have to buy their vodka at \$14 the fifth.

It seems to me that labor must make up its mind in 1940 whether it wants to go farther along the road toward collectivism, with its inevitable retarding of economic progress and its leveling of special skills and ability into dull mediocrity, or whether it is going to support the system of private enterprise, which, despite shortcomings and inequalities, has done a better job of producing and distributing wealth than any other system yet devised.

Private industry will not function successfully if it is hampered by government interference and excessive taxation, and if it is harassed by unstable labor relations or victimized labor bosses. I believe the Wagner Act is a one-sided act, and that at times its administration has been painfully biased. But the changes needed are not just of legislation and administration but of attitude.

The Republicans of 1940 should offer labor not the dole but jobs—not more laws but more employment. Above all, Republicans are needed to put out the fires of class conflict and encourage among workers, managers, and owners the attitude of cooperation in the common task of maintaining economic functions.

In my own State I have exerted my principal efforts for the revival of industry and the launching of new enterprise and for the keeping of industrial peace—all this primarily to provide workers with jobs and regular pay checks. Through cooperation, we have made real progress in the relief of the prime problem of our time—unemployment. I believe, through a similar joint attack, steady progress can be made on a Nation-wide scale.

By the same token, we are moving in Oregon to solve our farm problem. Through the intelligent guidance of our State college and agricultural agents, farmers are being directed to shift production from surplus crops to those for which there is a ready market at a good price. We produced \$6,000,000 worth of seeds last year in the Willamette Valley. In Multnomah County dairy products used to be the chief output of the farms; now, believe it or not, nursery stock is at or close to the top. Turkeys, filberts, fox and mink pelts, flax are some of the specialty crops which are making our farmers once more independent.

The present agricultural program embraces one grave error: It ignores the technological changes which have come to agriculture. Power machinery has come to the farm. Such equipment as the new tractors, large and small, combines, feed grinders, milking equipment for dairies, trucks for flexible transportation, are working a revolution on the farms. Unit costs of production have been reduced until the term "pre-war parity" is obsolete.

The entire policy of the Federal Government toward agriculture needs to be revised. Farming programs must be redirected so that agriculture will be self-supporting and not kept on a Government dole, offensive to farmers and costly to the Treasury.

At this point I wish to raise a warning: Republicans in 1940 should not seek to outbribe the Democrats. It is foreign to our philosophy; and besides it just can't be done. We can't make good on promises to balance the Budget and at the same time out-promise the opposition with more liberal farm benefits, bigger doles, and pensions. That way lies political grief and financial disaster. Let's be honest and tell the people, that while the destitute and aged will still be assisted, the spending orgy is over, that income and outgo must be brought into balance, that it is time for America to throw away the crutches and start walking again on its own stout legs.

This country still faces the task of economic readjustment. The boy scouts of the Roosevelt menage, in spite of their zeal to do a good turn every day, have not accomplished the task, merely postponed the day of reckoning. Ahead of us during the next 4 years are extremely critical questions. Leaving out of account the complications arising from the prevailing wars, we still must develop dependable fiscal policies.

First, there is the matter of deficit financing, which assuredly cannot go on forever. Sound public finance is the very basis of sound private finance. We cannot continue to emit Government bonds in huge volumes without impairing the structure of the national credit.

Secondly, the administration's gold policy may bring us to another financial Niagara. When gold was devalued in 1933 our gold stock amounted to \$4,000,000,000. Devaluation brought it to six billions. But the mark-up of price of gold from \$20.67 an ounce

to \$35 an ounce has made this country the dumping ground of the yellow metal. While only a billion dollars has come from our own mines, our gold stock has increased from \$6,000,000,000 in 1933 to \$17,620,000,000, plus another \$1,120,000,000, earmarked for foreign account. This amounts to 70 percent of the world's monetary gold, and the flow of metal still continues.

We get the gold out of sight, but we also get it out of use both as circulating medium and as base for the currencies of the world. This maldistribution of gold upsets world economy and contributes to trade stagnation. We run the risk of taking tremendous losses of value on this gold supply for which we have exchanged real goods. There must be, therefore, economic statesmanship of the very highest order to protect our own vital interests, and if possible to restore some measure of economic sanity in world affairs.

Thirdly, closely integrated with this fiscal problem is that of the tariff. Our Republican Party has consistently stood for a protective tariff which would hold the substantial home markets for our own farmers and manufacturers and laborers. The depreciations of foreign currencies and the interference with normal trade routes caused by the war make it imperative that dumping of foreign products to the demoralization of our own producers be prevented.

At the same time we must study the tariff problem realistically. Our creditor status, our excess of gold reserves are changed factors in the equation of foreign trade. New tariff policies should give them proper weight, recognizing that exports which we still require, for our surplus production, can be paid for only by imports. Republicans have never favored a policy of economic isolation—of autarchy, another catchword now "gone with the wind." Here in this great seaport city you know and appreciate the value of foreign commerce.

The reciprocal trade treaty plan of Secretary Hull has been an unjustifiable stretching of the treaty-making power, and as far as the West is concerned, distinctly unsatisfactory in its results. Our lumber industry in particular has paid a heavy price for the reciprocal-treaty policy.

I favor a return to President Taft's idea of a Tariff Commission, with broad powers to determine schedules, and with full opportunity provided for hearings before rates are fixed or altered. Flexibility must be preserved because foreign wars and subsequent peace may bring swift changes in trade relations.

These are key problems for the years ahead, problems which will test the intelligence of leaders and the loyalty of the people. The solutions may prove hard medicine; but the price of indifference, or of wrong decisions, may easily be disaster.

The Republican call of 1940 is not to lead the country backward to an era when labor was exploited and the poor oppressed. We have made mistakes in our periods of power, which we must not repeat; and we must be alert to keep step with progress. The call of 1940 is to lead the country forward into a time of restored economic health with prosperity widely diffused. We deny the New Deal assertion that our economic system has entered a period of decline because frontiers are closed and no free land is available. Why, the supply of arable lands was exhausted back in 1890, yet the next 50 years saw amazing progress and living standards sharply elevated.

Our resources are still plentiful; the American people are still industrious and inventive. We need only to set the channel lights of safe public policies, to lift the anchors of fear and hesitation and sail boldly into the current to reach ports even richer than those touched in the past—and the country looks to the Republican Party to furnish the captain and to chart the course for the next 4 years. A few miles south of Hodgenville, Ky., stands an old log cabin, with a single door and window, an earthen floor, and a fireplace chimney of sticks and clay. It was the birthplace of Abraham Lincoln.

At Washington, D. C., stands the beautiful Lincoln memorial, the tribute of a grateful people, with its chaste walls of Colorado yule and its rows of stately Grecian columns behind which is the heroic statue of Abraham Lincoln. The figure seated seems to gaze across the lagoon and the Mall, past the tall shaft of the Washington Monument to the dome of the Capitol, as though in perpetual watchfulness over the deliberations of the Government Lincoln labored to preserve.

Yet neither the cabin of his birth, nor the magnificent memorial at the Capital, is the true home of Abraham Lincoln. In the heart of the Midwest, in the deep, black soil of central Illinois, there Lincoln's brooding presence seems nearest. Springfield, where he lived, worked, was married, and lies buried; the county seats with their courthouses, where he pleaded his cases, and their hotels, where he told his stories; Bloomington, where he delivered his "lost speech"; Galesburg, home of Knox College, in front of whose main hall he gave one of his greatest addresses in the series of debates with Douglas—that is the real Lincoln country, where his spirit blends into the very life of the people. There the once common words, "He knew Lincoln," have become precious family heirlooms.

A man of strange contrasts, this man Lincoln—a giant in physical strength, yet stoop-shouldered, thin-chested, homely of face. A man of tremendous intellectual power and penetrating insight, but a man of moods, of deep melancholies, of racy humor, of premonitory dreams. This Lincoln stands as the epic figure of nineteenth-century America; his feet firm-rooted in the earth of the midcontinent, his mind towering to great heights, as it were "voyaging through strange seas of thought, alone."

Well does he epitomize the emerging Nation of that period, awkward, contradictory, unsure of itself; the raw life of the border in sharp contrast with the full-blossomed culture of New England;

the social and economic systems of the sections heading for collision; a Nation groping for self-realization; a Nation learning by the application of inventions the extent of its amazing resources and fighting its way to political unity and moral integrity.

Now the United States stands in the full strength of its maturity. Four decades of bitter controversy and 4 years of intense war settled this issue; that ours should not be a "house divided." The question now is, shall we let the horizontal sectionalism of class cleavage fracture the union which Lincoln saved?

A Lincoln is a miracle never repeated. It is for our generation to resolve the problems of our time. I am confident under the inspiration of his great mind and heart, borrowing a measure of his patience and the full mantle of his charity, we of today shall preserve in this country social unity, economic well-being, and political freedom.

### The Farm Problem

#### EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ADDRESS BY HON. EDWARD CORNEABY

Mr. MURRAY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD a copy of an address made before a farm group by Hon. Edward Corneaby, of Minnesota. Mr. Corneaby is the former Assistant Commissioner of Agriculture of the State of Minnesota under the able administration of the late, great Governor, Floyd B. Olson. He has an intimate knowledge of farm and labor problems, particularly in the great Midwest where these matters are acute. I am sure that his address will be of interest to many students of the farm problem and to practical farmers as well.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The two major unsolved problems of today are unemployment and an increase in farm income. Unemployment is out in the open because it cannot be concealed. The farm problem is buried in obscurity by long strings of figures for "cash income," atomic injections of "soil conservation" and a breakfast dole of "parity payments."

Farm "cash income" is a misnomer. It is the "income" inflated by the "outgo." For instance, farmers' "cash income" as published for 1938 was \$7,625,000,000. But when we get the actual produced income of the farmers, with the production expenses taken out but with every onion and every potato raised and used on the farm figured in, and with all the soil conservation and parity payments included, the "income" fell to \$5,432,000,000. Subtract this from the so-called "cash income" and we find \$2,193,000,000 of income which the farmer really did not receive.

Note, too, the Department of Agriculture's statement of "gross farm income," which is even more erroneous. For instance, the "cash income" for 1935 was \$7,090,000,000, the "gross income" was \$8,508,000,000, but the honest produced income was only \$5,276,000,000.

Now, let us look at the farm problem in 1938, the last year for which we have complete data. On June 12, 1939, the Department of Commerce released figures for 1938. They showed a national income of \$64,000,000,000, equivalent to \$500 for every man, woman, and child in the United States. Now, let us see how much of this \$500 the farmer received. In his statement to the House Agricultural Committee, Secretary Wallace showed there were 31,819,000 farm people in 1938. These people received \$5,432,000,000 of actual income. It is clear, then, that the average income per farm person was only \$170. Since the farm people only got \$170 per capita the nonfarm population of 97,881,000 got \$600 per capita. An honest parity would have increased the per capita farm income to \$500 and reduced the nonfarm income to the same amount upon the 1938 total.

These figures show the deplorable condition of agriculture after 6 years of attempts to improve the farmers' lot. The farm problem is not solved. It is scarcely dented. Twenty-two percent of our adult population are dirt farmers. Thirty percent of our children are on the farms. Fourteen percent of all capital investment is in farms and equipment. The labor is harder and the hours longer, but in 1938 they received only 8.5 percent of the national income. The preliminary reports for 1939 are but slightly better and, if any prosperity comes in 1940, it can come only from a war boom. It is a sad commentary if farmers must depend on droughts and grasshoppers and boll weevil and war and acreage reduction for prosperity.

What is the cause of this economic slavery for agriculture? Simply put, it is two different systems of price fixing—one for farm

products and the other for industrial products. Taking the industrial system first, how are its prices fixed? The first thing the law does is to permit creation of a corporation. It is permitted to operate in interstate and foreign commerce with 85 or 90 percent of its business. Its legal structure permits it to combine large volumes of capital under one management, giving it a commanding advantage over private individuals. It is a collective institution. The law also exempts its stockholders from personal liability for corporate debts. It permits renewals and therefore gives it perpetual life. In addition to all this, the Supreme Court has made it a live, living person by a legal caesarian operation unknown in judicial history. This, incidentally, was the old Supreme Court and not the present one which may outlaw the practice as soon as it gets the chance. All of these legal advantages added together give the corporation the economic power to figure its cost of production, add the profits it will charge the consumer of its product, and fix the prices of its commodity accordingly. It has no competition except from other corporations with the same set-up and figuring the same way. Thus the law enables the corporation to fix its own price. The buyer has no choice but to pay these prices. He may go from one corporation to another, and whichever he buys from he faces the identical situation.

The farmer has no such legal set-up to enable him to fix his own prices. Instead, industry and finance have gone outside the law to set up a speculative market, controlled by the buyer, to fix the prices of farm products. The farmers, who are the sellers, have no voice in its control. In addition to the general evil of speculation there is a special evil affecting the American farmer. This speculation is guided largely by the sale of his surpluses in foreign markets. His big cotton surplus or little surplus in other products is shipped to Manchester or Liverpool and sold in competition with all the world. The price is cabled immediately and the speculators bet accordingly in all the American exchanges. With special exceptions this price runs with the foreign price, less the freight and expenses of reaching the foreign market. The most outrageous item in this system is that even when the farmer sells to his neighbor at the market price freight and expenses are deducted all the way to Liverpool even though his crop was never loaded on a train. This puts him at the mercy of the free-trade markets of the world when he sells his own products; but he must buy what he needs at the corporation-computed cost of production, plus profit, all protected by a tariff wall.

Since the speculative markets are manipulated by the buyers of farm products the enormous expense of speculation must also come from the farmer's prices. Total speculative sales in 1937 were \$25,000,000,000, while the whole farm income was only six and one-fourth billion. I said "sales," but there were almost no sales. In fact, less than one-fourth of 1 percent of all the speculative gambling was actual sales. The economic slant to all this is that it takes from the farmers what is rightfully theirs. The actual prices for farm products year after year prove beyond doubt that this is the case. The farmers never did get a square deal in our time, even in the most prosperous years.

What is the remedy? The McAdoo-Elcher bill, introduced in the last Congress, is probably the best answer. It got 40 votes to 46 as a substitute for the administration's bill in the Senate. In the House it failed by a similar narrow margin. It had this support upon its merits alone and without the help of any farm pressure. It had the endorsement of labor and is the ideal farmer-labor bill.

Here are its simple provisions: An administrator is set up who estimates the total production of each crop as it comes to maturity. He estimates the percentage available for export. He then computes the 5-year average cost of producing each crop, using the same formula that industry follows. This becomes the fixed price for the percentage consumed at home and each dealer is required to pay it. The dealer gives the farmer a receipt from the administrator for the export percentage, stating the quantity and grade. The dealer must turn the export percentage over to the Government Export Corporation, and in that way the entire exportable surplus is collected by the Government. It is then sold in the best foreign market to be found, all expense taken out, and the postmasters notified to redeem the receipts at the net amount realized. The money to cover is already in the Treasury. This is the only farm bill ever offered which is not a tax on the Treasury. Soil depletion is estimated in the prices, and soil-conservation appropriations can be discontinued. The projected prices are far above the parity level that is now in the law. Whole farm income is expected to be increased by seven or eight billion dollars instead of the \$1,250,000,000 of benefits paid last year.

Under this plan the farmer would get something approaching the \$500 per capita to which he was entitled in 1938, instead of the shocking \$170 which he did get. Under this bill we propose to do for the farmer what the Government has always done for the corporation.

Would the farmer lose money upon the exportable surplus? No, he would get the world price for it, and that is all that farmers are now receiving for the entire crop. Besides, these surpluses are so small upon everything but cotton that farmers could well afford to give them all to the Government in exchange for fixing the price on the percentage consumed at home.

What will be the economic effect of such a vast increase in the farm income? First, it will increase the national income by the full amount, because farm products are the basic property of life and their value an integral part of the national income. Second, the farmer would spend most of this increased income in industry and that would put many of the unemployed to work at an adequate annual wage. The third effect would be to vastly reduce

relief expenses and go a long way toward balancing the Budget. And fourth, the reemployment of labor would produce further property values, further increase the national income, further increase tax receipts, and further reduce the Budget deficit.

This bill may permanently solve the farm problem and indirectly a large part of the unemployment problem. However, there will still be a large army of unemployed which industry itself must take care of. How shall it be done?

The \$64,000,000,000 national income of 1938 is ample to relieve agriculture and give every worker a job at a living wage and permit a balance of the National Budget, providing it is properly distributed. America's 29,000,000 families would have an annual income of \$2,000 each. Most of these families never had an income of \$1,000 annually. Such a distribution, inadequate as it is, would eliminate entirely the relief problem. The farm bill would give the farmers their share and would also increase the national income. Increased farm income means reemployment for a vast part of our unemployed.

Charts of American business activity show that there have been 25 major depressions, 24 of them lasting more than a year. Every period of prosperity has been followed by a major depression, which destroyed all the benefits of the preceding prosperity period. During the Coolidge prosperity from 1921 to 1929, farm properties declined \$13,500,000,000 in value. But during the same period the values of other properties advanced \$58,000,000,000, and then the bubble burst.

There can be no stability in American economics until these major problems of farm income and unemployment are solved. Once farm prices are fixed by law, the speculative element is removed. Our national wealth will increase materially.

Prosperity, real prosperity with a balance between farm income and workers' wages would be here as a permanent part of the national economy. These are aims that all of us can strive for, because once achieved, we not only insure a living democracy here, but make idle the fear of foreign "isms" finding any resting place in our land.

Julien N. Friant

## EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

TRIBUTE BY ALPHONSE C. LA FORGE

Mr. CLARK of Missouri. Mr. President, many Members of this body on both sides of the Chamber entertained deep affection for the late Julien N. Friant, special assistant to the Secretary of Agriculture, as a man, and great respect for his career and services as a public servant. I ask unanimous consent that there be inserted in the Appendix of the RECORD a very brief tribute to Mr. Friant by Mr. Alphonse C. La Forge.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

HE WAS MY FRIEND

MY HEADS

"For many and many a time, in grief,  
My weary fingers wandered round  
Thy circled chain, and always found  
In some Hall Mary sweet relief."

—Father Ryan.

Julien N. Friant, an established and beloved boyhood friend, has with a patient little sigh closed his eyes and drifted out to shores beyond our view. The hands that bled at Calvary carried that gallant soul through starland to his trysting place with the Divine, where God will bestow His reward as he kneels before His throne.

There is nothing more precious than an old friend—nothing more difficult to replace when we are in the youth of our old age and our thatches have thinned and been grayed by the years.

A mantle of gloom has been cast over his family and his friends, as bruised and broken hearts mingle their tears and mourn their loss, and our happiness is eclipsed by sorrow as we stand in the shadow of sadness.

To his wife, Bertha, the memory of his tender love and happy relationship will shine forever in the horizons of her heart—nor lose a single ray. Until death do us part—a sacred pledge fulfilled.

His children, Katherine and John, are like two faintly glowing sanctuary lamps shedding their rays in the home whence a loving, an understanding father has departed. 'Tis fame enough to bear his name. To them he left a legacy of loving acts done tenderly, unselfish gestures performed graciously, dreary tasks done cheerfully, the privilege and pleasure of having enjoyed his love, companionship, and guidance, lo, these many years; it gladdens them, their mother, and his sisters, and it is solace for their grief.

To his friends and associates the building in which his office was located will for a time become a big shell, a mausoleum to remind them that therein once worked a noble and gentle soul, a faithful and priceless friend. Our pot of gold is buried deep in the heart of friends like him. His friendship was a golden gift to share.

Better than riches are a peaceful home, fireside friends, sane living, and lofty thoughts—all these and heaven, too, for Julien.

Ever in the strife of his own thoughts he obeyed the nobler instinct.

His bright and cheery home held a welcome, opening wide its door of greeting to the many—not the few—and we who were privileged to call him friend and enjoy his hospitality will cherish his memory—always.

He taught me that kindness is the best key to unlock the door to happiness.

I voice the thoughts of all those who loved him when I dedicate with tears the burning lamp of memory for him out somewhere over the rainbow.

Though he sleeps peacefully back there amidst the birds and the flowers, where songs and silences unite, I sense him at my side. I breathe this blessing; I pray this prayer:

Out where he rests may the sun shine kindly, stars gleam brightly, breezes blow softly, rain fall gently; someone keep it orderly and angels guard the lovely scene. And please, dear God, help me live so that I may be with him again.

Good-bye, Julien.

ALPHONSE C. LA FORGE.

## Reciprocal-Trade Agreements

## EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

CORRESPONDENCE BETWEEN SECRETARY OF STATE AND RHODE ISLAND TEXTILE ASSOCIATION AND EDITORIAL COMMENT THEREON

Mr. GREEN. Mr. President, recently the Rhode Island Textile Association made a protest to the Secretary of State against the trade-agreements program. The Secretary of State wrote a long letter to the Rhode Island Textile Association setting forth his views. The treasurer of the association replied. I ask unanimous consent to have this correspondence printed in the Appendix of the RECORD, together with some editorial comments thereon appearing in the Providence Evening Bulletin.

There being no objection, the correspondence and editorial were ordered to be printed in the RECORD, as follows:

SECRETARY HULL AND RHODE ISLAND TEXTILE ASSOCIATION OFFICIAL DEBATE THE VALUE OF RECIPROCAL TRADE PACTS

[From the Providence Evening Bulletin of February 13, 1940]

We publish herewith the text of Secretary of State Hull's answer to the recent protest of the Rhode Island Textile Association against reciprocal trade agreements, together with the reply of Secretary Walker of the association to Mr. Hull.

JANUARY 20, 1940.

Mr. E. F. WALKER,

Secretary-Treasurer, Rhode Island Textile Association,  
49 Westminster Street, Providence, R. I.

MY DEAR MR. WALKER: I have received your letter of January 10, 1940, expressing your opposition to the continuance of the Trade Agreements Act and commenting on various considerations which you believe are of importance in this connection.

The various points raised in your communication were, in general, discussed fully in my statement and that of my associate, Mr. Grady, before the Committee on Ways and Means of the House of Representatives. For your information I enclose copies of these statements. I believe you will also find highly pertinent to some of the questions raised in your letter the statement on trade agreements procedure submitted to the committee as a part of his testimony, by Commissioner Fox, of the United States Tariff Commission. I am enclosing a copy.

There are some aspects of your letter, however, on which I should like to comment specifically.

You state that no attention is paid to the briefs and testimony of those industries which oppose rate reductions. That is entirely incorrect.

As everyone who is familiar with the procedure which has been applied in the negotiation of trade agreements must know, we have gone scrupulously on the theory that the data and views of all interested parties—the producers, the consumers, and the merchandisers of any particular commodity, as well as any person who feels that he or she has an interest in the matter—should be carefully

FEBRUARY 10, 1940.

considered in the determination of a possible duty adjustment with respect to that commodity. Such data and views are welcomed by the agencies of the government charged with carrying out the trade agreements program. Ample facilities for the presentation of such data and views exist. All such data and views are given fullest consideration. Your letter offers no proof to the contrary, unless one is to regard as "evidence" the concern which you manifest over the fact that those in charge of the program have not shown a disposition to accept unquestioningly and without full consideration the recommendations of some industries which oppose any and all tariff adjustments on their products.

Of course, you must know that no responsible democratic government could subscribe to any theory or formula which says, in effect, that any one industry or group shall have the right to dictate the precise extent to which the government shall extend tariff favors, without any regard to the interests of the rest of the people.

In this connection I must frankly say that I find little short of amazing the implications contained in your statement to the effect that persons engaged in particular industries are far better equipped to determine the tariff needs of their industries than are Government officials. The thought that matters of governmental policy should be determined entirely in accordance with the wishes of one group of interested persons, to the complete exclusion of all others who have an interest and of the general public welfare, is, to say the least, a strange notion—for our country, at any rate. I must confess that it does not conform to my idea of democratic government.

You state: "That the great body of industry and agriculture is harmed is not to be questioned." I not only question this but I am thoroughly satisfied that the contrary is true—namely, that both our industries and our agriculture have been greatly benefited by the operation of the trade-agreements program. A vast body of evidence exists in support of this statement. It is available to anyone who desires to secure it. A great deal of it has been incorporated in the testimony at the hearings now in progress before the Ways and Means Committee.

You state that through the operation of the trade agreements, export trade is being built up "at the expense of American agriculture and industry." Who are the exporters? Surely you know that the surplus-producing branches of our economic activity are of crucial importance to our entire national economy. In my statement before the Ways and Means Committee I discussed this question as follows:

"Contrary to all theories of autarchy and economic self-containment, the fact is that the domestic prosperity of every country is tied in with the condition of its foreign trade. A collapse of foreign markets inevitably brings with it disorganization and disruption of the domestic economy, as we discovered to our sorrow in the period following the enactment of the Hawley-Smoot tariff. In this country the ill effects of the collapse of export outlets for the great surplus-producing branches of both agriculture and industry rapidly permeated all branches of our economic life. Even those very industries which thought they were saving themselves by means of embargo tariffs soon discovered that instead they merely helped to ruin their own markets right here in the United States. \* \* \*

"The size of the American market depends upon the Nation's purchasing power, which in turn depends upon the volume of business activity—that is to say, farm production, factory production, employment, and all the other factors which create the Nation's purchasing power. There is a direct and unmistakable connection between business activity and the volume of exports. Our Cotton Belt, our Tobacco Belt, our Wheat Belt, our corn-hog industry, our fruit and vegetable growers, our lumber producers, our machine manufacturers, and many other branches of our production cannot prosper unless they have adequate foreign markets for their surplus output. Deprive them of such markets and their purchasing power shrinks, and with it the whole Nation's purchasing power declines.

"Let me cite again the cases of dairy products and of cattle. The dairy industry supplies over 99 percent of the domestic market. The cattle industry supplies from 95 percent to 98 percent of the domestic market. Under a system of complete embargoes, these two industries would have 100 percent of the home market, but it would be a vastly reduced market, disorganized and shrunken as a result of the destruction of purchasing power in the hands of the exporting industries and the consequent curtailment of the Nation's purchasing power."

This applies to all branches of production, whether in industry or in agriculture.

Nearly 2 years ago I had occasion to discuss in some detail the implications of this situation for New England industry and in a letter addressed to 15 Republican Congressmen from New England, in response to a joint letter from them expressing opposition to the trade agreements program. I enclose herewith a copy of my letter.

In your letter you characterize as a "wrongful delegation of power" the authorization granted by the Congress to the Executive to modify our customs duties in reciprocal trade agreements, within specific and well-defined limits provided for in the empowering legislation. As a matter of fact, the Trade Agreements Act is essentially no different in this respect from many other enactments by Congress over a long period of years, in which basic policies and standards of administration have been laid down, the detailed execution of which has been vested in the Executive.

I note that two leading newspapers of your own city, the Journal and the Evening Bulletin, have in recent editorials forcefully refuted the views contained in your letter. I refer to editorials appearing in the issues of each of these papers for January 11, 1940.

Sincerely yours,

CORDELL HULL.

Hon. CORDELL HULL,  
Secretary of State,  
Washington, D. C.

MY DEAR MR. SECRETARY: We assume that you desire a reply to your letter of January 20, since it carries the notation, "In reply refer to T. A. 611.0031/4620." Although this reference indicates that the file of complaints has reached voluminous proportions, we accept your invitation.

You are correct in disputing our statement that no attention was paid to the testimony of those opposing rate reductions. We apologize for our error as we find that you apparently did listen, and with a most attentive ear, to the protests of the cattle men, copper interests, and wool growers. Is it not true that these groups are represented in the Congress by a large number of Senators whose votes are essential if the Trade Agreements Act is to be renewed? Could it be that it was Senate votes and not authenticated economic facts that stimulated your interest? Does your treatment of all justifiable complaints indicate that relief may be expected only where Senate threats of sabotage to the trade-agreement program are voiced? And if this be true, could it be that in spite of your stated abhorrence of "logrolling," "logrolling" becomes necessary not only in negotiating the treaties but in securing continuance of the right to do so?

We begin to understand why you refuse to agree with our statement that industry is better equipped to determine its tariff needs than is the State Department. You refer in your letter to "the precise extent to which Government shall extend tariff favors" as if you believed that the need for protection is not a proper basis for a protective tariff. Can it be possible that you believe that tariff favors should be extended by the Government to deserving groups with the State Department as the sole arbiter to determine which are deserving and to what extent? If this is the case, as your letter would indicate, do you not think it is high time that the whole country be informed that you regard the tariff as a means of distributing favors to chosen recipients and not as a protection to American labor and industry from labor operating under much lower standards of living?

You are apparently unable to understand the meaning of our statement that export trade, if built up by the trade agreements, is at the expense of industry and agriculture. You speak of the surplus-producing branches of our economic activity in a way that appears to ignore the fact that practically every industry in the United States, as well as farming, is so organized as to produce a surplus. Some industries are better integrated than others and refrain from actual overproduction, but their potential excess capacity is just as serious a problem as idle farm acreage.

The trade-agreement program envisages the exchange of a certain amount of our surplus products (selected presumably on the basis of the State Department's distribution of favors) in return for an equal amount of foreign products. If the resulting volume of increased exports is great enough to do anyone any good, the imports which are of an equal amount must result in an equivalent amount of injury to certain domestic products, must they not? We cannot get something for nothing, even in trade agreements, can we?

You refer to "economic self-containment." So far as we know the discussion of this theory has its origin in the State Department. Your testimony before the Ways and Means Committee in this connection could be interpreted as misleading. Let us hope it was not intentionally so.

We believe that even the most active of the opponents of the trade-agreement program realize that we must give as well as take. None of those who oppose the trade-agreement program as at present conducted wish for "economic self-containment." We now admit 61 percent of all our imports without any payment of duty and no one can truthfully accuse those persons who do not think it wise to remove the protection from the products which comprise the remaining 39 percent of being either "economic isolationists" or guilty of "economic provincialism."

While we cannot agree with you that the Hawley-Smoot tariff was the cause of the depression since that calamity was well under way when the act became law, we do know that that tariff act, the tariff of 1922, the emergency tariff and most of the other tariff enactments were brought about because of the fact that competitive imports were excessive and were damaging our producers. Do you deny that your program of reducing tariff rates and encouraging imports as a means of expanding our export trade will, sooner or later result in a demand for higher rates which no President or Congress can possibly resist?

In the years to come people will probably debate whether the next tariff act did or did not cause the next depression. Is it not at least possible that the present program may well be responsible for the next protective tariff?

Sincerely yours,

RHODE ISLAND TEXTILE ASSOCIATION,  
E. F. WALKER, Secretary-Treasurer.

[Editorial from the Providence (R. I.) Evening Bulletin of February 13, 1940]

## TRADE PACT DEBATE

We publish elsewhere on this page an exchange of correspondence between the Honorable Cordell Hull, Secretary of State, and Mr. E. F. Walker, secretary-treasurer of the Rhode Island Textile Association.

Although this newspaper is committed to the principle of reciprocal-trade agreements as a means of freeing international trade

from restrictions by quotas, excessive tariffs, and exchange controls, we have said plainly enough that we believe any industrial interest of New England should present factual material whenever it is considered that a particular trade treaty threatens it or is unfair to it. But we cannot believe that Rhode Island textile interests are much benefited by Mr. Walker's method of approach.

The tone of his communication speaks for itself. His implication that a mere file number attached to a letter from the Department of State is a record of the number of complaints received is absurd.

Such an exchange of correspondence is in reality addressed to public opinion. We doubt if Mr. Walker serves the Rhode Island textile industry well in representing to public opinion that the Secretary of State in his trade agreements is only engaged in log-rolling, that he is incapable of understanding Mr. Walker's arguments in economics, and that he has intentionally made misleading statements to Congress.

The textile industry has too good a case to deserve such brash argument. The issue of tariff protection is becoming an increasingly difficult one for this State in the present condition of foreign trade relations. We are a State of diversified industry. Some of our industries have a far greater interest in export trade than others. All of them are vitally concerned with tariff policy now and for the future. How they present their case to Washington and to public opinion is a matter of grave importance.

### Emancipators—True and False

#### EXTENSION OF REMARKS

OF

#### HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ADDRESS BY HON. ALFRED M. LANDON

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered on February 11, 1940, by Hon. Alfred M. Landon, of Kansas, at the Lincoln Day memorial exercises sponsored by the Mid-Day Luncheon Club, at Springfield, Ill., on the subject Emancipators—True and False.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As we look forward to the enormous decisions that all the world must make in this crucial year of 1940, we are vividly reminded of a single great contrast, the contrast between Lincoln and the two men who, out of the welter and confusion of the last war, have risen to the leadership of Germany and Russia. For both of these men claim that they, too, are "emancipators"; that they, too, have "freed the slaves" and given a set of ideals to the nations over which they rule. Two men whose political philosophies have spread, not only across the Old World but have even attempted to undermine the democracy of the new.

And because both Hitler, of Germany, and Stalin, of Russia, have found followers and admirers in this country, surely this is the moment to contrast their ideals with the ideals of Lincoln; their characters and political philosophies with the character and philosophy of the man whom we eulogize tonight.

Many books have been written about Lincoln, and by many kinds of men. Some have admired him intensely and passionately. Some have attempted to belittle his greatness and his wisdom. But I believe I am right in saying that not one of them, not even those who have attempted to debunk the Lincoln legend, have denied his innate kindness and generosity and his gentle yet salty humor. They may have questioned his wisdom but never his warm, down-to-earth humanity or his infinite patience with and understanding of the democratic mind.

What a different place the world would be today, if the followers of Stalin and Hitler could boast of their generosity, their gentle kindness, and their humor, and their understanding of democracy. How different it would be for all of us if the German Nation and the Russian Nation could, in very truth, look up to a Lincoln.

For what do Stalin and Hitler symbolize to the vast majority of this country? They symbolize the cruel, intolerant, lawless, treacherous state. They are contemptuous of man's right to worship God. They disregard and ridicule the morality of individual freedom. The ideas represented by them have meant, and mean now, to many millions, death by starvation—death by sword—death in concentration camps. Hitler and Stalin force the state to live and die for them. Lincoln lived and died for the State.

Living here in the safety of America, we can only realize dimly, the magnitude of the misery and suffering Stalin and Hitler have caused. It's not so much that our sympathy and our feelings are blunted—are dulled by repetition of shocking scenes of cruelty

and suffering, but rather, their very enormity blocks the "gates of perception." A man can carry a hundred pounds, but not a ton. There is a limit to our imaginations. Our minds cannot grasp these huge massed brutalities, that make the Dark Ages a living present. Our thoughts cannot turn so quickly back to the distant and terrible age of Genghis Khan, and grasp the fact that once again it is actually here.

I thank God that tonight this Nation turns, in annual pilgrimage, to the memory of a man far, far different from these; to the memory of a man who symbolizes—not dictatorship, but democracy; to the memory of a man whose life gave proof of his absolute devotion to the theory of the Republic; to the memory of a man who is remembered, not only for victories won, but for humanity served.

In Lincoln's life we can read one of the greatest pages of human development. That page is proof of the force of exalted, passionate, enthusiastic conviction. Centuries of tyranny ended at the hands of this practical idealist, who could write poetry in prose. He succeeded in his mission because he combined the practical politician with the vision of a poet—the vision of a poet with the wisdom of a statesman.

Lincoln's appeals to the people were never based on their material needs, but on their spiritual needs. There was no stirring-up of enthusiastic hate to achieve his leadership, as is the mode today, both at home and abroad. No president has been so misrepresented, lied about, and maligned, as was Lincoln. But he met the hatred of others with personal magnanimity. He was the object of hate, but not the instrument through which hatred of others might grow. Always the people heard the voice of common sense, stirring as a bugle call, in his beautiful prose. He tried always to get people to behave like rational human beings, and to calm their passions, even while stirring them to fight a terrible war.

Lincoln's humor played over the serious problem of the most serious 4 years of the Republic's life, but not in a light, puckish, adolescent way. It was an asset, not only to himself and his colleagues, but even to the whole Nation. We may laugh to frustrate criticism. We may ridicule others to silence them. Or, as with Lincoln, we may join with others in laughing, to gain the strength and sanity that we all need to make rational decisions, unaffected by haste or bitterness. Lincoln's humor loosened the minds and helped the understanding of men. And, because it came from the mind as well as the heart, his homely philosophy not only offered an escape from the tension of trying problems, but it helped men to comprehend those problems.

Lincoln's humor was always meaty, if salty. It cleared up the real point at issue, preventing confusion and perplexity of thought. It was always apt, and to the point, and—more important still—there was always something solid in it, that you could put your teeth into, while you enjoyed a good belly laugh.

Lincoln was the rare combination of a first-rate evangelist and an able administrator. He was the one exception that I know of, in all the history of the world, to the rule that wars must be fought by extremism. He fought a successful one, on the basis of reasonable toleration.

It is clear from reading Sandburg's great life of Lincoln, that at no time in the 4 bloody years of war was Lincoln unwilling to make a just peace. It is true that with the passage of time a just peace became less and less possible. Again and again, some sort of peace negotiation was attempted, always with the sympathy of Lincoln. He hoped and prayed that the war might be ended by the breaking of the light of reason, before that light should be extinguished in suffering and total exhaustion. He saw what few statesmen see—that the best peace is not always made on the basis of utter and decisive victory.

To say that patience governed the whole attitude of Lincoln, the war President, is to say only the truth. Unlike Stalin and Hitler, Lincoln did not disregard human suffering. He pursued the war with the highest degree of energy and foresight. But even so, his forbearance was an irresistible force and an inexhaustible treasury.

But perhaps the greatest difference between Lincoln and Stalin and Hitler is in their backgrounds—in the backgrounds that formed their natures and crystallized their philosophies. Lincoln had a wide experience in politics and government. He had contacts with the courts, with county and local governments. He had participated in many political campaigns. He was, in fact, a practical politician as well as a statesman. Stalin and Hitler's ideas of government are based mostly on street-corner pamphlets. Their practical political experience has been only as conspirators, based on the technique of revolutions, bloody and bloodless. They learned their political ideas in the dark atmosphere of beer halls and cellars. A very different background—a much more varied experience—is needed for holding power and using power wisely. A far truer wisdom is needed to make the state serve the welfare of the people.

And with wisdom, and experience, and background, there must be understanding. Understanding of people as individuals—understanding of everything that makes for development of individual responsibility—understanding, in fact, of the principles on which popular government is based. And Lincoln had a real appreciation of individuals as individuals. He was not afraid, as Hitler and Stalin are afraid—of the free individual, either singly or in the mass.

Stalin and Hitler kill off merit when it fails to "yes" them. Lincoln tolerated a Secretary of War and a Secretary of State whose differences with him amounted almost to contempt, and in the end won their allegiance and their respect. He knew that a government of a free people must be composed at the top, as

well as at the bottom, of free men. A free people is not governed by a single leader surrounded by a group of servile followers. A government of a free people must be led by a leader great enough to tolerate the suggestions and criticisms of those close to him. Big men will not serve a leader who insists upon blind obedience, and free government needs the best serving of the biggest men.

It was this accurate understanding and handling of men that enabled Lincoln to shape the fate of the Nation he served. Lincoln had few books—which he read and reread. He learned chiefly from his daily contacts on the muddy roads of Illinois. His talk was the talk of the courthouse and tavern crowd. He relished their stories and comments. His was the lusty life of an outdoor people. Yet, Lincoln did not study them with the inhuman detachment Hitler reveals in his *Mein Kampf*. Lincoln's thinking developed out of his associations and his attachment for the common people. His insight and his impulses were of them and with them.

Many a politician has started with this insight and background but lost it as he moved on to the State capital and to the National Capital. But Lincoln continued to grow for he never lost the flavor of his early surroundings. He is an outstanding example of what is needed in man to make him great, and to enable him to be of real usefulness to his day and generation. This is because he was born small and grew great. He exemplifies the capacity of man for growth of character and intellect during the entirety of a lifetime. Almost without exception, it is unfortunate for a man, when he is "born" into a place of great responsibility. He has missed the opportunity for growth, so vital to understanding and true greatness. Perhaps that is why so many of the really great and worthwhile rise from a humble beginning.

It is much better to have the opportunity for change, for shift of focus and purpose, for growth in the nature and character of ambition. You find this in Douglas, as well as in Lincoln. To me the most stimulating incident of our political history is Douglas stepping forward to hold Lincoln's hat at his first inaugural. "It was a trifling act, but a symbolic one." Party leaders must serve as well as he served.

Lincoln's vision embraced more than the immediate problems and dangers of his day. He was concerned about the danger of new powers created in government, in the desire to curb old tyrannies. On one occasion he said: "Is there in all republics this inherent and fatal weakness? Must a government be too strong for the liberties of its own people or too weak to maintain its own existence?"

That is indeed the menacing question of today. How far dare we go in creating new powers for the so-called protection of the weak, and what are those new powers doing to the future life of the Republic in which Lincoln so fervently believed? The answer depends on just one thing: Do we have a whole-hearted belief in democracy or are we merely paying democracy a casual lip service?

One of our troubles today is that too many people in positions of influence and power do not believe that the man on the street—the average man and woman—has the qualities on which we can build. And, strangely, many of the Marxist academic liberals have the same contempt as the so-called special-privilege group has for the average man.

Take the terrible history of collective bargaining. The appalling resistance, the awful needless strife, the social waste, of this conflict between employers and employees. All because many employers said we could not deal with labor unions until they showed a sense of responsibility. For many years this excuse was used to deny women the vote. "We must wait," it was said, "until they show a sense of responsibility."

Industry must realize that if labor is compelled to fight for its life every step of the way it can and will only mean guerrilla warfare. And such warfare means creation of new government bureaus and endowing government with new powers. It must accept the fact that the average man and woman develops under responsibility.

Converts cannot be made by force to a sense of responsibility. People cannot be taught by force the successful workings of popular government.

The two dictators Stalin and Hitler do not trust the average man and woman. Lincoln did. So must we. Government is stirring up bitterness. Industry is stirring up bitterness. Labor unions are stirring up bitterness. If this country is to have a real and lasting prosperity all bitterness and distrust between government and industry and labor must be dispelled. Only if government stands for strict and impartial justice, as well as peace, can prosperity be accomplished. A partisan government can only accentuate conflict. If the Government is to have the confidence of all interests, it must stand for no one interest. It must, with true justice and true impartiality, represent all. And, if we are to remain a Republic, we must never lose confidence in the inherent political capacity of each other. Unless that be true—I mean, unless the mass is capable of exercising responsibility, there is no breath in popular government. Our perceptions may be imperfect, but there must be, and is, more good than bad in our combined intelligence. I repeat again, unless this be true there is no breath left in the Republic.

It is no accident that the autocratic Hohenzollerns and Romanoffs produced a Hitler and a Stalin, while popular government produced a Lincoln.

The principal message the two great bloody dictators bring to all men is: That no nation can succeed where there is hatred instead of tolerance; distrust and contempt for the common people, instead of confidence and trust. But the message of Mr. Lincoln still radiates good will. The Lincoln legends are enriching the lives of many peoples. The Lincoln language still retains its vitality for all men. The Lincoln spirit still catches the imagination of new generations.

The methods of popular government are still superior to the methods of dictators.

Instead of this Nation, and other nations, drifting away from the memory of Lincoln, many movements gather around the prestige of his name. The principles of Lincoln are the essence of the common faith of all free men. The principles of Lincoln were born of peace and of war. They represent tolerance in war, fortitude in defeat, forbearance in victory, optimism in peace, mutual helpfulness in the restoration of broad and enduring prosperity.

And so tonight let us who have gathered here in Lincoln's memory pledge ourselves, as he pledged himself, to these principles, in the firm belief that they are lessons for the year 1940 and for every year that follows.

The prophets of old, sitting out on the hillsides of Chaldea, when civilized nations were forming, saw there were certain things you could not write into a lawbook. They knew that if civilization was to survive, mankind must develop consideration for one another, and a certain thoughtfulness for one another's problems; that without consideration, and pity, and warm humanity, our lives would be filled always with the bitterness and rancor of war.

Lincoln proved to us that the good thread which runs through the lives of just ordinary persons is the thread, the true principle, which binds and ever will bind this Republic into a sound and healthy and peaceful union.

He knew that we must have a genuine confidence in the average man; that we must trust his intellectual integrity; that we cannot lose faith in those qualities in man which we think of as spiritual. For it is these qualities that make nations, that make civilizations, that make all greatness of the human race.

Popular government was born of that faith, and still rests upon that faith.

#### EDITORIAL FROM THE NAUTICAL GAZETTE

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Nautical Gazette of January 1940, with reference to the attitude of the United States toward Finland.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the January 1940 issue of the Nautical Gazette]

#### SUPPORTING FINLAND IN RESISTING SOVIET INROADS

Americans have a canny manner of avoiding commitments which laud another foreign country. They may admire a nation for many reasons but some qualification is usually injected. The present exception is Finland. Since the Soviet hordes were first lunged against the Finnish defense lines, the sympathies of the New World have been solidly for the brave republic. The promptitude in payment of interest on its debt could have some bearing but the monetary angle is not the motivating cause. The beauties of that country's scenery with its thousands of lakes and waterfalls may have a certain appeal but the esthetic approach would not bring such conviction. The romance of the historic ports and the stalwart ships operated under sail or by modern propulsion are compelling to those who are nautically minded. The real basis for our admiration lies not in the realm of materialism but in Finnish ideals and accomplishments. We see a counterpart of our own form of democracy and we like it. We behold a people of fortitude who resist imposition of communism and fight to retain their liberties. Though the odds are against them in numbers we don't pity the Finns—pity, indeed, for old people and children but straight, undiluted esteem for the women and men defenders.

Finland is a frontier of our very existence and the battleground for preservation of numerous benefits of individualism; freedom of worship, sanctity of the home, and maintenance of progress. That isn't being too emotional—it is factual. The collapse of Finland under the tenets of sovietism would bring the menacing border closer to us and threaten everything we hold dear from family life to our savings accounts and life-insurance policies.

Since the establishment of Russia's Bolshevik regime, Americans have been regarding the set-up as experimental and with the view that they are entitled to a form of government of their own choosing. We have sent over experts to aid in technical developments. We have permitted a Soviet bond flotation in this country. We have traded with them and granted rights to their agency, Amtorg, under the corporate laws of a State. In the meantime, communistic propaganda has been poured in sundry places in our 48 States as well as our Territories. We have been too tolerant and too damned good to Moscow.

It may be wise for the United States to sustain a neutral position in the conflict between the German and the British-French forces. But how can we assume any conciliatory attitude toward the Stalin incursions? It is doubtful whether our old friends in Hamburg and Bremen relish the idea of the absorption of their sister Hansa cities under Soviet rule. There is a question whether the German people who have long been exponents of private enterprise find anything gratifying in this Soviet effort of expansion. The day may come when Great Britain, France, and Germany evolve solutions to their difficulties. The continuation of the Finnish successes in keeping Russia out of Scandinavia may be the precise turning point. If we are to foster peace and defend our own institutions, aid to the Finns in their struggle against the dictators of pagan and tribal collectivism is our implement. Esteem is not enough—it must be specific. The efficient means is to contribute to the campaign for relief funds headed by ex-President Hoover.

### Silver-Purchase Program

EDITORIALS FROM THE NEW YORK JOURNAL OF COMMERCE  
AND THE NEW YORK TIMES

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the New York Journal of Commerce of today, February 15, entitled "Delay on Foreign Silver," and an editorial appearing in the New York Times of today entitled "The Silver Folly."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Journal of Commerce of February 15, 1940]

#### DELAY ON FOREIGN SILVER

The Senate Banking Committee has decided to delay reporting out the Townsend bill to repeal the provisions of the Silver Purchase Act of 1934 under which the Treasury has been buying vast quantities of silver abroad. Despite the favorable vote on this bill by a subcommittee headed by Senator CARTER GLASS, the full committee decided to hear from the Treasury and State Departments first, before acting.

Since Mr. Morgenthau has opposed silver purchases abroad, it is to be presumed that he will not encourage a continuation of this monetary folly. Originally, the Silver Purchase Act of 1934 was enacted to stimulate a rise in commodity prices in this country and to give financial relief to China. Actually, the buying of large amounts of silver has had no perceptible effect upon commodity prices either way, while, instead of helping China, that country was forced off her age-old silver standard and compelled to adopt a managed currency by our purchases of the white metal.

More recently, however, the continuation of silver purchases abroad has been favored for reasons of foreign policy. In 1937 and 1938 our purchases of large amounts of silver from China, which had no need for the metal after she was forced off the silver standard, doubtless aided that country to finance the war with Japan. However, China's silver exports last year dwindled sharply, and a considerable part of it was received from the portions of the country occupied by Japan. As a result Mexico has become the one major beneficiary of our foreign silver buying.

When Senator BARKLEY, the majority leader in the Senate, asserted earlier this week that American trade with Mexico, Central and South America might be seriously jeopardized by the cessation of foreign silver purchases, he was far from accurate. Our purchases of silver from countries in Central and South America, outside of Mexico, are comparatively negligible.

It is true that we bought upward of \$25,000,000 of silver from Mexico last year. However, it profits this country little to export goods in exchange for silver for which we have no earthly use, and of which we already possess some 3,000,000,000 ounces. Furthermore, it is quite doubtful that we can maintain our exports to Mexico, owing to the foreign exchange difficulties in that country, regardless of silver purchases.

The proper course of procedure for this country would be to halt silver purchases abroad, as futile and wasteful, regardless of other considerations. If, however, considerations of foreign policy are to affect the decision with regard to foreign silver buying, then there is all the more reason to halt silver purchases abroad, in view of Mexico's flagrant disregard of the property rights of American citizens and corporations, whose holdings there have been expropriated in cynical disregard of the elementary tenets of international law.

[From the New York Times of February 15, 1940]

#### THE SILVER FOLLY

The Senate Banking Committee has delayed action on a proposal recommended by a subcommittee to discontinue Treasury purchases of foreign silver. Senator BARKLEY declares that "this matter involves our foreign policy as well as purchases here by nations who have been sending us silver. Most committee members thought it best for us to consult the State and Treasury Departments before acting."

It will do no harm to consult the State and Treasury Departments, but no weight ought to be given to bad arguments from any source. Last spring some officials of the State Department were represented, perhaps unfairly, as believing that we must continue to buy Mexican silver that we do not need, and continue to pay a wholly artificial price for it, to prevent Mexico from expropriating American mines. If we bought Mexican silver for this reason, then our purchases would be in effect a form of political blackmail paid to keep more American property in Mexico from being seized.

It would be difficult to think of a worse argument than that for continuing our purchases of foreign silver—unless it is the argument, sometimes attributed to Treasury officials, that we must continue to buy silver that we do not need at wholly artificial prices in order to supply the countries from which we buy it with the purchasing power to take our goods in return. Such an argument is fantastic. We could accomplish the same result by buying sand from Mexico or Canada or elsewhere at \$10 an ounce. If a jeweler stood outside of his store and handed \$20 bills to passers-by in the hope that they would use them to buy his watches he would hardly be doing anything more ridiculous in principle.

There is not the slightest rational excuse for our continuing longer to subsidize foreign countries out of our Treasury so that they can make us the world's dumping ground at fancy prices for a metal that we do not need.

### Lincoln on His Last Birthday

#### EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ARTICLE BY EMANUEL HERTZ

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a learned and poignant essay entitled "Lincoln on His Last Birthday," written by Emanuel Hertz, an outstanding authority on Abraham Lincoln. The article appeared in the New York Times Magazine on February 11, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times Magazine of February 11, 1940]

LINCOLN ON HIS LAST BIRTHDAY—ON THE LAST FEBRUARY 12 OF HIS LIFE THE WAR PRESIDENT WAS PLANNING THAT MORAL REUNION OF NORTH AND SOUTH WHICH THE BULLET OF AN ASSASSIN WAS TO POSTPONE FOR A GENERATION

(By Emanuel Hertz)

Abraham Lincoln's last birthday on earth fell on a Sunday. No record survives to show that any notice of it was taken in the White House, or anywhere else. We know from the diary of Attorney General Edward Bates that "beautiful, moderate weather" prevailed, but Bates made no further entry and his fellow Cabinet members, Welles and Chase, found nothing to set down in their journals.

Lincoln himself left no written comment. We do find among his papers an order issued on that day which shows how little nearly 4 years of war had done to turn the Illinois lawyer into a military dictator. It went to Maj. Gen. John Pope in St. Louis, and it directed him to stop the practice of permitting military provost marshals in Missouri to seize the property of rebel sympathizers who had given bond for good behavior. "The courts and not provost marshals," Lincoln wrote, "are to decide such questions unless when military necessity makes an exception."

Probably Lincoln did not feel the lack of a birthday party, for despite continuing worries and some disappointments he had reason

to believe that the war was coming to a victorious close. What hurt him most was the thought that lives must continue to be sacrificed after the military outcome was all but certain. In the past his generals had often made it hard for him to show mercy. Now in a few months, if all went well, there would no longer be a cruel "military necessity" to destroy.

Mercy was in Lincoln's mind on this last birthday. On that day he, who was to die on April 15 by the hand of a demented fanatic, pardoned a physician who had been held for some breach of war-time regulations. The man, he thought, was "partially insane." On that account "he should be discharged."

His deepest thoughts, the broodings of these final days and nights, we cannot fully know. We do know that they were not darkened by dread of approaching assassination. He sorrowed with North and South alike over the lives that had been spent and were to be spent, but he had no fear for himself. If risk had to be taken he, above all men, was ready to take it. The Commander in Chief, he must have reasoned, could not send other men to their deaths and take too much thought for his own safety.

To Ward H. Lamont he once said, "I long ago made up my mind that if anybody wants to kill me he will do it; if I wore a shirt of mail and kept myself surrounded by a bodyguard it would be all the same." To Col. Charles G. Halpine he spoke in the same vein: "It would never do for a President to have guards with drawn sabers at his door, as if he fancied he were, or were assuming to be, an emperor." He figured shrewdly, too, that the South would prefer a man known to be kindly in his feelings toward his enemies rather than the more belligerent Johnson, who would succeed him if he were killed.

So he faced this birthday saddened and wearied by the frightful ordeal he had been through, yet beginning to see light ahead. The dawn was coming, just as he had seen it years ago breaking over the Illinois prairies—coming with the splendor of victory, but also, for him, with something far more important—peace, forgiveness, the beginning of a new friendship between the sections.

Lincoln wanted reconciliation with all his heart. It is true that he would not accept a compromise which left any vestige of slavery intact, or which weakened the Union. He had made that plain and may have been reflecting on the sad necessity as he sat in the White House on this last February 12 he was to know.

First, he had urged his generals to an early victory. When Sheridan wrote him, "If the thing is pressed I think Lee will surrender," he had replied, "Let the thing be pressed." But he did not want to press into the mud the people of the South, whom he never ceased to look on as fellow Americans.

He had left no stone unturned. Nine days earlier he had gone to Hampton Roads, with Secretary Seward, to confer with three Confederate representatives on a possible truce. The three men were Vice President Alexander H. Stephens of the Confederate States, Senator R. M. T. Hunter, and Assistant Secretary of War John A. Campbell.

He must have chuckled a little, and sighed, as he thought of that conference. There was little Aleck Stephens, who had come wrapped up in two big overcoats. Lincoln remarked aside to Seward that Stephens was "the smallest nubbins that ever came out of so much hulk." Good old Aleck, anyhow. He and Lincoln had been together in Congress years before. Lincoln had been moved, even to tears, by the Georgian's eloquence in those days. Aleck was the kind of man Lincoln might appeal to to help rebuild the South when the war was ended.

There had been informal and friendly talk, for in the midst of a frightful Civil War these old friends could not hate each other. Lincoln would have been thinking of what he had said to Stephens as they parted. "Well, Aleck, there has been nothing we could do for our country; is there anything I could do for you personally?"

Stephens had thought a while. "Nothing," he had said finally, "unless you can send me my nephew, who has been for 20 months your prisoner on Johnson's Island."

Lincoln wrote the name down—Lt. John A. Stephens. A moment later the two friends parted forever—though this could not be known to either of them. The big overcoats went on again and the little Georgian went back to Richmond and his lost cause. But Lincoln did not forget the imprisoned lieutenant. He had taken steps to get him out of prison, bring him to Washington, and send him home. He would see him, speak kindly to him, use him to prove to Stephens and the others that the northern government had something besides gall in its heart.

The conference had failed. Lincoln had to admit that. Lincoln had gone farther to make it a success than the public was to know for many years afterward. He had taken a sheet of paper and said to Stephens: "Aleck, you let me write the word 'Union' on top of this sheet and you may write whatever you wish below." Stephens verified this incident 17 years later at a dinner given when he was inaugurated Governor of Georgia—his last political honor. Both Col. Henry Watterson and the younger Clark Howell, present at the dinner, later confirmed what Stephens had to say.

But Stephens had his own word to write at the top of the sheet. That word was "independence." The slaughter of brother by brother had to go on until one or the other of these words was erased in blood.

Still Lincoln thought there might be a way out. He came back to Washington, and on February 5, just a week before his last birthday, he had made a proposal to his Cabinet. The thirteenth amendment, abolishing slavery forever, had gone to the States on January 31 and had been ratified by Illinois on the following day.

The Northern Commonwealths were hurrying to get it into the Constitution.

Lincoln would not compromise with the principle of abolition. Yet he would soften the blow, for North and South alike. He had told Stephens his hog story, and must have smiled at the recollection. It was about the man who had a large herd of hogs, and to save the trouble of feeding them had planted a field of potatoes in which they could root. A neighbor pointed out that butchering time for hogs came in December or January, whereas the ground in Illinois froze a foot deep after the early frosts. "He scratched his head," said Lincoln, "and at length stammered, 'Well, it may come pretty hard on their snouts, but I don't see but that it will be root, hog, or die.'"

The South would have to root or die if its labor system were suddenly abolished, and the old system of property rights turned topsy-turvy. But the Lincoln who could tell this robust story longed to ease the transition. So, a week before his birthday, he had pointed out that the war was costing \$2,000,000 a day and would, therefore, cost \$400,000,000 if it dragged out for 200 days longer. Why not pay this sum to the South to compensate it for the loss of its slaves?

The Cabinet unanimously said no. Lincoln sadly entered an endorsement on the back of his proposal: "Today these papers, which explain themselves, were drawn up and submitted to the Cabinet and unanimously disapproved by them. A. Lincoln." Perhaps on this last birthday he took the packet out and looked at it. He longed so terribly for this shedding of blood to cease, this agony to pass.

But he would shake off the mood of despondency. He had work to do. He was looking ahead. Sooner or later—probably this year, 1865—the war must end. He had plans for reconstruction and was quietly building an organization which would help him to carry them out. He had been growing steadily toward the magnitude of that task. If he had sometimes been a hesitating, cautious Executive in 1862 and 1863 he was such no longer. He was sure of his powers and of his resources. He was using the gifts of a supreme politician to carry out statesmanlike projects. He knew that mountains had to be climbed by slow and laborious steps.

He had built up a political "machine" for the safety of the Union and the reconciliation of its people. Patiently, through endless days and nights, he had conciliated the political leaders of the North, giving them patronage where it would do the least harm in return for their support. He knew the best angle of approach to almost every man in public life, knew his whims, his special interests, his soft spots.

He was looking toward the men of the South, too: Stephens, of course, who might have been president of the Confederacy had he not originally opposed the attack on Sumter; Robert Toombs, the eloquent Confederate secretary of state, who had also left the Union with regret; Governor Brown, of Georgia; Governor Vance of North Carolina, another early opponent of secession. These men were not rebels and traitors. They were Americans caught in a fix. They wanted peace and justice as much as he did. He could use them when the fighting was over.

The times were in flux. The swift current of destiny was sweeping the Nation along. Lincoln, perhaps sitting with his feet cocked on his desk, a slouching, ungainly figure of a man who was nonetheless majestic, could imagine the ship of state coming into calmer seas and more favorable winds. He could not know that a little later Walt Whitman would be writing, O Captain! My Captain!

A year earlier Lincoln had been doubtful of his reelection. Now there was even talk of a third term. The people of the North were less and less willing to let him go, even after another 4 years. Four years of peace, perhaps—4 years to "bind up the Nation's wounds."

A committee of Congress had been to call on the President 3 days earlier. They had news for him, though he had heard it before. They announced to him with profound solemnity that the electoral votes had been duly canvassed and that he had been the chosen candidate. He was moved, saying to them:

"With deep gratitude to my countrymen for this mark of their confidence; with a distrust of my own ability to perform the duty required under the most favorable circumstances, and now rendered doubly difficult by existing national perils; yet with a firm reliance on the strength of our free Government, and with eventual loyalty of the people to the just principles upon which it is founded, and above all with an unshakable faith in the Supreme Ruler of Nations, I accept this trust."

The "trust" had 2 months to run, but this fact was mercifully unknown to Lincoln—except as it may have been foreshadowed in troubled dreams.

He meditated his plans. He could straighten out a number of things, big and little. He would send Secretary of State Seward to London as Ambassador and make that fiery enemy of slavery, Senator Charles Sumner, his successor. He could tame Sumner and teach him mercy and forgiveness. He had overcome Secretary of War Stanton's earlier hostility and changed it into idolatry. He could use Stanton: "It is not for you to decide when your duty to your country ceases," he had told the Secretary. Salmon P. Chase had been more of a problem as head of the Treasury, but Chase was safely removed from politics into the Chief Justiceship.

Lincoln had taken pains to conciliate the radical leaders in Congress who might ruin his plans for reconstruction—Colfax of Indiana, the hotheaded and bungling Ben Butler of Massachusetts, and especially Thaddeus Stevens of Pennsylvania, the most powerful Member of the House. He had made allies of them. If

Stevens wanted a constituent appointed consul to St. Helena, Stevens could have his way—provided there wasn't another deserving Republican already sitting on the lonely rock.

Lincoln looked far ahead. He was already restoring order in the conquered parts of the South. He would go ahead. He foresaw little opposition. He thought patience, kindness, magnanimity armed with political sagacity would do wonders. Was he not a Kentuckian by birth? Hadn't he had southern friends? Didn't he know the South and couldn't he teach it to trust him?

He could not have heard the inaudible sigh, could not have seen the flutter of invisible wings, that went up and down those corridors of the White House and into that room where he was soon to lie in state—dead, the great brain unconscious forever, mercy and love for the time being silenced by an assassin's bullet.

The Nation would recover—that he was certain. He thought of the discharged and disabled soldiers, of the enormous debts that had been piled up. Then he looked westward, toward the rich prairies and the fabulous resources of the mines. "I am going to attract them," he wrote, "to the hidden wealth of our mountain ranges, where there is room for them all. Tell the miners for me that I shall protect their interests to the utmost of my ability, because their prosperity is the prosperity of the Nation."

He prophesied well, for it was the West that did in fact absorb the discharged soldiers in great numbers, and out of the West came the wealth that would repair the shattered physical resources of the Nation. But neither from the West, nor from the North, nor from the East came the mercy that was in Lincoln and that glowed so tenderly during these last days.

The President must have been forming in his mind, even then, on his birthday, the majestic phrases of the second inaugural. He was taking pains with his message, just as he had done with the brief address at Gettysburg. He wanted to speak to the whole Nation—to cross the firing lines and bring reassurance to the suffering people of the South.

A victor he had to be. In that role fate had cast him. A conqueror he was not—no Napoleon, no emperor drunk on the heady wine of blood-won success. The plain man of the people, the teller of homely anecdotes, the lanky Kentuckian who liked to lounge with his feet higher than his head, this man still existed; but the other Lincoln, the great humanitarian, the statesman, the commander, the mystic, was more and more in evidence during these final days and weeks. It was this man who sat at his desk in the White House on February 12, 1865, or wandered through the halls—thinking, thinking, planning, planning, hoping, hoping.

The noble words were rising out of the depths of his being. He would confess the common guilt of North and South, he would renew his fervent avowal of faith in a living and just God, he would profess with the utter sincerity of a man who has suffered each wound, died each death during a long civil war, "malice toward none, charity for all."

Lincoln was striding toward martyrdom and immortality, but what he certainly saw on his last birthday was the dawn of peace on earth, good will among men. He could not know that the bullet of a southern fanatic was to shatter his beneficent hopes for the South, postpone for a generation the moral reunion of the two sections, and cause suffering only second to the agony of war itself.

### Workers Profit!

#### EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1940

ARTICLE BY DR. JOSEPH F. THORNING

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Dr. Joseph F. Thorning, entitled "Workers Profit!" which appears in the magazine *The Sign* for January 1940. It explains very briefly a profit-sharing plan for workers in industry. I have long been an advocate of profit sharing in industry as a means of bringing about stable labor conditions, and common fairness to the workers themselves.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From *The Sign*, Union City, N. J., January 1940]

WORKERS PROFIT!—THROUGH VARIOUS PROFIT-SHARING ARRANGEMENTS MILLIONS OF WORKERS HAVE FINALLY ACHIEVED THE STATE OF PARTIAL PARTNERS

(By Dr. Joseph F. Thorning)

One of the most explicit recommendations in the Papal encyclical, *Quadragesimo Anno*, is that the workers "become sharers in some way of the ownership, or management, or profits" of indus-

try. Unlike Lenin, Pius XI considered that society would benefit from a much wider distribution of wealth and income. Collectivization, in the eyes of the Sovereign Pontiff, meant concentration of political and financial control. Sharing, on the other hand, meant social security for the worker and his family. "Working" and "ownership," it was suggested, should be almost synonymous terms.

Distribution of income sounded like a lovely theory and nothing more as long as red ink splashed all over the pages of annual corporation reports. "How can you divide a melon that has withered on the vine?" This was the plaint of businessmen and manufacturers who were struggling to meet pay rolls and keep their plants open in the hope that conditions would improve.

Quickly scoring another point, the industrialists added: "What we would like now are worker-investors who would be willing to share our losses. Gross revenue doesn't begin to cover operating expenses. Before we can have a sharing of profits we must declare a few dividends. You can't cut up the skin of the bear until you've caught the bear."

At the threshold of a new fiscal year it is fair to weigh the merits of this challenge. What is the profit-and-loss position of industry? Are the directors and owners of industry operating at a loss or are they sitting at the receipt of custom? Is the current trend toward concentration or distribution of wealth?

Year-end statements of more than one thousand representative corporations show the astounding increase of 300 percent in dividend payments to stockholders. Since substantial sums were voted for surplus and reserves, the amount of profit exceeded this percentage.

Shareholders were voted \$662,922,108 by 1,163 corporations. The total compared with \$210,884,738 for 819 corporations in the preceding report. In five cases only were dividends omitted, while in 40 instances dividends were resumed. Increases were more numerous than reductions. Financial journals reported that the dividend picture reflected "the sharp improvement in business since midyear."

In other words, it is important to realize that industrial America is once more in an ascending spiral of production and profits. Nowhere was this fact more dramatically portrayed than in the transportation manufacturing field. A survey of 80 companies revealed that the net gain in profits was five and one-half times greater this year than in 1938, representing a percentage increase of 448. Sales in the domestic market accounted for practically all this improvement, thus minimizing the effect of a world-war economy.

Spectacular as are these results, they are scarcely unique. Once before in this generation we were treated to the spectacle of rich plums on the dividend tree. The 3 years which immediately preceded the stock-market crash of 1929 were notable for soaring prices and a blizzard of dividend declarations. Some corporations, such as General Motors, prospered to such an extent that they were not only able to enrich stockholders by a 5-to-1 share split-up but also piled up the enormous surplus of \$212,000,000.

As a result, the company rode out the economic storm with a minimum of inconvenience for the directors and owners, although the same optimistic statement cannot be made about the thousands of automotive employees who were thrown on the county, State, and Nation for relief. If we learn anything from the 1920-29 experience, we should have decided that a surplus is just as important for the worker as for the corporation. And surplus is only drawn from income.

Pope Pius XI knew this, and that is why the late Pontiff recommended that more, not less, property be lodged in the hands of the laborers. His Holiness, Pius XII, shows his zeal for the same ideal when he speaks in the *Summi Pontificatus* of the harmony between "the laws that govern the life of faithful Christians and the postulates of a genuine humane humanitarianism." In the next clause, the Supreme Shepherd stresses the need for "unity and mutual support." Unless humanitarianism is to remain merely a name, it is obvious that respect must be paid to the claims of the worker for a family wage that will tide him and his children over periods of depression and unemployment. To what avail is it to the automobile worker in Detroit, who gains \$15 a day from Chrysler, or General Motors, or Ford, as long as the rush season is at its height, but who, in counting up his income on a yearly basis, finds he has received between twelve and fourteen hundred dollars, a sum which leaves no margin for life insurance, vacation projects, or cultural pursuits?

Social scientists who have charted the cost of housing, food and taxes in the Detroit area, estimate that \$1,600 dollars will barely suffice to cover the requirements of a family health-and-decency wage. The same students of the social scene marvel over the fact that the Chrysler Corporation can report a profit jump from \$1.53 a share for the first 9 months in 1938 to \$7.22 a share for the same period in 1939, while the employees of the company are expected to display the carnival spirit in view of the recent wage increases which are reckoned in pennies, not quarters or dollars. Speaking of the latter change, President K. T. Keller of Chrysler Corporation complacently remarked:

"We are pleased to be able to give the wage increase, which we expect will amount to about \$5,000,000 a year."

This one-big-happy-family statement was released to the press on November 29, 1939. On December 1 of the same year the financial pages of the great metropolitan dailies reported that net profit for 9 months only had aggregated \$31,403,118. In other words, a \$5,000,000 melon was split up among thousands of employees, whereas hundreds of stockholders (some of them owners of thousands of shares) divided up a melon six times as large

To be sure, the latter take the risk of business losses, but the workers run the much more serious risk of accident, illness, or protracted lay-offs. President Keller would accomplish a service if he would publish a break-down of the above figures, indicating clearly the number of people benefiting from dividend and wage increases.

A brighter, more heartening feature of the present situation is the practice of the two leading companies which produce electrical equipment. The General Electric Corporation just sliced up a \$4,750,000 holiday melon. The money was distributed among 67,000 employees. The latter had 5 or more years of service to their credit, sharing on the basis of 12½ percent of earnings available for common-stock dividends. Rises in the cost of living, computed upon the United States Department of Labor index, are taken into account to provide another \$2,350,000 bonus to the workers of this company. This profit-sharing plan has been working successfully for 5 years.

Talking with several General Electric employees, I found widespread satisfaction with their participation in the prosperity of the corporation. One of the foremen remarked: "Since the inauguration of the new plan we don't have to bother about any speed-up schemes. The men themselves know that increased productivity is to their own advantage. Moreover, they watch quality in the equipment we produce. The work of inspectors has been rendered almost superfluous. Every employee is a manager under this arrangement."

Directors of the corporation are equally enthusiastic. One of the high executives told me that "employer-employee partnership doesn't seem the impossible ideal that it appeared to be 20 years ago. All our men look forward to the day when they will be able to show 5 years' service and share in the rewards. It is a premium on steady, reliable workmanship. The incentive to share in the corporation's gains is tremendous. Waste is practically unknown in our shops and factories. Suggestions from the rank and file are constantly adding to the efficiency of our methods. Incidentally, the increased money pouring in at stated intervals enables the workers to buy more of the labor-saving devices of our corporation for the benefit of their wives and children. Every wage dividend is reflected in the home."

In Pittsburgh, Westinghouse Electric & Manufacturing Co. announced that it was stepping up the wage bonus from 4 to 6 percent for 45,000 employees. The Westinghouse plan has been in operation for 3 years. The fortunes of employees go up or down with the company's output and profit. According to this system, wages are boosted 1 percent for every \$60,000 earned above six hundred thousand; they are cut by 1 percent for every \$60,000 unit below this average. The year 1939 was a good one, inasmuch as more than \$3,000,000 were devoted to wage dividends. Incidentally, both General Electric and Westinghouse are in a stronger financial position than they were before the inauguration of the plan. Obviously, the two companies would enormously benefit by the application of the profit-sharing principle to all industries.

A much more elaborate system has been worked out by the Carrier Air Conditioning Corporation, of Syracuse, N. Y. This is a graduated profit and loss-sharing plan developed by Mr. James A. Bentley, vice president in charge of finance, after a study of the best features of 60 different systems.

The key to the administration of this project is a classification of each job, regardless of the individual incumbents. This means that for each niche in the productive phase of the company there is a standard of qualifications, with a minimum and maximum salary or wage base. The actual base rate paid to an employee in a particular job is in accord with his qualifications.

Each month the company computes average net income or loss for the preceding 12 months without reserve or reduction for income or profit taxes. Wages then are adjusted on a percentage basis, determined by dividing 20 percent of the previous 12 months' average monthly net income or loss by the total base salaries of all employees for the current month. The money disbursed to each employee for the current month includes his base wage plus the addition or minus the deduction of this percentage.

Some critics may quibble over the loss-sharing feature of this arrangement. They would do well to remember two facts: (1) The Nation is now entering upon a period of expansion, renewed productivity, and larger profits, at least for those companies which have a lion's share of the market; (2) experience shows that profit-sharing may easily transform an ailing concern into a prosperous industry.

On June 15, 1939, for example the Hanna Co. ceased to operate a famous old anthracite colliery at Minersville, Pa. Under the leadership of the Reverend Frederick Trafford, rector of St. Paul's Episcopal Church, the miners organized a cooperative company to take over the mine. The workers agreed to donate their labor for 2 weeks and sell the coal they produced in that period to obtain capital. White-collar executives expressed a willingness to join in the enterprise at greatly reduced salaries. Sales agencies in Boston and New York were persuaded to help in marketing the coal. The outbreak of war, of course, gave a fillip to the industry. But the bulk of orders came from the East, Middle West, and Canada. Production jumped to more than 1,200 tons a day.

Since September 1, 500 miners have received union-scale wages at the rate of 1 day's pay in stock and 4 days in cash. Profits will be divided as they occur. The whole effort is an example of what courage, intelligence, and cooperation can accomplish. And it justifies the recommendation of Pope Pius XI in the *Quadragesimo Anno*: "In the present state of human society, however, we deem it advisable that the wage contract should, when possible, be modified by a contract of partnership."

In the letter, *Sertum Laetitiae*, celebrating the one hundred and fiftieth anniversary of the Catholic hierarchy in the United States, Pope Pius XII speaks of the rich as "God's dispensers and providers of this world's goods." This passage refers to the obligation of the wealthy to administer their trust or stewardship in the light of supernatural charity. In other words, "sharing" is inculcated, even where the workers or the underprivileged make no contribution to the productive system. How much graver is the duty of those who enjoy large incomes to "share" with those who assist them to amass wealth?

In the same encyclical, the Holy Father insists on the obligation of the rich to practice justice with respect to the workers and their families. His Holiness declares in the most explicit terms that "the salaries of the workers \* \* \* are to be such that they are sufficient to maintain them and their families." Since the most cursory examination of the wage scale will demonstrate that millions of workers are each year forced into debt in order to pay health or maternity bills, it is certain that the wage deficiencies will be overcome only by the practice of profit sharing. Are not children a normal incident in family life? And are not employers bound to take this contingency into account when they reckon up the year's gains or losses? An extra wage dividend may constitute the difference between a happy and an unhappy family existence.

In *Quadragesimo Anno*, Pope Pius XI observed that cooperation was already being tried "to the no small gain both of the wage earners and of the employers." A similar judgment is rendered by 100 clergymen of the Protestant, Jewish, and Catholic faiths, who, in a recent joint statement, declared:

"A new spirit is coming over employers' associations. The labor movement, on its part, is exercising more responsibility for the efficient operation of industry than is generally known, and is aiming at cooperation with the owners for the purpose of guiding incomes and prices in a new and better way."

The same statement recommends that the people be "democratically organized around their own work and ownership." Would not the wider use of profit-sharing plans be an application of the principle of democratic economic organization? Employers' associations working in harmony with labor unions and farmers' marketing associations, as well as with professional groups, could easily evolve into a modern version of the guild system. Representatives of each group, meeting in council, could take practical steps to regulate production, prices, income, and standards of work. Eight hundred and fifty corporations now practice profit sharing. They could serve as the nucleus for national occupational groups.

The germ of the guild ideal is discoverable in the recent settlement of the workers' strike in the Chrysler factories. In establishing rates of production, provision is made for voicing claims on the part of employees who feel that the job is too fast and that the foreman is unable to adjust the matter. In that case, it is agreed that "there will be an examination with a union representative from the district in attendance, and all of the facts shall be made available for the parties dealing with the grievance."

In short—the worker through his collective-bargaining agency is given an opportunity, adequate and equitable, to safeguard his personality and his health from the encroachments of the machine and the mechanics of mass production. It means that millions of workers have finally achieved the status of a partial partner. Extension of the principle to the realm of profits will do much more to eliminate the status of the employee as a "hired hand." Profit sharing, shares for labor, means the end of wage slavery. Workers profit!

## Lincoln Day Address

### EXTENSION OF REMARKS

OF

HON. ANDREW EDMISTON

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

ADDRESS BY HON. ANDREW EDMISTON, OF WEST VIRGINIA

Mr. EDMISTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me at the Twentieth Annual Lincoln Day Dinner of the Meuse-Argonne Post, Veterans of Foreign Wars, at Clarksburg, W. Va.:

To my comrades of Meuse-Argonne Post, No. 573, and members of the Lucinda Rose Auxillary, I am very glad to be able to be here to join with you in your twentieth annual Lincoln Day dinner. For the past 7 years I have been unable to be with you due to the fact that this time of the year is also a very busy one for Congress. My Committee on Military Affairs is holding daily meetings, gathering information so that we may intelligently formulate a reasonable program of National Defense for the Army.

I was glad to note in the February issue of Foreign Service that West Virginia stands sixth in all of the 48 States for paid up mem-

bership for 1940. This certainly shows that some of you fellows have been working, as I know from experience it takes personal contact to collect dues in advance.

I also wish to report to you that the so-called Rankin-McCormack bill, sponsored by our organization, I am informed, is receiving serious consideration by the committee in charge of legislation for World War Veterans in the House of Representatives. This bill does what President Lincoln said after the Civil War must be done for veterans. President Lincoln said, "It is certainly the Government's obligation to care for him who shall have borne the battle, and for his widow and orphan."

The V. F. W. sponsored Rankin-McCormack bill, in most of our opinions, would put into effect this patriotic and sound principle stated by President Lincoln during his term of office.

Today we are observing the one hundred and thirty-first anniversary of the birth of Abraham Lincoln. This anniversary of the birth of this great American finds our Country in a very precarious condition as we observe conditions in the world around us. One-half the world is at war; dictators are threatening democracy everywhere, except in North and South America. There are many things in this great American's life and teachings that if we would but follow today would be a great help to our country. There are so many of these that I cannot give them all to you, but I do wish to call a few of them to your attention. Abraham Lincoln, in my opinion, had the greatest conception of loyalty to his country of any of our great Americans. If his philosophy of patriotism were reduced to three words, I believe it would be "Live for America." In this day and age, we Americans are very prone to feel that our country owes us a great deal, and that we do not owe much in return.

In Lincoln's early youth he had a profound appreciation of his country, as is shown when he confided to a close personal friend the following quotation: "How hard, oh, how hard it is to die and leave one's country no better than if one had never lived for it." With these simple words Lincoln certainly left a yardstick for all Americans to measure their own loyalty and devotion to the finest Government on the face of the earth. Too many Americans are merely living in America and not for America.

I now want to quote to you certain excerpts from a speech made by President Lincoln at the meeting of the Young Men's Lyceum, at Springfield, Ill., in 1835, 105 years ago, at which time Lincoln was 26 years of age, and I want you to know how these quotations from that 105-year-old speech of Abraham Lincoln's are so applicable to conditions that threaten America and her institutions today, as well as they did at that time. The following is a quotation from the above-cited speech:

"In the great journal of things happening under the sun, we, the American people, find our account running under date of the nineteenth century of the great Christian era. We find ourselves in the peaceful possession of the fairest portion of the earth as regards extent of territory, fertility of soil, and salubrity of climate. We find ourselves under the government of a system of political institutions conducting more essentially to the ends of civil and religious liberty than any of which the history of former time tells us."

We certainly find ourselves in this same condition today.

But let us listen again to Lincoln in 1835:

"We, when mounting to the state of existence, found ourselves the legal inheritors of these fundamental blessings. We toiled not in the acquirement or establishment of them; they are a legacy bequeathed us by a once hardy, brave, and patriotic, but now lamented and departed, race of ancestors. Theirs was the task, and nobly they performed it, to possess themselves, and through themselves us, of this goodly land, and to uprear upon its hills and its valleys a political edifice of liberty and equal rights; 'tis ours only to transmit these—the former unprofaned by the foot of an invader, the latter undecayed by the lapse of time and untorn by usurpation—to the latest generation that fate shall permit the world to know. Gratitude to our fathers, justice to ourselves, duty to posterity, and love for our species in general, all imperatively require us faithfully to perform this task."

We would do well to remember the above today.

But let us return again to Lincoln:

"How then shall we perform this task? At what point shall we expect the approach of danger? By what means shall we fortify against it? Shall we expect some trans-Atlantic military giant to step the ocean and crush us at a blow? Never!"

#### COMMENT ON AIR

"All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth, our own excepted, in their military chest, with a Napoleon Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years.

"At what point, then, is the approach of danger to be expected? I answer: If it ever reach us, it must spring up amongst us; it cannot come from abroad. If destruction be our lot we must ourselves be its author and finisher. As a nation of free men we must live through all time or die by suicide!"

How especially true today—with the Dies committee investigating internal foes such as the German-American Bund, communism, Nazi-ism, fascism, and numerous other "isms" that exist only to breed hatreds and class wars.

In this same speech at Springfield, Lincoln calls attention of the young men and women of that day to the danger in the increasing disregard for the law which pervaded the country. I

fear Mr. Lincoln, during the prohibition era in this country, would have been profoundly shocked with the disregard for law in America, and I believe that, while conditions are now better in this regard in America, there is still room for great improvement.

"Live for America" is just as vital a slogan for good citizenship today as it was 105 years ago. It is the creed which the Veterans of Foreign Wars are pledged to support. Loyalty to God and the country is the highest citizenship virtue. Abraham Lincoln pledged himself to that kind of loyalty when he uttered the following immortal words:

"Here without contemplating consequences, before high heaven and in the face of all the world, I swear eternal fidelity to the just cause, as I deem it, of the land of my life, my liberty, and my love, America."

If we will but swear, as Lincoln did, "Eternal fidelity to our country" and make it evident in our every act, we would all be better citizens.

### The Food-Stamp Plan and the Farmer

#### EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

STATEMENT BY MILO PERKINS, PRESIDENT OF THE FEDERAL SURPLUS COMMODITIES CORPORATION, BEFORE THE FRUIT AND VEGETABLE COMMITTEE OF THE AMERICAN FARM BUREAU FEDERATION AT CHICAGO, ILL.

Mr. GEARHART. Mr. Speaker, on the 4th day of December 1939, Milo Perkins, President of the Federal Surplus Commodities Corporation, delivered a most important and, at the same time, a tremendously interesting address to the Fruit and Vegetable Committee of the American Farm Bureau Federation, an address which he very aptly entitled "The Food-Stamp Plan and the Farmer."

Though some 2 months have elapsed since Mr. Perkins so ably advocated his cause the passage of time has not in any wise lessened the force of his arguments nor deprived anything that he then said in defense of the program it is his responsibility to administer of its persuasiveness.

I am sure that all who have had the opportunity of carefully studying his pronouncements will reach the conclusion that he was not in those early days of December unduly extravagant in his predictions. In the light of developments, his speech, I am sure, might well be regarded as prophetic. The favorable results that have been achieved in the further unfolding of the program amply justify all of the good things which he then predicted.

Because I believe that he is entitled to, and should have had, a much wider audience, I was constrained to ask the unanimous consent of the membership of this body for permission to include the text of his highly informative speech in the CONGRESSIONAL RECORD as a part of my instant remarks.

No objection having been expressed, I am happy indeed to hand the text of his remarks to the Public Printer.

In a recent Gallup poll, it was indicated that 88 percent of the people in the country had formed an opinion about the food-stamp plan as a method for moving price-depressing farm surpluses. That, probably, is more important than the fact that the program was endorsed by a big majority. It not only shows that our city folks are aware of the problems facing farmers with surpluses to sell, but it indicates that they want to do something about it. That ought to mean a lot later on in terms of improved farm income.

The poll indicated that 70 percent of the people in the Nation approved the stamp plan. Let's hope we're moving away from the day when farmers, who make up 25 percent of our population, get only 11 percent of our national income. Let's hope they're on the road toward getting a decent share of it, so that they can buy the things the unemployed men in our cities would like to be at work making for them.

Most of you, I take it, are familiar with the details of the food-stamp plan. Briefly, this is the way it works:

1. Studies indicate that persons getting public assistance spend an average of about \$1.00 per week per person for food. That's about 15 cents a day; 5 cents a meal.

2. On a voluntary basis, such persons may buy a minimum of \$1 worth of orange stamps a week for each member of the family. These are good for any food at any grocery store.

## APPENDIX TO THE CONGRESSIONAL RECORD

3. Persons buying orange stamps receive half again as many blue stamps free. They receive these in place of the commodities they formerly got at food depots. These blue stamps also are good at any grocery store but only for foods found to be "in surplus" by the Secretary of Agriculture. The list has been changed from time to time in accordance with changes in the season and the economic factors affecting the commodities. The first commodities on the list were butter, eggs, white and graham flour, corn meal, dried prunes, oranges, grapefruit, and dry beans. On July 16, a number of new commodities were added. These included rice, fresh peaches, fresh pears, cabbage, peas, tomatoes, and onions. The commodity list was unchanged until September 30. At that time peaches, cabbage, peas, tomatoes, and rice were dropped from the list and raisins, apples, snap beans (for October), and pork lard were added. In December, oranges and grapefruit, rice, hominy grits, and pork meats will be added to the list. On December 15, therefore, there will be 16 surplus commodities which can be purchased with blue stamps.

4. Grocers paste the stamps, each worth 25 cents, on \$5 cards and redeem them largely through their banks. The Government pays the banks for both colored stamps; the blue stamps are redeemed from the same funds that are now used to purchase surplus commodities directly.

5. Under the stamp plan, therefore, persons receiving public aid can get surplus foods at the corner grocery store. They have 7½ cents to spend for each meal rather than the 5 cents a meal they formerly spent. That improves farm income as well as the public health. The idea is to "eat the surpluses"; that is, the part that can be consumed in this country.

That is the essence of it, although, of course, there are variations which give us the necessary flexibility to meet different local conditions.

The program is now or very soon will be in effect in 23 cities or county areas. These are as follows: Rochester, N. Y.; Dayton, Ohio; Seattle and King County, Wash.; Birmingham and Jefferson County, Ala.; Des Moines, Iowa; Shawnee and Pottawatomie County, Okla.; Springfield, Ill.; Allentown, Pa.; Bethlehem, Pa.; Salt Lake City, Utah; Madison, Wis.; Minneapolis, Minn.; St. Paul and Ramsey County, Minn.; Providence, R. I.; Bismarck and Burleigh County, N. Dak.; Mandan and Morton County, N. Dak.; Denver, Colo.; Sioux Falls and Minnehaha County, S. Dak.; Wichita Falls and Wichita County, Tex.; Little Rock and Pulaski County, Ark.; Sioux City, Iowa; Memphis, Tenn.; Richmond, Va.

We anticipate that from 30 to 35 areas will be designated by January 1, 1940. By the end of the fiscal year, June 30, 1940, we hope to have the program going in from 125 to 150 places.

As a part of current operating procedure, careful attention is being given to the economic and marketing aspects of the program. It is not yet possible to draw final conclusions on the significance of this approach to agricultural problems. The information obtained is being analyzed in order to determine such matters as the commodities selected by consumers under the program, the volume being moved, changes in sales, price trends, and the probable agri-

cultural effects of the program on individual commodities. The preliminary figures now available are of great interest to every farmer in America. First of all, we can see how persons getting public aid are using their blue stamps on a wholly voluntary basis. We can tell which agricultural products are most popular and what percentage of the blue surplus stamps is going for each one on the list.

For the period from May 16 to July 15, when the program was in operation in only three cities, we had information for periods of from less than a month up to 2 months in each of the cities. Obviously, it was too early to attach a great deal of significance to the preliminary figures. Possibly the most interesting facts were the evident popularity of butter, eggs, citrus fruit, and flour.

From July 16 to September 30, when we had 6 to 12 weeks of experience in 6 cities, about one-quarter of the stamps were being used for butter and another one-quarter for eggs, two products which are produced very widely on our farms. About 13 percent of the added purchasing power was being used for flour. Corn meal and rice were each receiving about 2 percent of the blue-stamp expenditure.

It is extremely interesting to note that during this period about 14.5 percent of the total expenditure was being divided among fruits and 20 percent among vegetables, according to the consumer's selection and the commodities on the list at the time. In other words, slightly more than one-third of the additional purchasing power was being divided among fresh fruit and vegetables, dried prunes, and dry beans.

Of the fruit and vegetable commodities on the list during this period, fresh peaches were most popular, with 10 percent of the total. Tomatoes took nearly 8 percent, dry beans about 4 percent, cabbage and onions about 3 percent each, peas, prunes, and pears about 2 percent each.

By October 1 many of the fruits and vegetables were no longer in season, and changes in the list became necessary. For the first 4 weeks in October, the most recent period for which information is available, butter and eggs continued to secure about one-quarter of the stamps each. The demand for wheat products was about 13 percent of the total. Lard, placed on the list for the first time, took about 10 percent of the expenditure, and corn meal continued to take about 2 percent.

The fruits on the list included dried prunes, fresh pears, raisins, and apples. These four commodities took slightly over 14 percent of the additional purchasing power. Apples were first, with 8 percent; raisins, slightly over 2 percent; prunes, nearly 2 percent; and pears, about 1.8 percent. During October the three vegetables on the list accounted for about 9 percent of the total. Dry beans accounted for 4 percent, onions about 3 percent, and snap beans about 2 percent. All fruits and vegetables accounted for nearly one-quarter of the expenditure during the last month. The following table brings out these figures in greater detail and shows the variation in different parts of the country:

Percentage distribution of commodities secured with blue stamps in 6 areas (July 16 to Oct. 28)

Commodity	July 16 to Sept. 30—							Oct. 2-28						
	Rochester <sup>1</sup>	Dayton <sup>2</sup>	Seattle <sup>3</sup>	Birmingham <sup>4</sup>	Pottawatomie County <sup>5</sup>	Des Moines <sup>6</sup>	National average <sup>7</sup>	Rochester	Dayton	Seattle	Birmingham	Pottawatomie County	Des Moines	National average <sup>7</sup>
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)
Butter	30.4	20.9	31.7	14.6	12.4	22.1	24.0	36.2	21.5	35.2	12.8	9.1	25.7	26.4

<sup>4</sup> Birmingham program began Aug. 1.

<sup>5</sup> Pottawatomie County program began Aug. 16.

<sup>6</sup> Des Moines program began Aug. 23.

<sup>7</sup> In computing national averages, the percentage distributions of the number of persons receiving public assistance in the States around each city designated during July 1939 have been used as weights.

Source of data: Economic Analysis Section, Food Stamp Division, Federal Surplus Commodities Corporation, U. S. Department of Agriculture, Nov. 18, 1939.

This is interesting evidence, crop by crop, of the untapped market for American farm products here at home among our underfed families. Every farm leader in the country will want to watch these figures as they change from time to time. He will want to watch the demand for different products as they are added to the surplus list. It may be another year, however, before we can say with certainty, as far as any particular commodity is concerned, that a new market exists on anything like a permanent basis. The plan has not been in operation long enough to measure seasonal changes accurately; nor is it widespread enough to be sure that the food preferences of some 150,000 persons as shown for a few months are a true index to what the national appetite of this group might be over a longer period of time. There must be a continuing running analysis in order to get more current and reliable measures of the effects of the stamp plan upon our agricultural economy.

With that warning, we can speculate on the possible agricultural significance of the stamp plan if it were operating upon a national basis. In other words, let us project the increased market for surplus commodities which might exist if the program were in operation throughout the country, if every eligible family bought the same percentage of surplus foods as those which were purchased in six areas for a few months, and if participation of eligible families throughout the Nation were upon the same basis as that in a few experimental cities. The term "eligible families," as used here, refers to those now receiving some form of public assistance and does not include low-income, privately employed persons such as those in Shawnee, Okla., who now are participating in the stamp plan in that one city upon a wholly experimental basis.

Nearly 20,000,000 people are included in the total number of families which are now receiving some form of public aid. If the same percentage of persons took part in a national program as has been the case in the experimental cities, the group of participating eligibles would include about 15,000,000 individuals. This does not necessarily mean that we are currently planning to have the stamp plan extended to that many people, however. Many factors will influence the extent to which the plan can be expanded. As an illustration, we do not believe that it is wise administratively to think in terms of reaching the entire relief load in anything short of 2 or 3 years, even if other circumstances made it desirable to do so. By that time, of course, the size of the relief load may have changed considerably.

On the basis of the foregoing assumptions, it is interesting to note that with current prices the stamp plan offers a potential annual market for about 294,000,000 pounds of butter, over 300,000,000 dozen eggs, about 30,000,000 bushels of wheat in the form of flour, over 6,000,000 bushels of corn in the form of corn meal, about 120,000,000 pounds of rice, approximately 78,000,000 pounds of prunes, 88,000,000 pounds of raisins, and about 213,000,000 pounds of dry beans.

For fresh fruits and vegetables there is a tremendous potential market. Given purchasing power, poor people will buy trainload after trainload of citrus, tomatoes, cabbage, peaches, and other fruits and vegetables.

The knowledge we have obtained of consumer takings of dry beans and dried prunes has been sufficiently wide and consistent, even with changes in the list, to make a preliminary estimate of the demand stimulated by the stamp program. The demand for raisins is apparently about the same as the demand for prunes. Our early figures in both cases offer a great deal of hope for farmers producing these crops. For other fruits and vegetables, however, we feel that it is too early to make even rough estimates for individual commodities. It does look as if low-income consumers, when given purchasing power, will, on a voluntary choice basis, become extremely heavy purchasers of fruits and vegetables. It is beginning to be relatively certain that, depending upon the commodities on the list, these people will spend 25 to 35 percent of their additional food-purchasing power for these commodities. This kind of stimulus to sales of fruits and vegetables can become a major force in better marketing of fruits and vegetables. Since the demand for commodities among low-income families is the largest undeveloped market in the United States, farmers, through their marketing organizations, will want to make use of this knowledge and take all of the steps necessary to benefit as much as possible.

We are interested in the stamp plan as a means of helping local producers in the area around which the program is in effect. We expect to work with grower committees and extension leaders in each region in developing suggestions on locally produced fruits and vegetables that should be placed on the list for various periods of time. We feel that this program promises to strengthen tremendously the approaches to improved returns to growers through broader markets. It supplements, though it does not supersede, all the existing approaches to this problem that the Department now has available. For example, we plan to continue the direct purchase of farm surpluses including some fruits and vegetables. By combining this method with the stamp plan we hope to get the maximum returns to growers that are feasible under our legislation. An increasing amount of foods bought directly is being used in our school-lunch program.

From an agricultural point of view, these figures have great significance. The stamp plan makes possible a much broader market for farmers producing those commodities for which there is elastic consumption, such as dairy products, poultry products, fruits, and vegetables. The early figures indicating sharp increases in the consumption of rice and beans give a more hopeful picture than we anticipated. This wider distribution will do more than provide

a new market for surpluses; ultimately it can bring about a better price level for an entire crop, especially in the case of those commodities which happen to be selling very much below parity.

I should like to call your particular attention, however, to the situation with respect to sales of flour and corn meal. Important as the indicated increases are from the consumers' and the millers' points of view, they hold relatively little promise for farmers growing wheat and corn. In both cases the increases in the number of bushels which might be consumed as flour and corn meal would represent only a fraction of the total crops now being produced. Lard is already on the surplus list, and pork has just been added. The outlet for corn may therefore be increased substantially. This will be one of the most interesting figures to watch in coming months. Were the stamp plan operating on a national basis, with livestock products on the surplus list, a very significant market might be opened for our farmers in the Corn Belt. We shall wait and see.

The figures upon which the estimates of new markets are based appear in more detail in the table which follows:

*Rough estimates of possible purchases of certain surplus commodities under a national stamp plan and 1928-37 average domestic consumption of those commodities*

Commodity	Percent of total expenditure for each commodity or commodity group (1)	Unit	Approximate blue-stamp purchases on a national basis (2)	1928-37 average domestic consumption <sup>1</sup> (3)	Blue-stamp purchases as percent of 1928-37 average consumption (4)
	Percent		Million units	Million units	Percent
Butter.....	25.2	Pound..	294.0	2,191	13.4
Eggs.....	24.2	Dozen..	313.0	2,602	12.0
White and graham flour, wheat equivalent (in bushels).....	13.3	Bushel..	30.0	484	6.2
Corn meal, corn equivalent (in bushels).....	2.1	Bushel..	6.6	49	13.4
Rice.....	2.1	Pound..	120.0	709	16.9
Dry beans.....	4.0	Pound..	213.0	900	23.7
Dried prunes.....	1.9	Pound..	78.0	228	34.2
Raisins.....	2.3	Pound..	88.0	285	30.9
Other fruits and vegetables <sup>2</sup> .....	20-25.0				

<sup>1</sup> Estimates supplied by Program Coordination and Development Division, Bureau of Agricultural Economics; allowance is made for farm to retail market waste.

<sup>2</sup> Merchant mill consumption.

<sup>3</sup> Not including canned bean consumption; partially estimated.

<sup>4</sup> The distribution among these obviously depends on the number of commodities on the list and the season of the year. When oranges and grapefruit alone were on the list in 3 cities, they accounted for 24 percent of the total blue-stamp expenditures. As indicated in table 1, when more commodities were added, up to Sept. 30, peaches accounted for 10 percent of the total, tomatoes 7.7 percent, cabbage, onions, peas, and pears from 2 to 3.6 percent each.

Source of data: Economic Analysis Section, Stamp Division, Federal Surplus Commodities Corporation, U. S. Department of Agriculture.

There are a number of other qualifications we must keep in mind with regard to this table:

1. The calculations are based on experience to date. Subsequent experience will require modifications, particularly if there is a considerable change in the variety of commodities on the surplus list.

2. They are based on prices existing up to October 28. Radical price changes would alter the consumer purchases.

3. It may not be true that all of these purchases will be additional purchases. For some commodities and in some regions among some families, a part of these purchases, at least, probably would be made in the absence of a program. The extent to which these potential purchases represent a net increase in the demand for agricultural commodities is of primary significance. Although no final conclusions on this subject can be reached from the data now available, considerable study is being and will continue to be directed toward this phase of the subject. The preliminary figures are very encouraging.

4. On the other hand, these calculations are limited to the potential effect of purchases by relief families only and do not take into account any possible increase of purchases by other families. As a result of special food drives and lower distribution charges made possible by an increased volume of business, a still greater consumption of surplus foods by the entire population can be brought about. Reemployment, of course, will bring about this result even more quickly.

After nearly 6 months' experience with the stamp plan we have ample proof of the splendid job that can be done in pushing sales for farmers with surpluses to sell. Farmers, businessmen, and those of us who work for our Government have learned that we can get better results by tackling a tough job together. We know, for example, that the stamp plan is bringing increased understanding of agricultural problems by urban families and business groups throughout the country.

The prices of many surplus agricultural commodities are still too low, of course, to bring about a situation where the returns to farmers will have a fair exchange value with city goods which

farmers must buy. As long as this condition exists, and as long as there are millions of our own citizens with inadequate diets, we feel that the food-stamp plan should be extended gradually to sections of the country where it has not yet been placed in operation.

Within each city, however, there is a possibility that the number of families eligible to participate will decline if the current trend toward fuller employment continues. That will please no one more than it will please us. A man with a job at good wages provides the farmer with a broader market than we can afford to make possible through our food stamps, and he provides the grocer with a greater volume of business than he is now getting even in cities where the stamp plan is in operation.

From the very beginning of the food-stamp plan we have tried to build its administrative machinery upon an accordion basis. In times of great agricultural surpluses, which usually are accompanied by great unemployment, it will be there to do a minimum job in terms of minimum diets below which the public health would be endangered. The broader market thus made possible for our farmers in times of stress will help to stabilize our whole economy. In times of fuller employment, however, it can and should be restricted to the fewer families who would still be eligible for such assistance.

I should like to repeat that farmers can sell more food to men with good jobs than they can to men buying a mere 7½ cents worth of food a meal with stamps—at least 50 percent more. Every one of us in this room lives in a family where the food expenditures are at least three or four times the amount being spent by families getting public aid. Good times are likely to be followed by bad times, however, and a mechanism like the stamp plan can serve the general welfare if it is contracted to a mere skeleton in times of great prosperity, but kept alive so that it can be expanded in times of depression to help cushion the shock. These are the policy terms in which we are thinking during these difficult days, when no one can see very far ahead.

Most important of all from the farmer's point of view is the probable effect of the stamp plan upon farm income, once it is operating on a national scale. All of you know what happens if in any season there is even 5 percent more of a given crop than people are able to buy—the price breaks for the whole production. And you know what happens when people want to buy even 5 percent more of any crop than is available—a good price can be gotten for the whole production. It looks now, so far as a great many agricultural commodities are concerned, as though the stamp plan could help move surpluses and raise farm income in a good many cases.

If the farm price goes too high, however, as recently happened in the case of rice for a short period, the commodity can and should be taken from our surplus list. This is not only a fair protection to consumers, but it will prevent artificial inducements to unwise acreage expansions. The stamp plan can provide a new and a broader market for farmers with surpluses to sell; our early figures indicate that it should be possible by this means to increase the returns on many an entire crop. Wherever and whenever that takes place, farmers will be just that much nearer to their rightful share of the national income.

Wallace E. Pierce

### EXTENSION OF REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

#### RESOLUTION BY THE JUDICIARY COMMITTEE OF THE HOUSE OF REPRESENTATIVES

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Judiciary Committee of the House of Representatives with reference to the late Representative WALLACE E. PIERCE, of New York:

The Committee on the Judiciary hereby records its profound sorrow and deep grief in the loss of its distinguished and beloved member, Hon. WALLACE E. PIERCE, of New York.

Mr. PIERCE became a Member of the Seventy-sixth Congress on January 3, 1939, and soon after became a member of the Committee on the Judiciary. While Mr. PIERCE was only a Member of Congress 1 year, having died on the first anniversary of his taking the oath of office, he endeared himself to his fellow Members by his engaging personality and the generosity and warmth of his friendship. He was sincere, honest, and learned in the law, and was one of the ablest members of the committee, and his death will cause a great loss to the public service: Wherefore be it

Resolved, That the Committee on the Judiciary record with profound sorrow and deep regret the passing of our colleague, Hon. WALLACE E. PIERCE; and

Resolved further, That these resolutions be spread at large on the minutes of the committee, and that a copy thereof be transmitted to the bereaved family.

### Freight Rates to the Canal Zone

#### EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

#### RESOLUTION BY THE CALIFORNIA STATE LEGISLATURE

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of Assembly Joint Resolution No. 9, relative to discrimination in steamship service and freight rates between New York and California ports to the Panama Canal Zone. This Assembly Joint Resolution No. 9 was adopted by the Assembly and Senate of the California State Legislature, now in special session, and the resolution was received by the Governor on the 8th day of February 1940, at 10 a. m., and filed in the office of the secretary of state of the State of California February 8, 1940, at 3:30 p. m.:

#### Assembly Joint Resolution 9

Relative to discrimination in steamship service and freight rates between New York and California ports to the Panama Canal Zone

Whereas Congress has authorized the construction of additional locks at the Panama Canal at an eventual total cost of approximately \$277,000,000, as well as an additional expenditure of approximately \$35,000,000 for the construction of barracks, airports, etc.; and

Whereas large quantities of foodstuffs, materials, and supplies are imported annually into the Republic of Panama amounting in the year 1937 to \$21,828,000, of which imports from the United States amounted to \$11,377,000 principally from the Atlantic seaboard; and

Whereas materials and supplies will be imported into the Panama Canal Zone in large quantities as additional protection for national defense by the United States Government and for the Republic of Panama, including alfalfa, groceries, cold-storage products, drygoods, dairy products, raw materials, housewares, candies, and tobacco, milk and cream, shoes, cattle and hogs, soaps, meats, lard, vegetables, lumber, petroleum products, cement, iron and steel, automobiles, chemicals, medicines, reinforced concrete frames and floor slabs, hollow tile filler walls, stucco exterior, tile and composition roofing, miscellaneous iron and steel, hollow metal work, metal lath and plaster, steel shelving, automatic refrigeration systems, waterproofing, cold-storage rooms, slate toilet partitions, glazed tile wainscoting, ceramic, cement and other quarry products, tile floors, paint, plumbing, electric fixtures, and various other types of materials and supplies grown, produced, and manufactured on the Pacific coast; and

Whereas the United States Government owns and operates the Panama Railroad Steamship Co., which is operated under the direction of the President of the United States and the War Department, which operates steamship service between New York and the Panama Canal Zone, and railway service between Atlantic and Pacific ports of the Canal Zone; and

Whereas freight rates upon said Government-owned line between the Atlantic seaboard and the Panama Canal Zone are materially less than freight rates on private lines operated between Pacific coast ports and the Canal Zone, in some cases being as much as 50 percent less; and

Whereas, if similar service and the same freight rate basis were provided by the United States Government between Pacific coast ports and the Panama Canal Zone, California growers, producers, and manufacturers of supplies and materials to be used in said construction work, including the necessities of life, to be imported into the Republic of Panama as hereinabove set forth, would be in a position to compete with growers, producers, and manufacturers on the Atlantic seaboard; and

Whereas, due to the withdrawal of ships under the jurisdiction of the United States Maritime Commission from export trade due to the war, there are now numerous vessels available for this service; and

Whereas private steamship lines operating between the Pacific coast ports and the Panama Canal Zone will not meet the New York-Panama rates of the Government-owned Panama Railroad Steamship Co., resulting in a practical monopoly in favor of shippers from the Atlantic seaboard to said Panama Canal Zone: Now, therefore, be it

*Resolved by the Assembly and Senate of the State of California jointly, That the President of the United States, the Congress, and the Secretary of War are hereby respectfully requested to take such action as will be necessary to provide similar steamship service between Pacific coast ports and the Panama Canal Zone and at the same freight rate basis in order that Pacific coast growers, producers, and manufacturers may be enabled to compete with growers, producers, and manufacturers on the Atlantic seaboard in supplying agricultural and manufactured materials and supplies to the Panama Canal Zone; and be it further*

*Resolved, That copies of this resolution be transmitted by the Governor of the State of California to the President and Vice President of the United States, to the Speaker of the House, to the Secretary of War, and to each Senator and Representative from California in the Congress of the United States.*

## Needed! A Passion for Accuracy Rather Than "A Passion for Anonymity"

### EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

ARTICLE BY GEORGE ROTHWELL BROWN

Mr. MUNDT. Mr. Speaker, under leave extended to me by the House, I submit herewith an article from the learned pen of George Rothwell Brown, which I have taken from the Chicago Herald-American. In view of the very serious status of our National Treasury and the fact that our Government is now hovering perilously in the danger zone of \$45,000,000,000 national debt limit, it occurs to me that this analysis of President Roosevelt's surprising statement on Federal finances will be instructive.

In his Hyde Park statement the President undoubtedly had no intention of distorting figures or confusing the public mind, but was apparently simply placing too much reliance upon inaccurate figures and conclusions carelessly prepared for him by one of his six secretaries. If such unreliable advice continues to come to the Executive from his six new secretarial assistants, it will be easy to understand why they might have a "passion for anonymity," but from the taxpayers' viewpoint it is devoutly to be wished that they would develop a "passion for accuracy" as an alternative.

[From the Chicago Herald-American]

F. D. R.'S FIGURES ON DEBTS ARE WILDLY INACCURATE  
(By George Rothwell Brown)

WASHINGTON, February 10.—Mr. Roosevelt, launching into his defense of the New Deal as though already upon the stump in the 1940 campaign, has presented at Hyde Park a picture so vulnerable in its errors that he will now have to defend the defense.

Mr. Roosevelt says that local debt, State, county, and city debt, "had gone down the full extent that Federal debt had gone up." Since private debt has decreased, he said, the total debt therefore is lower.

According to the Twentieth Century Fund's Debts and Recovery, the total debt of all State and local governments in 1932 was \$15,977,000,000. The latest Census Bureau figures, for 1937, give the amount as \$13,909,000,000, a decrease of only \$2,000,000,000.

United States Government debt is up \$25,000,000,000 since 1932, when it stood at around \$18,000,000,000. If the figures supplied to Mr. Roosevelt by his anonymous "bulgingbrows" were accurate, the States would now have a surplus of about \$9,000,000,000. Instead they are mostly in the red.

The reason the State and local debts haven't increased more is that under 7 years of New Deal borrowing and squandering they have reached their debt limits and can no longer borrow.

The total of dividends and interest of the whole country, which mounted to \$11,396,000,000 in 1930, had fallen in the New Deal peak year, 1937, to \$9,563,000,000.

Cash farm income for 5 years from 1926 to 1929 averaged around \$11,000,000,000. In 1929 it was \$11,221,000,000.

In 1939—not counting Government subsidies—it was \$7,711,000,000. These are the latest official figures of the United States Department of Agriculture, Bureau of Economics, issued January 30, 1940.

Mr. Roosevelt in his rosy Hyde Park statistics supplied by the anonymous genius who very cannily hides his own light under a White House bushel, includes in his figures of cash farm income \$807,000,000 in Government benefit payments, as part of cash farm

income. What kind of bookkeeping is that to palm off on the gullible public? The Bureau of Economics doesn't do it. Can Government subsidy—which is debt—be called cash income?

Mr. Roosevelt says that there was an increase of 62 percent in salaries and wages paid, from \$2,403,000,000 in December 1932 to \$3,886,000,000 in December 1939.

This is smart and clever—too smart and clever. December 1932 was the bottom month of the world-wide depression. December 1939 witnessed the peak of the war boom, great activity in making airplanes and munitions for France and England.

The true basis of comparison, if Mr. Roosevelt's anonymous genius wanted some figures, was the total of all employee wages and salaries of \$51,509,000,000 in 1929 with \$46,720,000,000 in the New Deal peak year, 1937.

If 10,000,000 unemployed is the measure of New Deal prosperity, we have it.

If a \$45,000,000,000 Federal debt is the New Deal measure of prosperity, we have that, too.

If the American farmers getting 76 percent of parity prices—as according to December figures of the Department of Agriculture they are—is prosperity, then the New Deal prosperity wave has reached the farms.

Professor Hightower, the new White House anonymous lightning calculator, has compiled a strong campaign document—for the Republicans.

## Farm Tenancy—A Problem That Can't Be Dropped or Forgotten

### EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

EDITORIAL FROM THE NEW YORK EVENING POST OF FEBRUARY 5, 1940

Mr. VOORHIS of California. Mr. Speaker, in refusing to provide funds for loans to enable farm tenants to become farm owners, the House made a grave mistake. The following editorial from the New York Evening Post for February 5 will speak for itself, and is of particular interest to a Californian, since it shows the intimate relationship between the problem of migrant families in that State and the conditions of farm life in other portions of the country:

[From the New York Evening Post of February 5, 1940]

#### THE SHARECROPPER WAS FORGOTTEN

In voting to abandon the tenant-farm-purchase program the House of Representatives has demonstrated a callous lack of interest in one of the major social problems in the United States. Tenant farming is the polite term for the sharecropper system.

The sharecropper system, born out of the depressed reconstruction period after the Civil War, has grown to enormous proportions. In 1930 one-quarter of all the farms in the United States were worked for absentee landowners. By 1935 the percentage had risen to 42 percent, and it is still growing. Actually the statistics are a little more pleasant than the facts, for a new factor has entered the picture—the migrant agricultural day laborer, whose plight has been so ably dramatized in John Steinbeck's *Grapes of Wrath*. The migratory farmer belongs in an economic bracket even lower than the sharecropper, but his plight stems from the same disintegrating evolution of farm economics.

In 1935 the administration began to deal with the problem. The Jones-Bankhead Act was passed, providing loans to worthy tenants to purchase their farms, and Congress appropriated \$10,000,000 for the experiment. Applications for the loans have flooded the Farm Security Administration. In the first 2 years there was money enough for 6,181 loans, but 146,090 tenant farmers asked for help.

For 3 years the Government has been lending money at an average annual rate of about \$25,000,000. The sharecropper gets enough to buy his farm, put it in fair repair, and make essential improvements. He has 40 years to pay it back, and over the period the interest rate comes to about 4.3 percent. The amount of his payment in any one year is allowed to vary according to the value of the crop.

On Friday the House of Representatives, as if it had no concern for the matter, voted to leave the \$25,000,000 appropriation for farm-tenancy loans out of next year's Budget. It voted to bring the Government's efforts to help the sharecropper to a complete standstill.

The total amount of money loaned has been small compared to the size of the problem. Nevertheless it has been a positive attempt, and the first one, to correct a frightful social evil. The money loaned will be returned; it is an investment in citizenship.

It is up to the Senate, which surely cannot be so careless, to restore the money.

## Benefits to Missouri From Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

#### REPORT BY THE BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on the benefits to Missouri from reciprocal-trade agreements released today from the office of the Bureau of Foreign and Domestic Commerce:

##### THE SIGNIFICANCE OF FOREIGN TRADE TO MISSOURI

The drastic shrinkage of our foreign trade during the depression year made necessary the trade-agreements program, which was authorized on June 12, 1934, by means of an amendment to the Tariff Act of 1930. Between 1929 and 1933, the year before the Trade Agreements Act was passed, our total exports declined from \$5,241,000,000 to only \$1,675,000,000. More disturbing, our trade had fallen off proportionately more than had the international trade of the world as a whole.

Missouri is both directly and indirectly dependent upon foreign trade for continued economic development and sustained prosperity. It needs foreign markets for the surplus products of its factories, its farms, and its forests. It shares in the improved domestic market created when, by selling their surplus commodities abroad, other sections of this country increase their purchasing power.

Total exports reported as originating in Missouri fell from \$49,-296,300 in 1929 to \$9,451,200 in 1932. As the volume of exports from Missouri, and the United States as a whole, dropped, purchasing power throughout the State was reduced, large surpluses accumulated, and prices fell. The total accountable income of Missouri fell from \$2,104,000,000 in 1929 to \$1,277,000,000 in 1932, and cash farm income declined from \$354,000,000 to \$149,000,000 between the same 2 years.

However, according to a survey which has just been completed by the Foreign Trade Bureau of the St. Louis Chamber of Commerce, St. Louis alone during the year 1938 exported \$24,600,000 of manufactured goods to 97 foreign countries.

##### BENEFITS TO MISSOURI FROM THE TRADE-AGREEMENTS PROGRAM

Since the Trade Agreements Act was approved, agreements have been negotiated with 21 countries. With so many variables in the economic situation here and abroad affecting the movement of trade it is difficult to determine precisely the extent to which trade agreements have helped in the restoration of foreign markets for American farm and factory products. It is significant, however, that United States exports to the countries with which trade agreements were in force showed an average annual increase of 42 percent in 1936-37 over 1934-35, while exports to all other countries showed an increase of only 26 percent. Annual average exports to trade-agreement countries in 1937-38 were 61 percent above the 1934-35 average; exports to non-trade-agreement countries increased only 38 percent during the same period. Missouri undoubtedly shared in these increased exports.

##### SPECIFIC CONCESSIONS OBTAINED WHICH BENEFIT MISSOURI

Grains and flour, meat and meat products, boots and shoes, electrical machinery, chemicals, and allied products are examples of important products of Missouri for which expanded and more stable foreign market outlets have been obtained in trade agreements.

Wheat growers and flour millers of Missouri are benefited by concessions obtained for wheat and wheat flour contained in 11 agreements. The United Kingdom removed the duty on wheat, two countries bound the rate of duty, Canada reduced the duty, and two countries granted annual quotas. On wheat flour, seven countries either reduced the duty or gave assurances that existing duties would not be increased. The United Kingdom agreement removed the margin of Empire preference in five colonies.

Missouri producers of corn and oats are particularly interested in concessions obtained in eight agreements on corn and corn products, and in 10 agreements on oats and oat products.

The livestock farmers and meat packers in Missouri benefit directly from concessions obtained in 17 agreements on various kinds of meat and meat products. Reductions in the tariff rates on lard have been obtained from eight countries, the duty was removed by one country, and the duty was bound against increase, or increased annual quotas were obtained from four countries. The United Kingdom increased the annual quota for American hams and bound them on its free list. Twelve other countries granted

some form of tariff concession on American hams, bacon, fresh, frozen, or cured pork, beef, and veal.

Of particular interest to the Missouri manufacturers of leather goods are the concessions obtained on leather and leather manufactures in 19 agreements. Four countries reduced their duties on leather footwear and selected leather manufactures; one country bound its duty on leather footwear; two countries bound their duties on selected leather manufactures; one country gave assurance that the quota would not be decreased on leather footwear; and many other concessions were received on raw hides and skins, upper leather, patent upper leather, and other selected leathers.

Provisions facilitating the restoration and expansion of America's export trade in electrical machinery are contained in 16 agreements. These provisions include reductions in duty, assurance against any increase being made in the existing rates of duty, and removal of the rates of duty on such electrical machinery and apparatus as electrical household refrigerators, telephone and telegraph apparatus, vacuum cleaners, electric heating and cooking apparatus, incandescent light bulbs, power-plant equipment, radios, and on a great variety of other electrical appliances.

Missouri's manufacturers of chemicals and related products benefit directly from the concessions which have been obtained for such articles in 17 trade agreements. Ten countries granted reductions on various medicinal and pharmaceutical preparations; three countries reduced and two countries bound the duties on biologics. Nine countries reduced or bound the tariff rates on various industrial chemicals. On paints and pigments, 10 countries reduced the duties, 1 country bound its duties against increase, and 1 bound its duties and increased the quota.

In addition to the direct concessions obtained, there is a most-favored-nation provision in each trade agreement which automatically extends to American products reductions or limitations on tariff rates granted by the agreement country to countries other than the United States. For example, lower tariff rates on some 600 items formerly extended by Canada to France but not to the United States, now apply to American commodities. Among these Missouri is interested in reductions on meat products, on wheat and flour, on certain leather goods, on electrical apparatus and supplies.

##### BENEFITS TO MISSOURI LABOR FROM TRADE AGREEMENTS

Many thousands of the persons employed in Missouri owe their jobs to the export trade of the State. The trade-agreements program, by reopening and expanding foreign markets, increases the demand for labor. When foreign countries increase their demand for American products, industry must employ greater numbers of wage earners to produce these commodities. Increased employment in industries manufacturing for export provides enhanced domestic consumer purchasing power and creates greater employment opportunities for those engaged in supplying the domestic market.

##### MISSOURI BENEFITS AS THE UNITED STATES BENEFITS

There is a direct interrelationship between prosperity of any section of the country and prosperity of the country as a whole. Thus, the concessions obtained on American products not produced in Missouri indirectly benefit the citizens of the State by creating increased domestic demand for meat, shoes, wheat, machinery, tools, automotive parts, cotton goods, paints, and drugs, and the many other products of Missouri.

Expanding foreign and domestic trade means greater tonnage to be handled by railroad, steamship, and truck transportation industries. This, in turn, means more and steadier employment in these lines as well as in such service industries as banking, brokerage, advertising, insurance, and warehousing.

## A United America

### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

Mr. THORKELSON. Mr. Speaker, in this my third address on a united America, may I again call attention to the fact that our Government differs from others and is unique in that the Constitution of the United States is an instrument by which the people delegate certain administrative powers to the Federal Government.

The powers delegated are so clear that little or no disagreement should arise in interpretation, yet evasion and misinterpretation of the Constitution are the actual cause for the condition in which we find ourselves today.

In our Republic the people are the supreme power, and the Constitution is the body upon which our Nation depends for life. The people should elect Members to Congress who will "preserve, protect, and defend the Constitution" with the

same care that a skillful surgeon employs in protecting the life of his patient. For an incompetent Congress will, by ignoring the Constitution, destroy our Nation as effectively as an incompetent surgeon destroys the life of his patient when he ignores the principles of surgery.

I shall now, in my own words, discuss the significance of the preamble and its relation to the Constitution, for observation leads me to believe that little or no consideration is given to this part of the document, either by Congress or the Supreme Court:

We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

Suppose we arrange the preamble in the following manner:

We the people of the United States ordain and establish this Constitution:

1. In order to form a more perfect Union,
2. Which will establish justice,
3. Insure domestic tranquillity,
4. Provide for the common defense,
5. Promote the general welfare, and
6. Secure the blessings of liberty to ourselves and our posterity.

I have placed this interpretation upon the preamble, and I believe it was this the founders had in mind when the Constitution was drafted.

This should now be plain, and as questions arise before the legislative, the executive, and the judiciary branches of the Government, or before any Government department or employee, it is only necessary to ask these questions: Will this act on my part perpetuate a perfect Union? Will it establish justice? Will it insure domestic tranquillity? Will it provide for the common defense? Will it promote the general welfare and will it secure the blessings of liberty to ourselves and our posterity? If you are in doubt, or if the answer is "no" to one or more of these six questions, the matter under consideration is unconstitutional, and, therefore, not allowable except by special permission of the people as set forth in article V.

It would be interesting to know how much of the legislation now written into the law is unconstitutional. There is much of it, I am sure, and for that Congress alone is responsible. I shall now quote article I, section 1:

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

This paragraph is plain, and states without quibbling that all legislative powers granted in the Constitution shall be vested in Congress and no one else. This is only just and proper, for there is no provision in the Constitution which gives Congress the right to transfer any part of its own powers to any person or department. In spite of the fact that "all legislative powers herein granted shall be vested in Congress," transfer of powers to the executive and other departments is a common occurrence, and will, if continued, make Congress obsolete.

Members of Congress elected to office subscribe to an obligation "to preserve, protect, and defend the Constitution of the United States." In view of this, is it unreasonable to assume that such Members understand the document they have obligated themselves to support? I think not, for all Members surely know their oath is a solemn obligation to the people of this Nation.

These questions may now be asked: What mental quirk impels a Member of Congress to vote for unconstitutional legislation and transfer of power when he knows that he is not only violating his obligation but is, in addition to that, betraying public trust? What unseen force is employed to induce Members of Congress to support legislation which deprives the people of rights and liberty and to which the Member himself becomes a victim when he returns to private life? It is such acts upon the part of Congress which are responsible for the condition in which we find our Nation

today, and it is the duty of Congress to set this right before it is too late.

The people of our Nation should understand that Congress is responsible for the unwarrantable and unconstitutional transfer of power from Congress to the executive department. This transfer of power and regulation is the underlying evil in our Government, for it has brought about fraud and corruption which have increased Federal operative cost until it is nearly unbearable. The rules which Congress employs to force passage of unconstitutional legislation are most contemptible, and should not be tolerated by any intelligent parliamentary body.

The Constitution provides that: "Each House may determine the rules of its proceedings," which, of course, no one disputes. It is, however, my opinion that such rules should conform with ideologies as expressed in the preamble to the Constitution. When rules are brought in from the committee similar to those which circumscribed debate on the reorganization bill, and which were so aptly described by one of the members as being "pig tight, bull strong, and horse high," I fear the outcome. Such rules are not only unintelligent, but they are actually detrimental to the general welfare of this Republic.

When a political party takes advantage of its majority in Congress and employs such majority power to force unconstitutional legislation through the House, the end of intelligent government is near. It was under such rules the Reorganization Act was passed, and I still maintain, as I did then, that the Reorganization Act is clearly unconstitutional.

It is my firm conviction that when a Member of the House raises the question of unconstitutionality the debate should be centered on this point, and this is particularly true with a Supreme Court that ignores the Constitution of the United States. The party sponsoring such legislation should be called upon to prove that it will not involve any of the six provisions in the preamble, for if it does it should not pass. Surely nothing but good can come from such discussion.

The people share the responsibility of unsound legislation and wasteful appropriations when they elect Members to Congress under promise to follow political leaders and support party policies. It is evident nothing can be expected from such Members except what the administration policies may be. We have had many examples of this during the past 10 years.

Beware of the bearer of gifts and he who freely sheds tears for your plight. For the ill-clothed, ill-housed, and ill-fed are, in spite of this silly lachrymation, in a much more deplorable condition today than ever before in the history of this Republic. Let me add, this statement does not only apply to the "have nots" but is applicable and important to business and industry, which are now operating with inflated currency devoid of standard international recognized values.

The greatest gifts any administration can give to this Nation are active industries, sound business, and full employment. To bring these about, industry and business must be released from Federal restrictions so they may operate on a sound basis. This is no more than just, for the people reserve such rights to the State and to themselves—articles 9 and 10. The fundamental principles under which all may enjoy the rights of a free people are written into the Constitution, and we enjoy the greatest measure of protection when Congress adheres to it. It is therefore important that the people elect men to Congress who will not allow sabotage of the document or grant extralegal rights to minorities which may undermine our Nation from within.

Much of the legislation which was enacted during the first session of the Seventy-sixth Congress did not receive my support or approval, for the simple reason that it was unconstitutional. It seems to me that there is no end to legislation, and that laws, like an evil disease, will eventually, if continued, lead our Nation into a dictatorship. It is high time that Members of Congress recognize that nothing is accomplished by enactment of legislation. It will not create prosperity or peace, but will instead bring about public disgust, which is all it deserves.

We have now an overabundance of laws and a legal machinery which our Nation's industries cannot support. The wiser plan would be to repeal many of the laws now on the books, so that our Nation's business and industries may be released from unwarrantable restrictions. There is absolutely no excuse for the condition we are in, and it is high time that business becomes articulate and renders aid to those who are stating facts and taking a national beating in the communistic press because they tell the truth to the people.

### Abraham Lincoln

#### EXTENSION OF REMARKS

OF

### HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

EDITORIAL FROM THE WASHINGTON EVENING STAR OF  
FEBRUARY 12, 1940

Mr. SPRINGER. Mr. Speaker, we have commemorated the anniversary of the birth of the Great Emancipator, Abraham Lincoln, and we are not unmindful that his life and his achievements far outshine any eulogy which may be pronounced. Born in the great State of Kentucky, living during the formative period of his life in my own State of Indiana, and residing in the State of Illinois during the more active years of his life, he endeared himself to the people of every generation of every nation.

I ask unanimous consent to extend my own remarks in the RECORD and to include therein a splendid editorial on Lincoln, which appeared in the Washington Evening Star on Monday evening, February 12, 1940, which follows:

[From the Washington Evening Star of February 12, 1940]

#### LINCOLN

Each successive anniversary of the birth of Abraham Lincoln serves to educate his countrymen to a more comprehensive appreciation of his character and personality, yet it may be wondered if he ever will be perfectly understood. His biographers are unanimous in their belief that he could not fathom himself; his contemporaries were puzzled by him; the heirs of his sacrifice, therefore, need not apologize for failure to read a riddle which grows in complexity with the passing years.

The most obvious paradox involved in the problem is that of Lincoln's disappointments. He is a tragedy from the start. Obscurely born, early deprived of his mother, neglected by his father, reared in poverty, unschooled, abandoned to his own devices, he knew little in childhood and youth save struggle and suffering. His first sweetheart died unaware of his pathetic love; he married unwisely; business and professional frustration was his experience through a period when he sorely needed encouragement to try again. Election to Congress brought him only disillusionment, his earnings at the bar were meager, his domestic responsibilities increased from day to day, he toyed with the idea of suicide. But he could not surrender. Some power which he could not name kept him alive for his ultimate destiny. In agony of spirit he appealed to God for a sign of His intention. What answer was received remains a mystery. The savior of the Union was chosen to the presidency on a compromise platform—a minority victor. He came to Washington warned that he would be assassinated. Submitting to a fate which he was persuaded was inevitable, he took no precaution to protect his life.

Looking back to the events of three-quarters of a century ago, the story appears to have been finished before it began. Lincoln, it seems, was selected for the performance of one single service. His immolation was part of the price he paid for his patriotism. Other men lived and died in the conflict he vainly sought to avoid, but he felt the Nation's anguish as though it were exclusively his own. His melancholy grew upon him. Even victory brought him no satisfaction. He was conscious, of course, that he had prevented secession, but the price staggered him. His faith in Providence was not shaken; it could not be so late—it survived with a desperate intensity in the second inaugural. Then the blow which he had anticipated so long fell upon him, and he was gone—with his work unfinished.

Yet he did not labor in vain. The world, however dimly, sees that without Lincoln America might have become what Europe is today. His success may be found in the fact that "government of the people, by the people, for the people" has not perished altogether from the earth. For the rest, nothing can be said without tears.

### The American Sugar Industry

#### EXTENSION OF REMARKS

OF

### HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

Mr. GILLIE. Mr. Speaker, I wish to call attention of the Congress to an interesting and revealing discussion of the effect of the New Deal farm program on the American sugar industry which appeared in the Chicago Tribune of February 11, 1940, under the byline of Charles Leavelle.

The headline on the article is, Sugar Growers Term Federal Schemes Blight.

I was interested in the facts brought out by Mr. Leavelle, because I have in my district, in Decatur, the only sugar-beet plant in Indiana. One thousand six hundred growers produce sugar beets for this plant on approximately 14,000 acres of the finest land in the State. Why should there be a quota on sugar beets when American farmers are producing less than 30 percent of the sugar used in this country?

I think this is a fair question, and I do not think it has ever been satisfactorily answered by the New Deal "brain trusters" in the Department of Agriculture.

Mr. Leavelle, in the Tribune article, tells about a survey conducted by the American Sugarcane League to determine the beet and sugarcane areas of the United States. He then states:

The league knew, of course, that the cane area extends from east Texas to the Atlantic Ocean, taking in roughly the old South below Tennessee and North Carolina. But even the sugar experts were amazed at the vast beet area disclosed by the survey.

This area extends through the old West in great blocks, from Nebraska to the Pacific and from Canada to Mexico. Beets are raised also in Wisconsin, Minnesota, Iowa, Illinois, Indiana, Michigan, and Ohio.

One of the principal purposes of the survey was to establish whether or not the United States, with her possessions, Hawaii and Puerto Rico, could grow all the sugar required by this Nation—thus shutting out Cuba and the Philippines, whose output, the league charges, is strangling the domestic industry with the aid of preferential treatment and the Hull reciprocal trade treaties.

The survey, augmented by a symposium of the domestic industry's leaders, indicates that this not only is possible, but feasible, according to Charles A. Farwell, chairman of the Sugar Cane League's educational committee.

"The consensus is," he said, "that if we include Hawaii and Puerto Rico with the mainland beet and cane areas, we can within 2 or 3 years produce the entire consumption requirements of the United States."

It was explained that the domestic industry first would have to expand to its normal production, which is forbidden now by the Secretary of Agriculture under the quota system. With normal production reattained, further expansion to its potential capacity would follow.

The sugar producers then were asked if, in their opinion, the mainland alone could supply the need if Hawaii and Puerto Rico should be granted their independence. They replied they believe that in 5 or 6 years the domestic industry can develop production equal to three-fourths of the Nation's requirements.

Mr. Speaker, in my section of Indiana there are some 14,000 acres of good land devoted to sugar beets—land which has been taken out of corn and wheat and other surplus commodities. And there are thousands of other acres that could be converted to this crop if the New Deal would call a halt to its foolish policy of discouraging and hamstringing the American sugar industry.

Why permit Cuba and the Philippines to continue to flood the American market with sugar that might better be produced in the United States? Why pay American farmers to limit their sugar-beet acreage and at the same time buy 70 percent of our sugar from foreign nations?

Why not give this struggling American industry a chance? Why not extend our good-neighbor policy to the American farmer and laborer who, heaven knows, deserves a break? Why not turn the rich American market back to our own farmers—where it rightfully belongs—and stop this foolishness of limiting American production for the benefit of cheap foreign competitors?

I repeat, Mr. Speaker, Why not?

## Wise Talk to Youth

## EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

EDITORIAL FROM THE PHILADELPHIA EVENING PUBLIC LEDGER OF FEBRUARY 12, 1940

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Public Ledger of February 12, 1940:

[From the Philadelphia Evening Public Ledger of February 12, 1940]

## WISE TALK TO YOUTH

One of President Roosevelt's most remarkable speeches was made on Saturday to the American Youth Congress. Perhaps it should be regretted that the President does not always talk so simply, directly, and sincerely to the whole American people. For on this occasion there was small hint of politics in what he said and an admirable skill in meeting the mood and spirit of those he was addressing.

These were important people. Not because of their political and personal standing, but because the Youth Congress does, in some degree, represent the energetic uncertainties and restlessness of this Nation's younger generation. And a wise and worried father, perhaps, would see to it that his perplexed and impatient son reads the President's message, which has much more in it of parental advice than political pleading.

It was partly politics, perhaps, that the President addressed his advice to those "who believe in the form of government under which the United States has been living with reasonable success for more than a century and a half." This was fair warning that a youth movement under Communist leadership has no place in this country. If the American Youth Congress has that sort of leadership, it is likely soon to disown it. For the young people of the United States, for almost the first time, have been taken into the confidence of the President of the United States and told plainly that the Nation's problems cannot be simply solved by protests, resolutions, and mass meetings, but by the spirit of service and dedication and willingness to face hard facts.

## This Trash Must Go!

## EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

ARTICLE FROM THE READER'S DIGEST

Mr. GILLIE. Mr. Speaker, early last year I introduced a bill (H. R. 5757) to discourage the publication of obscene literature by requiring all magazines to print in a prominent position the names of their owners, editors, and other responsible executives.

This bill passed the House of Representatives by unanimous vote on January 15, 1940, and is now awaiting action before the Senate Committee on Post Offices and Post Roads.

The other day I read a magazine article which explains most vividly the reason why this legislation is needed. I think every Member of the Senate should read it—particularly the members of the Committee on Post Offices and Post Roads, who will be called to act upon this bill in the near future.

The article entitled "This Trash Must Go!" appeared originally in the Forum magazine but has been reprinted in the February issue of the Reader's Digest. To conserve space I am including only the portions of the article describing the wide extent of this evil, which H. R. 5757 would help to eliminate:

[From the Reader's Digest]

"THIS TRASH MUST GO!"

(Condensed from The Forum)

(By Courtney Ryley Cooper, author of Ten Thousand Public Enemies, Here's to Crime, etc.)

A torrent of "smutty magazines" is flowing across the newsstands of the Nation. Last month 8,000,000 people—most of them under 21—bought copies of 150 nationally distributed periodicals reeking with frankly objectionable material; in some localities these magazines constitute from one-fourth to one-half of all newsstand sales. These are publications that possess no literary or artistic merit; any intelligent adult would instantly recognize them as deliberate commercial exploitations of filth and as patent violations of existing laws against obscenity.

The filthy magazine is not a chimera of prudish minds. Its menace is real, its influence potentially crime-inciting. Law-enforcement agencies recognize that the sex criminal is a reader of such literature and that the imaginations of most juvenile delinquents are inflamed by pornographic publications. Lewis E. Lawes, warden of Sing Sing Prison, declares: "Salacious magazines are definitely connected with the criminal activity of individuals predisposed toward sex crimes. They have had a definite effect in many cases with which I have come directly in contact." J. Edgar Hoover testifies: "The publication and distribution of salacious material is a peculiarly vicious evil; the destruction of moral character caused by it among young people cannot be overestimated. The circulation of periodicals containing such material plays an important part in the development of crime among the youth of our country."

In the past decade the growth of salacious literature has been the most rapid in history. During this period sex crimes have more than doubled, with one out of every four committed by youths under 20. The latest National Uniform Crime Reports Bulletin indicates that while crime in general waned in the United States during 1939, sex offenses increased 7 percent. Rape cases have shot up 50 percent in the past 6 years. Sanford Bates, formerly Director of Federal Prisons, attributes this increase largely "to the lurid accounts of sex crimes which appear in public print, sex stories in magazines, movies, etc.," and K. P. Aldrich, Chief Inspector of the Post Office Department, asserts: "The present flood of filthy publications is greatly responsible for the increase in sex crimes, and furnishes an important motivation to youthful offenders."

But overt crime is not the only important part of the problem. Wherever obscene magazines circulate, cultural values decline, inferior standards of taste and morals prevail. The pernicious effect of such magazines upon high school children is keenly realized by principals and teachers. Frederick Houk Law, New York director of the National Education Association, voices the attitude of the teaching profession when he says: "For the young, especially, such publications cultivate vulgarity, lower taste, awaken lack of respect for womanhood, and lead directly toward an increase of social evils."

Distinctions must be made, of course, among various types of magazines. There are some that handle risqué material with wit and intelligent humor, with verve and urbanity; to brand them as obscene would run counter to the generally accepted attitudes of society today. The filthy magazines that have lately provoked clean-up campaigns in many communities are easily recognizable by their cheap vulgarity; they specialize in portraying a degraded concept of sex, or in glorifying the activities of criminals and perverts.

Few persons realize how widespread the pox of smutty magazines has become. They can be bought by the bale by any 13-year-old child in almost any city or town. They filter into the corner candy store; they can be purchased at filling stations, soda fountains, railroad and bus waiting rooms. They flaunt suggestively posed near nudes on their covers; their contents are revolting slime, nauseating to the normal adult but dangerously appealing to weak or impressionable mentalities.

These publications are beyond the pale of decency, not only in their text and illustrations, but also in their advertising columns, which offer everything from sexual stimulants, fake dice and abortifacients to the vilest of privately printed obscenities. Among the latter are the revolting cartoon books—a set of six or eight drawings purporting to reveal perversions in the lives of stage and screen stars. That cartoon books thus advertised find their way into the hands of high-school youths and incite similar practices has been established by postal inspectors and local law-enforcement officers.

In New York City, a council for decency in magazines, non-sectarian, was formed in 1938 to check the sale of border line periodicals that offend against reasonable canons of good taste. It is in no sense a prosecuting organization; its aims are to arouse public opinion and to secure the cooperation of publishers, distributors, and news dealers. The council advocates legislation requiring the name and address of the publisher to be printed in the masthead of the magazine. Such legislation would put an end to the fly-by-night publisher who brings out a single issue of an offensive magazine, cashes in on its quick sale to news dealers, then disappears from view. Three months later he bobs up again at a different address with another publication more objectionable than the first.

In all these local drives, no censorship of the press is involved; no legitimate literary or artistic liberty is curtailed. Bluenose

zealotry is frowned upon by the campaigners themselves, as un-American and contrary to contemporary reform methods. Communities all over the United States are discovering that the moment they organize and invoke local indecency ordinances against smutty magazines, publishers and distributors seize a broom and clean their own house. This simple technique has swept filthy magazines off the newsstands, not only in the communities mentioned, but also in Albany, N. Y., in Boston, Lowell, Lynn, and 10 other smaller cities in Massachusetts; in Grand Rapids, Mich., Des Moines, Iowa, Birmingham, Ala., Los Angeles, Calif., and elsewhere.

No city or town need be plagued by the sex purveyor, pervert maker, or morals wrecker any longer than it takes to organize against him. His malodorous product, and all that it represents in human and economic waste, can be obliterated by taking a community stand against it. J. Edgar Hoover speaks for every decent-minded citizen when he says: "There is no place in America for the filthy magazine. This trash must go!"

### Plain Enough

#### EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

EDITORIAL FROM THE PHILADELPHIA EVENING BULLETIN OF  
FEBRUARY 12, 1940

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Bulletin of February 12, 1940:

[From the Philadelphia Evening Bulletin of February 12, 1940]

#### PLAIN ENOUGH

Under the circumstances, including the occasion of delivery, President Roosevelt's condemnation of the Soviet Government was excellently timed. Sympathy for brutally invaded Finland, as he says, is felt by the overwhelming majority of the American people. That majority includes the former fellow travelers and those who, although revolted by Bolshevik brutality, had hoped that Russia would yet develop a real democracy.

No rupture of relations could bring home to Moscow more forcefully knowledge of what America really thinks of it than this declaration by the head of a state still in diplomatic relations with the Soviet.

Mr. Roosevelt gave good advice to the youthful Communists whom the American Youth Congress tolerates in its membership when he bade them confine their agitation to legal and constitutional lines. But Moscow, both in practice and propaganda, tells them exactly the contrary. Bolshevism came to power not by overthrowing Czarism but by ousting a democratic regime that had already destroyed the old imperial tyranny—a government of veteran fighters for liberty—men and women—in the persecution of whom Bolshevism outdid Czaristic terrorism. Bolshevism relies on purges, police terrorism, and the denial of every individual liberty.

For young "reds" the President had plain words about twaddle over Finland. The Youth Congress seems to think it is being asked to deny the right of young Americans to advocate communism. Conceding an atheist freedom of opinion and speech doesn't entitle him to barge into membership and influence in the Christian Endeavor Union. The Youth Congress had better travel alone.

### The Federal Judiciary

#### EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

ADDRESS BY HON. KENNETH McKELLAR, OF TENNESSEE

Mr. McKELLAR. Mr. President, some time ago I delivered an address at Nashville, Tenn., in honor of one of the new district judges. In my address I outlined something concerning the judicial office. The address was printed in part in the newspapers. I ask unanimous consent that it may be printed in the Appendix of the RECORD, as a part of my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, I am happy to be here tonight. You gentlemen of the Nashville bar and lawyers of this district are very gracious to honor your new Federal judge and are most courteous to invite me to take part in the ceremony. I begin by saying I know it is much more interesting for any speaker on any occasion of this kind to speak without notes, and as the most of you know, I usually follow that course. However, for reasons that seem to require it, I have concluded to confine myself largely tonight to my written discussion.

I first wish to state the situation leading up to Senator STEWART's and my recommendation and to the appointment of Judge Davies as Federal judge. As you all know, there were a number of applicants for this very important position—lawyers all of high standing, fine ability, excellent qualifications, and of outstanding honesty and integrity. Several from Nashville and several from the middle district outside of Nashville. Senator STEWART and I had a difficult task in making a selection.

In talking the matter over with the Attorney General, he informed us that his office would not recommend to the President anyone whose age was over 60. This rule did not meet my approval then and does not meet my approval now. I never agreed with the Dr. Osler theory that a man should be chloroformed after reaching 60 years of age. I am past that age and I think I am still able to do good work. I know many lawyers over 60 who would make better judges than others under that age. The Attorney General was officially and legally charged with the duty of making recommendations of judges to the President and we did not have the power to overrule him. This ruling eliminated a number of excellent applicants, as fine men as could be found in this or any other State. Senator STEWART and I went over the endorsements of the other applicants and there were many fine endorsements of each and they were all well qualified men. We submitted a number of names to the Department of Justice, but complications arose, which were not the fault of anybody, and we then submitted the name of Judge Davies, who was not an applicant for the place.

Senator STEWART and I submitted his name to the Department of Justice so that the Attorney General could make the examination that he always makes in such cases before joining in our recommendations. The Attorney General made his usual examination and soon reported favorably and submitted his name to the President and he was appointed. In submitting his name, we considered his standing at the bar, his education, his fitness, qualifications generally, his character, and his standing in the community.

Then came a wholly unexpected protest. I need not go into that except to say that I believe that the protestants were thoroughly sincere and honest in their protests, but they had simply been misinformed. Their testimony before the Judiciary Committee making the investigation amply showed this. The overwhelming testimony given by leading judges and lawyers showed that Mr. Davies was entirely worthy and qualified. The testimony of the protestants indicated that they were not fully informed as to the facts, and the committee unanimously recommended Judge Davies and the Senate unanimously confirmed him.

So far as I have been able to determine, the appointment of Judge Davies has met well-nigh unanimous approval of the Nashville bar and of the several bars of the entire district.

#### SOME SUGGESTIONS CONCERNING FEDERAL JUDGES

As all of you know, I am a lawyer by profession and practice quite actively in all the courts, State and Federal, where I gained considerable experience. I have been a member of the two branches of Congress for about 28 years. Not long after I entered the House we had the case of an impeachment of a Federal judge before that body, and Judge Robert W. Archbold was removed from office. Later United States district judge George W. English was impeached by the House and he resigned. Still later Harold Louderback, district judge, was impeached, but was not convicted, in 1933. In 1936 Halsted L. Ritter, district judge, was removed from office. I was exceedingly familiar with all these cases. In addition to that, as a Senator I have taken part in the appointment of all five of our Tennessee Federal judges. I am a devout believer in the Constitution of the United States and regard it as the greatest document for the government of people ever created by man.

For these reasons the observations I am now going to make concerning Federal judges would seem to be permissible, and I hope the five judges and all of you will consider them appropriate and proper.

Aristotle, the great Greek philosopher who lived long before the Christian era, said that there were four requisites of a good judge: One was to hear cautiously; the second to answer wisely; the third to consider soberly; and the fourth to decide impartially. I think Judge Davies and the other Federal judges of the State have these four qualifications.

However, in this modern age there are, as it seems to me, additional requirements of a Federal judge.

He should be learned in the law, familiar with Federal practice, quick at making accurate deductions from established precedents, courteous to lawyers appearing before him, just to all litigants, and he should so conduct himself as to earn and merit the approval of the people of the district over which he has jurisdiction.

The Federal judiciary has its origin solely in the Constitution of the United States. Its like has not been found in any other country. The Constitution provides for the Supreme Court, but leaves to Congress the power to create such inferior courts as the Congress may from time to time ordain and establish. So that

because of my actual experience at the bar in the trial of cases before judges and juries, I formed a very definite idea of the duty of judges under our Constitution. I want to set some of these out:

A judge should permit no one to discuss with him in chambers, privately, or anywhere else except in open court any case or official matter pending before him. There should be no exception whatever made by the judge to this inflexible, self-imposed rule of conduct.

A judge should listen with patience to all matters presented to him in open court, either by litigants or by lawyers. The more ignorant or lowly the litigant, or the more ill-advised the lawyer, the more carefully and politely the judge should treat them.

One of our chancellors, Judge F. H. Heiskell, used to say that a lawyer who was not of the first grade but who had many, many cases before him, caused him to do more work than any other for the reason that the lawyer sometimes overlooked the best points in his case, and he had to try the case on its merits.

A judge should permit full, open court hearings to all who desire to address him in behalf of leniency for criminal defendants who have pleaded guilty and stand before him for sentence where the term of such sentence is in his sound discretion within the limits of the penal statutes.

In dealing with sentences and punishments for crimes, he should bear in mind the fundamental philosophy of criminal law that the primary purpose of punishment is to prevent crime, and that certainty of punishment is the greatest restraining influence upon the criminal mind. He should bear in mind at all times that the judicial duty to uphold and influence the criminal laws of our country without fear or favor is a nondelegable judicial duty. Of course, I do not mean that every person charged with crime should be given the limit of the law for cases constantly arise in every court where the punishment should be tempered with mercy and kindness, but in all such cases the judge should be exceedingly careful.

Court business should be transacted with dispatch, cases should be set for trial and tried at the earliest practicable time under the rules of civil procedure. Criminal cases, especially, should be speedily heard. Courtesy continuances should not be granted and no case should be put off except for good cause.

No case should be held under advisement longer than is absolutely necessary for its proper consideration and determination. Next to correct decision, prompt decision is the most important consideration in the administration of justice. I once had a case before a Federal judge in which the jury gave me a verdict, as I recall, of \$80,000 against a perfectly solvent defendant. A motion for a new trial was made. The Federal judge took it under advisement and kept it under advisement for 5 years and then overruled it. However, in the meantime, the solvent defendant had become insolvent and the judgment was worthless.

#### JURY TRIALS

I desire to call attention to jury trials. The original Constitution, article III, provides:

"The trial of all crimes, except in cases of impeachment, shall be by a jury."

This was considered inadequate, and the sixth and seventh amendments were speedily adopted, which so specifically provided for jury trials in criminal and civil cases that it has always been difficult for me to understand why many of the Federal courts have been able so successfully virtually to do away with jury trials in civil cases. The sixth amendment, as to criminal cases, is as follows:

"In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation, to be confronted with the witnesses against him, to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense."

The seventh amendment is as follows:

"In suits at common law, where the value in controversy shall exceed \$20, the right of trial by jury shall be preserved, and no fact tried by jury shall be otherwise reexamined in any court of the United States than according to the rules of the common law."

In some way the doctrine that the Federal trial judge is the thirteenth juror has prevailed in many districts. There is no such provision in the Constitution. Judges should constantly bear in mind the sixth and seventh amendments, and should follow the spirit as well as the letter of constitutional guarantees of trial by jury, making no comment on the evidence which might influence the jury as triers of the facts.

I have known Federal judges in their charge to the jury to sum up the facts and thereby virtually instruct the jury to bring in such verdict as he desires. I knew of a criminal case before a Federal court in which the trial judge told the jury that whether they considered the Government's testimony or the defendant's testimony the result was the same; that they would be compelled to find the defendant guilty; and when one of the jurors asked the judge if he directed the jury to bring in a verdict convicting the defendant, he said no; that he was not allowed to do that, but that no reasonable man could hold otherwise on the facts adduced in that case. It is needless for me to say that this was a very extreme case of the judge's invasion of the province of the jury. The judge should in no case express to the jury his opinion on the facts.

In addition, a Federal judge should never set aside the verdict of a jury upon a question of fact, except upon a showing of passion, prejudice, corruption, or caprice on the part of the jury, and I may say that such a showing is a rare occurrence. In this connection, I might add that I know a Federal judge who has been on the bench for several years and has never set aside the verdict of a jury.

I believe in jury trials. Our Federal Constitution in three separate provisions guarantees the right of trial by jury, in the most explicit and unmistakable terms, and these mandates of the Constitution should be carried out. I am frank to say that P. I.'s have never been popular with me, though I do not recall ever having had one used on me. They seem established in our system, but should be granted only when there cannot be a difference of opinion. I have known many cases where the trial judge said there was no evidence to sustain a verdict, but the appellate court held that there was.

#### INSOLVENCY CASES

In receivership, reorganization, and bankruptcy cases, the judge should be careful to keep down the cost and not to allow excessive fees or compensation. In recent years, a number of cases have come before the Senate bringing the Federal judicial system in disrepute because of failure of judges to protect the assets of an estate and by allowing excessive fees. The purpose of all insolvency laws is to conserve assets for the creditors and to aid the debtor toward rehabilitation.

To the appointment of receivers, the most careful attention of the judge is called. In recent years not only excessive fees to receivers, but partiality and favoritism in the appointment of receivers has caused criticism of the Federal judiciary all over the country.

#### NOT AN AUTOCRAT—NO POWER OF VETO

As a rule, a Federal judgeship has been considered an easy place for one for life with all of the worries of the judge behind him. This is a very mistaken notion as to the situation of a judge. I believe a Federal judge should be unswervingly democratic in his attitude toward everybody, and courteous and considerate of the rights and feelings of others. His place is "during good behavior," and the judge should remember that as long as his behavior is good, his appointment is beyond recall by the people. For this reason, he should be more careful, both in his public and private conduct, and he should not place himself in such a position that it may be thought that any lawyer or other person is too close to the court. He should even be careful with whom he plays golf or bridge, or any other action which might make other lawyers or people believe that he would favor them in a lawsuit. In other words, it makes the judge's life somewhat lonely, but no Federal judge can be a "good fellow." He must pay the price for the respect and confidence of the people.

By his appointment for life, a Federal judge is not made an autocrat. He is not given power to alter or amend the Constitution of the United States. He is not given power to veto acts of the Congress. His duty is to uphold and enforce the several provisions of the Constitution where their infraction is charged, and to interpret and enforce acts of the Congress, and to do justice to all who come before him for a determination of their rights under the Federal Constitution and laws.

A judge should ever be mindful that the Constitution of the United States vests in Congress and not in the courts the law-making power and the determination of our national public policy. Where the constitutionality of an act of Congress is challenged, the appropriate function of the court where the test is made, should be to construe the statute in a liberal spirit of interpretation to the end that the broad power of Congress to legislate for the general welfare should be upheld, rather than thwarted in a narrowly restrained construction which defeats the will of the people as expressed by their congressional representatives.

In recent years some district judges have been prone to hold unconstitutional and set aside acts of Congress. Think of it a moment! A district judge is appointed by the President and confirmed by the Senate for life, and under the practice that has grown up he may in 10 days grant an injunction restraining the enforcement of an act of Congress deliberately passed by a majority of 435 Congressmen and 96 Senators, and approved by the President of the United States. A district court being created by Congress, and a district judge being appointed by the President and the Senate was never intended to have such power, and the all too frequent abuse of that power has led to the establishment of three judge courts. I hope no district judge in Tennessee will ever assert such unwarranted action in the granting of injunctions.

#### PRIVATE AND SEPARATE LIFE OF A JUDGE

Finally, may I add that the private life, the personal habits, and the rectitude of the judge should be above reproach. He should never forget that he is a Federal judge either on the bench or on the street. His private life should be an example to all those among whom he dispenses justice. This view of a judgeship undoubtedly deprives a man of some of his old associates and friends, but it is one of the penalties that a judge has to pay for judicial preferment.

The title of "judge" you receive from the President and the Senate representing your Government, but the name of "just judge" you earn for yourself. It is the greatest honor that can come to you. You are one of the servants of the people to do even and exact justice to those who come or are brought before you.

and to do justice as between them or as between them and their Government, evenly, exactly, and impartially.

I had all these things in mind when I made recommendations of the three judges whom I have recommended to be put on the bench in Tennessee, and when I voted for the confirmation of the other two judges now on the bench. I believed that all five would fulfill their obligations as herein set out. We had this view when we recommended Judge Martin, of Memphis, Judge Darr, of Jasper, and Judge Davies, of Nashville. I also had this in view when I agreed to the confirmation of Judge Hicks and Judge Taylor. I have never a doubt that they will all act in such a manner as will justify the exalted opinion we had of them.

Gentlemen of the bar of middle Tennessee, I believe in the selection of Judge Elmer D. Davies as a Federal judge. We have given you a splendid judge, a judge who will fully measure up to the requirements of the position.

Judge Davies has a delightful personality and engaging manners, is well educated, is gracious and courteous, and I predict for him a most successful career on the bench.

### The Motion-Picture Industry

#### EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

Mr. BOREN. Mr. Speaker, where there is any issue involved that touches the rights, the liberty and freedom, or the welfare of an individual or group, I feel that courage and honesty will stand ever ready to examine all evidence, though some evidence might conflict with prejudice or opinion. I believe the intellectual advancement of man depends upon an attitude of thorough and intense investigation and upon a fearless and ready acceptance of every fact, truth, and reality that investigation can produce. It is my keen desire that every conclusion that I may reach, which will govern my actions here, come always as the result of unbiased inquiry, investigation, and thought. At any time that my advocacy on one side of an issue reaches the point of presentation of the evidence in support of my viewpoint, I would feel it an injustice to my own comprehension and reason if there was not a full and free presentation of such evidence as might be opposed to the conclusion I had reached.

Mr. Speaker, I have on a few occasions discussed some aspects of the motion-picture industry and have referred to individuals representative of the executive powers in that industry. I have indicated among other things the personal incomes of these executives. Since these discussions, it has been frequently pointed out that a great amount of the individual incomes are absorbed by Government taxation, and by other means. This is undoubtedly true with reference to such salaries as that of Louis B. Mayer and certain stars and executives of the motion-picture industry whom I mentioned on October 18 and November 3, 1939.

I have in my hand a letter which bears on this subject, and I wish to incorporate it as a part of these remarks:

NEW YORK, February 12, 1940.

HON. LYLE H. BOREN,

House of Representatives, Washington, D. C.

MY DEAR MR. BOREN: I have seen in the CONGRESSIONAL RECORD of October 18 and November 3, last, certain references by you to the incomes of a number of persons engaged in the motion-picture business. I noticed that very fairly you pointed out that the earnings of actors and actresses are usually restricted to a shorter period of years than most other people because of the changes in the public esteem or favor.

Your fairness in that respect encouraged me to believe that you would also give fair consideration to my request that you would read, consider, and put into the RECORD the opinion of Justice Valente, of the Supreme Court of New York State, which opinion was given after his first full consideration of all the facts laid before him by interested stockholders in a suit against the executives of Loew's, Inc., mentioned by you in the CONGRESSIONAL RECORD.

It seemed to me that if you were advised that a justice of the New York Supreme Court, after careful and thorough inquiry in a truly conducted trial of issues, had ruled that these compensations were not only fair but profitable to the stockholders of the corpo-

ration, you would not hesitate to add to the RECORD by the inclusion of such an opinion from such a source.

It seemed to me also that you might fairly add to the RECORD the fact that with respect, for instance, to Mr. Louis B. Mayer, Mr. Schenck, and Mr. Rubin, on the amounts of compensations mentioned by you, each of them necessarily paid to the United States upward of 60 percent on those amounts in Federal income tax alone.

With respect to the justification of the compensations paid by Loew's, Inc., to these officials, may I quote to you these excerpts from the opinion of Justice Valente:

"This brief summary of the history of the company (in itself tending to refute any claim of fraud or of payments so large as to constitute a gift or waste of corporate assets) is supplemented by the undisputed evidence as to the scale of wages in the industry generally, the scarcity of talent to fill positions of producers and executives, and the intense competition among the companies for their services.

"The evidence is replete with instances of lucrative offers received by these executives in an effort to lure them away from Loew's, Inc., and I am convinced of the sincerity of Schenck's testimony that the only way he kept his unique organization intact was by the payment of generous compensation. That this policy has been successful is indicated not only by the standing of the company and the profits which it has earned over the years, but by the testimony of every single witness, including that of the president of one of its chief competitors, who frankly stated that he would like to get this executive group for his own company and that their loss would be disastrous to Loew's, Inc.

"The question before me, however, is not whether these payments were large—that is conceded—but whether they are so completely out of relation to the services rendered as to be characterized as a gift of corporate assets within *Rogers v. Hill* (289 U. S. 582). The evidence, however, justifies the conclusion that the contracts and payments were not a gift or waste of corporate assets, and that they were approved by successive and competent boards of directors, the majority of which was disinterested. Under such circumstances the court should not substitute its judgment for the judgment of the duly constituted corporate management. \* \* \*

"It is to be remembered that the 20 percent to the Mayer partners was virtually a compensation to the group for the production organization which they brought into the company. That percentage which began as a compensation to the Mayer organization when it was a corporation continued after it was changed into a copartnership. In addition to this percentage the individual members of the organization received a salary. When the arrangement was made with the copartnership, salaries continued in accordance with increased figures warranted by the additional responsibilities, and percentage compensation was also allowed to the organization as before. The contention that the percentage payments to the partnership were intended to be inclusive of salaries theretofore paid is untenable. In any event, the three members of the Mayer group represented the higher-water mark of the production end of the business of the corporation. \* \* \*

"The results, no matter how much one may attribute a part of the success to the Mayer group and the producing genius of Irving Thalberg, are in large part due to Nicholas M. Schenck. With the rapid growth of the company and with his diplomatic skill in holding the organization intact, it would seem that no ground for dissatisfaction at the salary allowed him by the directors or with adding to the salary the annual provision for a small percentage of the profits exists. To a comparable extent, similar justification may be found for the allowance of percentage compensation to David Bernstein, the treasurer. \* \* \*

"The action against the directors will be dismissed, and the prayer for injunction to restrain the operation of the new contracts effective January 1, 1939, denied. Findings and final judgment may be settled with affidavits of services by the respective attorneys for plaintiffs.

"LOUIS A. VALENTE, J. S. C.

"JANUARY 20, 1939."

I am enclosing a printed copy of the opinion referred to, and, for the sake of the record, I would greatly appreciate inclusion of that opinion, or, if that is impossible, of the excerpts quoted in my letter in whatever extension of your remarks upon this subject you would feel it fair to make.

Thanking you, I remain,

Very truly yours,

MANNY STRAUSS.

Mr. Speaker, I have carefully examined the decision of the Supreme Court of New York in the case of Bernard Epstein et al. against Nicholas M. Schenck et al. I find the references in the letter from Mr. Strauss as referred to herein both substantiated and elaborated on by the opinion handed down by Justice Louis A. Valente. In the sense of fairness, I would also add a few pertinent excerpts from this decision not referred to in the letter aforementioned:

Nor does any information seem to have been improperly withheld from stockholders. \* \* \*

Indeed, at the 1932 stockholders' meeting, after the disclosure of the amounts paid for the preceding 2 years, the stockholders by resolution formally approved the action of the board of directors in making such payments. Moreover, the court may take judicial

notice that since 1934 an agency of the Federal Government caused to be published the salaries of leading executives, and that these were widely publicized. Finally, extensions of the original contracts were submitted to and approved by stockholders in 1932 and 1936 after notice, and the new contracts, which take effect beginning January 1, 1939, were overwhelmingly approved by the stockholders after their proxies had been solicited by a notice which fully and fairly stated not only the terms of the proposed contracts but the terms of their existing contracts and the method by which their percentage compensation is to be computed.

Mr. Speaker, I regret that the length of the opinion written by Justice Valente is such that I cannot place it here in the RECORD in its entirety, but I feel that the references to that opinion are sufficient for the purposes, and I do not want ever to be in the position of withholding evidence or dodging the facts. I stand always ready to accept evidence, and am as anxious to correct any error of thought or action on my part as I am to maintain tenaciously the position of right. I hope throughout my life, and particularly my service here, that I will be at all times as quick to discard error as I am to accept the truth. Close examination of this material presented to me leads me to the opinion that my remarks of October 18 and November 3, 1939, would be, without this additional information, not sufficiently comprehensive to present all the facts. I am glad to submit this information by the way of addenda to my remarks in order that the full facts, taking into account all sides of this question, may be a matter of record.

### Youth and Government

#### EXTENSION OF REMARKS

OF

HON. FRANK W. FRIES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

ADDRESS BY HON. ROBERT H. JACKSON

Mr. FRIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Robert H. Jackson, Attorney General of the United States, at the Lincoln memorial meeting of the American Youth Congress, February 9, 1940:

Perhaps it is hard for you to imagine how flattering it is to such a well-worn youth as I to be invited to share the platform at a Youth Congress. For more reasons than one it is appropriate that you open your institute tonight with a memorial meeting for Abraham Lincoln. He was one Republican who would not have been afraid of you. Speaking of his long fight for human freedom, Carl Sandburg says of Lincoln:

"He knew that his best hopes for listeners to such an appeal were the young people. The 15- and 16-year-old boys who had read Uncle Tom's Cabin, when it was published 6 years before Lincoln's 'house divided' speech, had grown into 21- and 22-year-old voters. In what he was doing and saying Lincoln kept in mind the young men. He knew that the challenging radical tone of what he was saying about the Declaration of Independence would interest not only the foreign-born voters, but also the young people of all classes, those to whom the American Revolution still had a breath of smoke and a banner of sacred flame."

And, as Sandburg adds:

"Perhaps, after all, only the young people with dreams and wishes in their eyes would understand his language. When his talk was ended and his language had failed to measure off all he wanted to say, it might be the young who would best understand the desperation of his dreams, the unmeasured lengths of the adventure he was for."

I do not know what your dreams are, and it probably will not be for me to experience the unmeasured lengths of your adventures. In any case, I am quite certain that I believe in your right to have your dreams and your adventures.

Of course, to some people this spirit of social and political unconventionality is terrifying, and to some people such an assembly of young people is a symbol of dark and nightmarish plottings against government. Lincoln, too, experienced that. A book written at the time of Lincoln's campaigns so exaggerated his real aims as to anger him. It said:

"Men once fairly committed to Negro slavery agitation, once committed to the sweeping principle that 'man being a moral agent accountable to God for his actions, should not have those

actions controlled and directed by the will of another,' are in effect committed to socialism and communism and to the most ultra doctrines; to no private property, no church, no government; to free love, free lands, free woman, and free churches."

Thus it was sought to blast the dreams and ideals of the early Republican Party by labeling its antislavery sentiment as dangerous radicalism. Seems a little far-fetched today, doesn't it? But what seems more surprising is that the political party which has been trying to wear Lincoln's garments now refuses to associate with any of you youths because some among you are now labeled radicals and Communists. Of course, I do not know how dangerous you really are, but I do hope you are not so bad as to warrant the suggestion that you must clean up and purify yourselves in order to be worthy of a message even from the party of Warren Harding, Albert Fall, and Joe Pew.

I may be wrong about it, but it always seemed to me that a parent or a citizen who thought a youth in danger of great error was under an equally great duty to give patient and understanding counsel. That was the spirit and the practice of Abraham Lincoln. Convinced that he was right and that it was a duty and a privilege to set others right he went out and sought to present his views to those who differed with him. He set before us the classic example of revealing his own thoughts in debate, in the generous confidence that out of the free competition of ideas the American people can be trusted to choose the best ones.

My embarrassment in speaking to you tonight is not from a sense of being hollower than thou but from a confused sense of inferiority. While I try to be unconscious of the passing years, I am still vaguely aware of the mortality tables. They tell men of my age that, on average, you will be here long after we are gone. That means that our work, our capital, our institutions, and even our reputations will be left in your hands. Some men like Lincoln have grown in fame with posterity; others shrivel. The best we of today can do is at the mercy of time, and more time remains to you than to us.

Then, too, I am not so cocksure that my own generation has done such a good job in its time that I feel qualified to tell you what you should do with your lives in your allotted time. It would be too devastating if you should, as you probably would, reply: "Well, if you are so wise, why are you leaving us such a mess of wars, and rumors of wars, of social strife, economic stagnation, and political reaction, which has overwhelmed much of the world and bedevils all of it?" I freely acknowledge that the world of today lives in a glass house and is not privileged to throw stones at those who are to follow.

It is, I admit, a little difficult for one of my generation to talk to you in terms of your own dreams and visions, for we cannot share them fully. After all, we are a different generation, and we are a trifle afraid of you. That because, while you are tossed about by the same storms as we, you are riding free, while we older ones are mostly anchored. Some of us are anchored to a little accumulation of property; some anchored to a prospect of accumulating. Some are anchored to jobs or to social position or political affiliations or to some of those things which are tangible assurances that we will "stay put." No matter how free we try to be, we are all tangled up in the existing order of things and it is woven into us. We are part of the status quo.

And, too, no honest man can expect a free and hopeful youth to accept a status quo in which involuntary unemployment, foreclosed opportunities for independence, dependent old age, and so many injustices play so large and disastrous a part. We know we are leaving you an indefensible legacy. We know you are going to do something to it, and we don't know what. We know that you don't know what. We only know that the pattern of the future is in your minds, not in ours.

Although you do inherit a good deal of difficulty and confusion, you here in America are also the inheritors of things which have cost blood and sacrifice to win and which you will find still worth preserving. We have a system—an imperfect one, it is true—but one which aims to give us government by consent of the governed. And in order that such popular will may be enlightened and freely known, there was established the right of free speech, and of the press, and of petition, as well as other liberties from restraint. These limitations are to protect your freedom against the persons you elect to office.

Of course they are not the only persons from whom you will need to guard your liberties. Under our economic system grave injustices and inequalities may be perpetuated by men never elected to office, but who through economic advantage control jobs, or credit, or monopolize commodities, or who can otherwise strike at your means to live or your standard of living. From these sources come the greatest modern threats to your pursuit of happiness.

This democratic Government of ours was so fashioned as to be a power for your protection against such private injustice and exploitation and, at the same time, not to become an oppressor itself. It was placed in the hands of the people that they might stop wrongdoing by irresponsible private power without becoming subject to irresponsible public power.

Time will not permit me to trace the steps by which this virile and strong Government envisioned by John Marshall was stealthily deprived of its power to curb private exploitations and injustices of an economic nature. The slave power feared a government strong enough to check it, and its penetrating influence was long dedicated to the task of restricting through judicial decision, the power of the National Government. After Lincoln struck down that menace there arose the great combinations of finance and

industry which found strong government an obstacle to their imperial designs for exploitation. By 1936 the National Government was reduced by judicial decision to its lowest efficiency.

It has seemed to me that the biggest task of the New Deal was to restore to this people's Government its original powers, lost through judicial interpretation. That is the task in which I have been chiefly engaged, and we are prepared to hand on to you a more effective Government than the one Franklin D. Roosevelt has had to work with. Consider with me a list of the things that he was told he could never, never do, but which we now are told the Government always really had a right to do.

When President Roosevelt took office the people were powerless to enact, either through State or Nation, a minimum-wage law to protect women. Both the States and the Federal Government now have that power.

President Roosevelt took over a nation without power to enact a law dealing with child labor. We now have such a law.

President Roosevelt found a nation with its power to protect the right of labor collectively to bargain condemned as unconstitutional by a junta of 52 of the lawyers of America. The Nation has now won recognition of that power.

It was only about a year ago that we won the final decision of the Supreme Court confirming the power of this Nation to enact a valid farm-adjustment program.

It was only about 3 years ago that I sat before the Supreme Court on decision day to learn for the first time that our argument had prevailed and that a system of unemployment compensation could legally be undertaken.

Less than 3 years ago I was standing before the Supreme Court as a representative of this administration pleading for the power to deal with the urgent problem of decent care for our growing population of aged and infirm. We were opposed by the conservative argument that the Nation could not take any step whatever to deal with old-age pensions. Now we have that power.

President Roosevelt found this Nation without power to aid a distressed industry like the bituminous-coal industry. The Guffey Coal Act was thrown out as wholly illegal in 1936. This year the Coal Commission won its first contest in the Supreme Court.

President Roosevelt found the power of the Nation to enact a public-utilities holding-company act challenged. Its power to impose common honesty upon great interstate utility combinations which had always been the purse of reactionary politics was doubted. We have won the power to do that.

He found the country without power to enact a municipal bankruptcy act to permit its cities and villages to restore financial order and credit where there had been overobligation from years of political looting or improvidence. We have won the power to do that.

He found it without power to tax the public officeholder's salary as it did other citizens' salaries. We have won the power to do that.

He found it without power to tax the salary of a Federal judge as it did other citizens' salaries. Today the Nation has the power to do that.

In short, Roosevelt has won for the Nation that which he found it without adequate power to do—either to govern the powerful or to protect the weak.

The reason I call your attention in such detail to this change of constitutional interpretation is that I think it may answer in your mind, as it has in mine, grave doubts as to whether our Government could be made equal to solving its problems. Four years ago, as measure after measure of recovery and of reform were crushed as unconstitutional, I, too, was pretty despondent about the future. I did not, and do not, feel that the New Deal measures were the perfect nor even the best solution of our problems. The loss of these particular measures was not so serious as the loss of the power to enact any measures dealing with those admitted evils.

Before you look wistfully at any other form of government, let's see what we can do with this American Government with its powers thus restored. Here are old frontiers reopened to statesmanship. Here are new possibilities for the redress of grievances, restoration of lost opportunities and equalities. Of course, it will not move as fast as some would like, but our Government can move as fast as our underlying society and economy will assimilate changes, and efforts to move faster always produce countermovements that undo much of what has been accomplished. If the people are really determined, they can now utilize our Federal Government to knock out old privileges and unfair advantages, to open the closed doors to individual opportunity and to turn out unprecedented national wealth to a source of individual security.

I know full well that many people who talk of preserving this "American system" really mean only that they want to preserve the status quo and their advantageous position in it. But I would urge you to preserve our American system for an exactly opposite reason. Our system is really a great system for the changing of the status quo by peaceful and orderly means. Except in nations that have the device of popular elections, there is no way to repudiate and change a governmental policy except by force. Elections are the civilized substitute for force to keep a government abreast of public opinion.

I know that in many places abroad and in a few at home, it is the custom to scoff at free government, to call democracy the "cult of incompetence," to complain of it as slow and compromising and outmoded. But if we were to grant all of those charges—which we need not—it is still democracy alone which preserves that priceless thing for which youth in all ages has searched—the dignity and worth of the individual.

With all our gropings and uncertainties we have in America held to that ideal. If our practice does not measure up to the ideal then, that discredits not the ideal but only the weakness of our efforts. You live in a country where the individual may listen to his radio even if what he hears does him no good. The individual here may have grievances against his system, but he does not disappear unaccountably if he unites with others in denouncing them. The individual may read anything he can get hold of, write as he pleases, and speak his mind, even if what he says is distasteful to the rest of the country.

Among the great nations of the earth this is one of the few where plain, ordinary citizens are preparing to go to the polls and settle our national policy by a choice of leaders for the next 4 years. You are almost alone of the peoples in which the individual in humble station may register his influence on questions that settle the fate of the Nation. You may truthfully say that we have not the complete democracy and the perfect justice that we dream of, but you cannot deny that we are among the few who have in our own hands the possibilities of approaching those hopes. Is it any wonder that among us are people passionately attached to this system, in spite of its shortcomings, and intensely resentful of any movement which they think would overturn it?

You will soon take over from your elders unsolved problems as vexing as have fallen to any generation. But there is also handed to you a government more responsive, more effective, and more useful than we have had. Your great opportunity is to make it work. Let that be your crusade. Drive out of power the incompetent, the corrupt, and the indifferent. Walk into this democratic process and master it. Make it serve your dreams and realize your visions. I, for one, welcome your active, unbossed, and unpurchasable enthusiasms in public affairs.

If your enthusiasms and visions at times conflict with the lessons of experience and our cautions, that is only what happens under every roof that is blessed by housing two generations. For my part, I am glad it is so.

## America Must Be On Guard

### EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

RADIO ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. DITTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Hon. JOSEPH W. MARTIN, JR., of Massachusetts, made over a National Broadcasting Co. network during the National Radio Forum, arranged by the Washington Star, on Monday evening, February 12:

Tonight in every section of our land tributes to the immortal Abraham Lincoln are being voiced.

It is a great privilege to be able to address you from the Capital of the Nation on this one hundred and thirty-first anniversary of Lincoln's birth.

It is no mere figure of speech to say that the spirit of Lincoln is close to America tonight. The studio from which I speak is little more than a mile from the imposing Lincoln Memorial, which overlooks the historic Potomac, which Lincoln himself so often watched with anxious and prayerful eyes from the windows of the White House as he guided the Republic through the soul-testing ordeal of internal division and bitter civil war.

Less than a city square from this studio stands the church in which Abraham Lincoln often prayed; and in that church there is still preserved, as an abiding landmark of national history, the very pew in which Abraham Lincoln is known to have knelt in prayer during the crushing hours of the Battle of Antietam. It was then that the fortunes of the Union were perhaps at the lowest point of the war.

A living link between the Washington of today and that of Abraham Lincoln exists in the Washington Star. It is altogether proper that the army of steadfast friends of this fine radio program of public service should recall tonight that the Washington Star was established here in 1852. In its files from that year forward to tonight's final edition is to be traced the whole effect of Abraham Lincoln's public service.

In this Star forum we have a direct institutional link, unbroken since 1852, with the life and times and spirit of Lincoln. We are reminded that, after all, life is not a rope of sand. There is more to our national life than hectic change and restless experiment.

Lincoln's life and works hold for us some lessons which, it seems to me, we need to review.

Lincoln was a great man because he was a simple, sincere, just, and honest man. Lincoln was eloquent because his was the elo-

quence of simple phrasing, plain speaking, the language of the people and for the people.

Faced by grave domestic problems which we know must be solved, it is not enough merely to preach unity. We must practice unity. It is the most important goal for us in America—unity in the American spirit; unity in a resolution to pursue the American way; unity in a will to solve our domestic problems, and to make constitutional government work and work well in this country; unity in the will to stay aloof from foreign entanglements and conflicts; unity in the determination that we will never extinguish constitutional government, individual privilege, and liberty under the Bill of Rights in this country, that we will never suffocate our freedom under a military dictatorship in order to go to war on the mistaken mission of saving the rest of the world for democracy.

Lincoln knew well the vital necessity of real unity in this Nation, because he understood clearly the dangerous trick of ambitious men to divide and rule.

For several years now we have watched the rise and the encouragement of sectional jealousies, of class prejudices, and suspicions and strifes. Communism, fascism, and other foreign "isms" have been at their work seeking every opening in America's armor to creep in and break down the whole institution of free government on this continent.

We can defeat these destructive forces only if we solve our domestic problems. We must put our unemployed back to work. We must check the rise of the national debt. We must put an end to these recurring deficits. We must have better understanding and responsibility between employers and employees. We must have a permanent resumption of business. We must have lower taxes. We must have an end to this practice of inciting some sections of our country against other sections, of inciting some classes of our people against other classes.

For 7 years this country has been made a proving ground for reckless experiments, and those experiments have failed. For 7 years there has been rampant propaganda designed to lead the workingman to believe that his interests are separate and apart from those of the employers', and thus to convince the employers that their interests are separate and apart from the interests of labor; to lead the farmer to believe that his interests are separate and apart from those of industry and of labor. There is not an atom of truth in that propaganda. All have a common interest and a common welfare.

Just as Lincoln said this Nation cannot permanently endure half slave and half free, so I say to you this Nation cannot endure with the Federal Government running half the business in competition with the other half. Lincoln knew what he was talking about when he said:

"\* \* \* In all that the people can individually do as well for themselves, government ought not to interfere."

Lincoln said something else that bears on our conditions of today with a peculiar significance. In the statement that I am going to quote he laid down a doctrine to which we must return if we are again to know that prosperity which this Nation so richly deserves and for which its people have such a great capacity. Said Lincoln:

"I take it that it is best for all to leave each man free to acquire property as far as he can. Some will get wealthy. I don't believe in law to prevent a man from getting rich. It would do more harm than good. So while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else."

In those few words, my fellow Americans, Abraham Lincoln defined the doctrine which we call the American way. Tied up with that doctrine is the Constitution with its Bill of Rights. Linked with that doctrine is the right of the individual citizen to go about his business unmolested, unregulated, unregulated by his Government so long as he does not interfere with the rights of his fellow men.

"I believe each individual," said Lincoln on another occasion, "is naturally entitled to do as he pleases with himself and the fruit of his labor so far as it in nowise interferes with any other man's rights."

It was that doctrine that in 150 years made of this the richest, greatest, most enlightened, most cultured, and most capable nation that has ever existed since history began. It is that doctrine which will enable this Nation to endure as the richest, the most prosperous, the most enlightened, and the freest nation on the globe. It is only by being faithful to that doctrine that we can hope to pass on to coming generations the great heritage of freedom, security, prosperity, the great riches of spiritual and cultural and material possessions which our fathers have left to us.

Abraham Lincoln saw the dangers that could threaten this rich Nation if we ever allowed our energy, our self-reliance, our courage, our determination to cling fast to the Constitution and to the Bill of Rights to become weakened.

We have been hearing much in the last several months of the dangers which face us from abroad unless we do this or that or the other thing about it; in other words, unless we become entangled in foreign quarrels and foreign intrigues.

Lincoln put his finger on the danger which we face in this Nation today. He said:

"At what point, then, is the danger to be expected? I answer, if it ever reaches us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher."

These words mean that if the hardships and the suffering of unemployment too long continue, if the condition of the farmers become desperate; if our youth are denied a chance for honest

labor at decent wages; if we continue recklessly to pile up a national debt, to accumulate more deficits, to increase taxes, and to discourage business; if we do not stick to the American way, then, indeed, as Lincoln said, will our danger spring up among us, and we ourselves will be the authors and finishers of the destruction of this Nation.

Lincoln said something else that was very significant that I wish to point out tonight. You will recall that he feared the effects of power. He was afraid of the strange influence that power has on most men if they too long possess it. That was why he made haste after the Civil War was over to proclaim the strife ended, and thereby return to the Congress those emergency powers which had been granted to him as Commander in Chief.

Foreseeing the danger that power held too long might create, Abraham Lincoln uttered a warning that came from the very depths of his soul when he said:

"It is to deny what the history of the world tells us is true, to suppose that men of ambition and talents will not continue to spring up amongst us. And when they do, they will as naturally seek the gratification of their ruling passions as others have done before them. The question then is, Can that gratification be found in supporting and maintaining an edifice that has been erected by others? Most certainly it cannot. \* \* \* Towering genius disdains a beaten path. It seeks regions hitherto unexplored. It sees no distinction in adding story to story upon the monuments of fame erected to the memory of others. It denies that it is glory enough to serve under any chief. It scorns to tread in the footsteps of any predecessor, however illustrious. It thirsts and burns for distinction; and if possible, it will have it, whether at the expense of emancipating slaves or enslaving free men. Is it unreasonable, then, to expect that some man possessed of the loftiest genius, coupled with ambition sufficient to push it to its utmost stretch, will at some time spring up among us? And when such a one does, it will require the people to be united with each other, attached to the Government and laws, and generally intelligent, to successfully frustrate his designs."

The philosophy of Lincoln has continued to this day to be the philosophy of his party. It still embraces the deepest instincts and aspirations of all the American people. Therefore, tonight I want again to pledge allegiance to Lincoln's philosophy of government and of life. At one time he gave a special message to his party. He said:

"A few words now to Republicans. It is exceedingly desirable that all parts of this great Confederacy shall be at peace, and in harmony with one another. Let us Republicans do our part to have it so. Even though much provoked, let us do nothing through passion and ill temper."

That, my fellow citizens, is the philosophy of Lincoln's party today.

We can well believe that were he here at this hour, the Great Emancipator would speak out in tones that would echo throughout the world against communism, fascism, against all of these new and poisonous doctrines which would exchange free government for dictatorship; which would supplant constitutional government with autocracy; which would renounce individual independence, individual honesty, individual effort and self-government, and set up political monopoly, autocratic control, and bureaucratic administration down to the last detail of the citizen's life.

There are many kinds of slavery known to the human family. There is the physical bondage of man to man, now unknown in most of the civilized world. There is economic slavery—of which all too much still exists in the civilized world. There is political slavery, which in these later years has been creeping like some strange, new, and insidious malady through the world. Flowing out of the social and economic disruptions of war, it has in two decades engulfed nation after nation. This tide must not engulf America.

We have been told of new instruments of public power which have been built up. We have been told that these new devices might provide shackles for the liberties of the people.

America must be on guard.

It may or it may not be significant that we have reached a point for the first time in our history where a great political party has become so submissive to one-man rule that it cannot decide when to hold its next convention. However that may be, no group in this Nation can long maintain these new instruments of public power with which to shackle the liberties of the people so long as America remains true to the philosophy and ideals of Lincoln. As Lincoln said:

"While the people retain their virtue and vigilance, no administration, by any extreme of wickedness or folly, can very seriously injure the Government in the short space of 4 years."

This is a time, my fellow citizens, for some of Lincoln's plain speaking. This is a time when you have a right to demand and when you ought to demand that your public servants, your public administrators, your public executives, say what they mean and mean what they say.

You have a right to ask what is going to be done to solve these domestic problems which have gone unsolved so long that today they are threatening constitutional government and individual freedom. How are we to restore prosperity in this country? How are we to restore the jobless to jobs? How are we to reduce our stupendous public debt, our continuing deficits, our mounting taxes? How are we to give the youth of America their fair chance? These are questions you have a right to ask, and you are entitled to the answers.

Prosperity can be restored in this country, financial security can be brought back only by the sound and time-tested American methods by which prosperity and security were first achieved. When it becomes clear the Government is being operated for the welfare of all the people, then American self-reliance, courage, initiative, thrift, and love of liberty will be revived.

Our problems of today must be worked out in the spirit of Lincoln, "With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right \* \* \*."

Just as Lincoln and our forefathers in their day faced and conquered conditions which threatened the existence of the Union, and just as they saved this Nation in its hour of peril through their unwavering devotion to the principles of freedom and constitutional government, so, too, we of this day will face the problems which endanger us, and with that firmness and gentleness and, I hope, with that wisdom of Lincoln solve these problems and restore to our people the peace and prosperity for which Lincoln lived and fought and prayed and died, "That this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth."

Let us, then, leave that noble, gentle soul where he is—enshrined in the ages to which he belongs, one of earth's great ones. My own humble tribute to him is:

"He loved his fellow men."

But no words of mine can frame for Abraham Lincoln a tribute so perfect as his own tribute to Washington:

"To add brightness to the sun or glory to the name is alike impossible. Let none attempt it. In solemn awe pronounce the name and in its naked, deathless splendor leave it shining on."

I thank you.

### Wheeler-Lea Transportation Bill

#### EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, this Hall has seen many pieces of legislation debated and passed without Congress being aware of one-half the "bugs" in the legislation. Later we come to realize the existence of the vermin that is eating the substance of the law and then public sentiment demands that either we kill the "bugs" by amendment or kill the whole legislation by repeal.

The Wheeler-Lea transportation bill was debated very briefly in the body at the other end of the Capitol, passed, and came to the House. We gave it more attention. We took out some of the "bugs" that the Senate in the quick and brief examination failed to discover. We amended the bill in several particulars and passed it. Now the bill as passed by the Senate and the Senate bill as amended in the House are before the conferees.

The House passed the amendments in good faith with the intent of making a better bill out of a very bad one. It is bad even with the House amendments. It will be terrible if those amendments are not retained.

The bill is purely and simply a catering to monopoly without regard to the shipper, the public who pays the freight, or the employees who have made the American railroads what they are today. The advocates of this bill will tell you that it will reduce freight rates. I want them to tell me when freight rates have ever been reduced as a result of State or National legislation. Freight rates have continued to mount. The more legislation we pass the more powerful the equipment the railroads have; the longer the trains the higher the freight rates are. This is not theory. This is a fact, as any shipper can tell you.

Up until a few years ago 50 cars was a long train, and those 50 cars were manned by 5 men. Today there are more 100-car trains than 50-car trains. Many trains are 150 cars in length. They are still manned by only 5 men. The cars have increased in carrying capacity until they carry almost twice as much in each car as was carried when they were operating the smaller trains. In other words, today the railroads are carrying approximately 6 times the freight that they formerly carried with one-half the employees they formerly used. Did the great public, either shipper or consumer, receive any reduction in freight rates because of this

increase in the carrying capacity with less labor cost? No. They received the opposite—an increase in freight rates.

I was one of those who at the very beginning opposed the Wheeler-Lea bill because it failed to take into consideration the more important group to be considered in the transportation problem—the public. I favor all forms of transportation that will give to the public better and cheaper facilities for commerce. The effect of the Wheeler-Lea bill will be to destroy some forms of transportation that are now serving the public for the benefit of this railroad monopoly operated from Wall Street in the interest of the money tycoons, forgetful of all interests except the money interest, for the benefit of the select few financial operators. I am interested in the benefit to be derived from all forms of transportation, which includes waterways and trucks as well as railroads. I am also interested in security for the worker and his continued employment. The Wheeler bill as it passed the Senate throws thousands of rail employees out of work. This will not benefit the people of the Nation.

We have been spending our time here for 6 years trying to promulgate laws that will eventuate in taking people off the relief rolls and place them on jobs. We have spent billions of the taxpayers' money in the effort and now the Wheeler bill as passed by the Senate would place 400,000 more men out of employment. Men who are in the highest class, best paid ranks of labor. My authority for this statement is figures given in the Wall Street Journal. Congress passed a Railroad Retirement Act. The intent of this act was to provide security for the railroad worker. By it Congress said that a railroad worker must be employed 30 years before he would be eligible for retirement benefits. Congress made a further provision that he must not only have 30 years before he would be eligible for the benefits but in addition thereto he must have reached the age of 65 years. If he is put out of employment except for total and permanent physical disability before he reaches the age of 65 he must wait out the remaining years before he can draw his retirement even though the employee has paid all his assessments from his earned wages and the employer the pay-roll tax.

By the bill as it passed the Senate we would take away with our left hand all that we have given almost a million railroad employees with our right hand. We take it away without their consent and destroy by implication a vested right that we have led these rail workers to believe they possessed. We abrogate what was done in good faith. We take away from them that which they have paid for with their own earnings. Congress by the law forced all of the employees to contribute a percentage from every pay check to pay for the retirement.

Yet under the consolidation provisions of the Senate bill each and every man could be deprived of these benefits for which he has labored throughout the years, for which he has paid from his earnings in compliance with the laws of his Government. Under the provisions of the Wheeler bill a large majority of the 400,000 men displaced from employment would be men with 30 years' service who had not yet reached the age of 65 or men with 20 years' service or less. I submit that such treatment of railroad employees is unjustified, inexplicable, and inexcusable.

When the Railroad Retirement Act was before the House committee, that committee, to a large extent, used a personnel basis of 1,200,000 workers as an example of what the income from the act would be in future years. The Secretary of the Treasury was doubtful of the financial stability of the act and that testimony was used in the argument to convince him. The argument was also used that as soon as business picked up the pay roll would pick up. The business pick-up arrived. The railroads handled the greatest increase in volume of business in the last quarter of 1939 in a 10-year period. But now with this increase other means are being sought out to refute the argument that was formerly advanced in favor of the Retirement Act. Without the Harrington amendment nearly 50 percent of existing railroad employment could be eliminated. You cannot destroy even 1 percent of these jobs without vitally affecting the financial stability of the Railroad Retirement Act.

This Wheeler-Lea bill as passed by the Senate had in view, in my opinion, the destruction of the Railroad Retirement Act so that the railroads could save approximately \$20,000,000 a year in pay-roll tax, reducing by that figure the income derived by the board from its collections.

If we of the Congress even suggested doing to the Social Security Act and the beneficiaries under that act what is being done to the railroad worker by the omnibus transportation bill the whole Nation would be up in arms. These railroad workers are deprived of the benefits of the Social Security Act. We cannot take away from them or invalidate by making ineffectual the only social legislation they have. There can be no compromise on this matter.

The House passed the Harrington amendment. Under the Harrington amendment these employees would not be subject to the whim of a financial dictator sitting in the back room of a bank. Under the Harrington amendment these employees would retain what Congress has, by law, given them. Under the Harrington amendment one of the "bugs" would be taken out of the bill as passed by the Senate. The conferees of the House should be instructed to stand by the Harrington amendment, and the House should vote to reject the conference report if it does not do so.

The executive council of the American Federation of Labor went on record as favoring the amendment on October 2, 1939, after it had passed the House, and George M. Harrison, president of the Railway Labor Executives Association, signed that report. These two organizations, one representing labor without regard to railway employment, and the other confining its membership to those in railway service only, have both endorsed the Harrington amendment. The Brotherhood of Railway Trainmen, which represents by far the largest membership of any of the so-called train-service brotherhoods, has been most active in support of the amendment.

Of course, the argument is advanced that the motives of these laboring men are selfish in wanting to hold their employment. Certainly it is selfish if wanting to maintain the employment that they have striven a lifetime to keep and secure for themselves the equity which we gave them under the Railroad Retirement Act can be called selfish. Yet I know of no group that has been as unselfish as railroad labor. They have certainly contributed their share to economies in railroading. The number of employees on American railroads has been reduced almost 50 percent, or from more than a million and a half employees to less than a million employees. There is a great hue and cry raised by the proponents of this bill that we must protect the bondholders and the investment of the bankers. The Washington Star of February 2, this year, on its financial page, carried the headline "Net railway income shows big increase during 1939," and the article stated that the net income of the railroads in the year 1939 was \$215,290,253 more than the net income in the year 1938.

This would indicate to any fair-thinking person that the railroads of the Nation are doing pretty well under existing law and without this Wheeler-Lea monstrosity which would throw 400,000 workers with their families on the industrial scrap heap and relief. The record of one railroad does not indicate the condition of all of them any more than one robin indicates the spring. But if you want to pick out specific instances let us take the C. & O. Railroad, which is a great system, and realize the fact that in the year 1936 the Chesapeake & Ohio paid more money in dividends than it did in wages to its labor. Or take the Bessemer & Lake Erie that in the same year paid 1,100 percent in dividends. Is this showing on the part of these railroads such as would indicate that all the systems need consolidations that will result in monopoly to destroy all other systems of transportation in the Nation? I think not. But such a showing would indicate that if other railroads would study the system of operation of the C. & O. and the Bessemer & Lake Erie that big dividends would be paid on those roads, too, without coming to Congress for consolidations based on a system the primary purpose of which is to enable the monopoly to so fix rates that the cheaper forms of transportation will be destroyed.

The wise thing is to write this legislation as it should be written now. To protect all concerned now. When the need

for amendment to the original bill is so glaringly obvious, let us see that the will of the House is observed and that if the bill reaches final passage, it either contains the amendments as adopted by the House or does not become law.

**Naval Appropriation Bill**  
**EXTENSION OF REMARKS**  
**OF**  
**HON. CARL VINSON**  
**OF GEORGIA**

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

Mr. VINSON of Georgia. Mr. Speaker, there have been many articles in the press and much discussion generally relative to the so-called top-heaviness of recent destroyers. Much of such information has been misleading, to say the least, and many of the statements have had no foundation in fact. I desire therefore to apprise the Members of the Congress of the facts in the case, as otherwise the country may be completely misled as to the true conditions.

First of all, I desire to assure the Congress that at no time were the destroyers in question in danger either of sinking or capsizing. The changes which were adopted to improve them were made to provide a margin of stability which the Department felt necessary to assure satisfactory and safe operation under the worst possible conditions.

The destroyers in question are Nos. DD 409-444, a total of 36 vessels, of which approximately 30 are still under construction. In accordance with customary practice, the design, consisting of written specifications and a comparatively few drawings, showing the size, shape, arrangements, and so forth, of the general structure of the vessel and its machinery and armament were prepared by the Bureau of Construction and Repair and Engineering in collaboration with other bureaus of the Navy Department after the military characteristics had been approved by the General Board of the Navy. These plans and specifications also included the stability calculations composed of weight, centers of gravity, and other data. These plans and specifications comprise the data furnished the prospective bidders to enable them to submit intelligent bids and form the basis of the contract with the successful bidder. Many hundreds of plans, called "working plans" are then prepared by the contractor or his "design agent," which are used in the actual construction of the vessels, both in private and Government yards.

The contract with the Bath Iron Works, Bath, Maine, for two destroyers Nos. 409 and 410, included a provision for the development of the design and preparation of the detail working plans, using the Navy Department's contract plans and detail specifications, including stability calculations, as a basis. That company employed as their design agents the firm of Gibbs & Cox, of New York City, which firm developed the design and prepared the detail working plans for this class of destroyers, Nos. 409-420. The firm of Gibbs & Cox, as design agents for the contractors is also preparing the working plans for destroyers Nos. 423 and 424, 429 to 436, and 437 to 444, inclusive. The detail plans for destroyers Nos. 421, 422, and 425 to 428, inclusive, are being prepared by the Bethlehem Steel Corporation, Quincy, Mass.

The inclining experiments to determine stability and the trials of the first vessel of this group to be completed, the U. S. S. *Anderson* (DD 411), took place during April 1939. These tests and trials revealed that this vessel was approximately 10 percent over the original estimated weight and was short of the desired reserve stability characteristics in naval vessels. This does not mean that it was unseaworthy or was likely to capsize or could not maneuver at high speed. It did mean that these qualities of displacement, stability, and uprightness under certain conditions were not of the high standard for naval vessels and that therefore they should be improved. It also meant that appropriate steps should be taken to insure the excellence of these qualities in the other

destroyers of identical or similar designs in the group DD 409-444, most of which are not yet completed and some of which are still in the design stage.

These conditions were due to the weight and the heights of the center of gravity of structural hull material and engineering material exceeding the design calculations which apparently were figured too close in the first instance. Ordinance material was also overweight to some extent.

These original designs, although similar, are not identical for the several groups of sister vessels comprised in the 36 destroyers Nos. 409-444. The design for each group was based upon the preceding group with such improvements as experience with previous designs showed to be desirable. Since it takes almost 3 years to build a destroyer and determine its actual performance, the designs for the DD 409 class and succeeding classes were issued before the results of the preceding class were known. This procedure is unavoidable when building vessels on an annual basis. The design estimates as to weights were based on the best and latest information available, and all calculations indicated an entirely satisfactory design. The actual or finished weights when completed, however, were materially in excess of the design weights and were so located as to have unfavorable effect on the reserve stability. Overweight in the completed vessel does not necessarily mean poor design. It may mean—and sometimes has meant—insufficient consideration given to weight in preparing the original design, the working drawings, and in the fabrication and assembling of the vessel. While there were some changes or authorized departures from the contract plans and specifications, the defect in these vessels was due only in small part to such changes and is principally attributable to the finished weights being greater and the centers of gravity higher than allowed for in the basic design.

Subsequent to the adoption of the design of DD 409 the treaty limitations were removed, and the inclination was to stress reliability and ruggedness rather than lightness in weight. Undoubtedly zealotry to thus obtain the optimum in the new design, the DD 409 class, contributed materially to the resultant increase in weight. Improvements were embodied to accomplish more effectively the design requirements. This procedure, producing a design and thereafter incorporating in it the lessons learned from vessels not completed when the design was produced, is entirely normal and is the customary and logical method of improving each type of naval vessel.

Press reports have magnified the defect in these vessels to a very material extent. Although these vessels are satisfactory for normal service without change, nevertheless, having in mind an emergency condition such as might exist after a prolonged engagement followed by high speed maneuvering in a rough sea or for the vessel in a badly damaged condition due to battle or other causes, it was deemed advisable to provide an additional margin of reserve stability. The steps necessary to accomplish this are now under way. They consist of the removal and relocation of weight, particularly that which is high above the base line, such as rearranging the torpedo battery to provide centerline mounting of tubes instead of broadside mounting—without change in broadside fire; lowering of boat stowages, and omission of duplicate boat-handling means; reduction of heavy plating on the bridges and fire control stations; relocation of spare parts carried on board; lowering of the loading machine; and a number of other minor nonmilitary items involving a reduction or a lowering of weights.

Pending completion of this work and the results of an inclining experiment to follow such completion, it is also proposed to install fixed ballast as may be required to obtain the desired reserve stability and to allow a margin for new or future alterations. The estimated amount of such ballast is from 25 to 60 tons which will have no material effect upon any other characteristic of these vessels. The installation of ballast is a normal and usual procedure in ship construction and has been since time immemorial.

Some of the 36 destroyers are completed or nearly completed, some are well along in construction, while the later

ones have comparatively little construction work done. The cost of this remedial work, therefore, varies from a maximum on the completed vessels to a mere change in drawings—at a reduction in cost to the Government—for the later destroyers.

The total estimated net cost of all work on the 36 destroyers is \$230,884. The average cost of the changes per destroyer is \$6,413. The approximate percentage of the cost of change to the total hull and machinery cost is one-seventh of 1 percent. The above figure does not take account of the value of any salvaged materials nor reimbursement to the Government by contractors for that part of the overweight for which the contractor is considered responsible, nor especially of the reduced cost due to changes in the torpedo-tube mounting. If these changes are taken into consideration there would be an actual saving of cost on these vessels. The cost of the work is a good indication of the relatively minor nature of the deficiency in these vessels.

The work contemplated in connection with weight removal and relocation to provide an additional margin of reserve stability has recently been completed on the first one of the vessels of the group. This vessel has been subjected to thorough and extensive trials at sea by the regularly established Board of Inspection and Survey and found entirely satisfactory.

In conclusion, I would like to say to the Congress that, notwithstanding the minor troubles encountered on these particular destroyers, it should be proud of the record of the Navy Department on this new shipbuilding program. Prior to the adoption of the current building program we had had a long naval holiday, many of the types of ships had either never been built or had not been built for many years, particularly destroyers. Nevertheless we have very fine, modern ships, equal or superior to any in the world. The destroyers in question will be efficient additions to the fleet, and there is no reason for anxiety on this score by the Congress or by the citizens of this country.

### Some Impressive Witnesses

#### EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

ARTICLE BY MARK SULLIVAN

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan:

#### CAUSES OF DISTRUST—SOME IMPRESSIVE WITNESSES (By Mark Sullivan)

The executive committee of the American Federation of Labor, meeting at Miami, Fla., passed a resolution that goes deep. In part, it reads:

"At this time there are not enough jobs in private industry to go around. This is largely due, in our opinion, to the fact that lack of confidence has stunted business growth and expansion. \* \* \* We urge that all Government actions that tend unnecessarily to discourage business expansion cease \* \* \*."

Just what is it in the present administration that makes business recovery difficult or impossible? In the judgment of this column, a large part of the answer is to be found in the following comments, expressed over some 2 years past, by several observers and news sources having various points of view. If the reader will follow the thread that runs through these quotations, he will have got a clue to a condition that is extremely important, and ominous.

The first group of comments has to do with a so-called blue-card incident. Early in 1939 Secretary of the Treasury Morgenthau was eager for business recovery. He had a way of saying, in answer to suggestions made to him, "Will it contribute to recovery?" This impressed Under Secretary John W. Hanes, also eager for business recovery. He thought the phrase would make a good slogan. He had it printed on blue cards, which were distributed to Government officials.

This, as reported by columnists Joseph Alsop and Robert Kintner, "irritated the \* \* \* new dealers to a near frenzy." As reported by Mr. Arthur Krock, of the New York Times, some new dealers "represented the blue cards to Mr. Roosevelt as disloyalty to him." The result was reported in News-Week, April 3, 1939: "The cards are now being gracefully forgotten."

On another occasion, an episode at the White House is reported by Mr. Krock: "It is heartening to report that at a recent White House council, adherence was duly sworn to the capitalistic system when its future usefulness was called into question. This correspondent has reliably heard that when two conferees expressed doubt capitalism was worth giving another chance, or could be saved thereby, Harry L. Hopkins warmly denounced the viewpoint, and the President showed the firmest sort of agreement (with Mr. Hopkins)."

On yet another occasion Mr. Krock reported another battle in the running war between two groups of President Roosevelt's advisers—one group working for recovery of the American industrial system, the other believing in what Mr. Krock describes as "an undefined but different system." It was after Mr. Harry Hopkins had been appointed Secretary of Commerce and seemed to wish to bring about business revival. This wish appeared to anger some of Mr. Hopkins' former associates in the inner circle, who apparently regarded him as a deserter. Mr. Krock reported, March 11, 1939: "The White House hearth-rug battle has grown extremely bitter in the past week, with Mr. Hopkins getting the brunt of the attack from his former brethren, and Mr. Morgenthau and Under Secretary Hanes coming in for the second volleys."

The situation is commonly described as a war between two groups of the President's inner circle, with the President acting as arbiter, yet himself favoring retention of the system of private enterprise. A carefully stated picture of the President's attitude is in the words of Mr. Walter Lippmann. Mr. Lippmann, May 19, 1938, was describing the controversy between Mr. Roosevelt and the business world:

"Though it is a fact that very few businessmen really like any of the major reforms; though it is a fact, I believe, that the President and his favorite advisers dislike the system of private enterprise and distrust most of the individuals who operate it, it does not seem to me that doctrinal differences are the determining factor."

Possibly the phrase, "dislike the system of private enterprise," was too strong (as applied to the President, though not too strong as applied to the President's advisers). Mr. Lippmann put it in milder words on another occasion, January 20, 1938: "I rather think that the President, insofar as he considers these matters, is of the opinion that the capitalist order has reached a phase where it can be kept going only by Government assistance; and that it is not worth while to try for a true revival of private enterprise if the price is the modification of his social reforms."

Yet another observer, Gen. Hugh Johnson, said, February 27, 1938: "I have seen the gradual growth of the bunch of advisers in the administration who do not believe in the capitalist system."

When so many observers, with differing points of view, agree so completely, the sum of their judgments is convincing. How ominous this is hardly needs saying.

Yet the hopeful fact is that during recent months we have increased business recovery. Necessarily this must be based on the expectation that the condition pictured above will cease to exist. It is the expectation that as a result of the political events of the present year there will be in Washington an administration with a changed point of view, an administration loyal to the American system of free enterprise. Such an administration could be either conservative Democratic or Republican. If this expectation has stimulated the degree of business recovery we have already had, the reality, after next January, should bring about a recovery which will absorb all our unemployment. For such a recovery, the conditions exist, excepting that lack of confidence which the A. F. of L. mentions.

### The Road to War

#### EXTENSION OF REMARKS

OF

HON. GEORGE S. WILLIAMS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

EDITORIAL FROM THE WILMINGTON (DEL.) MORNING NEWS  
OF FEBRUARY 15, 1940

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilmington Morning News, of Wilmington, Del., for February 15, 1940:

[From the Wilmington (Del.) Morning News of February 15, 1940]

#### THE ROAD TO WAR

It is our sincere conviction that the Senate of the United States has made a grave mistake in approving legislation which makes possible additional loans of \$20,000,000 each to Finland and China.

The deep sympathy which we feel for both the Finns and the Chinese, and our knowledge that both peoples are the victims of outrageous aggression, must not blind us to the fact that this action amounts to taking sides as a government in wars which are none of our affair.

Our present neutrality laws, with their ban on loans to belligerent nations, were adopted because the American people had learned from experience that this is a step leading toward active military participation in foreign wars. The proposed loans to Finland and China are in direct violation of the spirit if not the letter of those laws. They threaten our future peace and security, not merely of themselves, but because they set our foreign policy in a new groove. For any intervention on one side of a foreign conflict is like starting a snowball down a steep hill. It gathers force and mass and speed as it goes, and before long it is apt to be completely out of our control.

In this case it is easy to foresee that a governmental loan to Finland now may prove the entering wedge for more substantial aid to that country, and eventually to loans to Britain and France. This is what we were calling only a few brief months ago the road to war. Once we have taken a step along that road, once we translate our sympathies into action, once we are definitely committed to one side, it is no easy matter to stop or turn aside.

That is why we hope that the House will reverse the verdict of the Senate on these two loans. The first duty of Congress is not toward China or Finland but toward the people of the United States. It will become increasingly more difficult to safeguard our peace, security, and neutrality once we start letting our sympathies lead us, against our own best interests, to intervention on behalf of other nations now at war.

### Postmaster Abraham Lincoln

#### EXTENSION OF REMARKS

OF

HON. JAMES M. BARNES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. BARNES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, Postmaster General of the United States, at the dedication of the post office, Lincoln's New Salem, Ill., February 12, 1940:

It was more than a century ago that a young frontiersman, eager to get ahead in the world, decided to cast his lot in the enterprising village of New Salem. A tide of migration was sweeping the prairies and people looked forward hopefully to the time when New Salem would be a thriving business and commercial center in a thickly populated region.

When Abraham Lincoln arrived here to settle, he came on foot, toting his meager possessions. He was a stripling of 22 years, a piece of floating driftwood, as he described himself, unknown to the villagers, without money, and without family connections or influential friends who might be ready to ease his path in life. His only financial asset was the promise of a job tending store for a man who had befriended him.

There was a flood tide of settlers at New Salem for the brief span of a few years. The village grew and then ebbed away as the restless pilgrims of that era found a richer promise of reward in other settlements.

Abraham Lincoln stayed on here for 6 years during the formative period of young manhood. The raw-boned stranger, who arrived here with nothing to recommend him save his own sturdy character and talent for human friendships, developed into one of the upstanding citizens of the community. Life for him was serious and real and a gnawing ambition drove him to make the best of his surroundings. The limits of opportunity in a rural town could not dishearten him.

He took advantage of leisure hours to improve his knowledge of the English language; he learned the rudiments of surveying and the fundamentals of law; he took an interest in public life and was elected a member of the State legislature. But above all else, by giving free bent to the genius of a keen and penetrating mind, it was here that he learned the essential lessons of how to direct the activities of other men.

Without distortion or exaggerating, it may be said honestly that Lincoln derived as much from his associations in the humble life of New Salem as other men get from a comparable period in one of the great universities of the world. It is this fact that brings us here today to the reconstructed village of New Salem—this fact that has made this site an object of devoted interest and a shrine for millions of patriotic Americans who find fresh inspiration and deep meaning in the life of Abraham Lincoln.

Those individuals who had the happy vision to bring about the restoration of this tiny village deserve the gracious thanks of their fellow citizens. While the project was carried out in large measure by residents of the State of Illinois, others made notable contributions and the work that has been accomplished here is deeply appreciated by the people of every State in the Union. All those who aided should be proud and happy in the result.

For many decades now a grateful Nation has rendered tribute and devotion to the memory of the martyred President who guided the storm-tossed ship of state through one of its most crucial periods. Lincoln's name has been placed high up on the honor roll of great American statesmen. Scholars, historians, and poets, regardless of party or section, have united in proclaiming the heroic labors he performed in preserving the Union and protecting the integrity of free institutions.

Yet, perhaps, this is the first time that citizens have gathered to observe the memory of humble Postmaster Lincoln. In the bright flame of his later achievements, many people forget that the Great Emancipator had his first experience in public office while serving as postmaster in New Salem. A musty volume in the Department files at Washington, its pages tattered and yellowed with age, gives a brief summary of this somewhat neglected period in Lincoln's early career.

He was appointed postmaster on May 7, 1833, by President Andrew Jackson. Although Jackson has been spoken of many times as the originator of the "spoils system" in politics, it is worth noting that Lincoln was identified with the Whig Party at the time of his appointment. A few historians have taken the view, in a humorous vein, I trust, that a Whig got the office because the pay was so small no good Democrat aspired to it. In any event, we may be sure that when he signed the commission Andrew Jackson had no idea that he was launching the public career of a man who would one day win eternal fame by his superb conduct of the Presidential office.

Lincoln continued to act as postmaster until the office was abolished in 1836 because New Salem was already suffering from a steady decline in population. The Department records were crisp and to the point in those early days and there is nothing in the files to indicate how Lincoln fared in his career as postmaster. A fairly accurate account, however, was later pieced together from the recollections of old friends and acquaintances who were proud of their early associations with Lincoln during his New Salem days.

The wartime President, who was never too busy to hear the plea of a grief-stricken mother, was foreshadowed in the sympathetic attitude of the young man who occupied the role of postmaster and voluntary letter carrier for the citizens of New Salem. The neighbors liked the informal, kindly habits of Postmaster Lincoln. He helped the illiterate to decipher their incoming mail; he walked long miles to deliver letters which he knew had been anxiously awaited; he was courteous and accommodating in explaining postal regulations to rural folks who had slight experience in matters of that kind.

Upon the firm foundation of good will which he established while acting as postmaster, Lincoln fashioned the ground work of his long and useful public career. Without the respect and confidence of those who knew him best, it would have been impossible for the struggling young lawyer to win election to the legislature and thus to satisfy his burning ambition to play a worthwhile part in the public events of his time. From early manhood the desire to take an active part in government was stirring within him. It was an honest ambition, and to those of us who have the privilege of looking back upon the life of the young frontiersman it was something more. Perhaps without realizing it Lincoln was obeying the urge of destiny which had prepared for him such a noble and tragic part in the great human drama.

Throughout his life Lincoln never overlooked an opportunity to learn from other men. With a detachment of viewpoint that seems well-nigh incredible, he was able to observe the motives that impel men to act. He understood why it was that an individual may be brave, loyal, and steadfast in some of his relations and petty, mean, and spiteful in others. He knew the best in men and the worst in them, and he had an uncanny accuracy in gauging the ability and the limitations of his associates in government.

The qualities which gave eminence and distinction to the statesmanship of Lincoln have been analyzed in skillful fashion by students worthy of the task. As a result of their long research and careful labor, it has been shown with abundant proof that the very qualities which his hasty and short-sighted contemporaries misjudged for weakness, really constituted the key to Lincoln's strength and greatness. He never drove men into action; rather he led them around slowly and patiently to his way of thinking, letting them believe that they were leading him and not he leading them. He was a politician in the finest sense because he understood the art of dealing with human beings.

There are many lessons in Lincoln's career for those who aspire to public office, but none is more important than the simple truth that character is the true foundation of statesmanship. Lincoln was sincere and honest in all his efforts. He taught the country to

cherish the idea of union because he believed in it so passionately himself. To those who opposed the appointment of generals and commanders who were not of his party, Lincoln replied that he was interested in patriotism and ability, not partisanship. In the midst of brutal and destructive war, from which his sensitive nature recoiled, he never lost an opportunity to do an act of kindness touched with mercy. He wanted justice done in small things as well as great, and he followed that rule himself without deviation.

Lincoln bore the Old Testament name of Abraham, and there was almost a scriptural touch in the simplicity of his writings. No man in recent times has been able to express such exalted truths in simple language. His thoughts were clothed in the homely garment of words which had been familiar to him since childhood and, against the urgings of others, he made no effort to effect a change in style. The wisdom of this course is shown by the fact that throughout his career as President, Lincoln grew steadily in the affections of the common people. Because they understood his words and purposes, the people gave him their full trust and confidence.

Lincoln at all times looked above the immediate, everyday problems to the great purpose he had in mind. When other men hardened amidst the savagery of internal war, the kindly man in the White House never let his fellow countrymen forget that the final object was national unity, untouched by hate or vindictiveness. As the end of the awful carnage appeared in sight, he had no time for gloating or rejoicing. The great task, he said, was to "bind up the Nation's wounds." There is no finer phrase in the whole range of American State papers.

In this age of dictatorship and government by cruel violence, it is heartening to recall that Abraham Lincoln was a product of democratic government. His rise to eminence and immortality in the annals of statecraft would have been impossible under any other system. He came from humble beginnings and was compelled to make his own way without benefit of social distinctions or family fortune. Even after he entered the White House, he still felt ill at ease in the pomp and glitter of dazzling social functions. He was not a military man who could seize public power by force and violence. The only power Lincoln had came from within, from the sublime qualities of a lofty spiritual nature. Throughout his life he was a man of the prairies who was accustomed to think in terms of man's eternal struggle against the elements for the simple comforts of decent food and adequate shelter.

In pondering over the full meaning of his career, we come to understand why Abraham Lincoln belongs to the ages. By the sheer force of his intellectual and moral powers, he lifted himself high above the errors and pitfalls that beset the lives of lesser men. The memory of his name is the heritage, not of one party or group or section, but of freemen everywhere who cherish the priceless qualities of liberty and justice, without which life is not worth the living.

And so I am happy to be here today to join in these ceremonies rededicating the post office of New Salem after a lapse of 104 years. It is my honest belief that the young man who takes over the duties of the office will prove a worthy successor to his illustrious predecessor. The primary purpose in replacing New Salem on the postal map is not commercial. The idea is not to enhance the revenues of Uncle Sam. Rather it is a loftier motive. It is a wish to aid in rekindling the interest of the Nation in New Salem.

In the years that lie ahead, I hope that millions of Americans will obey the impulse to visit this hallowed shrine, to walk the by-paths that Lincoln trod, to view for themselves the frontier village in which a great human being lived and loved and labored. The restoration of the village has been carried out in masterly fashion. Those who performed the task with loving care did something more than rebuild the physical aspects of New Salem. They have recaptured the spirit of the place and made it live again.

The fortunate people who come here will carry away more than a sense of historical association. They will realize again the sublime truth that human greatness is not born in success or material wealth, but in the hidden recesses of the soul of man.

### Wheeler-Lea Bill

#### EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

PREFACE TO THE PUBLICATION, DEEP WATER, COMPILED BY S. WILLSON RICHARDS, EDITOR OF THE MARINE NEWS

Mr. CULKIN. Mr. Speaker, the Members of the House who believe that waterways are to stop-gap and safeguard against exorbitant transportation rates in these United States are closely watching the outcome of the conference between the House and Senate on the Wheeler-Lea bill, S. 2009.

One of the most illuminating publications on the question is a factual, well-documented publication entitled "Deep Water." Most of the Members will not have an opportunity to see this publication, as it is only given limited distribution.

Pursuant to the permission of the House, I am inserting the preface to this valuable volume in the RECORD. This discussion is so sane and sound that I trust every Member of the House who is interested in the vital question of national transportation will read and ponder it. It follows:

#### PREFACE TO DEEP WATER

Congressional committees are soon to give careful consideration to the Wheeler-Lea bills, the purposes of which are to improve, strengthen, and regulate transportation facilities in the Nation. Owing to the controversies certain to arise during the discussion of these bills, we believe that we are performing a public service in making available in concise form some of the more important and salient facts with respect to waterway development and water-borne transportation.

We believe that all types of transportation should be developed and improved for the benefit of the country as a whole. We do not believe that any one form of transportation should be helped so as to obstruct some other form. Honest competition should continue to be the American way. When performing its proper function each type of transportation service should be able to earn a fair return on its investment.

As the Nation has grown its transportation facilities have naturally expanded. There has been tremendous evolution from the days of the covered wagon and the mule-drawn canal boats to our high-speed trains, fast steamers, self-propelled canal boats, trucks, motorcars, and airplanes. Each form of transportation supplements the others; each has its proper place. Certain tonnage is naturally the business of railroads. Other tonnage is naturally the business of trucks. It is an indisputable fact that certain bulk freight is naturally the business of waterways and can be transported over them at a cost which no other system can even approach.

It is a safe statement that every purchaser of an automobile or truck buys it for less owing to the economies effected through the transportation of iron ore by water, resulting in cheaper steel; countless home owners are benefited through savings in water-borne lumber; bread and fuel is cheaper for millions through water-borne grain and coal. The cost of gasoline, upon which the farmer, industry, and the public are absolutely dependent, would be a remote luxury to millions if its water-transportation cost was raised to railroad levels.

Our first inland waterways were local or State affairs with the Federal Government taking care of all harbor improvements. The Federal jurisdiction over waterways, however, has been gradually extended, until today almost all waterways are under Federal control. From 1822 to 1938—116 years—a total of only \$2,432,526,000 has been expended by the Government in improving and maintaining the Nation's waterways. This expenditure has been from the Federal Treasury, which, as everyone knows, is maintained by taxes from the entire country. Waterway improvements have always been based upon their benefits to the entire country. Every ton of freight—steel, gasoline, lumber, coal, grain, and countless other necessities—transported by water effects a saving to every citizen in the Nation. These savings exceed again and again the taxes which find their way into waterway improvements, giving a credit balance to every taxpayer in the land. We know that investigation will prove that cheap transportation over inland waterways has enabled manufacturers to widen the areas in which they operate, and has opened up new markets for farmers. Available statistics show that the annual saving to consumers through water transportation is more than 10 percent of the total amount expended during the past 116 years by the Federal Government in waterway improvement and maintenance. Has the Nation any other investment equally good?

We do not believe that any persons, genuinely interested in the public welfare, believe that waterway improvement and water transportation should now be throttled for the benefit of other and more expensive means of transportation. On the contrary, we believe that railroad officials, must publicly, and do privately, recognize the value to them of the great volume of traffic reaching their lines from water carriers. They must recognize, too, that much of the volume of traffic is carried by them because of the fact that it is prehandled or rehandled over waterways at rates sufficiently low to make the whole movement cheap enough to become part of the national economy. A tremendous tonnage is delivered by railroads to water carriers and by water carriers to railroads. This tonnage is a vital part of the total tonnage handled by many railroads.

Except for the low cost of water transportation, it would be impossible for the railroads to obtain the volume of traffic that they do on through water and rail, or rail and water transportation. If this tonnage were handled solely by the railroads the increased cost to the consumers would be tremendous or prohibitive. Instances of this kind are the millions of tons of coal carried annually from the West Virginia and Kentucky fields to Toledo and other Lake Erie ports for reshipment by water to ports on Lakes Michigan, Huron, and Superior, with tremendous savings to consumers. The millions of tons of coal delivered by rail to water carriers at such ports as Norfolk and Newport News are striking evidence of the mutual indispensability of rail and water transportation. Whence comes most of the vast tonnage carried by the railroads from coastal points into the near and far interior of the Nation? It comes from

vessels using the splendid system of harbors and waterways—Great Lakes, inland and intracoastal—prepared by the Federal Government. Water-rail transportation is the keystone of our national economy.

One of the marvels of America is its amazing rate of growth. What is one of the greatest contributors to this growth? Steel. Why? Because of the unparalleled Great Lakes transportation system, making for the economical movement of ore. How much more would steel cost if the vast quantity of iron ore from Minnesota mines—1,600,000,000 tons since 1855—had to be delivered by rail to Illinois, Indiana, Ohio, New York, and Pennsylvania steel mills rather than by boat down the lakes at a rate of less than one mill per ton-mile. This cheaper cost of transportation saves money for every taxpayer in America.

What made Houston one of the important ports of the world and the largest city in the Southwest—a Federal waterway connecting it with the Gulf of Mexico. As at all other water terminals, railroads handle much of the tonnage of this port, either before or after it is water-borne. Such examples can be multiplied many times by other equally striking instances of the value of Government waterway promotion and construction.

When the Federal Barge Line was established on the Mississippi River system, former President Markham, of the Illinois Central Railroad, stated that "The Illinois Central, of course, recognizes that the barge line offers competition paralleling it on the Mississippi River, but our interests are clearly identified with the interests of the people of the Mississippi Valley—if it is a good thing for the people of the Mississippi Valley, it in some way will probably operate as a good thing for the Illinois Central system. If it supplies additional transportation that is needed and may be needed in the future that we cannot supply or if it supplies a cheaper transportation than we can supply and makes for the prosperity of the people in that section of the country where our own interests are bound up, in some way may work back to our own selfish interests. Perhaps it will increase the population, increase the amount of business everybody does down in that territory. If it does operate in that way we are going to reap some benefit too."

Today, we find that, except for the loss of traffic directly attributable to the depression or to truck competition, both the Illinois Central and the Federal Barge Line are carrying more tonnage than before. There has been built up between them, and other barge lines and railroads, an extensive water-rail or rail-water exchange of traffic. It is unfortunate that there are not more railway executives with the far-sightedness and genuine public interest of ex-President Markham.

When the different railroads now composing the New York Central system between New York and Chicago were formed, their organizers knew that they would have to face the competition of water transportation. In fact, in many cases, the railroads were formed to offer shippers faster service than the water carriers then in business could give. Today, the volume of water-borne freight on the Hudson River, the New York State Barge Canal system, and the Great Lakes is vastly greater than ever before; this despite the fact that the New York Central system paralleling these waterways maintains one of the most highly competitive, efficient, and busy railroads of the Nation—to the great advantage of the public. There is no valid argument to support raising water-transportation rates above their present low average, to, or near to, rail rates. We know that if such rates are established the economic result to the country, as a whole, will be disastrous.

We deny that the development and maintenance of our waterways by the Government for the free use of the public is socialization, subsidy, or a handicap to other methods of transportation. On the contrary, we believe it has served to develop our Nation far more than any other Federal expenditure. We believe that waterways directly and indirectly are the means of developing a vast amount of tonnage for other forms of transportation which they could not otherwise obtain.

We believe that the Senators and Representatives in Washington are already aware of the great economic advantages to the country as a whole which will result from a vigorous and extensive expansion of our natural waterways and harbors, which are unequalled in the world and which through development may be made one of our greatest national assets. We believe, too, that no body of men is in a better position to determine when and where our waterway improvements should be made than our Army engineers.

We decry the attitude of those hostile to waterway development and to water-borne commerce, as well as reflections on the knowledge, integrity, and judgment of the Members of the Congress or the Army engineers. No other governmental agency has performed its duties with greater integrity and efficiency than the Corps of Engineers. With its unparalleled experience and familiarity with national waterway development the corps is preeminently fitted to forecast and execute such waterway development as will be needed for the future in order to meet the requirements of an ever-expanding commerce, and also to facilitate the movements of a Navy that, owing to a changing world, must inevitably expand and be able to maneuver safely and rapidly. Without improved waterways this great defense arm would be made less effective in case of war. Intracoastal canals, interconnecting harbor channels, and river estuaries, all with sufficient depths, are vital to the Nation's defense.

Finally, we assert that every citizen in the land now receives and will continually and increasingly receive generous dividends in the form of lower living costs through a wider and greatly extended system of commercial waterways.

**Hunters Point Drydocks**  
**EXTENSION OF REMARKS**  
 OF  
**HON. FRANCK R. HAVENNER**  
 OF CALIFORNIA  
 IN THE HOUSE OF REPRESENTATIVES  
*Friday, February 16, 1940*

Mr. HAVENNER. Mr. Speaker, the recommendation that the Navy should acquire the Hunters Point drydocks as an essential part of its program for national defense originated in the Navy Department.

The Chief of Naval Operations, in a report submitted to the Committee on Naval Affairs on March 9, 1939, made the following statement:

The situation confronting the Navy with respect to adequate dry-docking facilities is of serious concern to the national defense. Docking facilities on the west coast and in Hawaii are now inadequate to meet the needs of the existing fleet in time of peace. Even with the completion of the drydocks now under construction at the navy yards, Mare Island and Puget Sound, the peacetime situation will become steadily worse unless further relief is afforded as vessels now under construction or authorized are added to the fleet.

The question of docking facilities has been the subject of exhaustive study and analysis in the Navy Department over a great many years. Shortages exist in all sizes of docks to meet peacetime and wartime requirements. As a result of these studies, the Department has outlined a program of additional docking facilities considered essential for the proper support of the fleet in the Pacific.

In my opinion, the Navy should acquire the Hunters Point drydocks and should provide weight-handling facilities, power connections, galley, latrines, storehouse, and an assembly plant to permit the overhaul of our largest vessels in conjunction with the Mare Island Navy Yard.

The Committee on Naval Affairs, after an extensive examination of ranking officials of the Navy Department concerning the necessity for acquiring the Hunters Point drydocks, incorporated a provision in the 1939 Navy public works bill reading as follows:

The Secretary of the Navy is hereby authorized and directed to appoint a board consisting of not less than five officers to investigate and report upon the need for purposes of national defense for acquisition by the Secretary of the Navy of two graving drydocks situated on San Francisco Bay and known as the Hunters Point drydocks, such report to include a statement of costs and fair values and to be made prior to April 18, 1939.

After a very lengthy and thorough study of the property and its proposed uses, the special board appointed by the Secretary of the Navy unequivocally recommended that the Government acquire the Hunters Point drydocks, including all present equipment, at a cost not to exceed \$4,000,000, and that an additional \$2,000,000 be expended on the property to permit its utilization as an annex to the United States navy yard at Mare Island.

In pursuance of this report the Congress last year enacted a law authorizing the Secretary of the Navy to negotiate with the Bethlehem Shipbuilding Co. for the purchase of the Hunters Point drydocks property at a price not to exceed \$4,000,000, and further provided that if these negotiations failed to result in satisfactory agreement of purchase the Secretary of the Navy would be authorized to construct new drydocks adjacent to the existing site at Hunters Point.

As a result of these negotiations the Secretary of the Navy has recently signed a contract with the Bethlehem Shipbuilding Co. for the purchase of the Hunters Point drydock properties at a price of \$3,993,572. Under the terms of this contract the Bethlehem Shipbuilding Co. will continue to operate the drydocks for a period of 3 years, during which time the company will pay all costs of operation and maintenance, including taxes. At the expiration of that period the Government will assume complete control of the property. The title to the property will pass to the Government if the appropriation herein asked for is made by Congress and the purchase price is paid to the company.

While the property remains under the management of the Bethlehem Shipbuilding Co. the Government will proceed

with the construction of extensive improvements, which will be carried out under the terms of this proposed appropriation.

The property to be acquired consists of two graving drydocks, with necessary appurtenances and equipment, owned by the Bethlehem Shipbuilding Co. and located in the city and county of San Francisco at Hunters Point. One of the drydocks is about 700 feet long, capable of docking heavy cruisers. The other is 1,000 feet long, capable of docking 45,000-ton battleships and aircraft carriers.

The Secretary of the Navy reports that the land at Hunters Point is composed of a serpentine rock formation, impervious to water, easily excavated, and particularly favorable for the construction of graving drydocks.

His report states that the site also has the following advantages of location:

It adjoins permanent deep water, affording adequate approaches to the drydocks by large vessels. It adjoins the largest and best anchorage ground in San Francisco Bay. It is conveniently situated with reference to San Francisco and to water- and motor-transportation facilities.

The report points out that the Bethlehem Shipbuilding Corporation has not used this property as a shipbuilding plant but only for drydocking vessels. It lacks essential facilities for repair work, even of a minor character, on a shipping dock.

The essential facilities which are lacking, and which are proposed to be provided if this appropriation is approved by Congress, are as follows: (a) Adequate power supply, so that the ship's generating equipment can be shut down while in the dock—also service connections, including air, salt water, fresh water, and steam; (b) weight-handling equipment, so that heavy parts can be removed from and reinstalled in the ship; (c) a galley ashore, so that the ship's galley can be shut down for repairs; (d) suitable latrine facilities for the crew while the ship is in dock; (e) a small storehouse, so that routine repair materials may be immediately available; (f) an assembly building, to permit the assembly of parts fabricated and manufactured elsewhere for installation in the vessel in dock, and to provide space in which to keep tools and equipment necessary to accomplish drydock work and other necessary repairs; and (g) an adequate quay wall at which ships can be berthed prior to and after docking.

The drydock at Hunters Point is the only dock on the west coast except that at the Bremerton Navy Yard, 1,815 miles to the north, which can accommodate a man-of-war or other large naval or merchant ships. In the past the Navy has paid the Bethlehem Shipbuilding Co. approximately \$45,000 a year, and frequently more, for a preferential use of the Hunters Point drydocks. As the report of the special naval board clearly emphasizes, a permanent continuation of this arrangement is not considered to be in accord with the best interests of national defense.

**Freedom of Expression in Radio Communication**

**EXTENSION OF REMARKS**  
 OF  
**HON. J. WILLIAM DITTER**  
 OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES  
*Friday, February 16, 1940*

Mr. DITTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement in explanation of a bill which I have introduced today to amend the Communications Act of 1934 in order to preserve and protect liberty of expression in radio communication.

EXPLANATION OF BILL TO AMEND THE COMMUNICATIONS ACT OF 1934 IN ORDER TO PRESERVE AND PROTECT FREEDOM OF EXPRESSION IN RADIO COMMUNICATION

This bill consists of a series of amendments designed, so far as possible, to protect broadcasting against any encroachment on liberty of expression, including freedom of speech and of the press guaranteed by the first amendment to our Constitu-

tion and freedom from censorship generally. It is unnecessary that I point out how vitally important it is that the public be afforded this protection. Broadcasting rivals the press as an agency of mass communication. Freedom of expression is the cornerstone of democracy. Government control of what is printed or said is the antithesis of democracy and is a characteristic of autocracy and totalitarianism.

When Congress first enacted comprehensive radio legislation, back in 1927, it thought it had done all that was necessary to secure protection of this liberty. Section 326 of the Communications Act of 1934, reproducing a similar section in the Radio Act of 1927, reads:

SEC. 326. Nothing in this act shall be understood or construed to give the Commission the power of censorship over the radio communications or signals transmitted by any radio station, and no regulation or condition shall be promulgated or fixed by the Commission which shall interfere with the right of free speech by means of radio communication. No person within the jurisdiction of the United States shall utter any obscene, indecent, or profane language by means of radio communication (Sec. 326 of the Communications Act of 1934, formerly sec. 29 of the Radio Act of 1927).

The debates in both Houses leave no possible doubt as to the intention of Congress. In the House, it was even thought that such a section was not necessary because, to quote Mr. WHITE—now Senator from Maine—the principal sponsor of the bill, it gave the licensing authority “no power at all” to interfere with freedom of speech in any degree in considering a license or the revocation of a license (67 CONGRESSIONAL RECORD, March 12, 1926, p. 5430).

The Senate, however, was not satisfied and, to leave no doubt, inserted the present section. Senator Dill, the sponsor of the bill in the Senate, described this provision as prohibiting the Commission “from censoring programs in any way” (67 CONGRESSIONAL RECORD, July 2, 1926, p. 12615). The situation furnishes an interesting parallel to the two schools of thought that existed back in 1787 as to whether any specific guaranty of freedom of speech was necessary in the Constitution. Fortunately, the cautious view prevailed.

Notwithstanding the express intent of Congress, the Commission has found an Achilles’ heel in the law. The vulnerable spot is the broad statutory standard of “public interest, convenience, or necessity” which is the criterion applied to the granting or denying of applications. The Commission has construed this formula as giving it power to censor programs by the back-door method. Taking advantage of the procedural provisions in the act, they have limited licenses to the short period of 6 months, recently increased to 1 year, although the law permits a period of 3 years, and have regulated programs through actions on renewal applications. The theory is that this Commission has power to deny a renewal application and put a station out of existence if the station has been broadcasting programs which do not meet the standard of “public interest, convenience, or necessity,” whatever that means, depending on a whim of the majority of the Commission at any particular moment. I say the Commission. Fortunately, there is a minority which still understands fundamental American principle. Obviously, this is a far more dangerous form of censorship than if the Commission would promulgate standards in advance, which it concedes it does not have power to do. The present method is just plain *ex post facto* censorship and is too powerful a weapon to be entrusted to any such agency.

Everyone recognizes, of course, that there are legitimate limitations on freedom of speech. These are for Congress to decide, however, and not for a bureaucratic board in Washington. In the Communications Act as it now stands we have expressly forbidden several kinds of utterances, such as obscene, indecent, or profane language in section 326 and lottery information in section 317. Violation of either of these provisions is subject to heavy criminal penalties by way of fine and imprisonment after appropriate proceedings in the courts. This is the way such matters should be handled. There may be other types of utterances which ought to be, and can constitutionally, be forbidden. If this be the case, let us learn about them and enact legislation accordingly. But we certainly never intended to delegate to this Commission the power to impose their judgment as to what are good

programs and what are bad programs on the American people. The Commission was established primarily to deal with a technical problem in order to prevent interference, assure an orderly and efficient use of the ether, and effect a fair, efficient, and equitable distribution of broadcast facilities over the country. From all I can find out, it is to these primary duties they pay the least attention, while they fritter away their time on forbidden and, I believe, unconstitutional fields of activity.

Time after time during recent years, an effort has been made to bring about an investigation of this Commission. For one reason or another, these attempts have failed. Pending the time when a successful attempt is made, I urge that this, the most precious of our liberties, be made absolutely secure. No useful purpose would be served by attempting to recite at length the usurpations of power by this Commission in this field during recent years. Congress has been made thoroughly familiar with them. I can do no better in summing them up than to give you a picture of the process actually and currently followed by the Commission as described by a report of the Attorney General’s Committee on Administrative Procedure just made public. This report states that licensees of broadcast stations:

Would rather discontinue objectionable programs than risk the possibility of losing their privileges. This is borne out by the fact that, to quote one of the leading critics of the Commission, “The sanction really employed in many instances is not refusal to renew a license but the threat of initiating proceedings leading to hearing on a renewal application and the attendant publicity” (p. 76).

When the investigation of a complaint is undertaken, the law department invariably advises the licensee that a complaint has been made, usually sends a copy of the complaint without disclosing the identity of the complainant, and ordinarily requests, where investigation has developed that such action is necessary, that a copy of the continuity of the objectionable program be sent to the Commission. This often acts as an effective sanction for securing the discontinuance of the program. Desirous of preventing the submission to the Commission of a recommendation that may result in the institution of revocation proceedings or the designation of its renewal application for hearing, the licensee frequently either discontinues the broadcast of the entire program or alters it so as to eliminate the objectionable portions (p. 77).

During the course of his investigation, the Commission attorney is likely to engage in extensive correspondence with the licensee and frequently discusses the matter with the licensee’s counsel. If the first notice that a complaint has been filed does not suffice to move the broadcaster to discontinue the objectionable program, these later conferences with his attorney are likely to achieve that result (pp. 78–79).

Under most circumstances the complaint is also dropped if the station has voluntarily discontinued the program; the program would have to be exceedingly objectionable to justify the discontinuance of the licensee’s privileges in the face of his proved willingness to acquiesce in the Commission’s determination that his activities are contrary to the public interest (p. 79).

I will now proceed to explain the explicit provisions of the bill.

#### PROHIBITION AGAINST TAKING ADVERSE ACTION FOR ALLEGED PROGRAM OFFENSES

The basic provision of this bill is section 6, which would amend section 326 of the Communications Act by making it clear that the Commission is not to take alleged program offenses into account in any way in any of its actions on applications or otherwise. The only leeway left to the Commission is in the case where a licensee has been finally adjudged guilty by a Federal court of one or more violations of specific provisions of the act, such as the prohibitions against obscenity and lottery information, and then only where the offense is of so serious or repeated a nature as to show clearly that the licensee or applicant is not qualified in character to operate a station. We do not put newspapers out of business because of occasional infractions of laws against lotteries, obscenity, defamation, or any other improper utterances. We punish the persons responsible by fines, imprisonments, or damages. Why should any other principle apply to radio station licensees? We all know that, no matter how careful a station owner may be, there will be occasions when, in broadcasting plays, speeches, athletic events or whatnot, there will be occasional lapses into what is technically profanity, under court decisions ranging over the past hundred years or more. A bureau in Washington should not have the arbitrary power

to try such matters or to appraise their seriousness. This can best be done in the district and the court where the licensee lives. To give the power to a board in Washington means simply that it has an additional weapon with which to persecute those whom it dislikes while not molesting those who have its favor.

#### MINIMUM AND MAXIMUM LICENSE PERIODS

In view of the practices and tendencies exhibited by the Commission, it is not enough merely to forbid adverse actions because of alleged program offenses. Other safeguards must be set up because, without procedural safeguards, any right, constitutional or otherwise, can be easily nullified. The most important item in this respect is the license period.

Under section 307 (a) of the law as it now stands, the Commission may grant a license for any period up to 3 years, in the case of broadcast stations, and for any period up to 5 years for other classes of radio stations. For some reason, best known to itself, it limits broadcast licenses to 1 year. The only real reason I can think of is to use the renewal procedure as a constant threat. I therefore propose, in section 3 of this bill, that there be a minimum license period for broadcast stations of 3 years and a maximum of 5 years. I think we might well make the maximum for a longer period, but we can do this in the future if we find it advisable.

This takes nothing from the legitimate powers of the Commission. Section 312 (a) gives the Commission power to revoke a license for a wide variety of causes, including any violation of the act or any violation of the Commission's regulations. Section 312 (b) gives the Commission power to modify any license when such modification will serve public interest, convenience, or necessity. Section 303 (f) gives the Commission power to change the frequency, power, or hours of operation of any station if required by public interest, convenience, or necessity. What more power could a governmental agency legitimately ask? The only obstacle to using these three forms of procedure is, of course, that the Commission has to state a basis for its action and have a hearing, and it would much prefer to keep a sword of Damocles suspended over licensees and make them have the burden of proof on their applications for renewal of licenses.

There is another change which I propose to make in this same section in the interest of closing the door to any excuse for circumventing the intention of Congress. Section 307 (d) of the act now contains the following clause at the close of the section:

Action of the Commission with reference to the granting of such application for the renewal of a license shall be limited to and governed by the same considerations and practice which affect the granting of original applications.

This clause was first introduced into the law in the Communications Act of 1934, not having been in the Radio Act of 1927. I do not know what the reason for introducing it was. It does not make sense and, I am informed, has never been used by the Commission. Under the former law, the Commission's power to take one station off the air and put another on in its place was upheld in the broadest terms by the United States Supreme Court in *Federal Radio Commission v. Nelson Bros. Bond & Mortgage Co.* (289 U. S. 266), where a real public interest is involved.

Obviously, a mere newcomer should not have the right to replace an established broadcast station unless there is some consideration of public interest involved, and there should not be this opening to punish the existing station for programs which the Commission does not like. Furthermore, an application for renewal of license cannot possibly involve the same considerations as arise in connection with an application for a new station when, presumably, such questions are raised and decided as whether there will be undue interference, whether the city will support an additional station, and similar matters. Licensees should not have the obligation of proving these same items over and over again in connection with each renewal application.

#### HEARING PROCEDURE

The Commission, under the influence of a deluge of authoritarian jurisprudence, is taking the position that it may grant any application for a new station or for the increase in

power or change of frequency for an existing station without hearing, no matter how disastrously its action may affect any existing station or the public served by that station. It is not necessary to put a station off the air in order to ruin it. If you put another station on the same wave length so close that interference is caused over most of the area served by it, you very effectively destroy it. This was never intended by Congress, and, in fact, until this last year, the Commission itself did not entertain any such notion of its powers. It is altogether too tempting a manner in which to visit disfavor on licensees to permit it to remain at the Commission's disposal.

In section 4 of the bill, therefore, I propose that section 309 (a) of the act be amended so as to require hearing where the Commission's action would aggrieve or adversely affect the interests of any holder of a license or any applicant therefor.

#### REVOCATION PROCEEDINGS

In section 5 of the bill I have proposed to amend section 312 (a) of the act, covering revocations, so as to correct an unjust and, I believe, unintended construction that has been placed upon it. It now seems to permit the Commission to enter an order of revocation first and then later to hold a hearing to see whether its action should be upheld. The amendment turns this around and requires a hearing prior to any order of revocation.

#### POWERS OF THE PRESIDENT

Very broad and, I believe, excessive powers are reposed in the President of the United States, in time both of peace and war, to take actions adversely affecting radio stations and even putting them out of existence.

In time of peace he may accomplish this by proceeding under section 305 (a) of the act to grant a station's frequency to some Government station without cause or hearing. Section 2 of this bill proposes to correct this by requiring either that the privately owned station be given an equally desirable assignment or that there be a hearing.

Section 606 (c) of the present law confers unlimited powers on the President to close stations, to remove their equipment, or to authorize the use or control of stations, by any department of the Government upon a bare proclamation not only that there exists war or a threat of war, but even—

A state of public peril or disaster or other national emergency, or in order to preserve the neutrality of the United States.

We have now become familiar with the broad meaning of which the word "emergency" is susceptible. Even in time of war, it seems to me it should be for Congress and not the President to determine whether we are to sacrifice one of our two principal agencies for mass communication. Nevertheless, yielding somewhat to those whose judgment may be better than mine as to possible sudden military needs, I have confined my proposed amendment to this section to a situation short of war or insurrection which is the equivalent of war. Otherwise, I propose that it be made perfectly clear that the section is not to be used as an excuse for exercising censorship or for closing or taking over broadcast stations. Even in time of war or insurrection, my bill limits the closing down or taking over to imperative military need.

### King Coal or Court Fool

#### EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

ARTICLE BY HON. ROBERT G. ALLEN, OF PENNSYLVANIA

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by our colleague the gentleman from Pennsylvania [Mr. ALLEN],

which was published in the Black Diamond of February 10, 1940:

[From the Black Diamond of February 10, 1940]

KING COAL OR COURT FOOL

(By Congressman ROBERT G. ALLEN)

The present experiment in Government control of the bituminous-coal industry is not an isolated problem which should be considered in a restricted sense. Other great American industries are confronted with similar threats to their independence; the woes which beset them are similar to those which have troubled coal. From other angles sharp-shooting Federal bureaucrats are sniping at free institutions in our commercial system. If Government control of coal—which must result in eventual ownership—is to obtain, other natural resources will be similarly regimented, and the disease will eventually spread throughout all private industry. Around the hoary head of old King Coal rages the battle between free enterprise and regimentation, between industrial freedom and bureaucratic dictatorship. If coal surrenders, the path has been cleared for encroachments in other fields. In the fight now being waged against the Guffey Coal Act the time-tested American system of free business enterprise is at stake. One has only to read the speeches of Secretary of the Interior, Mr. Ickes, to verify the truth of this statement.

I am not a coal expert but I do know something about economics and government. It is not my purpose here to emphasize the obvious importance of coal in our national economy or to weigh in detail the merits and demerits of the Guffey Coal Act. I am more interested in the philosophy behind that act, its implications and its future effect not only on the coal industry but upon our entire economic system. The temptation to sidestep heavy responsibilities is a congenital weakness of human nature. When the problems of self-government grow too onerous people tend to surrender personal freedom for material security. They end by losing both. Dictatorship is the result. The same principle is applicable to business and businessmen. The moment businessmen grow weary of wrestling with their own problems and rush to the Government for help, they take the first false step on a downhill road. And there may be no turning back. For every ounce of security it may give, the Government will take 10 pounds of freedom in return. Students of history know this, but somehow the rank and file of human beings never learn from the experiences of the past.

#### INDUSTRY SHOULD TURN BACK

Nature in her immutable code gives us the choice between profiting by the experience of others and learning from our own experiences. History is replete with examples of the disastrous results of government interference with private enterprise. The path which the bituminous-coal industry is following under the Guffey Act is well marked with warning signs erected by other victims who once traveled the same road. If these signs are heeded now it will be a happy day for a great industry, but if they are ignored penitent operators soon will be placing their own admonitions for innocents who may be tempted to follow. The bituminous-coal industry must turn back before it is too late.

I do not mean to mitigate the sore and perplexing problems which have confronted bituminous-coal operators for many years. Because this industry is vested with a tremendous public responsibility there may be justification for a mild degree of Federal regulation in the interest of operators, miners, and the consuming public alike. The Guffey Act in effect is drastic. It violates fundamental economic principles. Most unfortunate of all, however, is the fact that under the Guffey Act one abuse is bound to develop others, which will be more devastating in effect. Instead of ameliorating the problems of the soft-coal industry, the Guffey Act will aggravate them in geometrical progression. One look at the record clearly indicates that no one has benefited from this ill-starred legislation except the swarm of political appointees who vainly try to administer its impossible provisions. If it were sound, the Guffey Act would be producing beneficial results by now. For nearly 5 years two Commissions, and more recently the Department of the Interior, have wrestled with the legislation and have failed to establish one single permanent price schedule. In fact, the only benefit resulting from countless hearings and the waste of countless dollars has been the knowledge that legislation has been enacted which cannot be properly administered and that the dangers of governmental intrusion in the field of private enterprise are too great.

#### PRICE FIXING IMPOSSIBLE

Under the Guffey Act the Government is charged with the responsibility of eliminating corrupt trade practices, preventing wasteful competition, and virtually guaranteeing a profit to the industry itself. Government can successfully handle the first two charges but the third, price fixing, never. In the history of human experience there has never been a case where profits have been successfully assured to a privately operated industry by government edict. Those who profess faith in the price-fixing provisions of the Guffey Act arrogate to the legislation and to its administrators a degree of perfection never achieved before by man. Temporary benefits may derive from arbitrary price fixing but as inexorable economic laws begin to react the futility of such an experiment becomes obvious. At this point two courses of action are open. The first suggests an entire change of procedure, and the second more experimentation and more control. It is perfectly obvious which course Mr. Ickes' bureaucrats will follow. Having failed in their first attempts to regulate, they will establish an excuse for their derelictions. That excuse will be insufficient authority and too

little control. To buttress their price-fixing powers, they will demand control of production. A drive for tonnage allocation will begin—in fact, it has begun already—and in the visible future Mr. Ickes or his successor will be absolute czar of the coal industry. That is the stuff of which bureaucrats are made. Once established, their primary objective is self-perpetuation; they grasp constantly for more power. They succeed for a time or until the object of their intentions withers from overdoses of pink pills and strangles from too much red tape. The most vicious lobbying in Washington today is conducted not by business interests but by Government agencies seeking to perpetuate themselves. So, having failed to regulate the bituminous coal industry, these same people will essay to operate it. This vicious trend would be ludicrous were it not so tragic.

#### MUST ASSUME FULL CONTROL

It is obvious that the Government cannot regulate the bituminous coal industry without assuming full control. It cannot assume this control until it owns the mines outright. The soft-coal industry is therefore faced with two alternatives: Outright Government ownership or the return of administrative control to private operators with the Government acting as referee. If men who have spent their lives in the bituminous-coal industry cannot regulate their affairs in orderly fashion, how can one expect theorists, green lawyers, and economic quacks to do better? It is apparent that if local and regional problems are too burdensome for skilled operators, the accumulated problems of an entire industry automatically exceed the administrative capacity of any Government agency.

One has but to consider the 500,000 different prices already proposed in the Appalachian area alone to realize the magnitude of the administrative task entrusted to the Bituminous Coal Division, or attend for 1 week hearings conducted before this Division, and you will be thoughtfully impressed with the complexities of the problem. Imagine, if you will, this Government bureau attempting to coordinate prices in one district with those in competing districts, and coordinating into this scheme different freight schedules and the differences between rail coal, water-borne coal, and coal transported by motortrucks. Then, on top of that, imagine the enormity of the task of coordinating coal prices with prices of competing fuels, realizing at once that competing fuels themselves are not regulated. Once this apparently endless task has been completed, does anyone believe that the price schedule of today will be applicable tomorrow? This is obviously impossible when we consider the dynamic condition of the factors which enter into the establishment of price schedules. Wage scales, for example, may be in a state of flux. Insurance rates and taxes may change at a moment's notice. Transportation costs will vary because the Interstate Commerce Commission will not bow to the sacrosanct edicts of honest Harold Ickes.

#### AN AID TO OIL AND GAS

The troubled circumstances surrounding soft coal have opened the door for competing fuels to step in. Unquestionably producers of fuel oil and gas have profited by coal distress. In many instances large consumers have refused to be annoyed by the 30-day restrictive contract clause in the Guffey Coal Act. They have accepted the greater stability offered by competitive fuels. Soft coal has suffered vast tonnage losses from this factor alone, not to mention concomitant losses from dislocated production schedules. Consumers of coal who depend on uninterrupted stability in their own production will be forced to contract for other fuels as coal continues to be disjoined by constantly changing administrative osteopathy. It is perfectly apparent to students of this problem that gas and fuel oil must eventually be subjected to the same degree of Government control as coal if this experiment is to continue, and justly so. Why should coal be fettered when its competitors go scot free? If gas and oil producers are wise, they will assist in repealing or amending the Guffey Act, because if Mr. Ickes has his way he will soon be squatting like a mother hen on the entire fuel industry.

#### GOVERNMENT A REFEREE

The Government has criticized the bituminous coal industry for disunity and lack of cooperation among its members. The Government itself is more responsible for this condition than anyone else. If the Government will clarify the antitrust laws now on the statute books, the coal industry can be brought into harmony by the operators themselves. We all agree that industrial combinations in restraint of trade should be curbed. We will not agree, however, that combinations to increase consumption, lower costs, maintain fair wages, and earn a fair profit should be punished. Indeed they are economically sound and should be fostered. In such cases the Government should act as a referee to insure against abuses. This is far more compatible with democratic processes than the role of policeman which Uncle Sam is now playing in the bituminous coal industry. If our Government wishes to aid the coal operators in a substantial way, it must first yield back the arbitrary control which it now wields, and it must permit reasonable cooperation within the industry itself. I am convinced that if anyone can stabilize the bituminous industry, it is the operators. They must be permitted to proceed without fear of persecution.

Coal operators will do well to heed the following words of Justice Brandeis:

"Experience should teach us to be more on our guard to protect our liberties when the Government's purposes are beneficent. The greatest dangers to liberty lurk in insidious encroachments by men of zeal, well-meaning but without understanding."

The Guffey Act must be amended or the bituminous coal industry as a free institution will disappear. In recent years we in

America have fed too much private enterprise into the maw of bureaucracy. Government functionaries have tasted blood and they like it. They are already roaring for more. The deadline has been reached and we cannot yield another inch with impunity. King Coal has wandered into the wilderness a little farther than his royal conferees. If he vigorously turns back, he can regain his throne but if he continues his peregrinations, it is safe to predict that he will soon be reduced to Court Jester at the throne of Mr. Ickes.

## The Upper Harbor Development for Minneapolis

### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

ARTICLE BY RUDOLPH LEE

Mr. ALEXANDER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article prepared by Mr. Rudolph Lee, of the Minneapolis Civic Council, for the Upper Harbor Completion Committee, November 1939:

#### MINNEAPOLIS AND ITS RESOURCES—THE UPPER HARBOR DEVELOPMENT

This is a proposal to extend the Mississippi 9-foot channel above St. Anthony Falls.

##### NECESSITY FOR THE IMPROVEMENT

The canalization of the river on the 9-foot channel basis will be completed from St. Louis to the Washington Avenue Bridge in Minneapolis during 1940. The work has been progressing for years, and there is no question about the final completion next year. The Government has spent upward of \$140,000,000 on the project.

The topography of the land in the neighborhood of the Washington Avenue Bridge in Minneapolis is such that dockage facilities there will be forever limited. In other words, the present terminus of the waterway in Minneapolis is located so that there cannot be adequate dockage facilities. The river banks at that spot are high and steep, so that there is no way to provide adequate docks adjoining the river. Neither is it possible to use escalators or other means of getting to the top of the bluffs on either side of the river in order to use the land there, because the areas are occupied by the University of Minnesota campus on the east side and by several hospitals on the west side.

The situation thus exists that the transportation opportunities provided by the waterway will be substantially lost to Minneapolis unless better dockage facilities are available.

St. Paul has good dockage facilities because the land adjacent to the river is level. This same condition prevails at Hastings, Red Wing, Winona, La Crosse, Dubuque, Clinton, and other cities on the river. Minneapolis is the only city on the river in which the topographical conditions where the waterway is constructed make dockage facilities largely impossible.

Hence, if Minneapolis is to have the transportation advantages that the waterway provides, there must be the opportunity for docks.

##### IDEAL DOCKAGE CONDITIONS ARE FOUND ABOVE ST. ANTHONY FALLS

There are 6 miles of river frontage above the Falls and within the city limits (3 miles on each side of the river). This frontage extends from the Falls to the Soo Line bridge.

The land slopes easily and gradually to the river, making it ideal for dockage and shipping facilities. There is no danger of floods that low-bank territory usually suffers, because the falls take care of excess waters. This is an important advantage that Minneapolis possesses. Other cities with low, sloping river banks are subject to floods at times of high water.

There are upward of 800 acres of this river frontage upon which there are at present no structures. There is a large additional frontage, the structures upon which could be easily removed.

The lands in question are not expensive. Much of the area is now tax-delinquent.

In the early days this river-bank land was used as the site for sawmills and for great lumber yards. After the abandonment of the mills the property was not used, and so it lies there awaiting the chance to render the city its greatest service—easy and cheap availability for expansive docks.

Thus it is that if the waterway is extended above the falls, Minneapolis will possess a barge harbor which, from the standpoint of convenience and accessibility, would not be excelled on any inland waterway.

Result: The completion of the upper harbor river development will put Minneapolis in splendid position to induce industries seeking a location that would give them easy access to water, rail, and truck transportation.

The facts to be faced: The Government has built one of the greatest of all inland waterways right up to Minneapolis. The city cannot make full use of the waterways, because peculiar topographical conditions limit dockage facilities. However, if the water-

way can be extended above St. Anthony Falls, the city will have the best dockage facilities on the entire waterway. The proposal for the upper harbor development is, therefore, that Minneapolis secure for itself the benefit of the waterway.

##### HISTORY AND BACKGROUND

As early as 1878 there was a movement to canalize the Mississippi River from the mouth of the Ohio River to Minneapolis. At first the proposal was to provide only a 4½-foot channel. Succeeding projects provided for various depths from 6 to 8 feet. However, in 1927 the 9-foot channel depth was agreed upon as a definite project from St. Louis to Minneapolis, a distance of 673 miles. Since 1930 the Government has pushed the project. It has spent upward of \$140,000,000, and the waterway will be completed during 1940. As a matter of fact, it is now complete except for some finishing work on the dam at Clarksville, Mo. Barges now regularly travel the entire river and unload at the small dock adjoining the Washington Avenue Bridge in Minneapolis.

On July 17, 1939, the river steamer *MacKenzie* brought up the river to Minneapolis a tow of barges that carried 17,000 tons of coal, oil, and steel. If this tonnage had been loaded on railroad freight cars, the cars would have made a train 2 miles in length. On the return trip the *MacKenzie* took a tow of barges loaded with scrap iron and grain.

Until the Government made possible a dependable water highway, the principal carrier on the river was the Federal Barge Line. However, as the canalization has been completed private carriers are entering the field in such numbers as to indicate that the waterway will be extensively used.

##### IS THE EXTENSION OF THE 9-FOOT CHANNEL ABOVE THE FALLS PRACTICAL?

Yes. Army engineers, after exhaustive investigation and study, have unqualifiedly recommended the project as practical. Congress, acting on this recommendation, has approved the project. However, as yet no funds have been definitely allocated toward the improvement but assurance has been given by Government officials that an allocation for preliminary work may be made without delay as soon as they are advised officially that Minneapolis will cooperate with the Federal Government to complete the project.

##### WHAT IS THE ESTIMATED COST TO MINNEAPOLIS?

The expense that the Federal Government wants Minneapolis to take care of is the cost of remodeling the bridges that now do not have sufficient clearance for barges to pass under. Also certain other minor work in connection with the development. The total estimated cost of remodeling these bridges and these other necessary expenses to meet the Government requirements is \$1,774,000. Of this amount, between \$600,000 and \$700,000 is the estimated cost of remodeling city bridges and between \$800,000 and \$1,000,000 is the cost of remodeling railroad bridges.

The balance of the cost of the upper harbor development, estimated to be \$7,779,000 is then to be paid entirely by the Federal Government.

The session of Congress which recently adjourned (August 1939), passed a bill to authorize the Government to pay the cost of remodeling the railroad bridges. This bill was vetoed by the President but it is believed that at the next session of Congress, the matter can be worked out in some way to meet the Presidential objections. However, at the present time "cooperation with the Federal Government to complete the project" means that the city, through action of the city council, must assure the Federal officials that Minneapolis will take care of the bridge remodeling cost.

Conferences of city officials with Army engineers have revealed that it will not be necessary for the city to provide in advance the entire expense of remodeling the bridges that must be changed, but that the expense can be divided over a period of years. It will require from 3 to 5 years to complete the project so there is no need of raising all the funds at once.

The city bridges, which in particular will have to be raised, are the Plymouth Avenue Bridge, the Broadway Avenue Bridge, and the Lowry Avenue Bridge.

As a matter of fact, these bridges are old and sooner or later they will have to be remodeled to take care of increasing truck and other traffic. Hence, remodeling them now to meet the Government requirements for barge clearance is not altogether an extra expense.

##### WHAT WOULD BE THE PROJECT PROGRAM?

According to the plans of the Army engineers, the project would be divided into five parts—

1. Dredging the river from the present municipal dock to a new dam that would be built below the falls.
2. Building this lower dam and one lock.
3. Dredging the river from this lower dam to the falls.
4. Building the lock over the falls.
5. Dredging and widening the river a width of 150 feet from the falls north to Forty-first Avenue, a distance of about 3 miles.

This 3-mile area would be the upper harbor and would enable dockage on each side of the river. The engineers plan to provide at least one turning basin and that at the north end of the river. At a hearing on the project, General Markham, Chief of the Army Engineers, said that "the proposed upper river harbor at Minneapolis will be the finest harbor of its kind in the world."

##### WOULD THE USE OF THE LOCKS TAKE MUCH WATER?

No. According to the Army engineers there would be plenty of water even at normal low-water stage. The capacity of the upper lock would be about 1,120,000 cubic feet of water and the capacity of the lower lock would be about 450,000 cubic feet. When a barge passes through either lock, about half the water is used so that

it would take approximately the water capacity of the locks (1,570,000 cubic feet) to enable a barge to go up the harbor and return.

The estimate of the Army engineers is that in normal water stage (not high-water stage) about eight or nine thousand cubic feet of water passes over the falls per second, which indicates that under normal conditions enough water to take care of a barge going up the harbor and returning passes over the falls every 3 or 4 minutes. Engineers for the Northern States Power Co. have stated that the water for the locks would have no material effect upon the present generation of power.

#### WHERE WOULD THE LOCKS BE BUILT?

They would be located just west of the center of the river at the falls.

It would take two locks to provide the facilities necessary to lift loaded barges over the falls. Each lock would be 56 feet wide and 400 feet long. One of these locks would be through the lower rapids and would lift barges about 25 feet. The second lock would be over the falls and would lift the barges about 50 feet.

These locks would be merely the last step in the system and offer neither engineering nor mechanical difficulties. As a matter of fact, the locks and dams now constructed between St. Louis and Minneapolis raise barges a total height of 325 feet, or substantially the height of the Foshay Tower. The elevation of Minneapolis is 733 feet above sea level and the elevation at St. Louis is about 408 feet, so that the present barges that ply the river are lifted 325 feet in traveling from St. Louis to Minneapolis. This lifting is done by 26 locks and dams, which in practical effect make the 673 miles of river into 26 long lakes or pools. The last lift of 75 feet over St. Anthony Falls is merely the last lift of the journey.

#### HOW MUCH LABOR WOULD BE USED ON THE PROJECT?

Figuring the amount of direct and indirect labor, the estimates are that 92 percent of the total cost of the project would be for wages and that between 45 and 50 percent of the cost (\$4,000,000 to \$4,500,000) will be paid to local labor engaged directly on the job. It is estimated that it will take 2 or 3 years to finish the job after it starts.

A large amount of labor would also be required to take care of the industrial development, private dock building, etc., certain to follow the project.

#### HOW WOULD THE FACILITIES BE USED?

Private industries would buy the land and build their own docks. The present municipal docks adjoining the Washington Avenue Bridge south of the falls can take care of package freight and serve the common carriers. Hence, there will be no need for additional municipal docks. The Government proposes to finance the project itself, and industry seeking location is to finance the dock facilities in the upper harbor. There is no reason why the city should be put to any more than normal expense in the matter.

#### WOULD THE PROJECT STIMULATE INDUSTRIAL DEVELOPMENT?

It is the one thing now needed to help Minneapolis secure and encourage the development of industry.

In addition to its rail and truck advantages, Minneapolis would be able to offer dependable water navigation to a prospective industry. During the navigation season barges would be able to travel from Minneapolis over 4,000 miles of a 9-foot waterway. Barges could travel to the Gulf of Mexico and to Chicago and Pittsburgh. By way of illustration:

Recently the Du Pont people, after a survey of the Midwest, bought land and are now building a \$7,000,000 plant at Clinton, Iowa. They chose Clinton in preference to other locations largely because of good harbor facilities. Recently the Continental Grain Co. located terminals at Clinton, Iowa.

The Allis-Chalmers Co. is increasing the size of its plant on the river at La Crosse.

The J. I. Case Co. has developed a large manufacturing plant at Rock Island, Ill.

The Mississippi Valley Grain Co. is establishing terminals at Muscatine, Iowa, and other river towns.

The Shell Oil Co. and the Socony Vacuum Co. have built large storage tanks at St. Paul, Davenport, La Crosse, and other river towns in preference to building them at Minneapolis because these towns have better harbor facilities than Minneapolis now has. In other words, Minneapolis is losing valuable industries because it does not have the dock and harbor facilities the industries are looking for.

The Erickson Oil Co. has built a refinery at St. Paul Park on the river.

All these concerns have located on the river because of the advantage of river transportation and have located in the cities named because of the available river frontage that may be served by railroad trackage and trucking facilities.

The decision of these firms to locate not only on the river but in cities where river frontage is available accents what Minneapolis is going to be up against in its search for industries if it is unable to offer adequate river harbor facilities.

The upper harbor, as proposed, will put Minneapolis beyond effective competition in dockage facilities because the 3-mile harbor above the falls, with its gradually sloping banks and cheap and easily accessible sites having excellent railroad connections, will give the city a better harbor than any of the other towns along the entire length of the river.

#### WHAT ARE THE PRODUCTS LIKELY TO BE SHIPPED ON THE RIVER?

Dairy products, coal, fertilizer, cement, sand, gravel, petroleum, sugar, salt, farm and other machinery, iron and steel products, lumber, grain, cereal products, scrap iron.

#### WHAT IS THE BASIS FOR BELIEVING THAT THE COMPLETED PROJECT WOULD SAVE MONEY TO THE PEOPLE?

Minneapolis uses about 1,000,000 tons of coal annually, of which approximately 970,000 tons are soft coal of various grades and 30,000 tons are hard coal. The big bulk of these coal shipments now come from the West Virginia mine area via the Great Lakes to Duluth and then by rail to Minneapolis. The average transportation cost of a ton of this coal delivered at Minneapolis via this route is from \$4.75 to \$4.93 a ton.

Since the completion of the 9-foot channel to Minneapolis comparable quality soft coal is being shipped to the city from the southern Illinois mines. In 1933, 72,380 tons of this coal were delivered in Minneapolis by river barge. The extension of the 9-foot channel above the falls, with the additional dockage facilities that would be available, will encourage more shipments of this coal. There would be approximately the following savings in transportation costs:

Average freight cost from West Virginia mine area via Great Lakes and Duluth.....	per ton.....	\$4.75-\$4.93
Average rail rate from southern Illinois mines to Minneapolis, comparable grade of coal (lump).....	per ton.....	3.90
Same for fine coal.....	do.....	3.31

#### Rate by river

From southern Illinois mines up river to Minneapolis, comparable grade (lump), average.....	per ton.....	\$2.96
Same for fine coal.....	do.....	2.51

#### Savings

Saving by river from southern Illinois over shipments from West Virginia via Duluth (lump).....	per ton.....	\$1.97
Same for fine coal.....	do.....	2.25
Saving by river from southern Illinois over shipments from same mines by rail (lump).....	per ton.....	.94
Same for fine coal.....	do.....	.80

It thus appears that if it was possible to ship by river all the soft coal Minneapolis uses there would be a saving of about \$2,000,000 annually over shipping the same tonnage via Duluth, and a saving of between \$800,000 and \$900,000 if the tonnage was to be shipped from the southern Illinois mines by water instead of by rail.

The extension of the 9-foot channel over the falls, thereby making practically unlimited river frontage available, will be an important factor in encouraging the shipment of the city's coal supply by river, and thus save large sums every year in transportation expense, a saving that is certain to be reflected in reduced cost to Minneapolis consumers.

Coal shipments are used as an illustration to show the reduced cost of river transportation. The same savings apply in approximate degree to shipments of other commodities.

#### WILL THE COMPLETED PROJECT STIMULATE THE GROWTH OF MINNEAPOLIS?

Availability of dependable and cheap water transportation is a recognized factor in promoting industrial development. From this time on, the city that does not have such facilities available will be handicapped in the expansion of its industry and business.

Illustration: Since the 9-foot channel project was completed sufficiently from Minneapolis to St. Louis this summer to insure the dependability of barge transportation, 34,000 tons of scrap iron have been shipped from the city to points south on the river. This is a comparatively new industry, and firms in the business say that within a short time these shipments will increase to more than 100,000 tons annually because of the availability of cheap water transportation.

New firms in this business now employ between 200 and 250 men and report that the employment of between 600 and 800 men within the near future is altogether probable.

The development of this industry is credited by those engaged in it to the availability now of water transportation and as evidence they refer to the following freight savings, since it has become possible to ship their product by river barge—

Rail rate on scrap iron, Minneapolis to Federal, Ill., gross ton.....	\$3.00
Water rate.....	1.25
Rail rate to Weirton, W. Va.....	9.35
Water rate.....	3.50 to 4.00

#### SHIPMENTS ON THE RIVER

During the shipping season of 1939 up to November 1, a period of 6 months, the total shipment of commodities in and out of the Minneapolis port totaled 263,400 tons.

Of these shipments, 223,882 tons were into the city and 39,568 tons were out-bound.

In the same period the total shipments in and out of the St. Paul port were 312,612 tons, of which 303,157 tons were in-bound and 9,455 tons out-bound. The gain of approximately 50,000 tons by St. Paul over Minneapolis was due in large part to the fact that St. Paul has better dockage facilities than Minneapolis now has. The only way that Minneapolis can compete with St. Paul in river transportation is to extend the channel above St. Anthony Falls. There is no other way to give Minneapolis a harbor that will enable it to compete with St. Paul for industries needing river transportation.

As indicating what Minneapolis is going to be up against, not only in securing new industries but in retaining the industries we now have, Minneapolis has already lost the Shell Petroleum Co., which moved to St. Paul because Minneapolis does not have sufficient harbor facilities on the river; and the General Iron & Metal

Co., a Minneapolis concern shipping large quantities of scrap iron, has just leased dockage facilities in St. Paul because there is not available in the small Minneapolis harbor the dock facilities it must have to operate its business.

#### VARIETY OF COMMODITIES NOW SHIPPED IN AND OUT OF MINNEAPOLIS BY RIVER
